The Spring clean-up shows that we have a much larger stock of HARDWOODS in our Philadelphia distributing yards than we desire to carry; in order to alleviate this condition, we have decided to name the lowest possible selling price and we assure you that this is LOW, when the condition and grade of this stock is taken into consideration. If you are in the market now for present or future requirements, it will mean money in your pocket to take advantage of this extraordinary offer. Let us have your inquiries and see for yourselves.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongue and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

Coming Association Meetings.

HANDLE MANUFACTURERS' ASSOCIATION.

The Handle Manufacturers' Association of America will hold its regular semi-annual meeting at the Galt House, Louisville, Ky., Wednesday, May 20.

SOUTHERN CYPRESS MANUFACTURERS' ASSOCIATION.

The fourth annual meeting of this organization will convene at New Greunwald Hotel, New Orleans, Wednesday and Thursday, May 20 and 21, at 10:00 a. m.

NATIONAL HARDWOOD LUMBER ASSOCIATION.

The annual meeting of the National Hardwood Lumber Association will be held at Milwaukee, Thursday and Friday, June 11 and 12.

NATIONAL LUMBER MANUFACTURERS' ASSOCIATION.

On June 16, 17 and 18 the National Lumber Manufacturers' Association will convene for its annual meeting at Minneapolis, Minn.

General Market Conditions.

While general hardwood conditions are not exactly featureless they approach that point. Hand-to-mouth buying prevails in all quarters, save that certain large and financially strong jobbers, figuring that hardwood lumber is better property than money, are buying very heavily. They are practically speculating on the market, believing that with comparatively short stocks lumber will command much higher prices before the year is over. There

is a renaissance of railroad buying in some quarters, although it has not yet reached the West to any extent. On the whole, the country over, the market may be considered a little stronger, and there is a little increase in the volume of sales. However, wholesale consumers are still chary and are generally buying only for immediate requirements.

The hardwood flooring trade remains in very fair shape, the aggregate of repair orders taken in combination with the office and public building work going on, seeming to keep this branch of the industry fairly well occupied.

Veneers and panels are showing only a moderate demand, and prices are ranging lower than they should. The same may be said of the handle industry, and there is apparently less than half the normal demand.

The foreign woods business is suffering with the domestic product and although the call is only moderate, prices are fairly well maintained.

As to domestic woods, the air is full of rumors of cut prices, but traced to their source it is found that few of the large operators are making any concessions. What cutting is being done, is by small manufacturers and jobbers of little financial worth, who have been obliged to make sales in order to meet current obligations.

On the whole the market is in very fair shape and thirty days' normal trade will greatly enhance values. The average manufacturer looks on the situation from an optimistic viewpoint, believing his stock of lumber in pile is a mighty good asset, and he proposes to keep it until he can secure his price.

The Maple Flooring Situation.

As compared with the trade of a year ago the maple flooring business cannot be counted brisk, although all the manufacturers of the better class have been able to operate on two-thirds to full time thus far during the year. Orders are becoming more plentiful and undoubtedly production will be considerably increased in the near future. The use of maple flooring is steadily broadening, and the product is constantly gaining friends. It is undeniably one of the best materials for the purpose on the market, and its ability to resist wear and rough usage is increasing its popularity for all purposes, particularly for public and office buildings, stores, warehouses and factories.

The manufacture of maple flooring has reached a point of perfection where it may be called a science, and about the only argument that can be used against the material is that, through bad handling and neglect after floors are laid, it often becomes grimy, a condition which materially injures its appearance. If users of it could be persuaded into an avoidance of the mop and slop-bucket in cleaning the floors, and would substitute therefor any of the approved floor finishes, or even so simple a compound as equal parts of turpentine, sweet oil and vinegar, thoroughly mixed, applying with cheesecloth rags, after the floor is swept, they would have a surface that would be clean, light and beautiful in appearance for many years. Manufacturers are certainly doing their part to make a very desirable flooring, but up to this time very few users have given the material just treatment after it has been laid.

APR 28 1908

Increased Use of Fireproof Building Material.

In spite of the growing popularity and consequent remarkable increase in the use of cement, steel, brick and stone as building materials, they are not yet so generally employed that the time when forests will not be called upon to supply the great bulk of it can be foreseen.

Building operations in forty-nine of the principal cities of the United States for the year 1907 show that fifty-nine per cent were of wooden construction. While these figures represent the building industry of the country to a certain extent it must be remembered that had they included small cities, villages and suburbs, the percentage of buildings of wooden construction would have been much greater.

Had the remaining forty-one per cent of the total number been built entirely of brick, stone or concrete, the figures presented would be much more valuable. However, vast quantities of wood, even in the so-called fireproof buildings, are used in the construction work, for floors and for inside finish, although today metal is very popular for the latter.

In comparative statistics New York shows the smallest percentage of wooden buildings constructed during the year, while Boston shows the greatest increase of any of the cities in the total cost of building operations. The rapidly increasing price of lumber, and the use of fireproof systems should eventually hold down the drain upon the forests materially, but so far they do not appear to have decreased the lumber demand, notwithstanding the vast quantities employed.

Contracts.

There are a lot of people in this world who make contracts and have not the last compunction about signing their name or giving a specific order and then breaking their word! Fortunately, there are few lumber concerns of this character. Nevertheless, owing to the reduction in volume of business, many houses have lately had to ask a suspension of contract. The fellow who

thought he was wise said, "Cancel our order,"—notwithstanding the fact that the man who had taken his business had probably purchased the timber and made provision to take care of it during the early months of 1908.

If a contract is worth anything it should bind both parties. As a general rule, lumber and woodworking lines have been free from sealaws who deliberately refuse to live up to their side of contracts; and it behooves all of us in this year 1908 to be considerate of the other fellow and endeavor to help him along if possible, by not forcing material on him, or insisting upon his living strictly up to the letter of his contract. However, it would seem that there is no excuse for peremptory cancellation, but every reason for suspending or stringing a contract along so that the man who manufactures the goods will not suffer too seriously, or the man who is buying be embarrassed by having to increase his stock when he is not in a position to pay for it.

The old golden rule applies in this case: "Do unto the other fellow as you would he should do unto you!"; but don't reverse the rule! Contracts should be contracts, or else let's eliminate them all from the lumber trade.

Distribution of Hardwood Purchases.

The following very interesting table is compiled from the bulletins of lumber requirements that have been issued by the HARDWOOD RECORD during the past two years, and it shows the number of buyers of the various kinds of hardwoods in the several states listed. The items from which it is compiled are nearly 8,000 in number. It is not presumed by any means that this list is complete, as it is being added to fortnightly; but it makes a very interesting study for hardwood lumbermen, in that it shows where the bulk of the stock is distributed, for the inquiries which elicited the information were distributed indiscriminately to all parts of the United States and Canada. Note the wonderful popularity of oak, maple, poplar, birch and basswood, and the large number of buyers of dimension stock and veneers and panels; also observe where the greatest distribution lies—Illinois, Indiana, Ohio, Wisconsin, Michigan, Pennsylvania and New York.

Number of buyers of each kind of wood.	Number of buyers																	Veneers and Panels ⁷

Pert, Pertinent and Impertinent.

To Julia, 1908.

"Curves lead young men to fall from grace. Suggestive figures in women tend to destroy purity. No doubt the new fashion will seem a little strange, but it is the only way to put an end to temptation."—PRESIDENT ELIZABETH WHITE of the Dressmakers' Protective Association.

When up-to-date my Julia goes,
Now, now, how continually flows
The liquefaction of her clothes.

So well concealed each sinuous curve,
That one with safety may observe
And never from decorum swerve.

No more in wanton garb she trips,
Provoking men to moral slips,
But seemly are her bust and hips.

She doesn't pad, she doesn't lace;
No bulge or dip in any place;
Of curvature not any trace.

The gown, tight-fitting, serpentine,
She wore last season, did design
To show each undulating line.

Till men, in gazing at them, fell
Beneath their necromantic spell,
And tumbled headlong into hell.

But chastely now my Julia goes,
Clad in her new colonial clothes,
From which no provocation flows.

Full modest her appareling,
Suggestively it does not cling,
But hangs as straight as any string.

And when my Julia now I see,
Compressed and straight as she can be,
Oh, how the new style taketh me!

At the Seashore.
Little girl—Why
do the waves dance,
Mamma?
Mother—Hush,
dear; they cannot
play bridge.

Affinity Tester.
What people seem
to need most nowa-
days is an invention
by means of which
they can always tell
positively whether
it's their hearts
they've lost or only
their heads.

**A Questionable
Adage.**
"The way of the
transgressor is hard,"
they say; when how
comes it that many a
bank president lives
luxuriously in jail
nowadays, surround-
ed with rare exotic
flowers and nourished
on imported wine?

**More Funerals Than
Deaths, Perhaps.**
Recent statistics as
to mortality among
grandmothers of of-
fice boys would indi-
cate that popular in-
terest in baseball is
waning.

Another Version.
You can drive a
boy to college, but
you cannot make him
think.

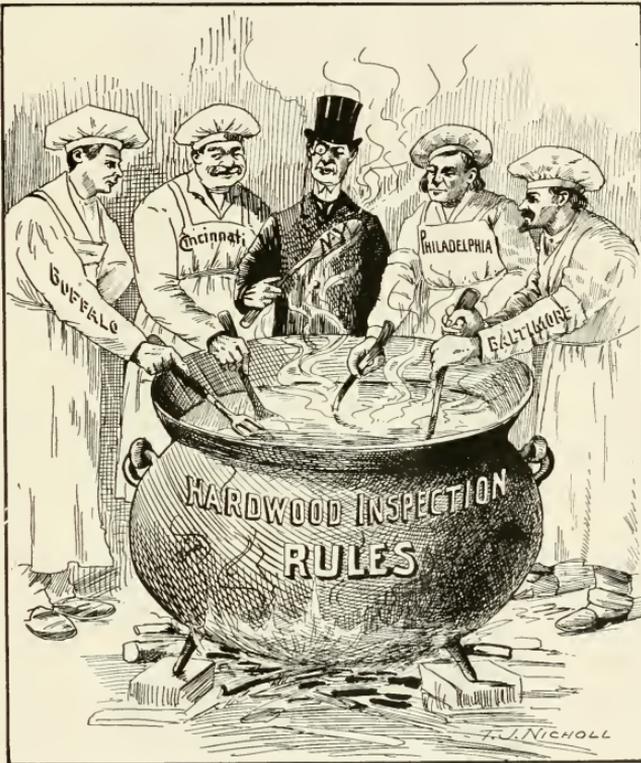

Transformation.
Star (before the footlights)—I must have
the gold tonight, me lori, tonight, or ere to-
morrow's sun shall rise thy castle shall be
but a charred and smoking ruin!

Star (behind the scenes)—Say, pard, loan
me a two-spot. Want to get m' laundry out
o' hock before we leave town.—PUCK.

Overstep.
Everyone admires a liberal man, and one
who is frank of speech, and self-confident.
But how many men, in their zeal to manifest
these three qualities overlook the boundaries
between liberality and prodigality; between
speech that is frank and speech that is blat-
ant; between self-confidence and egotism!

Cards Were Out.
"Ab come within a ace ob marryin' dat
niggab once!"
"Yo don't say!"
"Yais. If he'd had another ace, he'd ha'
won a jack-pot, an' if he'd won dat jack-
pot he'd had money 'nough to git married
on!"—PUCK.

Danger!

[New York has sprung a new set of hardwood rules; Buffalo is working on another; Philadelphia and Baltimore seek a change; and Cincinnati wants to return to National Association Rules of 1905.]

Too Many Cooks Spoil the Broth.

Requires Distinction.

adopts high stand-
ards is the only one
who never fails.

No Escape.
The chief trouble
with the man who
rides a hobby is that
he won't let you get
out of his way.

AMERICAN FOREST TREES.

SEVENTY-THIRD PAPER.

Balsam Fir.

Abies balsamea—Linn.

Abies balsamea, or the "Christmas tree," is found through a wide range of growth, extending from the Great Bear Lake region and Hudson Bay on the north through Labrador and Newfoundland; south to Pennsylvania and down along the higher mountains to Virginia; it is found also in Michigan and Minnesota, and to some extent in Ohio and Nebraska.

The tree is called balsam fir in New Hampshire, Vermont, Massachusetts, Rhode Island, New York, Pennsylvania, West Virginia, Wisconsin, Michigan, Minnesota, Nebraska, Ohio and Ontario; it is known as balsam in Vermont, New Hampshire and New York; as Canada balsam in North Carolina; as balm of Gilead in several states, notably Delaware, New York and Pennsylvania; as blister pine and fir pine in West Virginia; as firtree in Vermont; as single spruce in New Brunswick and the Hudson Bay district; as silver pine in parts of the same region; as *sapin* in Quebec; to the New York Indians the tree was known as *cho-kok-tung*—a word which translated means "blisters."

Balsam fir has several varieties distinguished in cultivation. In shape it is broad at the base, with pointed crown, forming a symmetrical pyramid, and though a small tree—only from fifty to seventy feet tall and from one to two feet in diameter—presents a majestic and picturesque figure in the forest. It is most frequently met with in the damp woods and mountain swamps from Minnesota to Maine, and is particularly prolific in the latter state, where thousands of young trees are cut every year and shipped to the large markets where they are sold as Christmas trees. Hans Christian Andersen, in his exquisite tale of "Der Tannenbaum," relates the sad adventures which befell one of these "little wanderers."

The bark of balsam fir is brown, thin, smooth and shows numerous white horizontal markings of a blister-like nature, which secrete an abundance of resinous matter valuable as the "Canada balsam" of commerce, which is much used in mounting microscopic specimens and as a curative agent. Young trees produce a great abundance of the balsam, and wounding them serves to increase the flow. Air laden with the aromatic odors of this fir is very beneficial to certain forms of disease, and many an invalid is relieved of

distressing symptoms by a vacation in the balsam woods of Maine, New Hampshire or North Carolina. Asheville is situated on a plateau which is surrounded by the Balsam Range of the Alleghenies, and the pure, dry air filtered through countless fir trees has proven better than all the drugs in the world to many a victim of phthisis and similar affections, especially when breathed constantly

ends, and with broad, closely overlapping scales; it has peculiar purplish color when young, but turns brown with age.

The balsam is a popular tree with every camping party in the northern woods, and the women industriously gather its leaves and tiny twigs for sweet-scented pillows, while hunters make their couches from its fragrant boughs.

The wood of balsam fir is coarse-grained, but of compact structure; the heartwood is brownish white, the sapwood considerably lighter. It is soft, light, not very durable, and easily split. A cubic foot weighs approximately twenty-three pounds.

The tree is cut when of good size and marketed with pine or spruce lumber. It resembles spruce in structural qualities and appearance, but may be distinguished from that tree and other conifers by the fact that it has no resin-ducts, although the blisters upon the bark contain the clear liquid balsam; however, its wood is freer from sticky deposits than would naturally be thought from that fact. It mingles with tamarack, black ash, arbor vitae and other trees of the forest, seldom being found in a pure stand of any extent.

Balsam lumber has never been manufactured to any extent until very recently, but of late large quantities of it have been employed in box making and in the paper pulp industry, especially in the North.

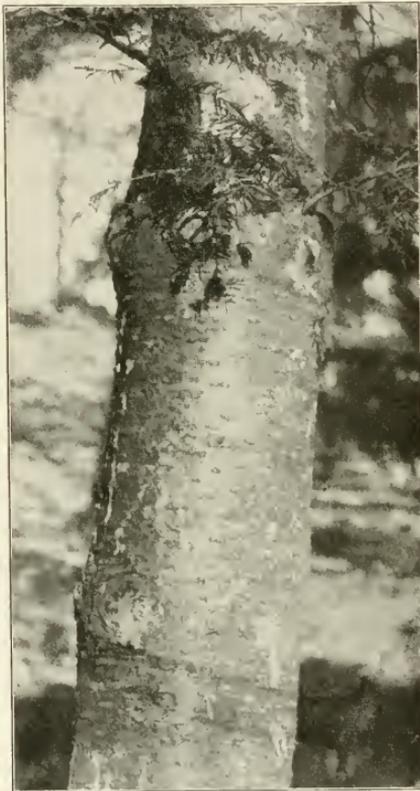

The tree picture accompanying this article forms an illustration in Rogers' "The Tree Book."

Wood Shrinkage.

Interesting experiments on the shrinkage of wood due to the loss of moisture have recently been completed by the Forest Service through its timber testing station at Yale university. These experiments show that green wood does not shrink at all in drying until the amount of moisture in it has been reduced to about one-third of the dry weight of the wood. From this point on to the absolutely dry condition, the shrinkage in the area of cross-section of the wood is directly proportional to the amount of moisture removed.

The shrinkage of wood in a direction parallel to the grain is very small; so small in comparison with the shrinkage at right angles to the grain, that in computing the total shrinkage in volume, the longitudinal shrinkage may be neglected entirely.

The volumetric shrinkage varies with different woods, being about twenty-six per cent of the dry volume for the species of

TYPICAL FOREST GROWTH BALSAM FIR.

day and night from a tent in the woods.

The leaves of the balsam fir are dark green and lustrous above, paler below; on top they show a decided groove, with corresponding ridge beneath; they are evergreen and needle-shaped, like the other members of the conifer family, but are very blunt at the ends.

The staminate flowers are yellowish, the pistillate purple. The fruit is an erect cone two to four inches in length, blunt at the

CHARLES D. GATES
LOUISVILLE, KY.

TANGENTIAL SECTION OF BALSAM FIR.

encalyptus, known as blue gum, and only about seven per cent for red cedar. For hickory, the shrinkage has been shown to be approximately twenty per cent of the dry volume, and for longleaf pine about fifteen per cent.

In the usual air-dry condition, from twelve to fifteen per cent of moisture still remains in the wood, so that the shrinkage from the green condition to the air-dry condition is only a trifle over half of that from the green to the absolutely dry state.

Builders of Lumber History.

NUMBER LXVI.

Charles D. Gates.

(See Portrait Supplement.)

The HARDWOOD RECORD presents as supplement to this issue the portrait of a man who though not well known to the general lumber trade in the usual sense of that term, is nevertheless a power in the special line of lumber operations which he has elected to follow—the manufacture of hickory handles.

Charles D. Gates of Louisville, Ky., was born in Hadlyme, Conn., on the twenty-first day of August, 1855, and comes of good old "blue-blooded" New England stock. His father is F. E. Gates, a direct descendant of the famous Gates family of Revolutionary times. His mother is a member of the illustrious Hungerford family, whose genealogy is recorded in the Knights of England—truly an ancestral line to be proud of. Mr. Gates' father, grandfather and great-grandfather were all prosperous farmers residing in the Connecticut valley.

The boy attended the school of the district in which he lived until the age of fifteen, when he was sent to Hartford graded schools for a time. From there he went to a preparatory school at Wolverhampton, Mass., and later to the Williston Seminary at East Hampton, Mass. After finishing his studies there he became a "Yankee school-teacher," and took charge of the principal graded school at Moodus, Conn. The work proved too confining, and finding that his strength was being overtaxed, Mr. Gates went to sea as a hand before the mast for one season. On his return he continued the outdoor life as a farmer for another year.

His first venture in the commercial world, and the one which decided his career, was made in 1877, when he entered the service of the Turner, Day & Woolworth Handle Company, Inc., of Louisville, Ky., as yardmaster. Mr. Gates has continued in their service ever since, and in the thirty best years of his life which he has devoted to their interests, has

filled the positions of shipping clerk, foreman, superintendent, secretary, general manager and president, which latter office he now holds.

The Turner, Day & Woolworth Handle Company, Inc., is one of the great industries of Louisville; its head office is located there, and branches are maintained at 116 Broad street, New York City, and the Flood building, San Francisco. The concern has an annual output valued at about \$1,500,000, and carries on hand at all times an average stock of hickory handles worth \$400,000. It maintains in all thirty-two branch factories, widely scattered, and all in charge of men who are experts in their line. The most important of these are located at Nashville, Tenn., Huntington, W. Va., Memphis, Tenn., Paragould, Ark., Cairo, Ill., Bowling Green, Ky., and Decatur, Ala.

The company believes its facilities for obtaining a large and well selected stock of hickory timber, and for its manufacture into the handles used by woodsmen, farmers, mechanics, miners, railroad contractors and the army and navy are unexcelled. In addition to supplying a large domestic trade, the "Turner-Day" people do an enormous export business, supplying probably about 75 per cent of all the handles that are shipped to England, Germany, Australia and other foreign markets. In fact, their product goes to all corners of the globe—to the Indian of the far East, the Eskimo of the North and the African negro of the southern hemisphere.

The large interests of which Mr. Gates is the head require his close and constant attention, and he has indeed given of himself unstintingly for many years, becoming familiar with their every detail, and leaving no stone unturned to forward the advancement of the business, so that he may look back upon his efforts with the utmost satisfaction, knowing that he has increased the operations and

prestige of the Turner, Day & Woolworth Handle Company, until it is today the largest concern of its kind in the world.

Like all forceful men, Mr. Gates is in demand from outside enterprises which seek the benefit of his experience and cooperation, but he has never consented to hold any salaried office; in politics he is a staunch republican. He is vice-president of the Louisville Park Commissioners and a director of the Board of Trade; belongs to the Filson Club and the Louisville Commercial Club and takes a lively interest in philanthropic and church affairs, being president of the Presbyterian Alliance of Louisville and an elder of the Presbyterian church; in the past he has filled the offices of chairman of the state executive committee of the Young Men's Christian Association and president of the Presbyterian Orphan's Home.

Mr. Gates is a thorough believer in association work, and is one of the most active members of the new Handle Manufacturers' Association of America and was president of the Hickory Handle Manufacturers' Association for four years. In commercial affairs he is possessed of keen penetration, the power of making a quick decision, and firmness in maintaining his position once it is taken—essential attributes in a man who would dictate the policy of a great corporation. He maintains an attitude of open fearlessness and absolute frankness in business relations, so much so that he cannot forgive or condone the lack of these traits in a competitor.

Perhaps the recent words of an intimate associate of Charles D. Gates best sum up his dominant characteristics: "When he goes after anything he usually gets it, and when he gets anything good he is always willing to share it."

A Profitable Expenditure.

Some people are always looking for outside investments. They put money into things of which they know nothing. They entrust it to entire strangers, who may or may not be honest and capable. Sometimes they receive dividends. Oftener they do not.

While they are playing the other fellow's game on the one hand, on the other their own business is perhaps suffering from lack of capital or offering excellent opportunities that are unimproved. As a rule there is no safer or more profitable investment for one's money than in one's own business. Frequently there is a chance to add greatly to the profits by making a small outlay in additional or improved machinery or appliances. For instance, in some cases mills are hauling off their sawdust or burning it in the open air and using slabs and edgings to run their plant, notwithstanding there is a good local market for firewood. Again, it not infrequently happens that mills do not cut more than ninety per cent as much lumber as they should because the steam pressure sometimes gets down.

In any case the Gordon Hollow Blast Grate is a big dividend earner and, in fact, some users report that it pays for itself every month! The manufacturers, the Gordon Hollow Blast Grate Company of Greenville, Mich., will ship an outfit subject to thirty days' trial, and will stand the freight both out and back in the event of rejection,—certainly a proposition worth looking into.

The Virginia Timber Company of Springfield, Ill., has elected A. F. Hemphill secretary, and has taken new offices in the Park building.

T. R. CLENDINEN, ATCHISON, KAN., PRESIDENT. P. C. SCOTT, ST. LOUIS, MO., VICE PRESIDENT. CHAS. D. GATES, LOUISVILLE, KY., DIRECTOR.

Special Meeting Hickory Division Handle Manufacturers' Association.

A special meeting of the Hickory Division of the Handle Manufacturers' Association of America was held at the Hotel Sinton, Cincinnati, April 15, following the general conference of hickory producers in all lines held at the same place the preceding day, a report of which appears elsewhere in this issue of the Record. The meeting was marked by extreme earnestness and frankness on the part of all present, which did much to establish confidence and mutual understanding among the manufacturers.

The meeting came to order with President T. R. Clendinen, of Atchison, Kan., in the chair, and Secretary Henry H. Gibson, of Chicago, recording. The following were present:

G. A. Triner, American Handle Co., Jonesboro, Ark.
G. Sherman, Seountchie Handle Works, Squatchie, Tenn.
L. A. Heston, McGrillis Handle Co., Norwalk, O.
F. W. Peters, I. F. Force Handle Co., New Albany, Ind.
Abner Fellabaum, Frankfort Handle Mfg. Co., Frankfort, Ind.
J. Hunsacker, Conover, N. C.
Chas. D. Gates, Turner, Day & Woolworth Handle Co., Louisville, Ky.
W. C. Howe, American Lumberman, Chicago.
T. R. Clendinen, Jackson Woodware Co., Atchison, Kan.
C. L. Hartwell, Hartwell Bros., Chicago Heights, Ill.
Henry H. Gibson, HARDWOOD RECORD, Chicago, Ill.
T. J. Gregory, T. J. Gregory Handle Works, Cookeville, Tenn.
J. O. McArthur, Inoue Handle Co., Fowey, Mo.
C. H. Jones, J. F. Jones' Sons, Columbus Grove, Ohio.
W. H. Braddon, Columbia Handle Co., London, Ont.
S. M. Egan, J. A. Fay, Egan Co., Cincinnati, O.
P. C. Scott, Keller & Tamm Mfg. Co., St. Louis, Mo.
C. H. Amos, Amos Bros. Handle Co., Poteau, Okla.

The entire morning was consumed by discussion of the conditions surrounding the handle manufacturing trade at the present time. The facts presented were involved in a series of plain, unvarnished and unmistakably truthful statements pertaining to the situation in the industry, as evidenced by the business of practically every member present.

It was shown that the jobbers, railroads and other large consumers of handles are placing orders at the present time for only actual requirements; that they are not buying a dollar's worth of goods unless they were placed in advance of sale; that on the Pacific coast the jobbers have established a clearing house and are exchanging small lots of handles among themselves rather than place orders with the manufacturers for quantity shipments. It was further shown that buyers that have heretofore bought handles in carload or larger quantities are now making purchases in l. c. l. lots; it was demonstrated beyond peradventure that a good deal of price cutting—notably among small producers—obtains; that a good many off-grade handles are being produced which are being branded higher; that the total quantity of purchasing demand today aggregates less than 40 per cent of that of a year ago, and that price cutting when it had prevailed had not stimulated the trade one iota! It was further shown that the majority of factories are running on short time—only from one to four days a week; furthermore, that the cost of handle

production during the last few months has not decreased as compared with the cost last year; no diminution in the price of rough hickory stock was shown, and the only diminution in cost seems to be a slight one in common labor, which is more than overbalanced by the overhead cost and management of the various concerns. Facts were also presented to show that through the diminishing quantity of hickory stumpage it is impossible to prognosticate that the cost of handle manufacture will ever be any less than it is at the present time.

The foregoing plain statements of fact were brought out by the reading of a letter from an Arkansas handle company, addressed to the secretary, which follows:

Replying to yours of the 4th in which the meeting was changed to Cincinnati instead of St. Louis on the 15th.

We thought at the time the writer would be able to get away to attend this meeting, as it is very important, but find at this time that it will be most impossible.

For the benefit of the members, will you please below what the conditions are in this locality and in the southwest.

Through Texas, Louisiana and Oklahoma there is no business whatever, as the large wholesale houses only order their handles after they get an order for them.

We find no trouble as to price, as people are still willing to pay, but are unwilling to carry a stock. All the large mills are either closed down or run with a few men, and are paying them through the commissary. Our company is running on orders only, therefore our plant is closed down most of the time. However, we find that the price of hickory timber is not going down, as most of the timber within reach of us is owned by large interests and they will not sell unless they get their price. The only difference in the cost of manufacture is the small item of day labor, which is very small. Trusting that all members of the association will realize that it costs just as much to make handles now as it did six months ago and that it is very important that they realize the fact that it is useless to reduce price to get business, as they can retain their regular trade at the regular price just as well as by making the reduction.

Chas. D. Gates of Louisville stated that the members of the association were suffering from severe competition in the buying field on rough sawn handles from Canadian operators. He stated that handles in this form were exported to Canada without the imposition of an import duty, and cited one case in which even rough turned handles had been exported from the United States to Canada without the exacting of any duty, while as a matter of fact import duty of 25 per cent—the same as applies to finished handles—should have been imposed. He therefore moved:

"That this association take immediate steps to place before the proper Canadian authorities such information as will lead to the imposition of a suitable import duty on sawn handles entering the Dominion."

Mr. Gates further moved:

"That a committee of three be appointed to take this matter up with the proper authorities."

The motion was promptly seconded and carried and the chair

appointed as such committee Messrs. Gates, Sherman and Scott.

At 12:30 the meeting adjourned until 2 p. m.
On reassembling the matter of grades was carefully discussed. As is well known, for several years the members of this association and its predecessor—the Hickory Handle Manufacturers' Association—have presumed to grade handles according to the standard grades as adopted on September 10, 1904. It was shown by samples exhibited at the Cincinnati meeting that a great many handles are going upon the market which are far below grade both in quality of timber and color, and manufacture, but which are being branded with a higher grade. It was further shown that the grading rules in force are not well known and recognized by the trade at large. Mr. Scott moved in this relation:

"That a committee of three be appointed to draft a system of grading and establish a set of standard rules which shall be the rules of grading employed by every member of the association."

In support of this motion Mr. Gates contended that these rules should be given wide publicity, and that the trade should be thoroughly informed of what constitutes just and honest grades, as compared with the off grades that are being put upon the markets in quantities. He avowed that the effect of such a proceeding would be to give character and dignity to the association and its methods, and would tend to discredit the fraudulent grades being shipped at present.

The motion was seconded and promptly carried, and the chair appointed as a committee to formulate the proposed grades, which will be presented at the Louisville meeting, May 20, Messrs. C. H. Jones, F. W. Peters and C. H. Amos.

On motion the secretary was instructed to canvass the entire hickory trade and ascertain so far as possible the conditions surrounding the manufacture of hickory handles and present the facts at the forthcoming Louisville meeting. The information to be requested from each concern it was decided should be held confidential in the secretary's files, and only presented by him to the association in aggregate form. The data he will solicit will be:

- (1) How much time are you running?
- (2) What is your average daily production?
- (3) In what section of the country are you marketing your product?
- (4) What prices are you getting?
- (5) How much finished stock have you on hand?
- (6) How many unfilled orders (amount of stock involved) have you on hand?
- (7) How much raw material and stock in process of manufacture?

National Hickory Annual.

The annual meeting of the National Hickory Association was held at the Sinton Hotel, Cincinnati, Ohio, April 14. This meeting was by far the largest and most interesting conference ever held under the auspices of this or any other like association, indicating that the importance of the subject and the work of the association since it was launched has aroused public sentiment to the point that not only has the association been able to interest the government and secure its assistance in carrying out the objects of the organization, but that those engaged in any business which involves the manufacture or consumption of hickory are alive to the situation and understand that in order that their present interests may be protected great activity must be exercised and that there must be an economical use of the remaining supply of hickory to prevent its entire destruction.

Secretary F. A. Curtis of Chicago made a report covering in a general way the work of the association so far, the objects for which it exists and what it has accomplished. This report indicated that practical measures had been taken to economize in the supply and that other organized bodies, such as the National Wagon Manufacturers' Association and the National Hardwood Lumber Association, jointly with representatives of the

Forest Service, have appointed committees who conferred on the matter of grading hickory vehicle products, such as hickory axles, hickory eveners, singletrees, neekyokes, bolsters, reaches, etc., with the idea in mind of using all the material that could possibly be used rather than of excluding all that could possibly be excluded; that a standard of grades had been evolved which it is calculated will govern the production and consumption of these hickory products for all time to come, and, while these grades have not been finally approved by the associations, there is no doubt but they will be within the very near future. This illustration of the kind of work which is being done indicates one practical way in which the material can be economized and in which the waste of hickory can be stopped. The secretary's report also indicated that the Forest Service at Washington had taken up the commercial study of hickory and that at much expense and effort on their part hickory has been secured from various parts of the country, cut under the direction of Forest Service men after studying the conditions under which the hickory was grown, and samples from the various parts of the country have been gotten together and tested, to the end that information is at hand indicating the relative strengths of the vari-

A general discussion then prevailed on the future of the association and several large producers stated specifically that it is impossible to produce handles and make a living profit if sold at less than the present uniform list—75 per cent off. They stated frankly that unless a renaissance of good sense prevailed among the handle manufacturing trade at large they would be compelled not only to protect their trade with prices as low as the lowest—or lower still if necessary—on standard grade handles, but also would be forced to put upon the market off grade stock to meet the competition of irregular and unfair producers.

It was shown that producers of other hickory products, notably wagon and carriage material, were receiving a very fair profit on their lines of business; that they were showing nearly twice the value of hickory that was attained in handle production; on motion it was therefore resolved:

"That the present price list with its discount of 75 per cent is as low as handles can be produced at a living profit, and it is the sense of the association that prices should not be made below this quotation."

A proposition was then presented as to the wisdom of employing a competent agent of the association who shall be an experienced handle man, to conduct the affairs of the organization and advise on methods of production, grading, sales and every other feature that would tend to the betterment of the organization, and it was moved:

"That there be presented at the next meeting of the association the question of securing the services of a practical, competent and honorable man to attend to the interests of the association, and that every member be assessed pro rata on his monthly sales to cover the cost of such expense."

This motion prevailed and was followed by a second motion: "That the chair be instructed to appoint a committee on the employment of such a man, pending the approval of the association at the forthcoming Louisville meeting."

The motion was carried and the following committee named: Messrs. Sherman, Gregory, Gates and Hartwell.

It was urged that every member should use diligent efforts to secure the attendance of every hickory handle manufacturer of his acquaintance at the next meeting to be held at Louisville, Wednesday, May 20, probably at the Galt House, at which time the handle manufacturers will be the guests of the Turner, Day & Woolworth Handle Company and the I. F. Force Handle Company.

On motion a special committee of three on attendance was appointed by the chair, as follows: Messrs. Gibson, Gates and Hartwell.

Adjournment was then taken.

ous kinds of hickory and the adaptability of the various species for different purposes, such as bending strength, etc., which information is now available to any and all, including those who are engaged in the bending of hickory and who, if they desire, may make practical application of the information at hand. The secretary's report indicated that such work as that outlined above was only part of a very great amount of effort that has been exerted by the association through its officers and members.

Treasurer W. A. Snyder of Piqua, O., then submitted his report covering the finances of the association, after which the president appointed a committee consisting of Joseph Ashcroft of Poplar Bluff, Mo., and O. B. Bannister of Muncie, Ind., as auditors. This committee later submitted a report approving the treasurer's report, which action was confirmed by the meeting.

O. B. Bannister of Muncie, Ind., chairman of the Executive Committee, then made a report reviewing the importance of the plea of the association and the advantages to be gained by future work if financially supported by those interested, to the small extent of the annual membership fee, it being understood that this is a day of associations and conventions and that it is the policy of the

National Hickory Association to hold general meetings not oftener than once a year; the principal work of individual members is to lend their financial aid and the officers and committees do the actual work. It was indicated that when a sufficient number of members had been added the officers would recommend the employment of a permanent, paid secretary. As a result of the effort in this direction a number of those present, who were not already members, signed applications for membership.

President J. W. Herron, Jr., made a report for the officers of the association and touched on points in connection with the work of the government and the possibilities of influencing our lawmakers in framing and passing measures looking to the protection of the remaining standing hickory timber, deploring the failure on the part of Congress at its last session to pass the law making available the forestry reserve in the Appalachian Range, and indicating the desirability of renewing

E. W. McCULLOUGH, CHICAGO, VICE PRESIDENT.

seating the manufacturers of carriage and wagon shafts and poles.

Remarks were made by Harry D. Hartley of Windsor, Ont., formerly connected with the Forest Service and now practically engaged in the production of hickory vehicle stock; also, by M. E. Campbell of Tallahoma, Tenn., and W. H. Braddon of London, Ont.

The meeting was then thrown open to receive suggestions, comments or remarks, and an interesting discussion of points bearing on the subject followed, after which a motion was passed instructing the president to appoint a committee to nominate officers and committees for the ensuing year.

The committee appointed consisted of O. B. Bannister, Muncie, Ind.; W. A. Snyder, Piqua, O., and B. F. Von Behren, Evansville, Ind.

They recommended the following: That the same officers and committees be elected

as during the past year, with the exception of J. D. Dort in the place of H. C. Staver, deceased, to represent the Carriage Manufacturers' Association; J. M. Lack of the Lack Singletree Company, Paducah, to represent the singletree and neckyoke people, and P. C. Scott of the Keller & Tamm Manufacturing Company, St. Louis, to represent the handle manufacturers.

The officers were elected as follows: John W. Herron, president; E. W. McCullough, vice president; W. A. Snyder, treasurer; F. A. Curtis, secretary; O. B. Bannister, chairman Executive Committee.

The advisability of having a paid secretary to devote his time to the furtherance of the work of the organization was discussed and it was thought desirable to do so as soon as finances would permit. A motion was made that the matter of having a paid secretary be referred to a committee of three, to be appointed by the president; this committee to confer with the officers before mak-

JOHN W. HERRON, CINCINNATI, O., PRESIDENT.

agitation that would result in the measure being revived and approved.

The president then called upon members of the Advisory Committee for comments and suggestions as to possible new and additional measures which could be taken to advance the interests of the association. Those responding were: Geo. Terrell, representing the National Wagon Makers' Association; C. D. Fischer of Wapakoneta, O., representing the western carriage wheel manufacturers; D. E. Allen, Wilmette, Ill., representing the eastern wheel manufacturers; B. F. Von Behren, Evansville, Ind., representing the bent hickory felloe manufacturers; D. P. Cooper, Struthers, O., representing the manufacturers of buggy gear woods; F. W. Peters, New Albany, Ind., representing the manufacturers of hammer, axe and pick handles; Peter Lesh of Memphis, Tenn., representing the manufacturers of hickory carriage and wagon spokes; W. A. Snyder of Piqua, O., repre-

F. A. CURTIS, CHICAGO, SECRETARY.

ing any final selection. The motion was carried and the committee appointed consisted of O. B. Bannister, chairman; B. F. Von Behren and W. A. Snyder.

A resolution was offered by H. H. Gibson, representing the manufacturers of handles, as follows:

"Whereas, it is the sense of the National Hickory Association that a census of the standing timber of the country is not only desirable but essential to the future welfare of the woodworking industries of the nation, "Therefore, be it resolved, that an appeal be made to the Senate and House of Representatives of the United States for an appropriation to make a census of the standing timber of all varieties in the country to be made in connection with the forthcoming census report."

The resolution was adopted.

The meeting then adjourned to meet at the call of the Executive Committee.

Among those present were the following:

W. A. SNYDER, PIQUA, O., TREASURER.

F. W. Peters, I. F. Force Handle Company, New Albany, Ind.

A. P. Steele, Carrer Lumber & Manufacturing Company, Sads, Miss.

G. A. Lambert, American Central Lumber Company, Anderson, Ind.

C. O. Burkart, J. Burkart & Son, Caldwell, Ohio.

J. Burkart, J. Burkart & Son, Caldwell, Ohio.

W. A. Schuchert, Von Behren Manufacturing Company, Evansville, Ind.

The Mitchell Wheel Company, Miamisburg, Ohio.

W. A. Snyder, Pioneer Pole & Shaft Company, Piqua, Ohio.

L. L. Gillett, L. A. Gillett & Sons, Boston, Mass.

A. T. Gillett, Gillett Bros., Memphis, Tenn.

A. J. Gillett, Gillett Bros., Memphis, Tenn.

R. H. Guthrie, Royer Wheel Company, Cincinnati, Ohio.

W. E. Tindler, American Handle Company, Jonesboro, Ark.

W. E. Small, W. E. Small Spoke Manufacturing Company, Corinth, Miss.

A. B. Bamister, Muncie Wheel Company, Muncie, Ind.

J. L. Dann, Campbell & Dann Manufacturing Company, Tullahoma, Tenn.

R. L. Shover, Campbell, Mo.

Peter Lesh, Weis & Lesh Manufacturing Company, Memphis, Tenn.

Joseph Ashcroft, Bimel-Ashcroft Manufacturing Company, Poplar Bluff, Mo.

T. J. Gregory, T. J. Gregory Handle Works, Cookeville, Tenn.

W. H. Braddon, Columbia Handle Company, London, Ohio.

Henry C. Rudman, Southern Wheel Stock Company, Ironton, Ohio.

W. W. Merriman, Vehicle Woodstock Company, Chicago.

J. W. Herron, Jr., Royer Wheel Company, Cincinnati, Ohio.

H. E. Sheets, Sheets Manufacturing Company, Watkins, Ohio.

W. A. Ryan, Crane & MacMahon, Inc., Richmond, Va.

L. A. Bruner, Paoli Spoke Company, Paoli, Ind.

E. K. Cunningham, Cunningham Manufacturing Company, Fostoria, Ohio.

G. W. Saille, Saille & Rone, Risson, Ark., and Saille & Rone, Kingsland, Ark.

W. C. Powell, Meridian, Miss.

W. C. Howe, American Lumberman, Chicago.

Henry H. Gibson, Hardwood Record, Chicago.

S. E. Skon, Empire Bending Works, Lancaster, Pa.

Frank L. May, May Bending Works, Loudonville, Ohio.

W. M. Hamilton, Pioneer Pole & Shaft Company, Muncie, Ind.

H. R. Cunniff, La Crose Wagon Stock Manufacturing Company, Cape Girardeau, Mo.

D. P. Cooper, J. A. & D. P. Cooper Company, Siders, Ohio.

A. E. Mahannah, Mahannah Lumber Company, Memphis, Tenn.

J. H. Keyes, Standard Wheel Company, Terre Haute, Ind.

George C. Hore, F. W. Hore & Son, Ltd., Hamilton, Ont.

High Ford, Pioneer Pole & Shaft Company, Akron, Ohio.

Carl D. Fischer, Wapakoneta Wheel Company, Wapakoneta, Ohio.

A. L. Heston, McCrillis Handle Company, Newark, Ohio.

Charles Huse, American Lumberman, Chicago.

F. Hara, Canada Wheel Works, Merrittton, Ont.

George A. Dobbie, Vehicle Wheel Works, Gait, Ohio.

J. Hunsacker, Conover, N. C.

C. F. Colville, Metropolitan, Chicago.

J. C. Scober, Scober-Williams Spoke Company, Winchester, Ky.

High Ford, Pioneer Pole & Shaft Company, Wellington, Ohio.

F. P. Dyke, Sidney Manufacturing Company, Sidney, Ohio.

J. M. Skinner, J. M. Skinner Bending Company, Toledo, Ohio.

H. K. Hartley, Windsor Turned Goods Company, Windsor, Ont.

A. R. Friedman, Pioneer Pole & Shaft Company, Piqua, Ohio.

J. M. Skinner, J. M. Skinner Bending Company, Toledo, Ohio.

T. Stearns, Stearns Bros., Pontiac, Mich.

C. H. Stearns, Stearns Bros., Pontiac, Mich.

E. S. Mills, Muncie Wheel & Jobbing Company, Muncie, Ind.

W. H. Clark, Muncie Wheel & Jobbing Company, Muncie, Ind.

M. R. Campbell, Tullahoma, Tenn.

W. H. Merritt, Henderson Lumber Company, Henderson, Ky., and Poole, Ark.

John Storr, Corydon Hub Factory, Palmyra, Ind.

George McMaster, Mutual Wheel Co., Moline, Ill.

H. J. Wildermuth, Lamb-Fish Lumber Company, Chester, Miss.

J. H. McCormick, Chatfield, Ohio.

J. F. Haury, J. F. Haury Bending Works, Eshart, Ohio.

J. Frank Hutcheson, Spokesman, Cincinnati, Ohio.

W. H. Braddon, Columbia Handle & Lumber Company, London, Ont.

W. H. Braddon, Swain-Duy Lumber Company, Clay City, Ky.

J. J. Wiesner, Bookwalter Wheel Company, Mansfield, Ohio.

A. L. Johnson, Weis & Lesh Company, Muncie, Ind.

Louis H. Rogge, Zwick-Greenwald Wheel Company, Dayton, Ohio.

Louis H. Rogge, Zwick-Greenwald Wheel Company, Dayton, Ohio.

H. Heper, Arkansas Bending Company, Stuttgart, Ark.

F. M. Falk, Jonesboro Bending Company, Jonesboro, Ark.

C. A. Timlar, American Handle Company, Jonesboro, Ark.

E. J. Skinner, Skinner-Russell Company, Louisville, Ky.

T. A. White, St. Marys Wheel & Spoke Company, St. Marys, Ohio.

J. H. Leippe, J. A. Leippe's Sons, Reading, Pa.

F. X. Hara, Canada Wheel Works, Merrittton, Ont.

F. A. Curtis, Vehicle Woodstock Company, Chicago.

C. C. Hore, F. W. Hore & Son, Ltd., Hamilton, Ont.

Charles Krug, Hanover Bending Company, Hanover, Pa.

A. C. Eberly, Eberly & Orris Manufacturing Company, Mechanicsburg, Pa.

J. E. Buscher, Louisville Spoke & Bending Company, Louisville, Ky.

T. B. Clark, Manchester Manufacturing Company, Manchester, Tenn.

W. H. Frechtling, Frechtling & Horner, Shelbyville, Ind.

William Lebelzer, Philip Lebelzer & Son, Lancaster, Pa.

B. G. Lynch, Jonesboro Bending Company, Jonesboro, Ark.

Mr. Kelsey, Detroit Bent Goods Company, Detroit, Mich.

Mr. Thompson, Kelley-Maus & Co., Chicago.

Mr. Treadway, John Ernsdorf Iron Company, Dubuque, Iowa.

Mr. Kneecamp, Beck & Corhitt Iron Company, St. Louis, Mo.

Mr. Davis, Shadbolt & Boyd Iron Company, Milwaukee, Wis.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries as reach this office from the Hardwood Record clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

Is This a Reflection on Perrine as a Lumberman?

PRINCETON, IND., April 10.—Editor HARDWOOD RECORD: We notice in your March 25 issue an item from the Indianapolis News, to the effect that we have purchased a tract of land in California on which there are said to be 3,000,000 feet of cedar. Will say that this tract is in British Columbia, about two and one-half hours' ride with a horse and buggy from the center of Vancouver. We expect to run an electric line out into the timber and haul the logs in to the bay in this way.

Want to say that the poem our friend Perrine had published in this number, entitled "Who Would Be a Camel?" is surely worth the price of your paper for one year. Have had more laughs over that than thing out anything I ever took up. He surely ought to have those published in book form. He would make more money out of them than out of the lumber business!—A. B. NICKKY & SOSS.

Wants Dredge and Ship Timbers.

FORT WAYNE, IND., April 11.—Editor HARDWOOD RECORD: We are particularly anxious to be put in touch with some firms that use dredge and ship timbers, and will appreciate it if you will make a request for these in the "Hardwood Record" Mail Bag.—LUMBER COMPANY.

Any reader of the RECORD interested in the above inquiry will be cheerfully supplied the address of the correspondent on application to this office.—EDITOR.

The Consignment Evil.

NEW ORLEANS, April 13.—Editor HARDWOOD RECORD: The consignment evil seems to be getting worse from day to day, in spite of all the endeavors of sensible shippers to stop this practice, and in spite of all the protestations from shippers on this side that they do not ship on consignment. I give you herewith an extract from a letter from our foreign house, which speaks for itself, and I wish you would publish it, that it may have as wide publicity as possible.

"...course we expect that you have not bought this stock, for we did not telegraph you an order for it, and only said that could possibly sell this quantity. From our letters you will have seen

In the meantime we do not take this order, first of all, because you wanted \$1 more and the buyer would not pay this; in fact, this buyer says he will not even uphold his last offer, for he claims this special stock is arriving at ——— now by almost every steamer and he can buy these consignments at cheaper prices than he has to pay on firm orders. Of course, he is perfectly right in this and from his standpoint it is certainly the best he could do, not to close any firm order if these consignments continue, for there is no doubt that he can buy stock consignments at any old price he wants to pay, for anybody will be glad to turn the stock loose at cost price or less, to avoid the storing of same. The fact that we could not get this order through at our price on account of these consignments proves the foolishness of the American shippers, who consign just that stock which is badly wanted at ——— and for which the buyers would have had to pay the regular price, or any price that the shipper would ask, if he had made no contract with the seller. ——— has made no contract with the government, he is bound to furnish, he can only get the stock in America, and would finally have to pay whatever price the seller wants for it. Now, these fools of shippers over there go ahead and consign this stock, and let themselves be slaughtered by this man, who this year is the only buyer for this special stock, as he is the one who got the government contract and nobody else. Instead of waiting quietly until his want becomes so urgent that he must pay a good price, they give their lumber for nothing. Of course, under such circumstances you understand that we cannot touch this order now."—LUMBER COMPANY.

Trouble in Kiln Drying Gum.

PITTSBURG, PA., April 9.—Editor HARDWOOD RECORD: We have a customer who is very anxious indeed to use red gum for the purpose of making mouldings and store fixtures. He has a car of red gum now in kilns, but apparently does not know how to properly kiln dry it, for it is so badly warped at the present time it does not look as if he would be able to use any of it. In the interest of encouraging trade we write to ask if you have any data on this subject, as it would be very much indeed to know a method of properly kiln drying red gum, and any information will be highly appreciated.—COMPANY.

Specifically, the writer knows very little about kiln-drying. However, thoroughly air-dried gum lumber, when dried in a good kiln, can be seasoned without serious warping or checking. About two-thirds of the kilns that are in use to-day are of little account,

and it is easy to spoil good lumber in them. There should be no attempt to kiln dry red gum unless it has been on sticks for at least a year, and two years is a good deal better. The Singer Manufacturing Company, the largest users of red gum in the United States, are giving their wood four years' time before putting it into their kilns. They use it exclusively as cores for their sewing machine tops. If you will buy gum of some good concern and explain to them that you want thoroughly air-dried stock, you won't have any trouble in kiln-drying it without warping.—EDITOR.

Criticizes Cartoon.

PHILADELPHIA, April 15.—Editor HARDWOOD RECORD: We noticed in your last issue a cartoon showing a fat donkey with an eastern man hanging on to his tail. Please be kind enough to reverse this cartoon in the next issue, and have a thin donkey with a big load of lumber—3905 inspection—that he cannot quite pull, with the empty dry kilns in the East and the bags of money waiting for him, if the West can straighten up its inspection so as to meet eastern requirements. We merely give you this as a suggestion, since we would like to see the thing reversed.—COMPANY.

Correct Weighing of Cars an Important Subject.

The HARDWOOD RECORD is in receipt of attached correspondence covering an important subject which, while not new by any means, is always worthy the attention and investigation of lumbermen. Shall be glad to hear any further views upon it, and to know if any definite action is taken. Doubtless our correspondent, Chas. S. Wentworth & Co., the well-known Boston hardwood house, would like to enter into communication with other large shippers upon this point, with a view to filing a formal complaint and having the hearing suggested by Commissioner Prooty.—EDITOR.

BOSTON, April 10.—Editor HARDWOOD RECORD: We have been having a good deal of controversy the last few years with various railroads in regard to the matter of weights. We have found it to be the general custom to weigh cars without uncoupling them, and in many instances they have not even stopped the train. It stands to reason that a just and true weight cannot be obtained in this manner. To the shipper of lumber this is a particularly important matter, for he sells his commodity by the thousand feet, or pieces, whereas he must pay freight by the hundred pounds. The greatest error in weight in our experience was one of 18,700 pounds, then one of 10,200, and so on down to a few hundred pounds. We think that shippers of lumber ought to stand together in this matter and urge the railroads into according true and reliable weights, which can only be obtained by weighing cars in a true and reliable manner, i. e., mottonless and uncoupled. We took the matter up with the Interstate Commerce Commission about a year ago and the following is a copy of our letter of May 4, 1907, to Hon. Charles A. Prooty, commissioner, and his reply under date of May 9:

"Dear Sir: Through your kind efforts the N. Y. N. H. & H. R. Co. and the B. & M. R. Co. have both been brought into line, so that of late there has not been any trouble in regard to the matter of weighing, none in fact since you kindly intervened in the matter. Some of the roads have recently 'sprung a new one,' which is to the effect that the weight must stand 'as obtained,' or, if the weight is not used, their

schedule of estimated weights must prevail. Has there been any ruling as yet by the Interstate Commerce Commission, in regard to the matter of weighing? It seems to be the practice among a good many of the roads to weigh cars without uncoupling and while in motion. Of course this is not a fair way to do. Individually, it is quite impossible to bring about a reform. The simplest way out of it would be to have a ruling from the commission, if the matter is within its jurisdiction—and it seems to be the writer it is, owing to the fact that weight plays an important part in making up charges. Regretting to be obliged to trouble you again in regard to this matter and hoping for an early and favorable reply, CHARLES S. WESTWORTH & CO."

"Charles S. Wentworth & Co., Boston, Mass.: Replying to your letter of May 4, regarding the weighing of cars while in motion, this commission has not made any ruling in regard to this matter inasmuch as it does not have jurisdiction over the physical operation of a railroad. We could, however, investigate and make an order if it was found that this method of weighing resulted in the imposition of a higher charge than would otherwise be made if the cars were weighed uncoupled and stationary. We can of course make no investigation of this matter except upon the filing of a formal complaint and a full hearing of all parties.—C. A. PROOTY, Commissioner."

This being a matter in which all lumbermen are vitally interested, the writer has taken it upon himself to address you on this subject, believing that you can do a great deal of good in effecting a much-needed reform through the columns of your valued paper.—C. S. WESTWORTH & CO.

Identifying Oak Timber.

WICHITA, KAN., April 15.—Editor HARDWOOD RECORD: We have today sent you by express, charges prepaid, a piece of hardwood lumber which we are doubtful about classifying; Mr. Kelso of the Western Planing Mills has suggested that we refer the matter to you. We want to know if this piece belongs to the white oak family—that is, if not white oak is it post, bur or pin oak, or does it belong to the red oak family? We have some 6,000 ties which we have purchased, and we pay ten cents more for white oak or oak of that family than we do for post. Inasmuch as you are disinterested we thought you could give us a good, unbiased opinion on this stock. The sample sent is typical of the timber in question, and we will gladly pay any expense you may incur in deciding.—RAILROAD COMPANY.

The Veneer and Panel Trade.

[Under this caption the RECORD will hereafter undertake to publish items of interest to manufacturers of thin lumber, veneers and panels, and of thin veneer manufacturers, and issues statements of market conditions, inquiries or news of individuals, new factories, casualties, etc., pertaining to this line, which may come to their notice.]

THINK IT OVER.

What does it profit a man if he tries to gain the whole world and loses his veneer plant?

For two years past thin lumber and panel manufacturers have been trying to place themselves in the independent position of controlling their own business. Up to that time they formed a free-for-all contribution society for the benefit of manufacturers of furniture and other buyers of their product. Because J. Pierpont Morgan and the Baptist Standard Oil Company concluded to have a little panic and stop big business for a time, orders got scarce in the thin lumber and

It is impossible to accurately botanize a small piece of wood. To do this properly one must needs not only have a specimen of the wood, showing both heart and sap, but should have also a section of the bark, specimen of foliage and, if possible, the acorn or whatever the seed pod growth may be. However, there is enough bark attached to this specimen to demonstrate, with the aid of the wood, that it is certainly not white oak (*Quercus alba*). Nevertheless, I am equally certain that commercially it would be regarded and marketed as belonging to the southern white oak family. It may be post, bur, pin, cow, overcup, chestnut or forked-leaf "white" oak. All these varieties are admitted to the family commercially. The specimen is a good one and will satisfactorily fulfill requirements for tie purposes.—EDITOR.

Referring to a New York Embarrassment.

NEW YORK, April 15.—Editor HARDWOOD RECORD: I wish to call your attention to the direct cause of my present trouble. The situation is simply this: I was pressed by several banks in Virginia, who held my acceptances for quite a large amount, drawn in favor of D. E. Cogbill of Boydton, Va., and discounted by him. These acceptances were in the form of advances which were to be covered by shipments of lumber before they came due. This Cogbill did not do, and when he got in trouble the banks took action against me, and at a time when the financial panic was on. This seriously embarrassed me, especially as I had many local losses aggregating many thousands of dollars. I wish to state, however, that my creditors, with the exception of above parties, have treated me very fairly, and I practically arranged with all of them for an extension such as would give me relief and would mean that I would ultimately pay out. These banks practically agreed to the same proposition, but at the last moment refused to do so unless I gave them certain security, which I would not to the detriment of my other creditors, the result of which forced the action. I shall continue the commission business under the name Minter Lumber Company, at 25 West Forty-second street. I cannot yet say what action I will take to further protect my interests and those of my creditors.—S. F. MINTER.

panel trade, and some of our good old praying brethren who had been adding to their wealth by getting a fair price for their manufactured material thought that the world had just about come to an end; they knew somebody was taking their trade and were just bound to get business—they had forgotten the other fellow was running only half the time. They had the question of overhead expenses and other things facing them and thought it was better to go out and buy in some trade rather than be satisfied to stand a little loss because the plant was shut down half the time.

Now, what have they gained by this? They've just demoralized the several branches of the thin lumber trade! Of course, they got an order or two, but a canvass of the situation in the various lines will show that all are in practically the same condition—manufacturing forty to sixty per cent of the

normal amount of stock and selling it ten or fifteen per cent cheaper than they should, besides causing men in and out of the association to point their fingers at these good old praying members for doing something they knew right down in their hearts they shouldn't do.

Every industry, starting with Judge Gary and the steel corporations, has endeavored to get together and talk it over and try to realize that there is just so much business, with capacity for twice as much as there is to be had; and most manufacturers have had the good sense to sit down and look out the window and figure out the future, but have not gone out to buy trade. Sad to say, the same does not hold good with some of our friends in the veneer trade. The fact is that if they were a little younger we would feel like taking them over the knee and using a skillet or a piece of heavy thin lumber on them!

Of course, if these people want to follow out the old Bible quotation and lose their factories, let 'em go ahead; but in the end it will be seen that a lot of other people in the thin lumber business had sense enough to take care of the assets they had accumulated and not throw them away just in order to run their old veneer plants!

INVESTIGATE.

In these days when trade is dull it is so easy to be guided by the buyer that some of our strong-necked friends have been led into the grievous error of swallowing all the confidential talks of the buyers. They have been satisfied that what is said was the truth—that "John Smith had cut the price of quartered veneer," and that the lumber manufacturers were cutting the price, too; but he lied.

Now, what's the use of being a lobster? Be a man or a mouse or a long-tailed rat, but don't go to town and walk into the furniture manufacturer's plant, and 'fess up that you haven't got an order to your name—that the plant has shut down and no telling when it will start up again—and you have a note to pay next month, and must have an order at any old price to get the money to take it up, etc., etc.

Now, what can you expect? Do you suppose these purchasing agents are hired just to look pretty and wear red neckties, or are they there to buy stock just as cheap as they can get it? Why should a manufacturer in fairly good circumstances, with plenty of good timber within easy reach, and a well-equipped plant, lose his head just because trade is dull with him? If he would compare notes with other manufacturers in any line of trade, in any part of the country, he would find that the volume of business is not over fifty per cent what it was this time last year. That being the case, why not be satisfied with the fifty per cent from regular customers, and not go around with head bowed down, or kneel to a buyer in order to force him to take something at

cost or less? It's a long, hard pull to get prices up where they belong and if you are responsible for helping break these prices at this time it may take you until 1920 to get them back again.

Therefore, when you are looking for trade and find Mr. Buyer has something awfully good offered him, let him buy it from the manufacturer who wants him to take body, soul and breeches at cost or less—or make him show you, but don't let him put his finger over the date on the bill in hand!

Investigate—don't imagine that prices have been demoralized when you make your own quotation.

Large Veneer Plant Changes Hands.

The Blair Veneer Company of North Troy, Vt., purchased at public auction, April 9, the entire property of the Veneer Box & Panel Company of Greenville, Me., consisting of a two-story mill, 350x100 feet, completely fitted with new machinery and appliances throughout; also a twelve-room boarding house and large saw on Moosehead Lake, with 700-000 feet of logs.

This property is situated on the south shore of Moosehead Lake, in a fine hardwood territory, mostly birch. The mill was built new in 1906, fitted with the latest and most up-to-date machinery, and operated for the manufacture of veneer panels and box shooks for one year, when it was closed, and finally went into the hands of a trustee.

This is the largest and best equipped veneer mill in New England, and it is the intention of the new owners, who are experienced veneer men, and who have similar mills at North Troy and Montgomery, Vt., to start this plant in the near future for the manufacture of built-up stock and boxes as before. The present management will insure a successful operation of the business.

Notwithstanding the very unsettled state of the financial conditions of the country the Blair Veneer Company has been running its mills full time all winter and spring, and expects to run the old plant continually, as well as start up the new one just purchased.

News Notes.

Lay & Valton are building a veneer manufacturing plant at Portsmouth, Va., which is rapidly nearing completion. The company will commence operations with the manufacture of butter-trays, berry-baskets and vegetable-crates; later it expects to produce finer material, such as mahogany and walnut veneers for the furniture trade.

The National Veneer Products Company, with plant at East Mishawaka, Ind., will in future manufacture its "Indestructo" trunks in newer, larger quarters. There is a good demand for these veneer trunks, which, though light, are very strong and attractive in appearance.

W. A. Beitner of Traverse City, Mich., is anxious to remove his plant to a southern location. The Chamber of Commerce of Beaumont, Tex., is trying to induce Mr. Beitner to remove to that city. The Michigan plant employs about two hundred people, and turns

out chair stock, plates, butter-dishes and other similar products.

The Radford Veneer Works at Radford, Va., have resumed operations, and are optimistic as to future trade.

The Standard Table Company has been organized at Avoca, Ia., and has bought the plant of the Jamestown Veneer Door Company at that point. The company will at once begin the manufacture of dining-room furniture. J. H. Frew is president.

The Birchwood veneer plant, Birchwood, Wis., has resumed operations, as has the sawmill connected with it. Superintendent White says the concern will employ fifty to sixty men the rest of the year.

The Diamond Match Company's veneering plant at Chico, Cal., has commenced operations. Orange slats are being manufactured, but only a few employees will be engaged until after the directors' annual meeting in May.

Burdis Anderson, secretary and treasurer of the Great Lakes Veneer Company, manufacturer of rotary cut veneers and thin lumber at Munising, Mich., has been in New York recently, attending a hearing before the Official Classification Committee, as a representative of the National Veneer and Panel Manufacturers' Association, of which he is president. Mr. Anderson hopes he has been successful in securing satisfactory adjustment of some railroad matters which have been pending between this committee and his association for some time.

The Burnsville Veneer Mills, Burnsville, W. Va., which were destroyed by fire a month ago, are being rebuilt as fast as possible, and it is expected that they will be ready for operation again in sixty days. D. H. Gowing, president and manager of the concern, will remain in Burnsville until the mill is completed. The plant will be larger than the old one; the mill proper will be 96x120 feet, three stories; cutting room, 24x96, one story; machinery room, 32x96, one story; boiler room, 42x28; engine room, 20x30. The sawmill was the only part of the old plant that was not burned. Mr. Gowing also has a plant at Syracuse, N. Y., where he has his main office.

The Inter-State Veneer Company is a new concern at Richmond, Va., which manufactures inside trim for cars, houses, etc.

B. W. Lord of the Chicago Veneer Company, Burnside, Ky., attended the hearing given members of the Veneer and Panel Manufacturers' Association, by the Official Classification Committee, in New York recently. His company reports business improving, and that it is receiving a number of good orders. About 2,000,000 feet of choice logs have been gotten in of late, and the mill is running full time.

The Edgar Veneer & Box Company, Edgar, Wis., has been incorporated with a capital stock of \$15,000. The incorporators are: A. W. Puchner, M. N. Schill and Peter Pesteen. A plant will be erected by the company at Edgar this summer.

The Utilization of Hardwoods.

ARTICLE III.

The Manufacture of Bar Fixtures.

This is not a temperance article, but simply a record of what an observer saw in the bar fixture department of the Brunswick-Balke-Collender Company's Chicago plant, which is one of the very few factories of the kind in that city.

Before starting to make the rounds the writer was warned that he need not expect to see the bar fixture department at its busiest. "The prohibition agitation that is having its innings over a large section of the country just now, combined with the money scare, naturally has seriously affected this department of the business. In the South the trade has suffered a grievous blow, and saloon men

are oak, which is the favorite, mahogany finished curly birch, and genuine mahogany. As an evidence of the unwaning popularity of oak, all the stock styles produced in the plant are offered in oak veneer, and several in that wood alone; both the plain and quarter-sawn varieties can be had. Bar tops are always made of solid hardwood in this factory, the reason being obvious. They are often of solid mahogany. The veneers in these bar fixtures are of five-ply construction. For the body of the bar poplar is employed. This wood may also be utilized for the binding veneers.

Bars vary in length from twelve to thirty

ARTISTIC STYLE OF BAR WITH CARYATID DECORATION.

everywhere are proceeding cautiously," said the superintendent.

Whatever a lumberman's standpoint on the liquor question may be—it is said to be "favorable" in a great many cases—he knows that the saloon man is a good customer for hardwoods. Nowadays there is considerable rivalry among saloon men with regard to the beauty of the furnishings in their places of business. They know that a handsome interior attracts trade, imparting an air of decency and respectability to the premises and thus, by reflected light, to the proprietor himself. Consequently the large amount of special, made-to-order work turned out in the bar fixture line is not surprising, nor is the richness of design to be observed in many finished and unfinished orders in a high-class factory.

to give some idea of this imposing design.

Another handsome stock bar, which has long been popular with the wealthier class of saloon men, has massive round columns, shown in one of the illustrations. It presents a peculiarly imposing appearance and is often demanded in mahogany veneer. This is one of the most expensive stock bars on the market.

Lions' heads, in various sizes and always artistically carved, are prominent features of many back bars. In one design there are no less than thirteen of these heads, with electric light fixtures protruding from the jaws, the whole forming parts of three arches overhanging as many mirrors. The veneers employed often exhibit fancy grain and the acme of fine finish.

The veneers ordinarily used for bar fixtures

feet, while back bars, from floor to top of mirror frame, run from nine feet six inches to nearly fourteen feet; thus a good supply of wood is used in each.

There are numerous stock styles of back bars, bottle cases, front and wine room partitions, summer doors, bar screens, window screens, display cases, wall cases, coolers, lunch counters, tables, chairs and all the great variety of objects fashioned of wood or iron that come under the general term bar fixtures. Oak and birch are the hardwoods most in evidence, though front and wine room partitions are sometimes furnished in real mahogany.

One of the most interesting sections of a factory of this kind is the wood carving department. Many hand carvers were at work, and the carving machines were fully manned. By observing the operations of the skilled ar-

A POPULAR AND SERVICEABLE BAR.

tisans who direct the movements of these near human machines it may be seen how it is possible to embellish great surfaces of hardwood with wonderful designs in a comparatively short time, and produce a work of art in the process.

One of the handsomest bars to be seen anywhere in the United States, it is said, is in the New Brevoort House, Chicago. The entire furnishings of this bar are the production of the Brunswick-Balke-Collender Company. The room forms a sort of rotunda, with an arched roof of art glass, through which subdued light filters, supplemented by electric fixtures of handsome design. The bar is circular, with counter of fine mahogany, but the panels and columns, which in other bars form the support of the counter, are in this case replaced

by art glass. This feature probably remains unnoticed by a large number of the patrons of the buffet, as this part of the glass work is not illuminated by either artificial or natural light. The hand-rail is formed by a complete circle of transparent imitation cut glass which is lighted up from within by a series of incandescent lamps attached to the brass rings that divide the rail into sections. The back bar is also circular and occupies the center of the room, counter and back bar thus forming concentric parts. The latter is largely of marble and brass, with several tiers of marble shelves. Up through the center shoots a great vase of cut glass, and this too is brilliantly illuminated from within. The center of the large dome is directly above the center of the vase. The dome forms a

sort of hemisphere and around its sides, directly above the space in which the customers stand, are smaller glass hemispheres. The mosaic flooring beneath these smaller domes corresponds quite minutely with them in design. The sides of the room are mainly of mahogany, but in one place there is a magnificent large art glass window representing a female figure, and brightly illuminated from without. Two cosy corners finished in mahogany form recesses in the wall, thus preventing a set appearance in the design. The furniture is mahogany, and the chairs are heavily upholstered in leather. While the art glass plays a most important part in the general decorative scheme, the large amount of mahogany employed "sets it off" with just the proper richness and tone.

News Miscellany.

West Virginia News Notes.

At points along the Western Maryland railroad in West Virginia as much as 145,000,000 feet of lumber is in place. This abundance is due to the recent financial flurry, in a way, and many owners are hard up-in-consequence. The timber market in West Virginia is not as good by any means as it might be, and different persons ascribe the conditions which exist to various causes. Some say that the dealers have created too high prices, and others claim that the prices which prevail are due to natural consequences; it is well known that timber is getting scarcer every year. In the lower end of the state the lumber supply is greater even than that along the Western Maryland and Baltimore & Ohio railroads, and a more liberal market would relieve the business situation greatly. Demand will surely arise ere long, but there is no promise of a reduction in price. According to lumbermen there is expected to be no particular reduction in timber, notwithstanding the absence of demand for lumber at this time.

Fire which originated in the plant of the Kentucky Coal & Lumber Company at Open Fork, Nicholas county, W. Va., destroyed almost the entire town on April 10. The plant was a total wreck and was insured for about \$7,000, which will cover only about half the loss.

J. W. Romine Lumber Company, Parkersburg, which has been in business a little over a year, is enjoying an excellent trade, and Mr. Romine anticipates a good summer business. The company has well appointed offices in the Central Bank building, where the trade is always made welcome.

The Hemlock Lumber Company, Charleston, W. Va., will begin operating its new plant just south of town about June 1. This mill is now under construction and when completed will be one of the most modern plants of its kind in the state. New machinery of latest type will be installed, and a hundred men will be employed. It will manufacture flooring, siding and mouldings.

The Hazelwood Lumber Company is a new con-

cern at Hazelwood, capitalized at \$300,000. It will do a general wholesale and manufacturing business and has timberland that it is estimated will take twenty-five years to clear up.

The C. L. Ritter Lumber Company of Avoca is enjoying an excellent business. Manager Gerhardt says sales for the month of March exceeded those of last year for the corresponding month, and present indications point to the same conditions for April. The Ritter company has been located at Avoca for years and has about two months' saving yet on this tract of land. It has extensive holdings in Kentucky and an option on 20,000 acres in close proximity to its present mill.

W. H. Bailey & Co. of Grafton was established in 1808 and is a manufacturer, wholesaler and exporter of West Virginia hardwoods. The mills of this company are located at Walkersville. They make a specialty of dimension stock and can supply the trade upon short notice for almost anything in this line. Business is exceptionally good with them.

The Biggs-Wilson Company has been incorporated under the laws of West Virginia and will do a general wholesale lumber business and sell soft timbers. The office of the company and sell timbers. The office of the company is located in the Frederick building, Huntington, W. N. Biggs is president and treasurer; Joe L. Wilson, vice president and general manager; S. G. Biggs, secretary; these, together with S. M. Trimmer, constitute the board of directors. Mr. Biggs is well known to the trade and has been in the business for many years, having been connected with the most prominent lumber men in the state. With such men as these at the head of the company it will have unbounded success.

Ohio News Items.

The Domestic Lumber Company of Columbus, although only a few months old, is booking some fine orders, and indications at this time are that they will have all the business they can care for in the very near future. Mr. Taylor, president of the company, said: "We are getting a good fall volume of orders, and cannot say why the cut lumber trade will not reach sixty per cent of last year during this season. As matters now stand we feel that all the people need to have done to them is to have their confidence in values restored, when they will buy for their full needs and anticipate to a certain extent. Unquestionably there are quite a number of items in the lumber catalog today which are worth more than money in the bank. Up to now it has been hard to get buyers to understand the real situation. Did they realize the scarcity of stocks in the field they would not hesitate to load up on present basis of values, as by so doing they would make the biggest rate of interest they ever did in their lives. Good luck to all lumbermen."

In a recent interview Albert Brigardier of Columbus, who has extensive holdings in the forests of West Virginia and Kentucky, and who is well qualified to speak of the situation from the standpoint of an owner and operator, said: "In my opinion it will not be a matter of more than twenty-five years until the timberland of the South will be cut almost clean. This section of the country is now supplying probably one-half of the United States with timber, but at the rate it is being cut there is little probability that it will last longer than a quarter of a century. There are thousands of acres of timberland, but there is a remarkable demand for all that is cut. Our two mills in this district turn out more than 800,000 feet of lumber in a month each, and oftentimes it runs as high as a million feet. We have demand for almost all of it each month. Corporations and firms are entering the huge forests on all sides and building railroads over high gorges, overcoming the greatest difficulties to get this lumber out to where it can be shipped to various parts of the country. The timber in these districts is secured only at an enormous expense and it does not pay a man to try to cut a few hundred acres. The great expense entailed to get at lumber and the cost of operation is a great factor in the high price of lumber today. The timber in our possession consists mostly of oak and poplar, but we have everything from walnut to pine. Oak and poplar are holding their price while pine seems to be declining. There was a time when one could have purchased an acre of valuable timberland in this district for \$6 or \$7. It is a great deal higher than that now, I can assure you, and it is going higher. The land, however, once rid of timber, is practically valueless as a farm. It sells cheaply and often goes for \$2 an acre nowadays, the owner reserving the mineral rights."

The Cleveland Onondaga Lumber Company, which was recently incorporated under the laws of the state of Ohio, for \$100,000, with \$75,000 paid in, is having a very satisfactory business. The general offices of the company are at 233 The Arcade, Cleveland, with mills at Oconee, Ga. It

manufactures and wholesales hardwood lumber of all kinds, and has about 2,400 acres of standing timber. The mill is newly equipped with all modern machinery steam engines, Fay-Eng band mill, etc. There is a standard gauge railroad of twenty-five miles with cars and engine. The timber is very large and said to be of the finest quality in the South, and is one of the most desirable tracts in the state of Georgia, and very accessible for export trade as well as domestic. Officers of the company are: President, J. George E. Meier; vice president, Will Mace; secretary, Neal Meier; treasurer, M. Powell. The company was organized by Mr. Meier, who is also president and manager of the Interstate Lumber Company of Cleveland.

Owen McNally of the McNally Lumber Company, manufacturers and wholesalers at Oswego, N. Y., was in West Virginia and other southeastern states this month placing orders for three million feet of basswood.

Suggestions for Careful Consideration.

A quotation from a report of the United States Forest Service, issued in September, 1907, is as follows:

"We have apparently about a fifteen years' supply of hardwood lumber now ready to cut. Of the four great hardwood regions the Ohio Valley states have been already almost completely turned into agricultural states, and the lakeshores and the lower Mississippi Valley are rapidly following their example."

"In the Appalachian mountains we have extensive hardwood lands, which have been cut and greatly damaged by fire. These are practically all in private hands, and while they contain a large amount of inferior, young timber, they are receiving little or no protection, and even such young timber as exists is making but slight growth. Even if these catover lands were rightly managed they cannot greatly increase their yield of merchantable timber inside of thirty to forty years."

"The inevitable conclusion is that there are lean years close ahead in the use of hardwood timber. There is sure to be a gap between the supply which exists and the supply which will have to be provided. How large that gap will be depends upon how soon and how effectively we begin to make provision for the future supply. The present indications are that in spite of the best we can do there will be a shortage of hardwoods running through at least fifteen years. How acute that shortage may become and how serious a check it will put upon the industries concerned cannot now be foretold. That it will strike at the very foundation of some of the country's most important industries is unquestionable. This much is true beyond doubt—that we are dangerously near a hardwood famine and have made no provision against it."

Why cannot the hardwood operator assist the government in establishing a system whereby conditions which we believe are of vital interest to the consumer as well as the producer may be kept normal? Although January, February and March each showed an increase in business over the preceding month since December—compared with last year—there is a decided decrease in the amount of business in the aggregate, which will hardly be overcome during the next nine months, for the reason that former business conditions will not become markedly apparent much before the end of the year, if at all. It is figured that only about 60 per cent of the business secured last year will be realized the present year.

Now, since this condition exists, *there should be no more lumber produced than that amount.* A large production means a series of low values and a slower movement of material. The costs of manufacturing have not been lowered sufficiently to meet such conditions without a tremendous loss to sawmill operators. The river mills are in a peculiar position; they are forced

to saw all their logs which came out with the winter tides and were felled in the woods last year. These mills will continue sawing, but they are not logging, and are running on high-priced timber purchased last year when there was a scarcity of logs. The interior and mountain mills are only running on logs they have cut in the woods to save them from worms and rot. This condition is more prevalent in the Mississippi Valley section than in any other portion of the country. It seems a hardship to the mountain or interior mills to shut down while the river mills are running, but as river men are not logging this year, and will no doubt be forced to carry over certain stocks for next spring, the mountain mills will be doing business while the river mills are awaiting their log tides the following season.

This condition has existed in the past, and is a fair one to follow on the "turn-about" principle—while one section is running the other should not necessarily follow suit, and vice versa. Lumber cut now, if held too long on sticks, will go to waste, owing to the climatic conditions; thereby the opportunity of marketing the cut will be lost.

Forest methods are natural ones, and the wisdom, based on past experience and a knowledge of present conditions, would be to cut down trees only when they are needed. By such methods our forests would be preserved, our needs of consumption would be better regulated and the industry as a whole more up to date and provided with fresh stocks. LEWIS DOSTER.

Annual Southern Cypress Manufacturers' Association.

The fourth annual meeting of the Southern Cypress Manufacturers' Association will be held at the New Grandview Hotel, New Orleans, on Wednesday, May 29, at 10 A. M., and will continue during that day and the next. It will be the first meeting held by this organization for some time and a large number of important matters will come up for consideration. President Frederick Wilbert and Secretary George E. Watson urge that there be a full attendance, and believe that in view of the present dull times no business engagements should be considered of sufficient importance to keep those interested in cypress mills far away from the conference. Details and program of the meeting will be announced later.

Handle Trade Notes.

The Ferguson & Wheeler Land, Lumber & Handle Company of Poplar Bluff, Mo., has been incorporated by William Ferguson, George P. Wheeler and William S. Welsh. It is capitalized at \$300,000.

The El Dorado Hardwood & Manufacturing Company of El Dorado, Ark., has increased its capital stock from \$10,000 to \$25,000. C. S. Jackson, president of the company, is an active member of the Handle Manufacturers' Association.

The Marmaduke Handle Company of Marmaduke, Ark., has filed articles of incorporation with the secretary of state. The company is capitalized at \$1,500 and the incorporators are Jacob Glascock, W. E. Talley and A. E. Bendol.

Dispatches from Shreveport, La., say that another factory for that city may be secured within the next few days in the Hugo Hand Company of Poteau, Okla., and that a representative of that concern recently visited Shreveport for the purpose of acquiring a site.

Indiana Still in the Ring.

The Smith & Randall Lumber Company of Fort Wayne has just shipped three carloads of the largest timbers that have been seen from Fort Wayne in a single order for many years. The shipment was made to Point St. Charles, Canada, and the lumber was for the Canadian government, to be used for locks in the construction of the large canals now building there.

The planks were oak, twelve inches thick, twenty-four inches wide and thirty feet in length. There were thirty-two of them, and to fill the order required thirty-two trees, each four and a half feet in diameter at the stump and nearly two and a half feet in diameter at the top, each tree producing but one of the big timbers.

The singular thing about it is that nearly all of these trees grew within four miles of Fort Wayne, and none of them came from a distance greater than six miles from the courthouse. This shows that despite the heavy demands upon the timber supply in this region, there is still some big timber to be found in the vicinity of Fort Wayne.

Hardwood Timber Deal.

The Crocker Chair Company of Sheboygan, Wis., has purchased from D. F. Sanborn & Co. of Ashland, Wis., 6,103 acres of hardwood lands in Houghton and Baraga counties for \$86,569.56. The lands are adjacent to Sidnaw and the timber will be cut at that place and then shipped to Sheboygan to be worked into the finished product.

The Crocker Chair Company has a large plant at Sheboygan, and is on the lookout for more hardwood lands farther north.

New Heavy Hardwood Moulder.

That veteran and high-class woodworking machinery house, the H. B. Smith Machine Company of Smithville, N. J., has just turned out a new and improved type of heavy moulder. It is known as No. 133, a heavy 7 inch moulding machine, and is especially adapted for working hardwoods, and is shown in the accompanying full-tone engravings. It is called the "Singer Moulder" because it was especially designed for an important concern of that name, and large numbers of them are in use working up the materials for hardwood sewing machine cases. The machine is strictly up-to-date in all respects and as compared with other moulders is more convenient to set up and adjust, is much more strongly driven and has a very powerful and positive feed. It may be described as follows:

The frame is cast whole, and is 28½ inches wide by 8 feet long, which gives ample room for long and wide belts. The design is of strongest possible form and admits of easy access to the inside vertical head; and it also supports the table close to the under head.

The table is extra heavy, adjustably gibbed to the frame and adjusts up and down by a single screw which rests on ball bearings and is adjusted by a wrench from the front. For deep work it will drop as low as 9½ inches, or by removing the outside head-stock, as low as 12½ inches. When the table is adjusted to position it is then clamped firmly to the frame by two clamp-bolts, one bolt through the outside sup-

port to upper head and the other near the under head.

The cutter-spindles are all made of high carbon steel, carefully turned and ground to fit the bearings. They are 1½ inches in the bearings, and the upper and under spindles are 1½ inches where the heads go, while the side spindles are 1¼ inches for the heads. The under spindle, like top mandrel, is provided with three bearings and the head is removable without disturbing the spindle.

The bearings to the upper and lower cutter-spindles are of our patent clamp self-oiling style which can be adjusted to the one thousandth part of an inch, and they are thoroughly compensating. The upper spindle is provided with an outside bearing 4½ inches long, and the other two bearings are 6½ inches long each. The outside bearing to the under spindle is readily removable so as to take off the under head. The vertical spindles have self-oiling compensating cap-bearings and are also provided with step-bearings, the pull of the belts being against the boxes. The countershaft bearings are compensating and self-lubricating.

The head-stocks of the upper and under heads have longitudinal adjustment, and the vertical heads or spindles have vertical, lateral and angular adjustments. The angular adjustment to the outside head is 17 degrees and to the inside head 8 degrees, and these angles are not disturbed when adjusted laterally or vertically. The inside vertical head-stock is attached to the table and, with the outside head, goes up and down with it.

The feed mechanism is composed of two upper feed rolls, one 4 inches and the other 2½ inches diameter and one 4-inch roll in the table, all driven and expansively geared so as to drive in any position of the table. The two upper rolls are driven in pressure by a combination of two intervening springs, all placed within the framing. The feed shafts are 1½ inches with substantial bearings and both upper rolls are driven by a downward pressure of the gears, thereby increasing the power of the feed. There are two rates of feed, 25 and 44 feet a minute, which are started and stopped by a lever in front. This lever actuates a friction clutch and the motion from the clutch-shaft is communicated to the train of feed gears by a very fine standard self-automatic roller-bearing chain running on milled sprockets, hence the feeds are very powerful and positive. The feeding mechanism as a whole has a screw adjustment to regulate the draw to the fence side of the machine. By raising a lever to a vertical position it lifts the feed rolls so that the stock can be withdrawn.

The under head, besides having a horizontal adjustment and being removable from the spindle, has an adjustment to regulate the amount of cut, and the end of the bed after the head has an adjustment to fit the cut as well as being raised and lowered with the head. Therefore, it is right for any cut when once set for the cutters

in use. The end of the table swings down for access to the cutters.

The cutter-heads furnished with the machine are all four-slotted, lipped and made from high carbon hammered steel, and all are of the same cutting circle, 5½ inches, thus allowing an interchange of cutters on the different heads.

The pressure bars and chip-breakers are of latest design and all readily removable for quick access to the cutter-heads. The chip-breaker to the upper head is adjustable to and from the cut and is weighted. There is a pressure foot immediately after the upper cutter, and another over the under-cutter, and these can be connected by a board or reverse moulding so as to make the pressure continuous. These pressure feet are adjusted by hand wheels.

The spring posts are held solidly by our improved cast steel clamps which do not bruise the post, hold more firmly and are easily repaired in case of wear.

Each four-side machine is furnished with one four-slotted steel head to each spindle, each head having cutter-head bolts and a pair of plain knives; a chip-breaker to the outside vertical head, one cap head, and wrenches and guide shown in the foreground of cut.

For top head belting 14 feet 2 inches long by 4 inches wide is required; bottom head, 15 feet 2 inches long by 3 inches wide; inside head, 15 feet 5 inches long by 3 inches wide; outside head, 14 feet long by 3 inches wide; and for feed 13 feet long by 2½ inches wide.

The machine weighs 2,350 pounds, and requires a floor space of 9 feet by 5 feet 8 inches; tight and loose pulleys 12 inches by 6 inches; the speed of the countershaft is 900 revolutions per minute, and the machine requires eight to nine horsepower.

The H. B. Smith Machine Company operates a large branch establishment in Chicago, at 10 and 12 North Canal street, under the management of Thomas R. Martin. Mr. Martin will be pleased to exhibit the new type of moulder to anyone interested in high-class tools of special value in handling hardwoods.

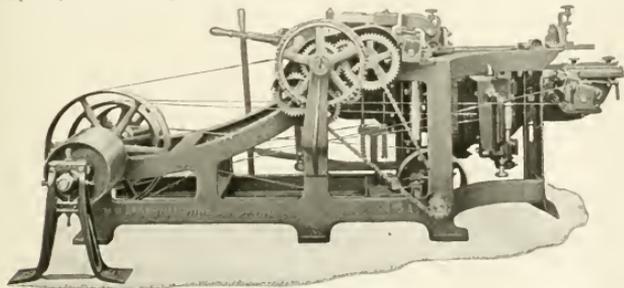

Annual of Philadelphia Exchange.

The Lumbermen's Exchange of Philadelphia held its twenty-second annual meeting in the Crozer Building on April 9. The attendance was unusually large and representative and included all the prominent Philadelphia lumbermen and not a few out-of-town guests.

The usual custom of electing a temporary chairman for this occasion was waived, and on motion of George F. Craig the retiring president, William L. Rice, was elected chairman, an honor which was much appreciated by Mr. Rice. The retiring president then read his annual address, which was followed by the annual report of John H. Lank, secretary of the exchange. These showed the affairs of the organization to be in very satisfactory shape and reflected great credit on the officers. After the reading of the various reports of the committees the election of new officers, directors and auditors was in order.

George F. Craig nominated Frederick S. Underhill of Wistar, Underhill & Co. for president, Edward P. Malone of Philadelphia, Herbert B. Robinson of Miller, Robinson & Co. for vice-president, and Frederick S. Underhill proposed that Charles P. Manie, who has been the popular treasurer of the exchange for a number of years, should continue in office, a move to which, as might be expected, there was no opposition. That the genial and affable John H. Lank should again be elected secretary by the directors was a foregone conclusion, his never has the exchange been better served in this capacity than by this same John H. Lank. On motion the nominations for the various offices were closed, and the names of the officers, who were elected without a dissenting voice, recorded by the secretary.

A vote of thanks was unanimously voted to

REAR VIEW H. B. SMITH MACHINE COMPANY'S NEW HEAVY SEVEN-INCH MOULDER.

[FOR FRONT VIEW OF THIS MACHINE SEE PAGE 51.]

the lumber trade journals, which have kindly supplied the exchange files with copies for the year; also thanks were extended to J. E. Challenger of the Philadelphia Car Service Association for the valuable information furnished the exchange. Frederick S. Underhill and William C. MacBride, by authority, extended the thanks of the Wholesale Lumber Dealers' Association, also of the Philadelphia Retail Lumbermen's Association, to the exchange for use of rooms during the past year. In resolution the exchange expressed its gratification at the timely call issued by President Roosevelt for a conference to be held in Washington, D. C., in May, of the governors of the several states, and representatives appointed by them, to study the problems relating to the conservation of our natural resources of minerals, timber, water supply, etc.

The tellers in charge of the vote for directors of the exchange not having completed compiling the vote, the intermediate time was filled in with calls upon officers-elect for extemporaneous speeches, which were well received, after which the meeting was adjourned. The new directors are Herbert E. Weltzel, Owen M. Bruner and Daniel Adams. The faithful trio, Henry C.

The entertainments of the evening were varied and of a most enjoyable character. William L. Rice, conspicuous as retiring president, and toastmaster of the evening, called on Frederick S. Underhill, the newly elected president, for a speech. After the most vociferous applause and a violent outbreak into the popular inspiring song "He's a jolly good fellow," Mr. Underhill took courage and began his address to his brother lumbermen. From start to finish so fitting were his words, so ingeniously wrought into his speech were graceful references to the noble vocation of lumbermen, that the appreciation of his hearers could not be restrained, and a search for offerings ended in the abstracting of flowers from the vases on the tables, potted plants from the floor, bundles of wood and small decorative trees, to lay humbly at his feet.

G. A. Howes of the Entertainment Committee exercised his famous quartette, and the imitable Edwin H. Coase, who had lately left a sickbed, sang his "Jesse Sam," a side-splitting production of an old man, who compared the present to the good old times of fifty years ago. James Edward Cattel, secretary of the Atlantic Deep Waterways Association, was another most acceptable speaker. H. Stanley Bristol of the United States forestry service, Washington, D. C., elucidated the object of this service and urged the necessity of the cooperation of lumbermen and other business men for its further extension. Herbert P. Robinson, the newly elected vice-president, and other men of note, delivered eloquently their word of commendation for the organization whose birthday they were assembled to celebrate. Francis Spencer Edmonds, a young man of growing distinction, expressed in his all too short address his views on the subject of panics, during which he brought forward some interesting statistics. It was regretted that Senator Blunsdel C. Knoe, presidential candidate, and Edwin S. Stewart, governor of Pennsylvania, could not be present, but letters from them pleaded prearranged and unavoidable duties.

As the midnight hour drew near, with a sonorous outpouring of feeling "Auld Lang Syne" was sung, and the curtain went down on a banquet which was unqualifiedly one of the most successful ever recorded in the history of the exchange. To the committee on entertainment, composed of Herbert P. Robinson, William H. Smedley, George A. Howes, Fisher Dalrymple and William T. Betts, be all praise.

St. Louis Lumbermen's Club Meeting.

The entertainment committee of the Lumbermen's Club of St. Louis provided a Dutch luncheon for the monthly meeting that was held at the Mercantile Club, Tuesday evening, April 14. W. A. Bonaack, first vice president of the club, presided in the absence of President J. A. Freeman.

After the meeting was called to order, Mr. Bonaack introduced Dr. Herman von Schrenck, the well-known authority on forestry, who spoke on the subject, "The Conservation of Forests." The doctor spoke extemporaneously and very rapidly and fluently, and was listened to with close attention. A resolution of thanks was given him for his interesting talk.

At the conclusion of Dr. von Schrenck's address the minutes of the March meeting were read and approved.

The secretary, Mr. Kessler, read the statement of W. W. Dings, treasurer of the club, which showed that the receipts of the club since the organization had been \$1,125 and the disbursements \$619.10, leaving \$505.90 in the treasury at present.

The membership committee reported the following applications and they were unanimously elected to membership: Frank G. Hanley, Henry Boeckler, G. H. Barnes and I. N. McCreery.

The committee on public affairs reported as follows: "Our committee on public affairs, to whom was referred a paper introduced by Mr.

Seidel, representing a bill known as H. R. 10457, introduced in the House of Representatives on December 19, 1907, by Hon. Frank D. Currier of New Hampshire, and then referred by that honorable body to the committee on agriculture, beg to report that they have considered same and recommend that the Lumbermen's Club of St. Louis indorse same and, in case of acceptance, the secretary notify Mr. Currier of the House of Representatives as well as the House committee on agriculture."

This bill referred to the establishment of a forest reserve in the Appalachian mountains and White mountains. The report was adopted and it was resolved that every lumberman in St. Louis send an individual letter to the Missouri congressmen to indorse the bill, and that the secretary prepare a general form letter to send to the members of the club so that they could send in uniform letters.

Lloyd G. Harris then read a motion which W. W. Dings had prepared. It was as follows: "The National Hardwood Lumber Association will meet in annual convention June 11 to 14 at Milwaukee. At that time there should be presented to the association an invitation from the lumbermen of this city to hold the next annual meeting in St. Louis. The Lumbermen's Exchange at the last regular meeting appointed a committee to present to this club the matter of formally inviting the national association to this city in 1909. It is suggested that a committee of three be appointed by the chair to attend the Milwaukee meeting and invite the national association, as above set forth; also, that this committee shall endeavor to secure an invitation from the Business Men's League and the mayor of our city. The national association is one of the strongest organizations in the United States, and it should be deemed an honor to entertain its members. We should go before them with statistics relative to St. Louis and give our reasons for believing that St. Louis is the best convention city in the United States. I therefore move you that a committee be appointed at once, as the time for action is limited."

The motion was carried.

Miscellaneous Notes.

The Cherry River Boom & Lumber Company has resumed operations at its Richwood, W. Va., mill, and General Manager Armstrong says that all mills in that district have resumed. This means that there are now about fifteen hundred men employed out of more than three thousand that have been idle for several months but who will all be busy again soon.

A syndicate of Oregon lumbermen, headed by Dr. W. J. Pettit of Portland, has just returned from Panama, where they made an extensive investigation of hardwood timber prospects along the canal and secured a large tract. They also crossed Colombia forests and find many varieties of hardwood in that country. They will not commence logging operations for some time to come.

The Nile Lumber Company is a new concern at Friendship, O., capitalized at \$11,000.

Fire in the lumber yards and dry kilns of the Camden Lumber Company at Camden, Ark., recently caused damage of about \$25,000.

W. K. Futch of Opelousa, La., and Charles McDonald of New Orleans have organized the Beaumont Hardwood Lumber Company at Beaumont, Tex. The company is capitalized at \$75,000.

J. H. Sloan has secured a contract to furnish railroad ties for the Santa Fe and is cutting them from his timberland in Apache Canon, in New Mexico. They are then put through a preserving process at Albuquerque.

Samuel Bridges of Dickinson county, Michigan, has arranged to purchase ties and North-western with 75,000 railroad ties in the next two years.

F. S. UNDERHILL, THE NEW PRESIDENT OF THE EXCHANGE.

Riley, Samuel B. Vrooman and Franklin Smedley, who composed the auditing committee last year, were again elected to continue under the present administration.

At 7 o'clock in the evening the twenty-first annual banquet of the exchange was held in the banquet hall of the Union League Building. The tables, at which nearly one hundred and fifty members and guests were seated, were decorated with sprig bouquets and artistically strewn here and there with pieces of bark and small branches of trees; the latter were enthusiastically waved during the dinner to accentuate the various witty remarks of the speakers.

The booklet beside each plate, containing the names of the members of the exchange and the menu, of a character to tempt the most epicurean palate, was an attractive piece of art. The covers were made of the fiber of a remarkable tree which grows on certain Pacific islands, which is skillfully manipulated by the natives, making a delicate and pliable wood-like material. These were fancifully colored with native vegetable dyes and ornamented with an emerald green lizard and gilt lettering. On the first inner page was a long quotation from Carlyle: "Adversity is sometimes hard upon a man, but for one who can stand prosperity, there are a hundred that will stand adversity." These books were presented by the lumbermen's insurance companies.

The Chihuahua Lumber & Manufacturing Company, which has a plant at Chihuahua, Mexico, will soon build a band sawmill at San Juanito. The company already has two mills in that section and employs about 250 men. The hand mill is to fill the demand for lumber which will come with increasing mining operations this fall and winter.

Mrs. S. St. John of Indianapolis recently sold 16,000 acres of southern timber land to an eastern syndicate for \$240,000. The firm operates a large hardwood mill in Louisiana and cotton plantations in that state and Mississippi.

The woodworking establishment of the Buckley Lumber Company at Abingdon, Va., suffered a loss of about \$6,000 by fire early in the month.

A. F. Bard, connected with the Laguna del Carmen Company, an American mahogany concern in the state of Campeche, Mexico, states that an average of 3,000 mahogany logs is being shipped out of that district every month to Boston, New York and Europe. This company owns an immense amount of mahogany stumpage and is capitalized at \$6,000,000.

The Pioneer Pole & Shaft Company at Muncie, Ind., has resumed operations with a full force of men and expects to keep running all summer.

The Colorado, Columbus & Mexican railroad will extend its line from Columbus, N. M., to Durango, Mex. George M. Duncan, representing the Carter Lumber Company of Houston, Tex., secured the contract for supplying lumber material.

The Hastings Table Company of Hastings, Mich., will double the size of its factory this spring.

The Long Beach Sash & Door Company of Long Beach, Cal., reports more business during the first ten days of March than during the entire month of February and says that building conditions in Los Angeles and vicinity are improving right along.

News from the City of Mexico tells of the destruction by fire of the property of the J. M. Carr Insurance Company and the large lumber yard of Fernandez Martinez at Monterey, Mexico. The loss aggregates \$400,000, with no insurance.

The number of ties purchased by the steam and electrical roads of the country during 1906 was 102,834,040. The demand of the steam roads

amounted to seventy-five per cent of the total.

The New York Central and the Pennsylvania Railroad Company have contracted with a Mexican concern which owns a large tract of hardwood timber in the state of Campeche for ties made of zapote. It is claimed that this wood is almost indestructible and that it will last half a century under the most trying conditions.

The Girard Lumber Company of Dunbar, Wis., has purchased 2,000 acres of hardwood timber land in Forest county.

A large part of the town of Open Fork, W. Va., was destroyed by fire April 11. The blaze started in the plant of the Kentucky Coal & Lumber Company, which was destroyed together with fourteen two-story houses.

The Greenwood hardwood plant at Owensville, Ind., has closed down temporarily.

The Milwaukee-Falls-Evansville Chair Company, capitalized at \$100,000, will start building at Evansville, Ind., within a very short time, and will be in operation probably by July 1.

Samuel K. Smith has been appointed receiver for Ernest E. Price, hardwood dealer located at 1406 Continental Trust building, Baltimore. Mr. Price's liabilities are scheduled at about \$54,000, with assets of approximately \$18,000.

The heirs of William Helwig, who died recently at St. Louis, and who had a lumber yard at Broadway and Barton streets, are puzzled over his will and have no idea of what his estate consists, although they know he was wealthy. He sold out his lumber business some time ago, and made a trip to Germany. What has become of his money they cannot tell. They believe it may be buried, however, inasmuch as his grandfather, who was equally eccentric, hid his fortune under ten feet of ground, and it was only accidentally discovered.

H. H. Haines of Easton, Pa.; George H. Mutton of East Bangor and J. J. Himmel of Ackermanville have just purchased a large tract of timberland on the Blue Ridge. They will have it manufactured into railroad ties and poles.

John W. Corbett, a prominent business man of North Attleboro, N. M., believes that hardwood will grow in that state, and is following his annual custom of promoting tree planting by giving away saplings to anyone who will agree to nourish them. This year he offers 500 young elms. The trees planted in former years are thrifty.

current number is the ninth volume which has been issued by the corporation, and shows a great amount of work. Each number is better than the last, and promises a valuable addition to any lumberman's library.

F. M. Shaw of the Rib Lake Lumber Company, Rib Lake, Wis., was a Chicago visitor a few days ago. Shaw says his company has large holdings in hardwood and hemlock in Wisconsin; it is operating in birch, elm, ash and maple, and is fortunate in having some dry stock on hand.

N. A. Gladding of E. C. Atkins & Co., Inc., Indianapolis, was in the city April 9 and 10, visiting the company's Chicago office.

Don Arpin of the Arpin Hardwood Lumber Company, Grand Rapids, Wis., was in Chicago within the past few days, accompanied by his wife.

C. Fred Yegge of the Chicago Mill & Lumber Company has recently made a tour of the Arkansas and Mississippi mills.

Horace Wildberg of the Wildberg Box Company, Cincinnati, was in the city on business the other day, and incidentally remarked that he would buy 1,000,000 feet of shortleaf yellow pine for box purposes—six to twelve feet.

Charles Linder, secretary of the John H. Kaiser Lumber Company, Eau Claire, Wis., was in town the past week and reports that his mill is busy on hardwoods and hemlock. The company is one of the largest box manufacturers in Wisconsin.

R. A. Johnson of the Meehan-Johnson Company of Minneapolis, has been out on the Pacific coast with C. A. Smith of the C. A. Smith Lumber Company, looking over timber purchases.

M. A. Hayward, the popular wholesaler of Columbus, O., was a welcome visitor at the Record office April 23.

Edward Hines, the foremost Chicago lumberman, was obliged to submit to a severe operation a few days ago. Mr. Hines is at present in the Presbyterian hospital, and reports from his bedside are favorable to his prompt recovery.

Boston.

William E. Litchfield has recently returned from a business and pleasure trip through the South and West. He states that the mills that he came in contact with had small stocks only of hardwood lumber and that it is his opinion that what lumber there is in the West is held largely in dealers' hands.

Frank W. Lawrence of Lawrence & Wiggin, Boston, reports business as only moderately active. He states that furniture and piano manufacturers are not large buyers of mahogany at present, as they are not as busy as usual at this season of the year. Mr. Lawrence is very enthusiastic over the Lumbermen's Golf Association meeting that will be held near Boston this season. It is secretary of the association and Frank Witherbee of the H. M. Bickford Company, Boston, is president.

The following comprised a recent shipment from Boston to South America: 1,343,616 feet of white pine, 50,500 feet of oak, 25,615 feet of ash and 14,707 feet of poplar.

Omer Schoffner of Nashville, Tenn., was a recent visitor in the Boston market. Mr. Schoffner is a large handler of reports from the Wendell F. Brown Company of Boston has been incorporated in Kittery, Me., with a capital stock of \$300,000.

Chelsea, Mass., the home of several large lumber concerns, has been visited by a bad fire that caused a loss of \$10,000,000 and destroyed over a thousand dwellings, as well as churches, schools, stores and factories. Lumber dealers escaped this great conflagration. The George D. Emery Company, large mahogany importers and dealers, offered a part of their property to the telephone company, whose headquarters were destroyed. The company erected fifteen public pay stations on this property. The Pope and Cottle Lumber Company, whose yard is in Chelsea, has

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

Announcement has been received here that the Warren Ross Lumber Company of Jamestown, N. Y., has succeeded and purchased the business of the Ross Lumber Company at that point. The company will maintain a complete stock of foreign and domestic hardwoods at Jamestown and also at mill points for direct shipment. "High grades at fair values" will be its policy.

Burdus Anderson of the Great Lakes Veneer Company, Munising, Mich., was a Chicago visitor recently, en route home from New York, whither he had been in the interests of the National Veneer and Panel Manufacturers' Association, of which he is president.

W. E. Douglas of the Crosby & Beckley Company, Columbus, O., called upon Chicago friends April 34 and 15.

A two-story frame building in the yards of the T. Wilce Company, West Twenty-second and Troop streets, was partly destroyed by fire early on the morning of April 16. The loss was about \$1,000. For a time it looked as though the flames might sweep through the entire lumber yard, but they were fortunately checked before this happened.

W. H. Russe of Russe & Burgess, Memphis, president of the National Hardwood Lumber Association, spent Sunday, April 12, in Chicago in conference with Frank F. Fish, secretary of the association. Mr. Russe was on his way home from a trip to Great Britain and the

Continent, where he has been for the last three months. He has again taken up association work vigorously and is already making plans for the June convention, which will be held in Milwaukee. Mr. Russe had a very rough passage in crossing the Atlantic; the storm retarded the steamer so it had to put into Halifax for coal, making a record breaking trip—on the wrong side of the record—of thirteen days between Liverpool and New York! Mr. Russe reports lumber conditions abroad as being a good deal worse than they are on this side. He states that the consignment evil has again reasserted itself, and that the docks are full of undesirable and unsalable lumber.

The Hardwood Record is in receipt of large special editions of "Timber and Woodworking Machinery" and the "Timber Trades Journal," two well-known lumber publications of Great Britain. Both numbers are handsomely illustrated and give elaborate writeups of prominent lumber concerns abroad.

At the annual meeting of the Philadelphia Lumbermen's Exchange, held April 9, a vote of thanks was extended to the HARDWOOD RECORD for the issue it applied it during the year ending March 1, 1908.

The National Lumber Manufacturers' Credit Corporation of St. Louis, W. T. Blederman, superintendent, forwards the RECORD its April, 1908, issue of the Credit Rating Book. The

secured a piece of land in the burned district and erected a temporary office with the view of better being able to serve the demands of the builders who have already started to put up temporary quarters for business houses.

Among the lumber dealers of Boston who contributed about \$2,500 to the relief work in Chelsea are the Shattuck & Morse Lumber Company, H. M. Hickford Company, Davenport, Peters & Co., William E. Litchfield, Owen Bearse & Son Company, H. D. Wiggins, James Harwood Company and Lawrence & Wiggin.

E. V. Babcock of Pittsfield, Pa., was in Boston on business recently.

New York.

A petition in bankruptcy has been filed against Isidor L. Cohen, trading under the style of the Mott Haven Lumber Company, Manhattan, with creditors with claims aggregating \$13,500. F. H. Van Duzen and L. D. Driggs have been appointed receivers with bonds at \$10,000. Mr. Cohen suffered reverses in October last, since which time the business has been conducted under a trusteeship.

John Faber, the large lead pencil manufacturer of Jersey, is constructing a big pencil factory at Irvington, N. J., which will be ready for operation June 1. Richard Best is local representative for Mr. Faber and maintains headquarters at 63 Duane street, New York.

President James Sherlock Davis of the New York Lumber Trade Association was guest and speaker at the annual meeting of the Philadelphia Lumber Exchange in that city April 9. President Richard S. White of the Eastern States Retail Lumber Dealers' Association, and head of the John C. Orr Company, Brooklyn, was also a prominent attendant.

The Kilpatrick Lumber Company, West Fifty-seventh street, Manhattan, has increased its capital from \$2,500 to \$10,000.

Clifford A. Bockoven, Bockoven Bros. Company, Newark, N. J., died April 3 after a long illness. He had been associated with the Newark lumber trade through the operations of Henry H. Munday for many years, and with his brother bought out the business in 1906. The firm announces that there will be no change in the conduct of the business, which will be continued as heretofore.

James C. Place has severed his connection with George M. Grant & Co., wholesale hardwoods, 74 Cortlandt street, Manhattan, to represent the well-known Philadelphia wholesale house of Schofield Brothers, whose interests he will look after in the Metropolitan district and vicinity. Mr. Place has been associated with the local hardwood trade for the past eighteen years. Schofield Brothers have large facilities in all lines of hardwood, white and yellow pine, and already enjoy a large eastern trade.

The regular semiannual meeting of the New York Lumber Trade Association was held at the association rooms, 18 Broadway, April 8, at which time several transfers of membership were effected upon and a nominating committee appointed to report at the annual election in October. There was a large attendance and much interest shown in the general affairs of the association, but for the most part only routine business was transacted. Resignations of several members, by reason of retirement from business, were also accepted.

James H. Pittinger of Watson & Pittinger, Carroll street and Gowanus canal, Brooklyn, has just returned from a pleasure trip South and West via New Orleans, during which he visited his nephews, James E. and W. A. Stark, prominent Memphis lumbermen.

Clayton P. Chew has resigned his position as joint manager of the New York office of the Goodyear Lumber Company, 45 Broadway, and has engaged in the wholesale lumber trade on his own account, with headquarters at Morris-town, N. J. E. V. Randall, who has been associated with Mr. Chew in the management of the Goodyear office, will continue at the head

of things at 45 Broadway, and will be assisted in the selling department by J. L. Billington and H. D. Dunleavy.

Frank D. Langstroth has severed his connection with Robert R. Sizer & Co., 17 William street, and has engaged in the wholesale trade on his own account, with headquarters at 63 Broad street, Manhattan.

Stone & Hershey, prominent Newark wholesale house, has just moved into fine new headquarters at 776 Broad street from 800 Broad street, where they have larger and better facilities for handling their growing business.

John Bossert of Louis Bossert & Son, Brooklyn, has just returned from a three weeks' pleasure trip to the Florida resorts.

Captain A. P. Bigelow of A. P. Bigelow & Co., West Fifty-fourth street, Manhattan, is convalescing from a severe attack of pneumonia, a result which is very gratifying to his many friends in the trade.

M. S. Tremaine of the Montgomery Bros. Company, Buffalo, arrived April 6 after a month's pleasure trip abroad.

The big veteran operation of I. L. Cole & Son, foot of East Eighth street, Manhattan, was badly damaged by water on April 7, resulting from a fire in adjoining premises. The loss is fully covered by insurance.

W. B. Mershon of Saginaw, Mich., was a recent visitor in town in the interest of business and pleasure. It had been some time since Mr. Mershon was in New York, and his many friends were glad to meet him again.

C. H. Bond of E. W. Hatburn & Co., Oswego, N. Y., was here on a day en route home after a vacation at Pinehurst, N. C.

George E. W. Luehrmann of the Charles F. Luehrmann Hardwood Lumber Company, St. Louis, Mo., has been spending several days here in the interest of the domestic and export trade.

Judge W. A. Crombie of W. M. Crombie & Co., 81 New street, arrived April 14 after a six weeks' pleasure trip abroad.

The Goshen Sash & Door Company, large manufacturers of Goshen, Ind., are arranging to open a branch office in Brooklyn in the interest of an active eastern campaign.

R. F. Krelindner of the Standard Hardwood Lumber Company, Buffalo, was a recent visitor in the interest of business. His company is as usual in possession of a choice assortment of hardwoods for the eastern trade. Business is reported as very fair with them.

The Lumber Sales Corporation has moved from 95 Liberty street to the new Hudson Terminal building, where it will be in better shape to take care of its business.

The sash, door and blind firm of Levin & Kronenberg, Brooklyn, has been incorporated as Levin, Kronenberg & Co., with a capital of \$50,000. The incorporators are J. Levin, H. Kronenberg and A. Flink.

A petition in bankruptcy has been filed against S. P. Minter, wholesale hardwoods, 1 Broadway, by attorneys for the Elm City Lumber Company, a creditor for \$745, and the court has appointed Charles L. Cohn receiver, with bond at \$2,000. It is stated that the liabilities are \$10,000 and the assets \$5,000.

Edward Hines and C. F. Welthe of the Edward Hines Lumber Company, Chicago, were prominent visitors during the fortnight.

George J. Kennedy, wholesale hardwoods, 1000 Ellcott square, Buffalo, N. Y., has opened a New York office at 1 Madison square. Mr. Kennedy will conduct his Buffalo office and divide his time between the two cities.

L. C. Haden, vice president of the Forman-Blades Lumber Company, Elizabeth City, N. C., and J. V. Blades, secretary and treasurer of the J. B. Blades Lumber Company, Newberne, N. C., sailed on the 18th for Italy for a three months' tour of Europe.

Philadelphia.

Soble Brothers are not arguing over trade situation, but are complementing meeting conditions

as they arise. Harry I. Soble is spending some time in Honaker, Va., looking after mill interests of the firm. John J. Soble has just returned from a two weeks' trip through New York state and reports some little improvement all along the line.

The Coding-McEwen Lumber Company reports March trading very encouraging, but that of April somewhat irregular; however, they are not hopeless of an early improvement in business.

Miller & Miller are not grumbling, as they have been fortunate enough to secure some desirable orders. They regard the outlook fair.

Horace G. Hazard & Co. state that so far April has not equaled previous month; think so many rainy days may have had some effect upon trading. However, they work industriously and reap their reward in a goodly share of what business there is. They do not anticipate any decided revival of trading until the political sky shines clear once more.

John W. Coles is pushing his hardwood department and has no fault to find therewith. He reports trading generally a little slow, but believes that to the huster come the orders, and takes little time to indulge in pessimistic conjectures.

Halfpenny & Hamilton report business in fairly good shape. They look for gradual improvement right along. Benjamin C. Currie, Jr., of this house is making a short business trip to New York and part of New Jersey.

I. H. Maus & Co., Inc., are satisfied they are getting their share of trading in the lumber line, but report slow buying of tea, etc., by railroads. However, they are sanguine that the near future will see a fair restitution of business.

Emil Guenther has been spending some time in eastern Tennessee looking up the general stock situation there.

On the morning of April 10 fire visited the lumber yard of Sheep & Vandegrift, Inc., and that of the Philadelphia Veneer & Lumber Company, in the fire-ravaged corner was largely interested. At one time it seemed that the entire plants would be destroyed, as the seasoned state of the lumber rendered it extremely combustible, but the losers are pleased to state that the first estimate of a \$70,000 loss has been reduced to \$30,000 to \$40,000. They are fully insured, and the disaster will not prevent them from filling all orders as heretofore.

A fire which started on April 14 from a burning pile of trash in the garden of R. C. Pervis destroyed about 100 acres of valuable timber land in Middleford, Del., owned by R. C. Pervis, George Boyce and George Stewart of Middleford.

Standing timber worth thousands of dollars was recently destroyed near Millville, N. J., by forest fires. Among the heaviest losers are Gabriel Glann, John Mason, Liburn Hess, Eugene Goodwin, John Cambron and Harrison Shaw, all of this place.

It is announced that the last two drives of logs in the West Branch of the river at Kettle Creek and one from Pine Creek, the two amounting to about 30,000,000 feet, are now afloat and will be safely within the Williamsport boom within a few days. Then this famous boom will be dismantled, only enough of it being left to harbor about 2,000,000 feet of logs, which will be driven in next spring.

Justice H. W. Bardwill of Montrose has placed in his office a desk built of white oak that for fifty-three years lay at the bottom of the Susquehanna River, underneath the piers of the bridge. The trees were cut on his father's farm over fifty years ago and used for cribbing for the foundation of the piers. Notwithstanding its long bath the wood looks new and fresh as though but recently cut in the forest.

It was recently announced in Allentown, Pa., that the largest transfer of land ever made at a private sale in the state took place when C. O. Dorney, trustee for the collateral heirs of the estate of the late C. A. Dorney, recently

sold to Col. H. C. Trexler between 9,000 and 10,000 acres of timber land located at Hickory Run, Luzerne county. The consideration was \$20,000.

On April 13 a petition was filed to have the Phoenix Woodworking Company of Phoenixville, Pa., adjudged an involuntary bankrupt. The petitioning creditors are Justice P. Taylor & Co., \$1,439.16; F. W. Unkel Lumber Company, \$306.00; and William Whitmer & Sons, Inc., \$329.10.

The American Timber & Lumber Company of Philadelphia obtained a charter on April 8, under Delaware state laws; capitalization, \$125,000. Incorporators are John T. Flournoy, Newark, N. J.; C. F. Thomas, Wilmington, Del., and Leon P. Thomas, Philadelphia. The personnel of the company is not generally known to local trade.

Among the recent visitors to the local trade were E. Wheeler, Wheeler Lumber Company, Glad, W. Va.; F. W. Lawrence, Boston, Mass.; E. H. Stouer and Harry C. Bemis of Pittsburg, Pa.; Joseph C. Campbell, Marlon, Va.; H. K. Eutsler, St. Paul, Va.; W. W. Dempsey, Johnstown, Pa.; Robert G. Patterson, Hot Springs, N. C.; W. W. Welch, New York City; H. L. Graham, president Stuart Lumber Company, Brimban, Ga.; W. T. Latham, Buckhannon, W. Va.; and C. L. Strauss of Jackson Lumber Company, Lockhart, Ala.

It is stated that John Coleman of Williamsport, Pa., is enlarging his plant to permit the manufacture of 2,500,000 feet of match blocks a year, the output requiring 3,500,000 feet of lumber. The extension is being erected to supply a contract for match blocks, 1,000,000 feet of which will be exported to Liverpool, England; the remainder will be shipped to Barberton, O.

Baltimore.

The managing committee of the Baltimore Lumber Exchange had before it at the monthly meeting on April 6 the report of the special committee named in connection with the recent inspection conference. In order to determine upon a future course of procedure the members of the committee met in the office of Price & Heald on April 13. It was agreed to notify J. D. Cary, secretary of the New York Lumber Association, who acted as secretary of the New York conference, in response to his letter inquiring what the Baltimore hardwood men were disposed to do and to indicate who was going to the Chicago conference, that in the opinion of the committee here it might be well to ascertain whether or not the National Hardwood Lumber Association's committee was still willing to keep up the negotiations in view of the action taken at Philadelphia, and whether the prospects of an agreement were reasonably good. While the Baltimoreans are willing to work with the representatives of other cities and will go to Chicago if it is deemed necessary, they prefer to lay the ultimatum before the National Hardwood Association at the annual meeting in Milwaukee unless the committee evinces an inclination to meet the eastern representatives.

The failure of the East Coast Lumber Company and of B. E. Coghill, its president, is reported from Eydout, Va., receivers having been appointed on April 11. Those for the corporation as such are John A. Lamb and P. H. C. Cabell, those for Mr. Coghill individually are H. S. Fulton and Henry R. Miller. They are bonded in the sum of \$50,000 each. Mr. Coghill has been operating in Mecklenburg county and other places in that part of the state for a number of years and was regarded as wealthy. He also attained much political prominence, having been county treasurer. The failure has also carried down the Bank of Mecklenburg, the cashier, E. W. Overby, having, according to his own confession, allowed Mr. Coghill to overdraw his accounts to the extent of more than \$100,000. This, it appears, was done without the knowledge of the president and directors, the cashier say-

ing that it was an act of kindness and that he did not benefit in any way. An investigation by the board of directors of the affairs of the bank discloses a shortage of over \$125,000. Overby has been released on \$50,000 bond. It is thought that the depositors of the bank will get from 50 to 75 cents on the dollar. Receivers have been appointed for the institution also.

Advice received here from abroad are of a decidedly discouraging nature and constitute an impressive warning against the shipping of stocks on consignment. In a letter to a Baltimore firm of exporters specific instances are given of the heavy losses sustained by such shippers. Thus a lot of oak planks from two to three inches thick was sold at Liverpool for about \$21 per thousand feet, while another lot brought about \$23.50. This, as the recipient of the letter expressed it, is less than the oak is worth standing in the woods in the trees, and must prove ruinous to anyone who incurs such losses. The prices mentioned were ex quay, which means that the cost of transportation and of putting on dock and the interest charges must come out of the amount realized.

G. W. Eisenhauer and Daniel MacLea, who compose the Eisenhauer-MacLea Company of this city, dealers in hardwoods, have sold their stock in the J. S. Coleman Lumber Company, which operates a sawmill in the Asheville, N. C., section. The purchaser was A. F. Sprinkles of Asheville. Governor Smith of New York has also disposed of his shares. Messrs. Eisenhauer and MacLea now have no lumber interests outside of the company here. The former has been at Asheville for several weeks and it was during his stay there that the deal was consummated. He has been taking a rest from business care and found his sojourn in the North Carolina mountains very refreshing.

John H. Burrell of the Liverpool firm of John H. Burrell & Co. stopped in Baltimore for several days on his journey over a large part of the United States and called on various firms here. He gave a rather discouraging report of the situation abroad, saying that conditions were worse than they had been for years. Prices, he declared, were demoralized, and the large stocks at different points served to prevent recovery. Mr. Burrell laid much stress upon the bad effects of shipping lumber on consignment. From here Mr. Burrell went to Norfolk and thence to Knoxville, Bristol and Memphis, Tenn. His itinerary after that included Mobile, Ala., and New Orleans. It is his first visit to the United States in twenty-five years.

S. S. Mann of Mann & Parker, West Falls avenue, Baltimore, is back from Robbins Neck, S. C., where his firm erected a mill, which has just been put in operation. For the present the plant will not be run to the limit of its capacity.

R. P. Baer of R. P. Baer & Co., Keyser building, is back at his office after several weeks spent in western North Carolina, where he called on a number of the millmen and noted trade conditions generally. He found many of the plants shut down, stocks of lumber as a rule light, the market far from buoyant and prices depressed.

Pittsburg.

The Flint, Irving & Stoner Company is having a good run in the spruce trade, this wood leading in their sales this month. The company's operations at Dunlevie, W. Va., are going ahead rapidly and it will increase the cut as the market demands.

The Jones & Laughlin Steel Company has contracted with the McClure Timber Company for the building of fifty barges to be used in its coal trade on the Monongahela and Ohio rivers. The boats are being built in lower Allegheny, and a large amount of timber is used in their construction.

J. L. Lytle, president of the J. L. Lytle Lumber Company, feels fine since his return from a short trip to Virginia. While there he made some new hardwood connections, which will put

the concern in even better shape to supply the market with poplar.

The personnel of the Meed & Spear Company has been changed by C. L. Snodgrass withdrawing to take a position with the Forest Lumber Company of Pittsburg. Mr. Snodgrass had been in the employ of the Meed & Spear Company about eight years and is well known throughout this district. As vice-president the Meed & Spear Company has secured L. C. Thompson of the Auburn Lumber Company, Auburn, N. Y., who is one of the best-posted hardwood men in the state. He will bring to the company strong acquaintance and exceptionally good knowledge of hardwood conditions in the East.

H. H. Haines, vice-president of the North Hampton Traction Company of eastern Pennsylvania, with other capitalists has bought about 1,000 acres of wood land on the south side of the Blue Ridge, this being the largest tract in that part of the state. The buyers will at once cut the timber for railroad ties and telegraph and telephone poles.

The Clay-Shoppe Lumber Company is getting along nicely with its new operation in southern Pennsylvania near the Maryland line, and by May 1 will have at least four portable mills working there. Vice-president McGilberty of the company is making a hurried trip through the East and is filling up some nice trade.

W. P. Craig, manager of the local office of Wm. Whitmer & Sons of Philadelphia, spent a few days last week in Richmond and vicinity and found conditions there but little better than in Pittsburg. The company's reports show that the spruce trade was quite active this month, especially in box lumber.

H. Newell, president of the Newell Bros. Lumber Company, reports that its run in West Virginia is running steadily. It has an accumulation of dry stock there for special orders and finds this an advantage in landing good business.

Manager S. A. Seaman of the C. F. Caughy Lumber Company reports business a little better than in March. The local yards are doing a hand-to-mouth business in buying. Manufacturing business is more promising, but due to the coal strike there is little inquiry for mine stock.

The Acorn Lumber Company is feeling good over an order for nearly 100,000 feet, mostly hardwood, which it took for delivery along the lake. President H. F. Dombhoff has been quite successful in building up lake trade, as well as getting into the manufacturing towns of central and southern Ohio.

The Central Shenandoah Lumber Company, whose mill near Williamsport is said to be the largest and best equipped plant in Pennsylvania, has elected officers as follows: President, Frank W. Simmons; first vice-president, C. B. Farr; second vice-president, B. G. Brownell; secretary, A. W. Mallinson, and treasurer, Rosser Thomas.

In Pittsburg lumber circles the death of Robert Jenkins, Jr., president of the Vigilant Lumber Company, is deeply regretted. Mr. Jenkins died at his residence April 2, after having been ill about six months. He was a well-known Pittsburg lumber and coal dealer, having formerly been a member of the coal firm of T. M. Jenkins & Co. In 1900 he was largely instrumental in organizing the West Virginia Lumber Company, from which he withdrew in May of 1907 along with Charles J. Cappler and George E. Bartlett, two former members of the Vigilant Lumber Company.

The L. L. Satter and Interior Lumber Companies are now nicely quartered in the new Kennan skyscraper at Liberty avenue and Seventh street.

The Cosmopolitan Coal and Coke Company, which lately bought 11,000 acres of coal land in Braxton and Gilmer counties, West Virginia, is letting contracts for 100 or more houses and 100 coke ovens. Its investments for these improvements will be at least \$100,000.

The Cheat River Lumber Company has been thrown into bankruptcy by a petition filed by

Bemis & Vosburgh and other Pittsburg firms. The action was rather unexpected in this city as the Cheat River was supposed to be in fair shape. Up to one year ago the company discounted its bills and had a good business. Through the efforts of its president, W. H. Herberson, the Cheat River plant at Lynchburg, Va., was at about that time taken by Mr. Herberson's brothers, M. H., M. L. and R. L. Herberson, who gave in exchange for it their stock in the Cheat River. Since then the Lynchburg operation has been conducted under the name of the Herberson Lumber Company, and is to be a good buy. W. H. Herberson left Pittsburg the last of March and has not been seen in this part of the country since.

Buffalo.

F. A. Beyer, who is just back from his oak mills at Pascoia, Mo., finds that his company has been active there and the returns are good. He will have a yard here before long.

H. S. James has been looking closely to the mills of the Empire Lumber Company of late, both in Arkansas and North Carolina. He is running them slowly but with good results.

Following the closing of the mills of the Hurst Lumber Company in New Brunswick has cut out the active business of the company for a season, but the mill will be rebuilt and it is thought that the delay will be an actual benefit to the owners. One lumberman says it is worth \$2 a thousand to the company. The fire occurred on the 14th, involving a loss of \$50,000. Manager French and Vice-President Carrier are back from the scene of the fire.

R. F. Kreinbender of the Standard Hardwood Lumber Company was a delegate to the republican state convention and President Wendt of the company was made a presidential elector at the convention. Trade with the concern is fair.

A. Miller made a trip east in the interest of business lately and is active in putting in stock as it goes out. Basswood is a pretty good seller and his yard has always been well supplied with it.

Manager Wright of the Memphis interests of Scantler & Son paid a long visit to the home office and his old home lately and will get busy at the mills there as soon as he returns.

F. W. Vetter sticks to his plan, formed when he went in for himself, of keeping a stock just large enough to cover the hardwood trade generally. Sales have been fair and the sources of supply are always open.

The Buffalo Hardwood Lumber Company is making more of a specialty of gum than ever, finding that it can be sold in the East as it could not in times past. It is low-priced and an all-round wood and should go.

Hugh McLean is back on the road again after quite a general waiting for the demand to return and Angus McLean is most of the time in Canada looking after the mills of the McLean interest down the St. Lawrence.

I. N. Stewart has returned to business after a pretty bad winter fighting the grip. He reports that there is a fair demand for his specialties, such as cherry, oak and walnut, with a good stock of it all in sight.

A. J. Elias is taking a prominent part in the union passenger station meetings, having furnished the map that seems to be the basis of a plan most favored by the business men of the city.

The yard of Beyer, Knox & Co. is still pretty well beset by grade crossing operations, but so far nothing has been done towards a new site, as business goes on as usual in spite of drawbacks of that sort.

D. E. Yeager has worked hard on the National Inspection rules and has drawn up a set that should go far toward settling the differences in that line. Business has been very fair with him.

The car trade with Canada is good at the yard of T. Sullivan & Co., as elm, basswood

and black ash are coming in from there; also some Washington spruce that goes direct to destination, the yard stock of it being good.

Detroit.

Detroit hardwood men realize now that business this year will not be anywhere near what it was a year ago. Trade has been dull for the past three or four months, and although indications now are that conditions will improve, lumbermen are far from satisfied. Prices have been cut some, but with building operations taking on renewed life, the dealers look for better things.

Thomas Forman of the Thomas Forman Company says that, while trade is by no means booming, he looks on the situation optimistically. The wholesale lumber dealers of Detroit have effected a settlement of their long-standing difficulties with the Longshoremen's Union, and boats will be unloaded without hindrance this year. H. L. Wilton and C. W. Kotcher represented the dealers in the negotiations with the union.

There are 225,000 feet of hardwood flooring in the new 18-story Ford building, which is nearing completion.

Lawrie & Robinson have bought the Delray yards of the Restleck Lumber Company for \$100,000. The property comprises fourteen acres and is on the bank of the River Rouge. The power plant, planing mill, dry kilns, etc., on the premises are included. The property has been used as a lumber yard since 1885, when the Delta Lumber Company established a wholesale business there. C. W. Restleck bought it six years ago.

"Trade is rather quiet in hardwoods," said Mr. Brownlee of Brownlee & Kelly, "but I look for it to improve."

The increasing popularity of hardwood floors in residences has caused local agents of fire insurance companies to issue a warning to householders relative to polishing floors. The insurance men say that many fires have been caused in this city lately by carelessly leaving about oil-soaked rags used in polishing floors.

Bay City and Saginaw.

The manufacturing business is living up a little. The new mill of the Richardson Lumber Company at Bay City started operations April 20 and will be operated during the season. Monday, April 27, the Kneeland-Bigelow Company will begin sawing day and night, and a considerable portion of the cut has already been contracted for, 6,000,000 feet of maple going to one flooring concern. The Kneeland, Inall & Bigelow Company mill also starts April 27, and will run ten hours a day.

The single hand mill of W. D. Young & Co. has been running several weeks, and now another hand saw outfit is to be added, the mill having been designed as a double hand mill at the outset. The flooring department of this big plant has started operations also. Last week the firm shipped a number of carloads of their famous maple flooring to Europe, where a good portion of their output will be marketed. What the old mill which burned last September was in operation this firm shipped seventy-five per cent of its flooring output to Europe, and with the connections the company has abroad a fine market is provided for its product. The plant now is one of the most modern in the United States.

Bliss & Van Anken are getting logs by rail from the North and their plant is being operated steadily. The output may not be quite as large this year as last, owing to general business conditions.

Maple flooring manufacturers note an increased movement in that commodity. Operations have been carried along under check during the winter, but of late orders are coming in and plants are getting busy. The Eastman Flooring Company has made some large pur-

chases of stock to convert into flooring. The winter was quiet in this industry, but trade is picking up and there is more inquiry for stock.

The Strable Manufacturing Company is doing a fair business, and Bliss & Van Anken are always busy. Up at Grayling the Kerry-Hansen Flooring Company, a plant in operation only two years, is doing some business.

The stringency of the times has checked stumpage investments for the time being. Last year the Ward estate figured to put 77,000 acres of heavily timbered land on the market, containing several hundred million feet of timber, but after selling off a small portion, it is understood the property has been taken off the market for the present. Some 8,000,000 feet of hardwood logs put in by the Ward estate last winter will be railed to W. D. Young & Co. to be manufactured.

Southern Michigan men and A. T. Bound of Brimley, at the mouth of Kalka river, are negotiating for a lumber plant at that place. The plan contemplates a sawmill and planing mill and woodware factory. There is ample timber available for a long run.

Despite the depression in industrial lines, there has been a good deal of hardwood timber put in during the winter in eastern Michigan between the Saginaw river and the Straits of Mackinac. The lumber firms at Alpena have secured very nearly if not quite the normal stock, about 25,000,000 feet. In the Saginaw valley about 50,000,000 feet of hardwood logs will be converted into lumber. At Onaway, Gardner, Peterman & Co. will have about 5,000,000 feet, and the Lobdell & Churchill Manufacturing Company over 12,000,000 feet. At Au Sable the H. M. Loud's Sons Company will handle about 6,000,000 feet. This firm lumbers during the summer to some extent. Gardner & Richards at East Tawas will have a stock of 2,000,000 feet. The Michelson & Hanson Lumber Company at Lewistown has about 10,000,000 feet, and the Salling-Hanson Company at Grayling about the same amount. McTiver & Hughes at Onaway will have 3,000,000 feet of hardwood logs to manufacture.

Grand Rapids.

Governor Warner has named James B. Angell of the state university, Charles B. Blair of Grand Rapids and Chase Osborn of the Soo as delegates to the national conference for conserving national resources, to be held in Washington next month. Mr. Blair is secretary of the committee of inquiry into forestry conditions of the state.

J. S. Stearns recently purchased a touring car in Grand Rapids, making the trip to his home at Ludington in the new machine. It is Ludington's first car, though it is reported several others will be purchased this spring.

The plant and business of the Cabinetmakers' Company, manufacturers of mahogany library and dining-room furniture, located at Kent and Newberry streets, have been sold to W. C. Groblier of Sturgis, Mich. The factory will continue operations for the present under the management of J. G. Robinson, who was manager for the Cabinetmakers' Company.

The Luce Furniture Company of Grand Rapids has been bought by J. C. Giddings and it will be in operation by June 1, employing fifteen men. It is located on the north shore of Lake Cadillac.

Ed Allen's mill, located on the G. R. & I. railroad between Tustin and Leroy, completed its season's cut last week, and also has probably made its last run. Mr. Allen is a member of the lumber firm of Gibbs, Inall & Allen of Grand Rapids.

Herman Allen is removing his shingle and sawmill from Diggins to Cadillac and it will be in operation by June 1, employing fifteen men. It is located on the north shore of Lake Cadillac.

W. D. Young & Co.'s new flooring plant at Bay City turned out its first flooring April 17. The plant when in full operation will employ 400 hands.

Charles Whybrow and Isaac Parker, both of Escanaba, have taken the contract from H. W. Reade, receiver for the Escanaba Woodware Company, for loading about 1,500,000 feet of hardwood logs and a large quantity of pulpwood, single timber and ties, all of which was cut in the company's camps near Watersmeet this winter.

Saginaw has followed the action of Grand Rapids in purchasing 10,000 elm trees, to be set out by school children of the city on Arbor Day, May 1. Saginaw bought its trees in Wisconsin, while Grand Rapids imported its trees from France.

The town of Gwinn on the Swanzey range is to be built this year by the Cleveland-Cliffs Iron Company of Ontonagon. The company has already erected forty-eight double houses and has purchased sites for a hospital, hotel and bank, while lots are secured for churches, high school, railway station and business blocks. No intoxicating liquors will be allowed to be sold in the city.

Joseph Jennott, who built some of Muskegon's largest sawmills, is dead at his home in that city, aged 75 years.

The John F. Corl piano factories, now located at Jackson and Grand Haven, are being consolidated at Battle Creek. Manufacturing operations will begin in the new location in May.

Beginning April 23 the Story & Clark Piano Company of Grand Haven resumed a ten-hour schedule at the factory, on account of a fast increasing business.

The plant of the Ludington Woodware Company will resume operations in a few days. The company has 2,500,000 feet of timber in the yards, cut in Mason county, and has timber enough in Kalkaska and Grand Traverse counties to keep the plant busy for four years more, besides having nearly 15,000,000 feet on Drummond Island. Pins, wooden bowls, butter moulds, butter dishes and mop handles are turned out.

Cleveland.

Constant complaint is made by lumber dealers in Cleveland against the practice of railroads in furnishing erroneous rates, which are later corrected, to the detriment of the dealer. A dealer sends to a railroad in another state for quotations on a bill of goods. The railroad replies that it has not schedules of its tariffs on hand, but is willing to quote rates upon request. Subsequently it informs the dealer that the rate is, perhaps, 26 cents to a certain point. When the lumber is shipped it is found that the rate is in reality 29 cents, and the dealer is out of pocket. He puts in his claim to the company, and it dallies along for months, even years, so complaint is next to useless. E. L. French of W. A. Cool & Co., Cleveland, says that this sort of thing is the bane of the dealer's existence and that Cleveland firms have hundreds of these claims which have not been settled. He suggests that the Interstate Commerce Commission be appealed to to take steps to overcome this difficulty. Numerous threats are being made here to have a joint suit to bring the matter to a head. It is felt, however, that some joint movement by lumber interests the country over might result in more effective work.

W. A. Cool spent some days in West Virginia during the past week visiting the big mills at Mahan and vicinity.

H. Gillispie of the G. C. Stitzinger Lumber Company of New Castle, Pa., was a caller upon local lumber dealers during the week.

W. H. Sowers of the Sowers-Leach Lumber Company of Columbus was in Cleveland on business and called upon a number of his friends here.

Several big lumber companies in the "flats," where most of the mills are located, will be affected by the decision of the fire department that the city's rule that lumber piles must be

hacked thirty-five feet from the lot line must be enforced. In a case in which one company was involved a few days ago the fire chief directed the moving of a long pile of lumber because it was too near the lot line and endangered neighboring houses in case of fire.

W. H. Hilton of the Advance Lumber Company, with offices in the Rockefeller Building, will start into business on his own account on June 1. Mr. Hilton has been in Cleveland for a number of years and latterly has had charge of the hardwood flooring department of the Advance company.

F. T. Fetich of the Advance Lumber Company was kept from his desk several days the past week by sickness.

O. H. Taylor of the Crescent Lumber Company of Marietta, O., formerly with the Hardwood Manufacturers' Association, was a visitor in Cleveland a few days ago. He reports the company's mills in West Virginia as operating full time.

The city forestry department is making valiant efforts to reforest Cleveland, formerly known as the Forest City, but depleted of verdure on account of gas and smoke. The ban, however, has been placed on the willow, the poplar, the ash and the soft maple. Permits will not be granted for the planting of these trees because of their tendency to attract insect pests. An ordinance recently passed by the city empowers the city forester to pass on all trees to be planted.

Robert Jenks spent some days recently in northern Michigan and the Georgian Bay district looking up the lumber situation.

Columbus.

W. H. Putnam, president and general manager of the General Lumber Company, returned recently from a trip to the property of the company located along the Big Sandy in Kentucky. The company has two large mills at Ashland, Ky., and is operating a large timber camp on property of Lawrence, Johnson and Martin counties. It is estimated that the three tracts contain 15,000,000 feet of timber. The mills are being placed in first class condition preparatory to starting operations as soon as market conditions will warrant such action. The foundations have been repaired and the machinery is being overhauled. The company will install at least one new boiler and possibly two.

While conditions in the hardwood market in this section are not as bright as was anticipated some time ago, still improvement is noted in many directions, and the demand from manufacturing establishments is increasing. This is true especially of factories making agricultural implements and vehicles. The starting of the Barney-Smith car works at Dayton is expected to help the market generally.

Kenneth McLeod, president of the American Hardwood Company, left last week for the property of the company at Sedgwick, Ark. He will look after the opening of active development work on the large tract which has been taken over by the corporation. Ralph Westfall, general counsel for the company, and W. H. Harris, assistant secretary, left later to take up the work of collecting abstracts.

W. M. Ritter, president of the W. M. Ritter Lumber Company of Columbus, is preparing to take his annual trip abroad. He will sail from New York some time in May, to be absent for about three months. He is now fully recovered from the operation he underwent at a local hospital. While abroad he will visit the branches of the company at London and Liverpool. The company keeps some of its mills in the various southern states in operation all the time. Its policy is to keep its stocks low, and following that plan the mills are operated only when sales are made.

J. W. Mayhew, sales manager of the company, in discussing the situation, said: "I find better market conditions, judging from inquiries which have been received by our company recently. The market is still in a de-

pressed state, but we look for improvement soon."

The organization of the East Side Lumber Company, with a capital stock of \$50,000, has been completed by the election of N. J. Funnell, a local real estate dealer, president; E. R. Clarridge, secretary, and E. A. Prentiss, treasurer. Mr. Clarridge was formerly secretary of the Buttles Avenue Lumber Company. The active management will devolve upon Messrs. Clarridge and Prentiss. The recent purchases of stocks have been shipped to the new location of the company at the intersection of Main street and the Norfolk & Western tracks. A large tract has been leased from the railroad at that place. It is expected to have the mill and other machinery moved in about a month.

W. V. Smith, president of the Clear Creek Coal & Lumber Company of Columbus, left last week for Isonline, Tenn., to formally take over the 6,500-acre tract recently purchased in Cumberland county, Tennessee. The deal was closed at Baltimore, Md., by W. F. Felton, representing the company. The active work of development will start at once.

Indianapolis.

The Paoli Cabinet Company is erecting a new brick factory building at Paoli which it expects to occupy soon.

Julius Pinnell is reported to be some better. He has been seriously ill at Daytona, Fla., for some time, and his condition is still quite grave. Several local business men have organized the Federal Timber Company with \$200,000 capital and have arranged for the purchase of thirteen sections of timber land in British Columbia just north of Vancouver.

The O. Grimwood Company of Owensville, who have a large hardwood plant and yard, have a refractory mule that has caused the death of one employee and the serious injury of three others within the last few weeks. A. V. Spreckelson of this city has been awarded the contract for erecting the new Y. W. C. A. building, his bid being \$80,200. It is understood he will soon let contracts for the hardwood finish and floors.

F. M. Bachman of the F. M. Bachman Company has been elected a director of the Citizens' Gas Company, succeeding E. H. Eldridge, president, who recently resigned.

The Dilks Lumber Company of Richmond lost their offices a few days ago when the Colonial office building, in which they were located, was burned.

Will H. Freeman, secretary of the Indiana Board of Forestry, is having 40,000 poplar trees, 30,000 ash trees and 42,000 walnut trees planted on the state forest reservation near Henryville.

The Indiana Manufacturers & Shippers' Association states that it will ask the coming legislature to make provision for reciprocal demurrage, provide for a satisfactory method of refunding overcharges by railroad companies, and will oppose the establishing of a public utilities commission, which would virtually supplant the Indiana Railroad Commission.

Manufacturers in about sixty cities and towns on the Big Four railroad are being affected by the failure of the Big Four and Southern industries to reach an agreement on the division of joint freight rates on coal.

The Roach-Brown Manufacturing Company has been organized at Cumberland, a small town ten miles east of here, and will manufacture furniture.

Ground for a baseball park has been purchased by E. C. Atkins & Co. for the use of their baseball team, which was made an enviable record last year. The two or three years. The park will be opened December Day.

D. R. Trippett, representing the S. C. Major Lumber Company of Memphis, Tenn., is making a business trip through the southern part of the state and reports that he finds conditions are improving throughout the country.

Milwaukee.

The sixth strange fire that the Milwaukee Chair Company has experienced, recently occurred at its plant. The blaze was discovered in time and was extinguished before much damage was done. Deputy Fire Marshal End is still working on the case, but as yet no clue has been obtained to the perpetrator of the fires.

The Wisconsin Railway Commission recently dismissed the complaint of J. Hanover, alleging excessive rates and unsafe service on the Mattoon railroad, and a short logging line running from Ashwa, Wis., into the lumbering country of Shavano county. A distance tariff schedule was recommended by the commission, however.

C. H. Shuttlerworth, traveling salesman for B. A. Kipp & Co., furniture manufacturers of Milwaukee, was recently killed in a railway accident at Slater, Mo. Mr. Shuttlerworth was well known in Milwaukee and was a prominent Elk and a member of the Travelers' Protective Association, member of the Wisconsin Protective Association.

Saw mills are to be erected on the Indian reservations in Wisconsin by the United States government in accordance with the act of Congress authorizing the cutting of timber, the manufacture and the sale of lumber and the preservation of the forests on certain lands given over to the Indian reservations in the state. E. A. Barnhill of Green Bay, Wis., a member of the United States Forest Service, has recently been looking over the territory of the Menominee reservation and selecting sites for the new mills that are soon to be built there. Three or four large mills are to be erected, the largest at the Norway dam on the reservation, and it is said that there is already timber enough cut to keep the mills busy for over a year. Insofar as possible, the work in the sawmills will be done by Indians and no Indian will be allowed to enter any partnership with any one other than an Indian. The products of the mills will be sold to the highest bidder.

The Wisconsin Chair Company at Boyd, Wis., has purchased a large plant at Evansville, Ind., in supplementary to the large industry at Boyd. About 200 men will be engaged in the manufacture of chairs at the new location.

It is reported that a large lumber industry is to be established at the mouth of the Kauska river at Brimley in Chippewa county, Wisconsin. As proposed, a saw mill with a daily capacity of 60,000 feet, a planing mill, a tannery and later the establishment of a woodenware factory, will comprise the big plant. There is a remarkable timber supply in the vicinity, enough to run such a plant for years to come. Operations will be started this coming summer, according to reports.

Due to increasing business, the Green Bay Show Case Company at Green Bay, Wis., has begun the erection of a large addition to its present plant. The addition will be of brick and will serve as a variety of establishments for the company. The firm expects to soon double the present capacity of the plant.

The Crocker Chair Company of Sheboygan, Wis., has purchased of the G. F. Sanborn Company of Ashland, Wis., 6,108 acres of hardwood timber lands in Houghton and Baraga counties, Michigan, for the sum of \$86,589. The lands are in the vicinity of Sidnaw, Mich., and the timber will be sawed at the mills there and will then be shipped to the plant of the company at Sheboygan for the manufacture of fine furniture.

An unusual supply of logs is piled at the yards of the Two Rivers Woodware Company at Two Rivers, Wis., some six million feet of logs, and the company has indications of a prosperous season. The recent report that there was a strike among the pall turners of the establishment was unfounded and the matter, which was only a slight difference owing to slight reductions in wages, has been satisfactorily settled.

The Blue Grass Lumber Company of Milwaukee has increased its capital stock from \$1,000 to \$15,000.

Cincinnati.

The Clifton Star Building Company of 214 West McMillan street, with a capital stock of \$5,000, was incorporated last week by Rudolph Keitmann, W. H. Hurn, F. Henry Hurlander, Adolph O. Heinrich and Gerritt J. Fredericks. The incorporation was made in order to enlarge the plant.

E. L. Edwards of Dayton was in town during the last fortnight, visiting his plant, located in the West End, of which J. E. Tuthill is general manager.

J. S. Walker of the J. S. Walker Lumber Company of O'Keefe, W. Va., spent a few days here inquiring into trade conditions.

"Jess" Thompson of the W. J. Thompson Lumber Company of Memphis stopped off here while en route further south to attend to some business with a local concern.

H. K. Bilan of the William H. Perry Lumber Company has found a quiet little place in the country and has gone there to rest for a month or so. His address for the time being is held a secret, as he wishes to be entirely free from business details. Even his old associates do not know where he has gone. E. L. Wolfe of the company has returned from Nashville, Tenn., where he went some weeks ago to attend to a large shipment of white oak. W. E. Johns of the concern, who assumes active charge in the absence of Mr. Bilan, says that business is increasing every week. "The demand for the lower grades has been in active request for some weeks and an increase in prices would not surprise me in the least," he said.

T. B. Stone, president of the T. B. Stone Lumber Company, left last week for a business trip through the South.

The Cincinnati Furniture Exchange held its regular monthly meeting at Abbrand's Cafe last week, and in the absence of Secretary Ernest Schneider, who is at the Christ Hospital recovering from an operation, his assistant, E. Kepler, acted as secretary. Communications were read from the Receivers' and Shippers' Association, Chicago Furniture Manufacturers' Association, asking that the Exchange send representatives to meetings. A. G. Stelman was elected delegate to the Receivers' and Shippers' Association and President Deltz to the Chicago Furniture Manufacturers' Association. The annual outing of the exchange will probably be held at Highland Grove, as the entertainment committee seems most favorably impressed with that resort. The furniture trade is now about sixty per cent of what it was last year, and the local concern are running about forty hours a week. Improvement is generally looked for in every line of trade.

Alfred Mannon, a manufacturer and dealer in lumber of Scottown, Ohio, last week admitted he is bankrupt through a petition filed in the district court. He owes \$1,205.63, while his assets amount only to \$1,018.

J. Overstreet of the Southern Lumber Company was a visitor in town during the last fortnight, looking over the hardwood situation here.

Thomas J. Moffett, president of the Maley, Thompson & Moffett Company, says the situation is growing better each week, and he finds a noticeable change in the demand for walnut, with prices firm. The company is shipping a great deal of that wood across the water, along with several other hardwoods. The veneer business, he says, is not as good as it was several weeks ago. But the last flood the concern floated a great many logs to within a short distance of its mill on West Eighth street, which will keep the mill busy for some weeks. All other mills of the company are running full time.

L. B. Banning has returned from a business trip east. During his absence A. E. Hart assumed charge. He states that the past week's business has not been very good. "Last month we were not quite so busy," he says.

The Cincinnati Carriage Makers' Club broke

all records in initiating fifteen new members at the meeting held at the Grand Hotel. The occasion for the meeting was the dinner served to Otto Armleder, the new president, and the other new officers. Arrangements were also made for the annual June outing.

Incorporation papers were taken out at Columbus for the Abr & Rost Company last week, with a capital stock of \$25,000. The incorporators are John Abr, George J. Rost, Sanford Brown, Fred J. Wesselman and David P. Shorr. The concern operates a carriage and woodworking plant in Grest Street.

J. E. Tuthill, general manager for E. L. Edwards, has returned from a business trip east. He reports the situation here as showing gradual improvement, and he looks for a decided change in the cypress situation within a short time.

J. W. Darling of the J. W. Darling Lumber Company, located in the Union Trust building, will leave this week for a trip to the yards of the company at Joppa, Ill., to inspect stock. R. L. Gilbert of the company is out on a business trip through the North. He will be absent from the local offices for a week or more.

L. H. Gage of the Gage & Possell Lumber Company, located in the Bell block, has returned from a business trip through Mississippi, where, he said, conditions were rather quiet. He thinks that improvement in the cypress situation will eventuate within a very short time.

H. H. Fields of the E. R. Spatswood Lumber Company of Lexington, Ky., was in town recently looking into the hardwood situation. The trade in the Blue Grass region is showing gradual improvement, and within a short time he thinks the general volume of business will show a neat increase.

W. W. Pease of the Galloway-Pease Company of Johnson City, Tenn., was in town recently transacting business and taking a general look into conditions.

J. Watt Graham of the Graham Lumber Company reports a little change in the situation, an increase of the amount of transactions.

F. W. Mowbray of Mowbray & Robinson, is on a business trip to Chicago, from which city he proceeds to the South.

C. L. Clarke of the Swann-Day Lumber Company of Clay City, Ky., was in town last week and visited Richey, Halsted & Quick, as well as a number of other downtown merchants.

"There has been a decided change in the situation during the last fortnight in the various grades of building lumber," said Melvin K. Short of the Dwight-Hinckley Lumber Company, "and I think, now that the weather has opened up, and that the volume of business will continue to show improvement."

The Lumbermen's Club, at a special meeting held at the Business Men's Club recently, adopted resolutions advising the National Hardwood Lumber Association to discontinue the present inspection rules and readopt those in use in 1905.

At the annual convention of the National Association, to be held in Milwaukee in June, the local dealers will vote for the adoption of the 1905 rules. A letter was read from the Pittsburgh Chamber of Commerce asking the club to do all in its power with the congressman from its district for the appropriation of the \$5,000,000 for the Ohio river improvement.

The Acme Veneer Company has applied for a building permit for two additional stories for their factory at the corner of Eighth and Harriet streets, to cost about \$6,000.

M. D. Farrin, president of the Farrin-Korn Lumber Company, has submitted plans to Building Inspector Kuhlman for a brick and stone factory of two stories, with flats on the second floor, at the corner of Clifton and Spring Grove avenues, to cost about \$15,000.

Several creditors brought involuntary bankruptcy proceedings against the John Stengel Company of Dayton last week, and later Stengel himself filed a petition admitting his bankruptcy. He places his liabilities at \$64,000 and assets at \$60,000, in real estate, but this is heavily mort-

gaged. The creditors are all of Dayton. Thomas J. Callahan of Dayton was appointed receiver at \$25,000 bond.

A. P. Steel of the Carrier Lumber & Manufacturing Company of Sards, Miss., was in town during the last fortnight drumming up trade among local concerns.

Walter Qulek of Richey, Halsted & Qulek is on a business tour through the Hoosier state. S. W. Richey of the concern reports business pretty good, considering everything, and he looks for improvement in all grades of lumber soon.

J. H. Britton of the Britton Lumber Company of Linkwood, Fla., was here a few days recently. He is making a tour of the South to get a line on the hardwood situation.

S. P. Stanbery of the Chicago Lumber & Coal Company, with offices in the Mercantile Library building, sees a favorable change in the situation during the last week or so.

Further examinations in the bankruptcy case of the United States Timber Company have been made in Referee Greve's office. George R. Berry, who managed the sale of the company's stock, was on the witness stand and told in detail of the measure taken for floating the stock and getting the company going. Berry said that 25 per cent commission was paid for the sale of the preferred stock which was disposed of at first for 40 cents on the dollar and later for 80 cents, until finally it reached par, where some sales were made. All the preferred stock was paid for with the exception of \$1,000, according to Berry, which was given to John Hawks for acting as vice president. His services consisted, according to Berry, in attending two board meetings and advising with the managers one. The company's common stock was given away as a bonus to buyers and solicitors. An answer was also filed in the district court by Trustee Robert D. V. Carroll to the intervening petition of the Cumberland Lumber Company. The latter sold a carload of lumber to the bankrupt on the latter's representation that it was in sound financial condition, and it now seeks to recover the lumber which is still on hand. It is charged that the financial statement was false and fraudulent. All of this is denied in the answer.

Business of a much better kind during the past fortnight," says Ralph McCracken of the Kentucky Lumber Company. Mr. McCracken is of the opinion that the hardwood trade will show a much better tone from now on.

James Meyers, president and manager of the Enterprise Lumber Company, with whom he is indebted to a large extent, was in town recently in an effort to straighten out matters with Receiver W. H. Stewart. Just what agreement was reached the parties concerned refuse to divulge.

A report was filed last week by Receiver W. R. Thrall of the E. M. Schantz Lumber Company, bankrupt. The property which came into the hands of Thrall consisted of lumber, merchandise and machinery, but no money or cash was received by him and he was unable to collect any of the accounts. He turned all over to the trustee, who was subsequently selected. Receiver Thrall was allowed \$75 for his service. The sale of the concern has been set for April 27 by order of the court.

Evansville.

Richard Jenks of the Conroy & Birely Table Company, Shelbyville, Ind., was in the city last week. Mr. Jenks is a widely known and popular lumberman and is always welcomed by the trade.

Ben Young of Young & Cutsinger spent a week in central Indiana territory looking up old friends and incidentally attending to some business. Last week Mr. Young was at the firm's Jasper plant looking after affairs there.

Word has just been received by J. C. Keller, manager of the traffic department of the Evansville Manufacturers' Association, that at an

early date walnut, butternut and cherry lumber and logs, which at present are 3 cents above the common lumber rate, will be reduced to the common lumber basis from Evansville to all points on the Illinois Central railroad in Illinois. The association has been agitating this reduction for some time.

N. R. Dennett and C. E. Holden of Port Washington, Wis., two of the organizers of the new Evansville chair factory that is to be established in the old Neptune Launch Company's plant on the lower river front, arrived in Evansville last week to make arrangements for the installation of machinery, the first consignment of which is to arrive in about two weeks. The firm hopes to get the plant in operation by July 1. The new company will be known as the Milwaukee Falls-Evansville Chair Company and will manufacture nothing but high-grade sliding-room chairs.

May Bros., the well-known and popular hardwood firm of this city, announce their intention of moving to Memphis, Tenn., where they will be in the center of the hardwood manufacturing district. They will leave here at once and will open up an office in Memphis and be ready for business in a very short time. Their local offices will be closed just as soon as their interests are disposed of. The firm is composed of Frank and Ralph May, who were formerly connected with May, Thompson & Thayer, now Thompson, Thayer & McCowen, of this city. They operate a large plant at Dumas, Ark.

The Maley Athletes defeated the Green River Cubs in a hotly contested game here April 19 to the tune of 6 to 5. The feature of the game was the pitching of J. W. Bertrand of the Maley. The Maley Athletes represent the office and working force of the Henry Maley Lumber Company.

The Hercules Buggy Company is operating its body manufacturing plant day and night, being unable to take care of the demand for carriage bodies on its regular schedule.

St. Louis.

The Lumbermen's Exchange of St. Louis sent the following letter to Maj. William Warner, United States senator from Missouri, a few days ago: "Dear Sir:—At a special meeting of the Board of Directors of the Lumbermen's Exchange of St. Louis, held April 14, a motion was made and unanimously carried that this Board of Directors, representing one of the most influential associations in Missouri, does hereby enter its earnest protest against the passage of the Hepburn amendment to the Sherman anti-trust bill, feeling that it would be detrimental to the business interests of the country. Lloyd G. Hazlett, President; A. J. Bush, Secretary."

Harley Miller has come back to the firm where he first acquired a knowledge of the lumber business, the Thomas & Proetz Lumber Company. Until his present connection he was secretary of the John F. Scobee Lumber Company.

W. E. Keown, president of the International Hardwood Company, says conditions look better just now for a good spring trade than they have for a long time. Orders are coming in more plentifully. Prices, however, are not satisfactory. Mr. Keown has just made a southern trip.

Fred Gerber, a well known insurance man and politician and father of Fred Gerber, vice president of the Fidel-Ganaal Lumber Company, died a few days ago.

Louis Eppler, formerly with the Mossberger Lumber Company, has formed a connection with the Lyon Cypress Company of Garyville, La., and will represent the firm in this territory. The Tower Grove Planing Mill Company is now known as the Darr & Sons Planing Mill Company.

Theodore Plummer, president of the Plummer Lumber Company, is not feeling as much like going fishing as he did a short time ago, for business is looking better and he has booked more orders during the past few weeks than for several weeks previous.

Orders are coming in pretty well, says Charles Proetz of the Thomas & Proetz Lumber Company. They are not large ones, but they are satisfactory ones, for at this time few large orders are received by any firm.

Cypress conditions are somewhat better, E. W. Blumer, sales manager of the Lothman Cypress Company, reports. He believes business will soon be in good shape. Prices, while not satisfactory, will no doubt become better as the demand increases.

W. Arthur Waide, secretary of the General Sash and Door Association of Chicago, was a recent visitor. He has been on a little selling trip.

H. J. Schwartz has become identified with the G. H. Barnes Lumber Company. He was formerly with the F. H. Smith Lumber Company.

Charles Grote has associated himself with the John F. Scobee Lumber Company. He was formerly with M. J. Heller in the railroad timber business.

W. R. Chivvis, who makes a specialty of walnut, but who sells all kinds of hardwoods, says business is quiet. He sent some walnut to Europe a short time ago and has ordered and will ship some more of the near future.

Trade conditions, both wholesale and retail, are reported quiet by the Wilson-Rehels-Riffe Lumber Company. Inquiries are plentiful but orders are few, although there is a likelihood soon of business picking up.

The sawmill of the Henry Quellmalz Lumber & Manufacturing Company at Brookings, Ark., and also their St. Louis factory are being operated full time.

The Fish, Mo., sawmill and the Kilgore, Ark., sawmill of the Garetson-Greenson Lumber Company are now being operated on full time. Inquiries for car oak are coming in and the demand seems to be good.

The Mine Lumber Company state they have fair demand for good stock, principally for bridge plank.

Leopold Methudy, whose specialty is export trade, states that the situation at present on the other side is large stocks of low grade stuff, principally oak, both lumber and logs, shipped on consignment. There is considerable more stock at seaboard to go forward when accommodation for the freight can be secured. Low grade poplar is plentiful, but high grade is scarce; the demand, however, is quiet.

W. A. Bonsack of the Bonsack Lumber Company, says that conditions remain practically unchanged. While every now and then local concerns secure considerable business and so for the time being regard matters in a cheerful light, the improvement is not maintained and has not become general. In regard to grading, Mr. Bonsack says he does not think it makes any material difference whether it is high or low; the main thing in this is that it be stable and recognized.

F. H. Smith of the F. H. Smith Lumber Company says he is disposed to regard lowering grades as a mistake, since it renders the market unstable. As matters stand prices are now being readjusted on the basis of the present grading.

The Verdin Lumber Company state that with them the call is mainly for cypress for the planing mill. Last month when Mr. Verdin was in the South he found only six out of thirty mills running, but looks for most of the southern mills to start up within a month, as many of them are now getting orders.

The American Hardwood Lumber Company believes that contractors have considerable business on hand, but are holding it back expecting to employ help at lower wages. Stocks are not heavy at many southern mills, and the big yards have held off from stocking up so that a sudden revival in demand would probably bring about a marked shortage in first hands.

The Krebs Lumber Company report the chief call for quartered oak and clear sap gum, which

is being substituted to some extent for cottonwood. No. 1 common poplar is in better demand. Steele & Hibbard say that prices held up well through November and December, but eased off about \$3 a thousand in March. He thinks the market will soon become firm, though there is a good deal of cheap lumber being offered and a disposition on the part of buyers to abstain from for snags. However, bargain counter stuff will soon become scarce. The company's trade runs to quartered oak, poplar and ash.

The Krug Lumber Company reports best inquiry for quartered red and white oak, which is wanted by furniture manufacturers and the Massena Lumber Company near that city. The Dresser Hardwood Lumber Company and the Massena Lumber Company also report a good demand for the latter wood.

The Proctor, Ark., sawmill of the Waldstein Lumber Company started up early in the month. The plant will cut mostly white oak, but some other woods will also be cut.

An involuntary petition in bankruptcy has been filed against Anton Roeker, trading as the Roeker Lumber & Land Company.

Nashville.

Nashville lumbermen are responding nobly to the enterprise recently launched here of building a handsome ten-story hotel in order to enable the city to better handle conventions and tourists. John W. Love of Love, Boyd & Co. is secretary of the Hermitage Hotel Company, capitalized at \$300,000, and it is proposed to erect a \$700,000 structure on High street near Church. Gen. G. P. Thurston of the Prewitt-Spurr Manufacturing Company has contributed \$600 to the hotel, subscribing for the same amount of stock; John H. Hanson of John B. Hanson & Co., \$2,500; Love, Boyd & Co., \$1,000; W. J. Wallace of Wallace & Norvell, \$500; Bascom Montgomery of the Montgomery Furniture Company, \$300; W. J. Cude of the Cude Land & Lumber Company, \$500; Montgomery & Co., furniture, \$500; Standard Lumber & Box Company, \$500; Prewitt-Spurr Manufacturing Company, \$200; T. H. Dunlap, \$200; Lewis Doster, secretary Hardwood Manufacturers' Association, \$100, and A. L. Hayes, a dealer, \$100.

Lewis Doster, in speaking of the advantages a city well equipped with hotels has over one that is not, has the following to say: "Unless Cincinnati had been well equipped to handle the recent conventions of lumbermen that city would not have been selected as the meeting-place. And if Nashville were equipped to handle such conventions it is not only possible but it is very probable that these two conventions, which were in Cincinnati at the same time, would have come here at different times, as well as many others. I can say almost positively that the Hardwood Manufacturers' Association will hold its convention in Nashville as soon as this city is prepared to take care of this convention."

"Strong efforts are being made to secure a reduction in the tariff on lumber, says A. S. Lowery of Cedar Rapids, Mich., a recent visitor to this city. "This is being done in order to allow the Canadian lumber dealers to enter the American field. If the tariff is lowered it will no doubt reduce present prices in America, occasioned by the scarcity of the product. Canadian lumber, with the tariff reduced, can be imported and sold at as low prices as home dealers can cut it, on account of the low wages paid labor in that country. Lumber is getting very scarce in the United States, and it is estimated scarce in Canada to supply the United States for several hundred years. Some Canadian timber is now finding its way into this country, but the high tariff makes it unprofitable to import much of it."

A special from New Brockton, Ala., announces the destruction of two dry kilns and the planing mill of the Boyd Lumber Company near that point. The loss is estimated at \$100,000. By heron work the stock shed, containing 2,000,000 feet of lumber, was saved. Convicts who were quartered in a stockade nearby worked valiantly

to arrest the progress of the flames. The property will be rebuilt. This was the second largest plant in northern Alabama.

The Hill Truck Company has made application to change its charter, increasing the capital stock from \$25,000 to \$50,000, to be used in extending the business.

The Clear Creek Coal Company of Crossville, Tenn., which has large timber interests as well as mineral rights, has sold out to Ohio capitalists. The purchasers propose to operate several large saw and stove mills. W. V. Smith of Columbus will be president of the new company and Andy Elmore, an experienced lumberman, of Crossville, will have charge of the timber cutting and manufacture. The tract embraces 16,200 acres and the purchase price was \$162,000.

E. R. Freeman of Nashville, acting for Florida parties, has just closed a deal whereby he sells a large tract of timber land in Hale, Perry and Bibb counties to F. L. Richardson of Michigan and E. F. Allison of Alabama. The tract is said to be the largest one in the Birmingham district not owned already by manufacturers. It comprises 16,200 acres and the purchase price was \$200,000.

The Greenfield-Talbot-Finney-Battle Company, which has a big furniture store in Nashville, Tullahoma and Sewanee, has just placed an order for a large amount of new machinery. This company is one of the few that has continued to run full time during the late financial troubles.

The McEwen Planting Mills of McEwen, Tenn., a short distance west of Nashville, which were destroyed by fire a few months ago, will be rebuilt. New and modern machinery will be installed and the mills will be made even larger than before. A stove plant will also be run in connection with the mills. Electric meters will furnish the power for the plant, and it is expected they will also give day power to the town of McEwen.

Sawmills which shut down some months ago in and around Hartsville have resumed operations, and the long line of wagons which used to pour into the town from the surrounding country are again in evidence. This is one of the chief lumber markets of Tennessee's smaller towns and several carloads of lumber are shipped out daily.

The Nashville Board of Trade is trying to secure the removal of the Florence Wagon Works from Florence, Ala., to Nashville, and, looking to that end, has appointed a committee to take up the project. The company, it is stated, wanted \$100,000 in stock subscriptions in Nashville. John D. Fletcher of this city proposes to furnish a site for the plant, twenty acres, to go in at \$4,000, and is willing to take stock in payment therefor.

Although no decided improvement is reported in the Southeast in freight traffic matters, many of the freight traffic officials are inclined to take an optimistic view of conditions and predict better things in the near future. One local railroad man facetiously says of the situation: "Time was when cars were scarce and we had all the business we could handle, and sometimes more than we could attend to; then we were rather lax about soliciting business, but now when one of the collectors hears about a carload shipment everybody from the president down is sent after it."

W. V. Davidson, M. F. Greene and J. N. Hicks, all of the Davidson-Benedict Company, have returned from a pleasant sojourn in Florida, where each has a cottage and an orange grove.

Memphis.

W. H. Russe, president of the National Hardwood Lumber Association and a member of the American Lumbermen's Association, but now returning from an extended European trip, reports that the hardwood situation abroad is practically demoralized. He attributes this condition in part to the business depression prevailing over

Europe, but also believes the indiscriminate consignment of American hardwood lumber by those unfortunates with foreign conditions is largely responsible.

Mr. Russe believes that there are two possible solutions of the consignment problem. One is that the foreign brokerage firms stop making advances against lumber consigned to them. He points out that there is not a lumberman who sends his lumber abroad on consignment who is not actuated by the motive of securing every cent of ready cash that the foreign brokerage firm will allow him to draw against his stock the moment it is under proper bill of lading. He loses sight of other considerations in the contemplation of the money he will be able to realize immediately, forgetting even that the charges which accrue against such shipments abroad will, in nine cases out of ten, absorb the remainder of the value of his stock over and above what he has drawn against. Mr. Russe thinks foreign brokerage firms are largely responsible for the continuance of the consignment evil in the United States, and declares that they have it in their power to put an end to it forever by simply shutting off drafts against shipments the minute the lumber is ready to go forward from this country.

The other suggestion is that lumbermen instead of consigning lumber to foreign countries out of their own reach and certainly out from under their own control ship it to brokers in the larger centers in the United States, where they can at least look after it. If necessary, at comparatively small expense. He expresses the belief that this plan would realize from 10 to 20 per cent more than shipping to foreign brokerage firms.

Mr. Russe states that the foreign markets for hardwood lumber are so depressed that lumber cannot be bought or manufactured in the United States and sold abroad at as good prices as can be obtained in the United States, and that the present level is practically prohibitive for every regular exporter and he does not hold out hope of any immediate improvement in conditions abroad.

Official announcement is made that the big plant of the American Car & Foundry Company at Binghamton, a suburb of Memphis, will be placed in operation again May 1 with a force of between 750 and 1,000 employees. The big car works closed down some months ago because of the financial depression. It has been well supplied with orders all the while and will soon be running at full capacity with favorable conditions. The management denies strenuously that there is any truth in the statement that the suspension of the local and other plants was the result of threatened embarrassment growing out of the failure of the Kalkecker Boat Truss Company. The resumption of operations at this plant will be a great help to it with the other lumbermen here, as it is one of the largest woodworking plants in this city or section.

It is encouraging to note in the same connection that the Louisville & Nashville and Nashville, Chattanooga & St. Louis have increased the number of men at their machine shops in Tennessee and Alabama and that the Queen & Crescent has not only refused to suspend operations at its plant at Gadsden, Ala., but has announced its intention of increasing materially the capacity of its shops there. The St. Louis, Iron Mountain & Southern has begun work on a small scale at its machine shops at Little Rock and the Rock Island-Frisco system has reinstated all the men discharged from its shops at Argenta, Ark., some weeks ago.

Production of hardwood lumber is being increased in this territory. Weather conditions during the past few days have been somewhat unfavorable and have interfered to some extent, but most of the mills which have been ready for operation have kept busy. Hale & Kelsor, with headquarters in Memphis, have put their big mill at Osceola, Ark., in operation again

after an extended shutdown. The Sawyer & Austin Lumber Company, Pine Bluff, Ark., has announced its intention of resuming within the next few days at full capacity. The Bellgrade Lumber Company, Memphis and Belzona, Miss., has had some trouble with its machinery recently, but is preparing to resume without delay. The J. W. Thompson Lumber Company announced that it will start its hardwood mill at Berclair, Miss., within a short time. The big new double band mill of R. J. Darnell, Inc., is in steady operation here, and the Darnell-Love Lumber Company is running its plant at Leland, Miss. The management, however, has stopped work on the second band mill being installed at the latter point. The Anderson-Tully Company is operating only one of its mills at Vicksburg; its box factory at that point, only recently completed, is shut down for the present. It is running both of its big box plants here, however, and the Morgan-West Box Company, closely identified with the Anderson-Tully Company, is running its plant at Madison, Ark., with a fairly full force. The Brasfield-Thompson Lumber Company is running steadily at Brasfield, Ark., the town formerly known as Biscoe. The Kyle Lumber Company at Gadsden, Ala., has resumed with a full force and with a large supply of hardwood timber. But even with the resumption of operations in this section, the Memphis territory is still considerably short of normal and manufacturers declare their intention of sustaining proper relations between production and consumption to the end that there may not be an accumulation of hardwood lumber sufficient to cause further depression in prices.

The committee representing the railroads entering Memphis and having in charge the matter of readjustment of rates to compensate for withdrawal of reconinging privilege advises the special committee of the Lumbermen's Club that it has held a meeting, but that, owing to the absence of one railroad official, it cannot make known the result of this conference until it has heard from the absent one. It is putting it rather mildly to state that the lumbermen of Memphis are becoming somewhat impatient over the delay of the railroads. It has been nearly two months since the reconinging privileges were withdrawn and, instead of having secured an adjustment, lumbermen of this city are confronted with the probability of an advance in freight rates on lumber shipments from points south of Memphis, notably on at least two lines, amounting to from one to two cents per hundred pounds. They regard this as a complicating factor and are bringing pressure upon the railroads to settle the old problem before new ones arise.

The property of the bankrupt Tutbill & Pattison Manufacturing Company, Shelbyville, Ala., which a year ago failed for about \$1,000,000, with all its mill equipment, is considered to have just been sold by Trustee Herbert Jackson. The purchaser was Charles McKee of Little Rock, and he paid only \$7,200 for the lumber mill and veneer plant, valued at about \$50,000, and only \$850 for a boat which was appraised at \$3,000. A large passed into his ownership for \$200. The failure of this firm had a Memphis end to it, officials of the Memphis Savings Bank stating that the flotation of bogus paper by brokers representing this concern was directly responsible for the necessity of suspending it. The loan, it will be recalled, was made through Tutbill & Parsons, "bankers and brokers," who had been connected with the Tutbill & Pattison Manufacturing Company.

The Illinois Central has established through freight and passenger service into Birmingham from St. Louis, Chicago, Memphis, New Orleans and other larger centers in connection with the Hayleyville extension from Corinth, Miss., and the tracks of the Northern Alabama and the Frisco system. At the same time, a number of promotions have followed the inauguration of this new service. Chief among these is the

advancement of E. F. Stovall, one of the local freight agents of the road, to the position of general agent of southern lines, with headquarters at Birmingham. The Illinois Central has established three yards at Thomas, Ala., and has erected big machine shops there. It is expected that the yards, in connection with the car plant, blacksmith shop, roundhouse and other appurtenances, will give employment to between 300 and 400 persons.

The Oasis Lumber & Timber Company, which recently joined the Memphis lumber colony and which has its headquarters in the Randolph building, is erecting a mill at Louisville, Miss., for the development of its timber holdings in that section. The plant will have a capacity of about 20,000 feet a day.

John W. McClure, secretary-treasurer of the Lumbermen's Club and secretary of the Bellgrade Lumber Company, has been receiving the condolences of his many friends here during the past few days over the death of his brother, Eugene A. McClure, which occurred a few days ago at Riverside, Col., where he had gone in search of health. The deceased was connected with E. B. Deeser & Co. and other lumber firms here until he was forced to give up business in this section and seek a more healthful climate. His remains reached Memphis April 18 and burial was from the residence of his brother.

A. C. McCormick, Oshkosh, Wis., has purchased from Max Fleischer of the Max Fleischer Stave Company, Memphis, the entire holdings of the corporations in Desha county, Arkansas, amounting to more than 11,000 acres of timber lands. The tract lies on the Memphis, Helena & Louisiana and Iron Mountain lines of the Missouri Pacific system and is estimated to contain fully 100,000,000 feet of hardwood timber. The terms have not been made public. Mr. McCormick is heavily interested in timber lands in both Arkansas and Florida and considers investments in this class of property the most promising of anything within his knowledge.

Three new members were received into the Lumbermen's Club at its last meeting, bringing the membership to the highest mark in the history of the organization. They were: S. S. Parks of Pioneer Lumber & Shunt Company, J. B. Thurman of the Hinton-Thurman Lumber Company, and E. C. Latanner of the General Lumber Company.

At the same meeting suitable resolutions were adopted respecting the recent death of Ike Watts, a member of the old lumber firm of Watts & Schaeffer and for several years secretary of the Lumbermen's Club, of which he was a charter member. He was forced to retire from active connection with the lumber business some years ago and the club, out of appreciation for the splendid services rendered by him as secretary, voted him an honorary member for life.

The railroads entering Memphis have agreed to call a conference within the next thirty days for the purpose of discussing the granting to Memphis of the stopover privileges enjoyed by other gateways. The Frisco system has already, acting alone, granted the privilege asked by the commercial organizations and arrangements are now being made for a conference between officials of the lines east and west of the Mississippi, at which action will be taken on the proposition.

George D. Burgess of Russe & Burgess left this evening for New Orleans, Vicksburg and other points south on a business trip.

Jack Monroe of Lyon, Monroe & Co., Liverpool brokers, left some days ago for Kansas City and other points in the West. Mr. Monroe spent about two or three weeks among the lumbermen of Memphis. He is not at all favorably impressed with foreign conditions as affecting lumber, declaring that there is so much consigned stock as to make it extremely difficult to operate advantageously.

R. J. Wiggs of R. J. Darnell, Inc., has returned from a business trip to eastern points for his firm.

Every lumberman of Memphis is working hard for the election of A. L. Foster to the first vice-presidency of the Business Men's Club. He is opposed by George R. Janes, head of one of the largest wagon manufacturing companies in this city, but the lumbermen believe they are sufficiently strong to land the honors for their candidate. The Lumbermen's Club decided to hold its regular semi-monthly meeting, which falls on the day of election, April 25, at the home of the B. M. C. in order that every member of that organization might be there to work for Mr. Foster. The election of Mr. Foster will be the order of the day, taking precedence over every other question.

New Orleans.

Plans for a 4,000-foot wharf of the most modern type that will be especially constructed and equipped for handling export lumber shipments have been formally approved by the Board of Commissioners of the port of New Orleans, and it is expected that within a short time the commission will be ready to go ahead with the work. The announcement that these plans had been approved attracted much attention among lumber exporters of this section and they are anxiously awaiting the completion of the structure they are to give them the facilities they have so long required. J. H. Hinton's testimony before the Legislative Port Investigation Commission several days ago is believed to have been responsible for the action of the Port Commission in having plans prepared. Mr. Hinton showed that the lumber exports from New Orleans were much smaller than they would be if the proper facilities were placed here. The Dock Board took up the matter and the plans have been drawn and approved.

Much interest is being manifested in the session of the Interstate Commerce Commission that will be held here April 27 and 28. Several matters in which lumbermen are vitally concerned will be aired at this sitting and the developments will in all probability prove particularly interesting. It is probable that the lumber exporters' complaint against the cutting down of free time in L. O. B. lumber cars for export business will be considered.

On application of George L. C. Lhots the Commercial-Germania Trust and Savings Bank has been appointed receiver for the Lhote Lumber Manufacturing Company, a well-known concern of this city. This company formerly did a big business and exported a good deal of lumber and products of it. It is said to be unable to meet its obligations, however, and the receiver has been named at the request of Mr. Lhote, who says he is a creditor in the sum of \$47,477.31, and that the company's paper for \$33,000,000 is due obligation.

Plans for a big furniture factory that will be established in St. Bernard parish, just below New Orleans, and which will manufacture furniture of hardwoods imported from Central America, are being discussed. The names of the promoters of the company have not been made public, but it is understood that an option has been obtained on a very desirable site.

A new \$50,000 corporation that will engage in a general lumber export business has been organized here by J. H. Hinton and associates and will immediately begin business. Articles of incorporation have been filed and the organization is authorized to do a general business in lumber and timber, handling it on commission and otherwise. Mr. Hinton, head of the Camp & Hinton Company of Lumberton, Miss., said today that the company would do only an export business. H. L. White, S. Hinton and J. W. Hinton are the other incorporators.

Adam & Steinbrugge, a well-known export lumber firm that has been doing business here for many years, has dissolved and the business

is now being conducted by Phil I. Adam, who will continue to operate it. C. D. Steinbrugge has returned to his home in Germany, where he will engage in importing lumber from the United States.

Approximately \$60,000 loss resulted from the big fire which recently destroyed the plant of the New Orleans Chair Company at Algiers, just across the river from New Orleans. The company's stock was well covered by insurance. It is not making arrangements to re-establish its business.

Advices from Jackson, Miss., state that the case of the State of Mississippi vs. the Grenada Lumber Company et al., the celebrated Louisiana-Mississippi retail lumber dealers' case, has been formally submitted to the Supreme Court of that state. A lengthy brief submitted by Attorney L. E. Brown of Yazoo City and Mayes & Longstreet of Jackson sets forth the case of the lumbermen, who deny emphatically that their organization is a trust. Chancellor Lyell has already decided that the association is a trust and appeal from this decision has been made to the Supreme Court. A decision is expected within the next week.

Dr. Stringer Boggs, a widely known hardwood lumberman of Clarksburg, W. Va., was a recent visitor at New Orleans.

Merchants and professional men of Grand Cane, La., have organized the Grand Cane Lumber Manufacturing Company and are just about to begin operations at a big plant that has been established at Grand Cane. The company is devoting itself to the manufacture of interior woodwork.

Norfolk.

Harvey M. Dickson, the well-known and popular hardwood lumberman of this city, at the head of the H. M. Dickson Lumber Company, has been appointed president of the Industrial Commission of Norfolk, recently organized among the most progressive business men of the city. Mr. Dickson is active in matters of this kind in both the direct and indirect interests of the trade. He is chairman of the Transportation Committee of the National Exporters' Association, and recently rendered efficient service in relieving a congestion of stock shipped to this port for export.

David L. Wing of the Department of Justice, Bureau of Commerce and Labor, has returned to Washington, leaving two assistants in this city to examine the books of the North Carolina pine concerns and to secure therefrom average prices obtained on certain stock. This information it is proposed to tabulate in pamphlet form and to issue within two months from date. Although they cover only North Carolina pine in their investigations, the result of their work should prove of interest to the trade at large, and it seems probable that it will completely relieve the public mind of the suspicion that extortionate or unreasonable profits are being obtained. The local hardwood firms are much interested in the matter.

A recent visitor to the city was Grover D. Smith, wholesaler, from Montclair, N. J. Mr. Smith deals in white pine, spruce, cypress and maple flooring.

F. S. Adkins of F. D. Adkins & Co., Salisbury, Md., was in the city April 17.

The Allegheny, a British steamship, sailed from this port April 10 with an unusually valuable cargo, the major portion of which consisted of hardwoods. She is bound for Liverpool.

Mr. Courtney, vice-president and general manager of the Alexander Bros. Railway & Manufacturing Company, New Brunswick, Canada, is now making his regular yearly trip to the city. The lumber interests of the Alexander Bros. company are extensive.

Last week the Richmond Cedar Works shipped to the American Lumber Company of Baltimore part of a cargo, amounting to about 100,000 feet, of gum. It is not known at what price this par-

ticular lot was sold, but the indications are that the trade in gum, both rough and flooring, is holding up well. The Butters Lumber Company of Boardman, N. C., makes a specialty of gum flooring and reports trade as fair. Gum is coming to be quite a favorite in this section and dealers find a good market for it.

Freight rates for vessel shipments to and from this port as well as North Carolina points have suffered a decline, and the hardwood men are taking advantage of low rates to sell stock. Some shipments have been made from lower sound points to Baltimore and Norfolk at as low a rate as \$2 per thousand, although \$2.25 would probably be a fairer average.

Quite a large quantity of oak and other hardwoods went to swell the cargo of the British steamship Allegheny, which sailed on the 8th instant with an unusually valuable load, which fact can be accepted as indicating that the export trade is holding its own steadily, even though there be fluctuations in the volume of business received.

Charlotte.

Among the new concerns organized during the past two weeks was the Chair Manufacturing Company of North Wilkesboro, N. C., which has a capital stock of \$100,000. J. D. Smith and others are the incorporators. High Point, N. C., is the home of a new concern which will make chests, cabinets and other products of cedar. The name of the concern is the Cedar Safe Company and R. C. Maxwell is its prime promoter.

The plant of the Kincaid Veneering Works of Salisbury, N. C., was destroyed by fire a few days ago, entailing a loss of about \$10,000.

In a hearing before Special Master W. C. Irwin at Salisbury, N. C., a compromise has been reached in the case of the Harber Bugzy Company, which practically means that the affairs of this concern will be wound up by the referee. It was agreed that the company is a partnership, and the members compose a partnership, and the insolvency and acts of bankruptcy complained of in the petition were agreed upon. All assets are to be delivered over to the referee. It will be recalled this company closed down some months ago, and since there has been an interesting contest among parties interested as to the exact nature of the concern. It is not likely it will be reorganized.

Mount Airy furniture factories are going back to the ten-hour day after running on the eight-hour plan for a number of months. This is following advice of the North Carolina Case-workers' Association. Business at Mount Airy, High Point and other furniture centers of the state is picking up noticeably.

Receiver Lewellyn has been authorized to sell the bankrupt plant of the Carolina Casket Company of Elkm, N. C.

Directors of the Sanford Bugzy Company of Sanford, N. C., recently met and decided to increase the company's capitalization. This is a thriving enterprise and is doing a good business.

Fire at C. M. Betts & Co.'s lumber plant near Chester, S. C., recently, resulted in a loss of about \$20,000, mostly covered by insurance. The sawmill and planing mill near the burned kilns were saved by heroic efforts of the fire fighters.

The record in the famous case of appeal of Coffin & McDonald against the New York "Bubble King," C. R. Flint, has been filed in the United States court at Asheville, and the case will go up to the circuit court of appeals. Coffin & McDonald have been granted a verdict of \$85,000 damages. Thousands of acres of land in western North Carolina counties are involved in this suit. Coffin & McDonald allege that Flint contracted with them for millions of feet of lumber several years ago, and later refused to perform his part of the contract, thereby causing them a net loss on expenditure of money and outfit they had provided to fill the large order.

An interesting Concatenation of Hoo-Hoo was held a few days ago at Sumter, S. C., with a large number of members present and eleven "kittens" to be carried through the mysteries of the order. An all around good time was had at the meeting, which lasted two days, a big banquet being one of the features.

The burned plant of Hewberry Bros. & Cowell at Dunn, N. C., has been replaced by a fine new chair factory, which is now in full operation.

Minneapolis.

E. Payson Smith of the Payson Smith Lumber Company was returned from an extended trip in the hardwood districts of upper Michigan and of northern Wisconsin, along Lake Superior. He found the cut greatly reduced everywhere: all the large producers whom he saw had curtailed their log cut and the product of their mills about one-half as compared with last season. Owing to this, Mr. Smith expects to see prices higher in a few months. Business is rather quiet, but prices are holding well. There are not many buyers in southern hardwood territory, but the wholesalers who are handling the stock are getting more money for it on a good many items.

The railroads, Mr. Smith says, are going straight against the general trend of business in buying their own supplies. Several of them have been cancelling orders for lumber placed last January, although they really need the stuff. Apparently they are trying to cut down expenses so as to make a better showing for the fiscal year, and are allowing their equipment to run down. Mr. Smith is going south in a few days. They have secured a new engine and boiler for the mill at Hough, Mo., and increased its capacity, but the mill is down now on account of high water, as are all the mills in the section as at present, and it is not likely that they will be running for three or four weeks yet.

D. F. Clark of Osborne & Clark is at Hot Springs, Ark., resting and taking the baths, so as to build up from a serious attack of the grip. He left nearly two weeks ago for the South and has been down in Texas, also in Arkansas, looking up the hardwood proposition in that territory. C. F. Osborne of the same firm is back from a visit to their retail yards at Barroo and Ladyman, Wis.

George S. Agnew, who went into the hardwood and yellow pine trade on his own account recently after five years with the Payson Smith Lumber Company as a salesman, reports that he has been enjoying a very satisfactory trade at the start, and in spite of the dull season he has no complaint to make.

The directors of the Forbes-Everts Lumber Company met recently and elected E. H. Broughton treasurer of the corporation. Mr. Broughton is manager of the Minneapolis sales office, which has opened at 1042 Lumber Exchange, and is marketing their white and red oak lumber and ties from the plant at Van Buren, Mo., acquired by this new concern last fall. The company has bought another tract of timber adjoining that purchased last fall with the mill, and now has an ample supply of good oak timber for a number of years ahead. G. W. Everts of the company has returned from a business trip into Wisconsin.

S. H. Davis of the S. H. Hill Lumber Company, Minneapolis, presented a \$5,000 organ to the Lowry Hill Congregational church of this city as a memorial to his wife, Agnes Cornelia Davis, who died last fall. The organ was in use at the Easter services, and a dedicatory recital will be given later.

Albert La Berge, a hardwood and hemlock dealer of Stearnsville, Wis., was a business visitor in Minneapolis last week.

A. S. Bliss, representing the R. Connor Company of Marshfield, Wis., was a business visitor in Minneapolis this week, looking up his friends among the factory consumers of hardwood.

Cadillac.

Flooring is moving a little better than last month and hardwood orders are coming in a little faster than heretofore. Hemlock is a little off and is not moving rapidly. From recent statistics gathered in Michigan we find there will be at least 30,000,000 feet less hemlock cut than originally intended and a slight increase in the hardwood cut to offset this.

W. L. Martin of the W. H. White Company and P. Collyer, national inspector, Boyne City, were in Cadillac a few days ago.

John R. Davis and F. T. Demaree of the John R. Davis Lumber Company, Phillips, Wis., were in Cadillac this week inspecting the steam log loader of the Cummer-Diggins Company.

The Cummer-Diggins Company has located in the Mitchell Brothers Building, North Mitchell street, during the remodeling of its office building, which will be one of the most complete office buildings in this city when finished six months hence.

J. C. Knox, secretary of the Michigan Hardwood Manufacturers' Association, has moved his office temporarily to the Cadillac State Bank Building. It is expected his office will be located in the new Cummer-Diggins building when completed.

Mr. and Mrs. W. W. Mitchell and sister, Miss Yost, are sightseeing in California and are expected home about May 1.

The followers of Izaak Walton in this vicinity are of the opinion that the trout season, which opened April 15, is about fifteen days too early, May 1, according to sportsmen, being about the proper date. However, a number of good catches have been recorded, one a six-pound rainbow trout caught by J. M. Kelly on Pine River, near Heaville. Monroe Cornwall of this city received a rainbow trout caught in Pine River yesterday that weighed when dressed 9 3/4 pounds.

A. W. Newark of the Cadillac Handle Company and H. H. Cummer of the Cummer Manufacturing Company left today for a two weeks' trip in Texas.

Wausau.

The Rib Falls Lumber Company, which operated mills during the winter at Rib Falls and Berlin, just finished a large cut. The mills were stocked with an excellent grade of hardwood logs.

The Weideman-Linden Company of Marinette has lately added new machinery to its plant to be better enabled to fill some large orders on its books. A specialty will be made of kitchen cabinets this season.

The Paul Seymour mill in the town of Wausau has finished a very successful season's run. The mill cut on an average of 22,000 feet per day and the logs received were mostly black ash. The mill was stocked by the Wheeler-Timlin Lumber Company of Wausau.

The Quaw Lumber Company of Edgar cut 4,000,000 feet of timber during the winter, mostly hardwood.

The Griffith mill in the town of Bergen, Marathon county, has started sawing a cut of hardwood and will run steadily till September.

Buman Bros., who operate west of Marathon City, cut 2,000,000 feet of hardwood during the season just closed. The Selig mill in the town of Berlin, Marathon county, cut a like amount.

Firth & Thompson, a Wausau concern building a mill at Cornucopia, is pushing the work with vigor to have the plant in running order by May 1. It will have a capacity of 50,000 feet daily. The company owns a large tract of timber land adjacent to the mill.

At a meeting of the directors of the Merrill Woodenware Company, Merrill, held recently, the resignation of R. E. Wallace as general manager was accepted, to take effect May 1. The board appointed George Emerich of that city as his successor. The reason Mr. Wallace

leaves the firm is to accept a position with the Pioneer Coopagee Company of Pioneer, La., a larger concern.

J. E. Collins of Sheboygan, representing the Crocker Chair Company of that city has closed a deal at Houghton, Mich., whereby the Crocker Company becomes owner of an immense tract of timber land. The purchase was made from G. F. Sanborn of Ashland and includes 6,103 acres in Houghton and Baraga counties, the price paid being \$86,569. The timber is adjacent to Sidsnow, and the timber will be cut in the mills at that place. The lumber will then be shipped to Sheboygan and worked into finished product by the Crocker Company. The company is looking for more hardwood lands in that section.

A woodenware factory will be established in La Crosse by J. Jung of Milwaukee. He has made a two years' contract with the Vought Berger Company of La Crosse to furnish it with all the lumber to be used in the manufacture of telephones, switchboards and kindred supplies made by that company. The new factory will employ twenty experts and will open May 5.

The large chair factory erected in Boyd last summer by the Wisconsin Chair Company of Port Washington is being moved to Evansville, Ind., where the company has purchased other factory buildings and will employ 200 men. This will be run supplementary to the company's other business in Wisconsin. The company gives as a reason for moving that it is necessary to get where there is oak timber, as there is no more demand for elm chairs. A bonus was given by the citizens of Boyd to secure the location of this factory and the company offers to either return the bonus or locate some other woodworking industry in the immense buildings being vacated.

A. C. McComb of Oshkosh has purchased of the Max Fleischer Ship Company of Memphis, Tenn., all of that company's timber land holdings in Desha county, Arkansas, amounting to 11,000 acres. This tract lies on the Memphis & Helena and Iron Mountain railroads and contains 100,000,000 feet of timber, mostly white and red oak and hickory, with some ash and cypress. Mr. McComb is among the most extensive timber land holders in the South. He has 75,000 acres of timber, most of which is in Arkansas and Florida. He also has considerable timber in Wisconsin and Michigan and believes that the present money stringency affords good opportunity for the timber investor. The Beswick-Daley Company of Marinette will start manufacturing soon. The company has erected a large and modern factory building near Poplar Point, built of brick and concrete. It will be operated by electric motors. The company will cut its own timber at its mill located near the factory and manufacture it into columns, tank staves and other articles.

The English Manufacturing Company of Antigo is at present having a very successful season and has \$50,000 worth of bolts on hand. The working force consists of sixty-five men, with a monthly payroll of \$2,500.

The Wausau Lumber Company has by its president, W. H. Blasel, and secretary, W. W. Gamble, filed an amendment to its articles of incorporation, increasing the stock from \$25,000 to \$100,000. The company operates at Edgar and Rib Falls.

Louisville.

Harry Kline of the Louisville Veneer Mills spent several days in Chicago the early part of the month. Colonel Kline says business is improving but its volume is still only about 50 per cent of last year's.

Secretary McCracken of the Kentucky Veneer Works spent a few days in Chicago with the same object in view.

R. Mengel, president of the C. C. Mengel & Brother Company, is still absent in Europe. The W. P. Brown & Sons Lumber Company

reports considerable activity in business compared with other months this year. They look forward with anticipation to a fair increase during the latter part of the year.

Ed Shippen of the Louisville Point Lumber Company spent the past two weeks in the mountains of Kentucky purchasing logs from the new plant recently purchased at Ford, Ky. The company has provided for a good run at this mill, which is of the single band type, and has also opened an office in Cincinnati. Secretary Gates of this company reports a fair volume of business and that clients at Louisville will enable him to do care of a large volume of business during 1905.

Barry Norman of E. B. Norman & Co., Inc., has the new shoe stock plant completed and has made considerable progress in building up trade for it. The company also does a wholesale hardwood lumber business and is far from being discouraged in the amount of orders being booked.

A. E. Norman reports some business at hand, but will gladly welcome increased volume at this time.

Edward L. Davis of the Edward L. Davis Lumber Company has been seriously ill for some time, but has arranged to have his business running along about as usual.

Little Rock.

Several new institutions have either been granted charters to enter the state from the outside or been incorporated within the state during the past two weeks. Among these are Ferguson & Wheeler Land, Lumber & Handle Company, incorporated under the laws of Missouri. The company states that it has \$100,000 employed in the state. H. W. Lasster of Corning is state agent and Corning is chosen as the headquarters in Arkansas.

The McCoy-Isbell Lumber Company, a concern at Horatio, Ark., has filed a dissolution notice with the secretary of state, showing the company has quit business.

The Grafton State & Heading Company of Grafton, Ill., has filed its articles of incorporation with the secretary of state and been granted the right here. The company gives its assets at \$35,000, with equal liabilities, and has \$10,000 invested in the state. N. A. Grosbeam of Biggers is named as state agent.

The Bender Wagon Company, one of the oldest concerns of its kind in the state, located at Texarkana, has been granted a receiver on petition, A. E. DeLoach of Texarkana being named. The assets of the concern are placed at \$35,000, with liabilities placed at \$20,000.

The big Hale & Keiser mill at Osceola has again opened for operations after having been shut down for several months. The reopening of the plant was a welcome event in Osceola.

The dry kilns of the Camden Mill Company at Camden were recently visited by a very destructive fire. The kiln has been estimated at \$25,000. The origin of the fire is supposed to have been a passing locomotive. Fortunately the rest of the plant was untouched. Manager Webb, with his customary energy, is clearing away the debris, to be replaced with new material.

The St. Mary's Woodstock Company at Prescott is another of the larger concerns that has recently resumed operations after a lengthy shutdown. The plant had closed down with the dull season.

G. F. Weiss, manager for the Brinkley Spoke Company, reports a rather encouraging business at his establishment. The Brinkley concern is one of the most complete of its kind in the state and has a capacity of about 10,000 spokes daily, under their recent improvements.

L. N. Lanier & Co. of Howard county have purchased extensive site properties at Ashdown, where they will erect a stove factory to be ready for operation by fall.

A series of important suits are now being heard in the Federal Circuit Court here to determine the possession of large tracts of timber

land along the Frisco between Hoxie and Memphis. The lands were originally granted to the St. Louis & Memphis Railway Company and are located in Desha, Drew and Chicot counties. The parties to the suits are W. S. Bryan vs. Bliss-Cook Oak Company, W. S. Bryan vs. Edward S. Layman, M. G. Rider vs. Bliss-Cook Oak Company, S. S. Moser vs. Edward S. Layman, and W. S. Bryan vs. William Bagwell.

Representatives of J. B. York and son Robert, millionaire lumbermen of Pine Bluff, have purchased the plant of the Annesdale Lumber & Manufacturing Company at Memphis, the consideration being \$33,800. The Yorks held a heavy claim against the lumber concern.

Fort Smith is making a strenuous effort to close up the stock subscriptions necessary to secure the Southwestern Chair Factory, a concern incorporated last fall and which seemed fairly established when the financial flurry struck the town. It was necessary to raise \$75,000 in stock, and the stringency brought subscriptions to a standstill. About \$10,000 is yet to be raised. The plant proposed is a very extensive one employing over a hundred men.

The strike trouble at the Alley Heading Factory at Paragould has been smoothed over and the white men are returning to work. The trouble arose over a demand for higher wages by the white crew, which the company met by employing negroes. Serious trouble was promised, but everything seems now in a fair way to a satisfactory adjustment.

Col. E. W. Frost, one of the lumber kings of southern Arkansas and northern Louisiana, has sold his magnificent home at Texarkana and will hereafter reside in St. Louis.

A. C. Morhardt, one of the founders of the hub factory at Paragould, is now manager for the spoke factory at Marlanna.

J. E. Slack of Delight, who is associated with the Grayson-McLeod Lumber Company, reports that his company owns 8,000 acres adjoining the recently developed diamond fields in Pike county. It needs to be added that this part of their holdings has been taken off the market so far as an offer to sell is concerned.

J. L. Starrett spent some time here this week in the interest of the Nebraska Bridge & Supply Company.

Col. J. W. Irwin, for many years manager of the Capital Hotel in this city, the leading hostelry of the state for a long time, has recently turned his attention to the development of extensive hardwood interests in the northern part of the state.

Ashland.

Mr. Sausberry, of the Wright-Sallsbury Lumber Company, who has been looking after their timber on Rock Castle Creek, states that they are receiving some of the finest poplar logs that ever floated in the Ohio river. The recent tides brought the logs out of Rock Castle.

S. B. Reese of the S. B. Reese Lumber Company, Farmers, Ky., is making an extensive business trip through the East and expects to be away at least two months.

Mr. Searcy, of the Whisler & Searcy Lumber

Company, Ironton, Ohio, was a business caller here en route to Farmers, Ky. Mr. Searcy has lumber interests at Farmers and is also a member of the American Booming Company there.

R. G. Page, secretary of the Licking River Lumber Company, with general offices in this city, just returned from several days' visit to the Company's large band sawmill and planing mill at Farmers. Prior to last week the mill had been closed about thirty days for the purpose of making changes and improvements. The concern has a mill capacity of about 45,000 feet daily. N. Goodman, vice-president of the company, and manager at Farmers, reports a large supply of fine poplar and oak logs on hand for this season's run.

J. H. Koester of this city has accepted a position with the Hardwood Lumber Company and will buy for the concern. Mr. Koester will spend most of his time travelling through West Virginia and Kentucky. The Hardwood Lumber Company reports receiving some very desirable orders at good prices.

The log jam of 100,000 logs in the Guyan river near Huntington, W. Va., will soon be cleaned up and rafted. Most of them belong to Cincinnati firms.

W. E. Berger of the W. H. Dawkins Lumber Company is in St. Louis this week attending to business for the company. Mr. Berger will visit several other cities, calling on the lumber trade before returning to this city.

W. A. Cool of W. A. Cool & Son, Cleveland, Ohio, called on the lumber dealers here this week, looking after the interests of his company. Mr. Cool expects to make several cities in West Virginia, Pennsylvania and Ohio before his return to Cleveland. He reports business improving and says they are receiving some very desirable orders in bill oak.

Probably one of the largest timber fleets in the Ohio river this season was towed past here one day this week by the steamer Equiner, en route to Louisville, Ky. It was the property of the Norman Lumber Company of that city. This fleet consisted principally of fine poplar from Big Sandy territory, which will make exceptionally fine lumber. The Norman Lumber Company is fortunate in being the owner of such a fine lot of poplar logs.

William Eckman of the R. G. Page Lumber Company of this city is making a business trip calling on the lumber trade in several cities in Wisconsin and in Chicago. Upon his return he will visit South Bend, Ind., Richmond, Ind., and several Ohio cities.

L. D. Cooper of Pikeville was a business visitor in this city and Catlettsburg. Mr. Cooper is one of the largest state dealers up Big Sandy.

J. H. P. Smith, president of the Hardwood Lumber Company, has returned from his business trip through Ohio and reports some very good orders for poplar and oak. Although prices are somewhat firmer, there is a little more opening of their orders. Mr. Smith believes that a general renewing of trade is at hand.

W. R. Vansant, who operates a sawmill at Rush, Ky., was a business visitor in the city this week.

as reports are very conflicting. Some buyers feel the bottom has been reached, but do not believe they will be higher right away. Others are of the opinion that there will still be much lower quotations named. Furniture manufacturers are not very busy, according to salesmen visiting this trade. The demand for stock from manufacturers of interior house finish is quiet.

The market for quartered oak is still rather dull. One inch, ones and twos, continues to be quoted at \$80 to \$83. The best stock cannot be had at less than \$82, but at this figure the demand cannot be termed active. Plain oak is in quiet call and offerings are large. Prices of one inch, ones and twos, range from \$49 to \$51. There is a fair call for ash. Offerings of the latter are yet large and prices are held with a fair degree of firmness. Brown, one inch, is quoted at \$55 to \$57. Maple is not very active at present and prices are a little soft. Interest in whitewood is limited. Buyers state they are able to get along by placing small orders only, and many say they look for lower prices. North Carolina pine is in moderate call only. Prices continue in a very unsatisfactory condition. Large mills are still cutting prices, one against the other. While such conditions exist dealers find it very hard work to interest buyers. The latter do not feel like anticipating their wants in a quiet market, especially while the mills are engaged in a price-cutting conflict. Veneers of all kinds are in rather quiet demand. Mahogany veneers are not as firm as they were.

New York.

There has been some improvement noted in the local hardwood situation during the past fortnight, although consumption does not yet compare with that of a year ago. There is little tendency to push matters or to crowd the market and prices are holding up well, especially on the better grades of stock. Some quotations have been shown which rule \$3 or \$4 off on certain items, but a study of the character of the shipments in these instances usually shows that these prices are based not on strict grades but on a belief that one thing can be sold and another shipped. Of course, this is a tendency which is apt to arise under conditions like the present, but cutting prices and selling one thing and shipping another can be done only once, and such quotations do not reveal actual market conditions. When it comes to the market conditions governing well-manufactured and graded hardwoods of the better grades prices are ruling exceptionally firm, notwithstanding rumors to the contrary through manipulations above referred to.

Ash is strong in price, and the demand is sufficient to preclude any shading of prices. Plain and quartered oak are firmer than they were a month ago, and good, well-manufactured stock is bringing good prices where wanted. Changes have been occasionally noted in some sharp manipulation, but when it comes to the standard grades prices are holding very firm. Birch is a little sluggish and there is ample stock for all wants. Maple and basswood are also a little slow, but there is some stock moving. The general yard trade is not buying freely as yet, having carried over considerable stock from the winter, but there is quite some improvement noted in activity in the furniture and some other consuming lines, which is expected to increase as the season advances. But as a whole, while there is not a large trade looked for between spring and summer, it is believed that prices and general market conditions will hold up well in view of the volume of supplies available for those seasons.

Philadelphia.

During the month of March there was great encouragement as to a resumption of activity in the hardwood business, but it is evident from reports of the trading during the last fortnight that buying is done only with great caution.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

The Chicago hardwood market is practically featureless. The aggregate of trade is considerable, but it is of the hand-to-mouth variety. Some jobbers are even trading among themselves to take care of their wagon-load trade rather than buy any large quantity of stock. On the contrary, there are other large and well financed institutions which are buying mill stocks right and left. On the whole, local trade shows a slight improvement, but nothing remarkable.

Boston.

The market for hardwood lumber is not active and very little improvement can be reported over conditions that have existed for several months. The consumers are passing through quiet times, and in a few instances only have they taken advantage of the easier tone to values to replenish their stocks. Buyers have considered it to their advantage to restrict their purchases to articles of use to some extent. This means that when business does start up the demand will be brisk and quick delivery will be wanted. It is difficult to predict the future course of values,

Especially is this noticeable in the large cities. The yardmen in all the smaller towns in New York State, New Jersey and the eastern district of Pennsylvania have been obliged to readjust their stock and in many instances, as orders now cover only actual requirements.

The building work already started, and that for which plans are being arranged, insure considerable activity in the mill work and flooring factories. Work in the furniture manufactories in this and other eastern localities lags somewhat on account of the slow movement of the retailers' stock, the result of so many mechanics being thrown out of work. The boxmakers' report business far below normal, while cigar-box manufacturers speak of a slight change for the better. The hardwood stocks both at mill districts and in consumers' hands are not over heavy, and at this season the usual freshets at mill centers will retard considerably the work at the mills.

Values remain practically unchanged; quartered oak holds firm, but is extremely scarce; No. 1 and 2 poplar keeps steady, the lower grades are somewhat off, and ash has been losing reputation, but taking the hardwoods as a whole the situation is far more satisfactory than that of the soft woods. Collections are noticeably slow and unsatisfactory. It is the general opinion that the present seasonable weather will give a new impetus to building work, a very important factor in regards a market for trading during the next few months, but nothing really decisive can be hoped for until after the presidential nominations and election.

Baltimore.

The hardwood trade has been without any marked changes during the past two weeks. Business is still reported quiet, with the offerings liberal enough and a somewhat larger inquiry, but with the actual movement much the same. Spring has proved a distinct disappointment, and the expectations entertained earlier in the year have fallen far short of realization. The range of prices is still decidedly lower than the level that obtained last year, and this, notwithstanding the fact that stocks seem to be by no means excessive. As far as can be learned supplies at most of the mills are small and many of the plants are still shut down; those in operation usually have some special reason for activity. As the prevailing quotations lumber ought to prove attractive, and yet buyers are not disposed to place orders beyond immediate needs. It is the opinion of most hardwood men now that no extraordinary activity is to be looked for until after the election, and that while a moderate amount of business may develop, it will not be difficult to meet the wants of the buyers.

Poplar is in much the same condition as the other divisions of the hardwood trade, the demand having declined in the past few weeks. Values are not as firm as they were, and the absence of a brisk foreign movement is felt more than ever. Stocks seem to be going forward to Liverpool and other transatlantic points in considerable volume, but the business is not profitable, the large accumulations abroad and the pressure to sell at home having forced prices down to a low notch. Quiet also prevails in the other divisions of the export business, the accumulations of oak operating against the wood. Not a few of the exporters have stopped shipping because of the unsatisfactory conditions, and the entire trade leaves much to be desired.

Buffalo.

The lumber trade is still unsteady and reports have to be averaged from wide differences of opinion. One dealer reports that there is nothing doing and is afraid that things will be worse before they are better, a second is doing very well and a third has sold a lot of stock at good prices. Again the same dealer will flourish in doing well or otherwise and will suddenly strike the opposite side of the trade.

Buying is still uncertain, but a fair consumption is going on that has to be met somehow, and as there is not demand enough to keep even the usual trade goes in streaks. It will keep on in this way till there is a more genuine revival of all sorts of business.

The city building reports here and elsewhere in the country are very favorable, as compared with other business, and there is going to be a pretty good consumption of lumber in this direction this year.

As to the various hardwoods there is improvement, though, small in plain oak, Elm and basswood continue to be better property than they were, hardwood no doubt coming in to take the place of poplar, which is not any more plentiful. Quartered oak is as strong as ever and black ash moves, but white ash is quiet and chestnut and birch do not improve. The plan is still to keep stocks down to a good working size and to run sawmills enough to make sure of plenty of stock that is in demand and not let the mill force scatter, so that when the demand is large again there will be stock to meet it.

Bay City and Saginaw.

Hardwood stocks are light as to dry material, and there is an increased movement. In fact, manufacturers and dealers state that trade is picking up, some good lots having been disposed of in the last ten days. There will be many small lots cut at interior mills this season. The market is steady. Ash, oak and basswood are firm. Maple is also quite firm, but if concessions are made they will be confined to maple, owing to the proportionately large stocks of that timber. Orders for flooring are coming in, and some European shipments have been made. The domestic trade is also showing symptoms of material improvement.

Cleveland.

A steady improvement in conditions in the lumber industry has been noted during the two past weeks, and a much more optimistic feeling prevails. While the demand does not compare at all favorably with last year, still most of the lumbermen are hopeful that a sufficient volume of business will make itself apparent to make up for the last few months.

Poplar still holds the top rung of the ladder, the demand being quite heavy, with the supply light. Quartered oak is also in strong demand, with no fluctuation in price noted. Plain oak has failed to show much activity, much of the stock offered in this market being of poor quality, although there is plenty of good oak procurable if a search is made.

Dealers in maple flooring expect a good season in view of the activity in residence building.

Most of the factories and mills using hardwoods in quantities are operating in Cleveland; some, however, on short time schedules. A fair season is looked for. Inquiries indicate that mill stocks are getting low and that purchases will have to be made soon if many concerns are to be kept moving. Little price cutting has been noted here and less is looked for now that the revival is making itself apparent. A decided improvement has been noted in the way buyers bargain for trade, and the last month or two ago is being replaced by a more liberal attitude.

Cincinnati.

During the month of April transactions in hardwoods showed improvement over those of March, and the sixty-five per cent of normal trade predicted for spring has been about fulfilled.

The demand for the lower grades of poplar has shown a decided increase over the previous month, and there is some talk current of a possible increase in prices, owing to the apparent scarcity of that wood. The better grades of

poplar, which have been in demand for many weeks, still keep up, and sales are being made at firm prices. The furniture trade is gradually getting into the market, and this element are frequent inquirers for walnut, oak, cherry, mahogany and chestnut. The recent meeting of the hickory association here and the talk of the shortage in that wood led lumbermen to hold their stocks more tightly, and naturally they are not willing to dispose of it, unless they secure what is in their minds—a good price. All in all, the hardwood situation is at its best so far this year, and lumber dealers in general are almost certain of improvement in all grades.

Columbus.

While the improvement in the hardwood market in central Ohio during the last fortnight has been slight, it is nevertheless certain. One of the best features is the fact that stocks in the hands of manufacturers are now at a low point, and if they continue operations purchases of lumber will be necessary. Prices are stationary. Poplar is the wood on the market and quotations are unchanged.

First and seconds are held at \$53 f. o. b. Ohio river.

There is a good demand for oaks of all kinds. Inquiries have been fairly numerous for ash, hickory, chestnut and other hardwoods. Manufacturers as well as jobbers predict a better market soon. Collections are improving in almost every quarter. Mills are being repaired for operation in the near future.

Indianapolis.

Hardwood prices are remaining quite steady, with a good demand in practically all lines. The demand is heaviest for quartered oak, and these prices will undoubtedly take an upward course before long. However, business is not yet up to the average of this time last year.

Southern Indiana mills are complaining of an inability to get logs, and one or two mills have been compelled to shut down for a short time. This is due to the numerous floods along the Ohio river. In this vicinity, where the river is not depended upon for transportation, logs are coming in to meet demands.

The unusual number of large buildings being erected here, or contemplated, is making a nice demand for hardwood finish and floors. At least half a dozen skyscrapers or large public buildings are under way or the contracts have been let for them.

Milwaukee.

Although there is little change in the Milwaukee hardwood situation, the leading lines of lumber are holding their own and dealers are receiving inquiries that denote improvement in trade a little later. There have been more building permits issued this spring in Milwaukee and about the state than for a number of seasons, and the effect is already evident to the hardwood men in the city. All of the dealers are well stocked preparatory to resumption of activity.

Maple is holding up well and there is considerable demand for flooring. Cypress is said to be a little weak, but a change is expected as the demand increases. Basswood is keeping up well and the supply is limited, while the same may be said of hickory. The price of quarter-sawn oak is unchanged at present, but the indications are that prices are to rise. Ash is maintaining its own and there is considerable demand for this lumber, there being no signs of weakening in the market.

Evanston.

The market in this section has shown some signs of improvement in the last two weeks. Inquiries are numerous, and while the volume of business does not compare with that of last year, manufacturers are optimistic and believe that business will continue to improve until it reaches

its former magnitude. Several of the local mills have been shut down a part of the past two weeks making repairs, as logs have become scarce and they are getting things in readiness for the time when logs become more plentiful. However, most of the mills are running on an eight-hour schedule.

St. Louis.

While the volume of business in hardwood continues to increase it has not shown the steady increase that it should have done. Still it is decidedly better than it was a couple of weeks ago. Prices, however, have not advanced. They continue just about the same that they have been for some time. Most of the demand for hardwood comes from the planing mills. The furniture factories are not ordering as they have as a rule quite a supply of stock on hand. Box factories are not ordering as freely as last year. Some calls for oak have been received from car shops, as their stocks are running low. Poplar is in pretty good demand. Hickory is also in considerable request. There is quite an active demand also for red and white quartered oak. This item is scarce. Plain oak is quiet. In fact is in least demand. Gum is also quiet, except for wagon box boards and box material. Ash is also slow.

Nashville.

Poplar continues to be the leader in the local market, and is being readily sold in all grades. Quartered oak is also finding ready purchasers, but plain oak is still dragging. Quite an improvement has been noted in ash within the past few weeks. Plenty of inquiries continue to reach this market, but the number of sales do not approximate that of the former inquiries. Many of the inquiries are said to be merely "feetles" from those wishing to pick up cheap stock; a further reason for a disparity between the inquiries and actual sales lies in the fact that lumbermen are holding on to their stuff and refusing to sacrifice it; in fact, they are not selling it unless the price realized is fairly remunerative.

The outlook is regarded as encouraging, however, due to the rapid increase in building operations and to favorable crop reports. The business of April thus far, as a matter of fact, shows a decided increase over a corresponding period in March. March was known to have been a great improvement over February, and it is believed and figured, therefore, that business is rapidly assuming a normal condition again.

Memphis.

Lumber interests here generally report some improvement in demand for hardwood lumber, but they all admit that the call is somewhat irregular and spasmodic and that buyers are indisposed to operate beyond their more immediate requirements. The number of inquiries is increasing all the while, and this fact is taken as basis for the belief that there is more activity ahead. A number of prominent local lumbermen during the past few days have expressed the view that with improving business conditions, as reflected in the steel and iron industry and other lines of activity, there is certain to be increased demand for hardwood lumber. They have likewise expressed the idea that there may possibly be some further holding back on the part of buyers until the nominating conventions have been held. After that they declare themselves to be of the opinion that there will be a return to something approximating normal conditions as regards hardwood lumber. Prices are about as erratic as the demand. There is some shading in progress on plain oak, cypress and ash, but the remainder of the list appears to be in fairly stationary position. Production is being increased, but, as has been the case for some months, lumber interests are doing their best to prevent an accumulation of hardwood lumber through overproduc-

tion, and they have been decidedly successful thus far in this effort. Export demand is rather slow. Occasional orders from that source for special classes of stock are received, but the general call from that quarter is most limited. Some of the largest exporters here hold the view that no radical improvement in the export situation may be reasonably expected until the consigned stock now at foreign ports has been disposed of. Quarter sawn oak is even scarcer than heretofore, and those who own any of it are able to name their own terms thereon. The offerings locally are the smallest they have been for years, and, owing to this scarcity, the demand appears to be even larger than it really is. Plain oak is in slightly better request, but prices have suffered to some extent, as already indicated. Offerings are fairly liberal, but there is no burdensome surplus. Ash is moving fairly well in all thicknesses of the higher grades, but the lower grades are not much wanted and are moving slowly. Prices on high grade ash have suffered somewhat, but the loss in the better grades has not been as large as in the lower. There are plentiful offerings of cypress, and sales are made at concessions from recent prices. Gum in the lower grades is better property than in the higher, judging by the greater demand for the former than for the latter. The box factories and a number of miscellaneous sources are taking considerable quantities of the lower grades. Cottonwood continues slow in box-boards and firsts and seconds, both wide and narrow. The offerings are rather liberal, too. The lower grades, however, are offering in only a moderate way, and most of the stock available is finding ready purchasers. This is and has been for quite a while one of the best sellers in this market, and prices have been remarkably well maintained when the weakness in other directions is considered. Poplar is moving in only a moderate way, but so far as local dealers are concerned prices are well maintained.

New Orleans.

Conditions have changed very little here during the last fortnight. The export demand continues light and prices which shippers are getting are far from being satisfactory. The interior demand on hardwoods continues to hold up fairly well, but conditions are still somewhat discouraging. No marked change is looked for for some time.

Norfolk.

The general tone of the market here is about as last detailed. If any change is noticeable it is a slight decrease. April exports, so far during the month, have not been as large as those of March, and exports are now forming the greatest portion of the trade here.

The weather throughout this section, as well as in North Carolina, has been balmy the past two weeks and favorable for both good logging and easy milling. Most of the mills operating are running on full time, and if orders are scarce lumber is being pilled or kiln dried and assorted in anticipation of business which is bound to come, it is believed. In the near future because of the resumption of spring building operations and a general stimulation of buying.

Charlotte.

Despite the effects the panic has had on the lumber business of this state, the fact that new lumber concerns are organized and chartered every few days points to an abiding confidence among capitalists in the early resumption of the more favorable business conditions. During the past two weeks business has shown considerable improvement. Inquiries are coming in more freely and manufacturers are turning out more goods. With labor easily obtainable and with the regular spring revival in business it is the opinion of lumbermen that soon a much better business will be done.

Charlotte is enjoying a season of unpre-

cedented building activity, there being under contemplation or in course of construction new buildings to the value of \$750,000, and as a result local manufacturers are busy filling orders for building materials. Numerous plants that had to close down several months ago are resuming operations now.

However, although prices are better than for some months and general conditions show signs of improvement, it is hardly likely that normal business conditions will be restored for some weeks, and probably some months, to come.

SOUTHERN HARDWOODS

M. A. HAYWARD

1021 Saving and Trust Bldg., Columbus, O.

San Francisco.

Since the dullness of last fall, caused by the financial crisis all over the United States, San Francisco business has been slowly but steadily improving. Business is today very good, although of course it is not as active as it was a year ago, when abnormal conditions existed on account of the enormous activity in rebuilding the city.

The heaviest demand is for oak (principally quarter-sawn). Most of the large office and store buildings here call for this wood. Some are being ordered in jenisero and a few hotels have been completely finished in interior trim with red birch. In all this kind of work veneers are naturally cut with large figure, and it has been the tendency of architects to reduce, as much as possible the width and thickness of trim, finding it convenient, satisfactory and quite attractive to use a great deal of finish about one-half inch thick.

Mahogany is another wood which has had a great deal of attention; in fact, more so than before the fire of April, 1906. Some of our most handsome buildings are finished in this wood, and, although the eastern lumber is used principally, the west coast mahogany is being more extensively used every day, as it seems to show figure almost without exception.

The interior trade, which is supplied from San Francisco, has also been fairly active and all the dealers are receiving their share of the business from the interior towns, which have generally been supplied from local yards. There seems to be considerable inquiry among some of our manufacturers for cigar box lumber or Spanish cedar, and also for the imitation which is made from Pacific coast woods.

Minneapolis.

There is a good demand reported from some of the factories, but trade is still running to small orders, and the tendency of consumers of hardwood is to buy only for present needs. There are somewhat less than usual owing to the fact that considerable work is late this season. Contractors did not put in foundations last fall to such an extent as usual, owing to the financial condition and the fear for the future. Accordingly there are few buildings coming along this early to the point where they call for finish. Some local concerns have large contracts closed, but will not need to fill them before fall, and being confident that the hardwood market will not get any stronger after the new spring cut is in shipping condition, they will not buy till along in the summer to cover these jobs. There is no contracting or buying ahead reported.

Oak is holding up fairly well, northern stocks being about exhausted and southern offerings not heavy. Plain oak is selling here at \$45 and \$46. There is no strength yet in birch, though it is selling about as well as any wood on the list. It is quotable here at \$18 for common and \$28 for first and second class. There is a fair call for upper grades of basswood, but calls are about out of the market, and little call for them also. Country demand is quiet, running mostly to wagon stock. Flooring is rather slow also. The outlook for building is not as heavy as last year, but is nevertheless good. It should bring a better hardwood situation by next fall, but northern hardwood is not going to be a drug on this market if reports as to curtailed consumption are all true.

Little Rock.

The lumber market continues sluggish. As one well-known buyer here expressed it, "there is simply nothing doing." This buyer reports that he has recently made an extensive round of the manufacturing centers and finds everything exceedingly dull. This dullness, of course, reacts on the market for raw material. A car of lumber which at this date last year would have brought \$400 was bought for \$240.

Still there is the regular round of work among

many of the mills, and it is interesting to note that the hardwood mills are not as much affected as the others.

Ashland.

Market conditions are gradually improving, which is very encouraging to lumber manufacturers and dealers in this section, and they are confident this is a sure indication that business is reinstating itself in such a manner that is sure to demand more lumber.

There is no trouble in disposing of quartered oak and poplar at good prices. The demand for plain oak continues to increase. Building operations are picking up somewhat, causing a demand for the output of the planing mills and retail yards in hemlock, pine, poplar, oak, etc., which promises to increase during the next few months.

London.

The market for lumber here seems to get worse instead of better; the manufacturing trades are very slack indeed and this has had its effect on prices, especially as consignments have been heavy, and most of these consignment parcels are going into store, as agents find that buyers have heavy stocks and will not make an offer of any sort. There are of course a few orders being given to shippers, but these are only on special lines.

There is very little demand for whitewood, and agents have had to drop their prices to sell even prime stocks that might be held here or only recently arrived.

Oak boards, one inch and under, have arrived in large quantities, being mostly No. 1 or No. 2 common grade; these are difficult of sale and are being stored.

There is a little better demand for walnut, especially prime grades and good, medium boards and planks. Satin walnut should on no account be shipped. Stocks are large and prices are low.

John A. Perrod of the American Walnut Company, Kansas City, has returned after a trip on the continent. He reports that he finds business as bad generally as it is here.

I. R. Williams and Mr. Raschenburg of the Ferl Brener Lumber Company, Norfolk, Va., visited some of the principal buyers of lumber here recently.

Liverpool.

The mahogany sales this coming week are expected to bring slightly higher prices owing mainly to a slackening of the import from the West Coast. The wood offered is of a prime description and contains a fair proportion of panel and board logs. Complaints are still being heard in numerous directions about the state of trade, though the general opinion prevails that business is going to be better. The volume of trade has certainly been better in March than it was in February, but that, of course, is only what can be expected in the ordinary course of events. The prevailing opinion is that prices will have to be lower before we see much improvement in demand. Already in many directions there are signs of a falling market and if shippers want to realize anything approaching present values they should ship at once.

Hickory is still in active demand and good prices are being obtained for prime parcels. Inferior wood of course never is wanted and when poor prices have been paid recently for wood at this port shippers may rest assured that there was something wrong with the quality. High prices have been obtained without any difficulty for good wood and it is a known fact that many buyers at this port have not anything approaching the quantity they will need to cover their requirements. Large ash logs are in quiet demand and shipments in moderation would receive support. Small second growth wood is still very flat. Oak and poplar are much as when last reported, with a weaker tendency, while birch is firmer and fresh wood will be soon picked up. It should be said that buyers are rather nervous of handling this wood, fearing that the import is going to be heavy.

Dependence

Jobbers seeking absolutely dependable columns are sure of satisfaction in our Solid Bored Colonial Columns. They will please your trade and can be sold to them with the guarantee they will not check, crack or warp.

Dealers in Columns are satisfied only when they get a Column that will meet all requirements and one that takes readily with the trade. Such an article is our Solid Bored Colonial Column. This Column is equally serviceable in all climates and weather, North, South, East and West; sleet, snow, rain, sun, heat, cold and dampness. There are no joints to open up in either the shaft or trimmings.

These statements are facts which are proven when we sell our Solid Bored Colonial Columns with the absolute guarantee against cracking, checking and warping.

We are manufacturers of Solid Bored Colonial Columns exclusively.

LIBRARY BUREAU 11, 1186

SPECIMEN INDEX CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town
Name of concern
Name of buyer
Line manufactured
Kinds, grades and thicknesses of lumber
Kinds and sizes of dimension stock
Kinds and thicknesses of veneers
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber not used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

SOUTH DAKOTA

Key

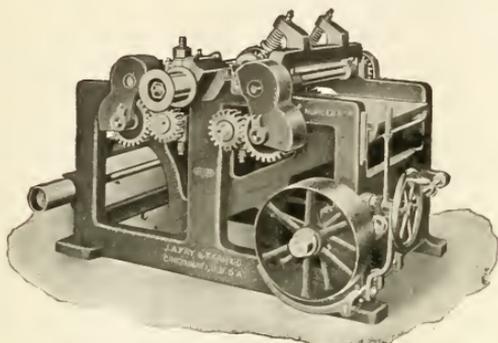

1	Ash	12	Hickory
2	Basswood	13	Mahogany
3	Beech	14	Maple
4	Birch	15	Oak

9	Cypress		Persimmon, Sycamore.
10	Elm	19	Dimension stock
11	Gum	20	Veneers and panel stock

SPECIMEN STATE GUIDE CARD

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you into a good thing.

HARDWOOD RECORD, Chicago

A HARDWOOD SURFACER

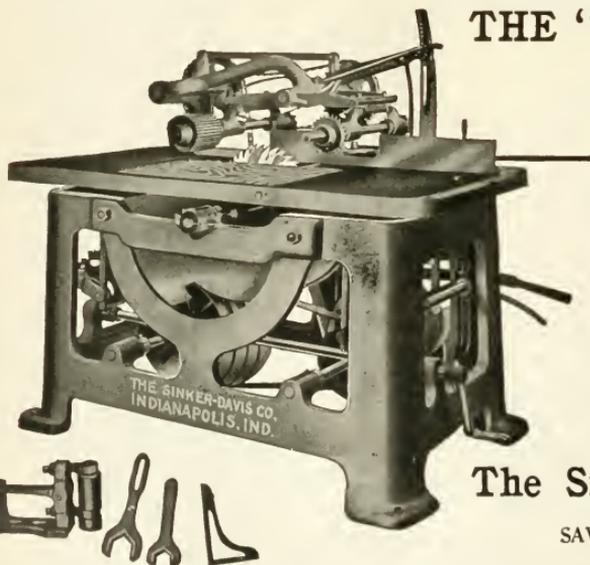

No. 156 Special Hardwood Surfacer.

In surfacing hardwoods for cabinet and fine interior work, you need a planer that will give your stock a surface perfectly smooth and free from knife marks. You don't want an ordinary machine, you want the best you can find.

Take a Fay & Egan No. 156 Cabinet Smoothing Planer, with its table raising and lowering on wedges, with its Patent Sectional Clamp Bearings, and you can rest assured of satisfactory results.

Write for Descriptive Circular, also Samples of Work it Does, and You'll be Surprised. : :

J. A. FAY & EGAN CO. 414-434 W. Front Street, CINCINNATI, - OHIO.

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

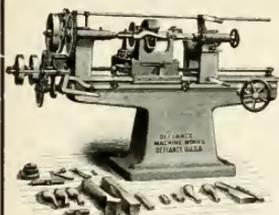

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock 17 1/2 inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

Write for Full Description.

The Sinker-Davis Co.

Manufacturers of
SAW MILL MACHINERY
Indianapolis, Ind.

No. 0. Copying Lathe
For turning Axe Handles and other

Will turn 8000 Broom Handles in
10 hours.

If you want to reach the wholesale consumers of hardwood lumber throughout the United States, a HARDWOOD RECORD advertisement will do it for you.

If you want to reach the hardwood manufacturers of the United States, a HARDWOOD RECORD advertisement will do it for you.

The HARDWOOD RECORD represents high-class, special, class circulation, with a minimum of waste circulation.

Ask any HARDWOOD RECORD advertiser for experience on results.

An Open Letter to the Lumber Trade

Detroit, Mich., April 16, '08.

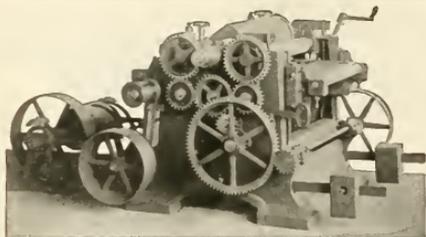

GENTLEMEN:

In times like the present when it is difficult to make money, is not the question of saving it of even greater than usual interest?

Russel Logging Machinery reduces cost of operating when in commission; it requires NO feed when out of commission.

May we tell you more?

Russel Wheel & Foundry Co., Detroit, Mich.

26-in. x 8-in. Single Surface Planer

CRESCENT WOOD WORKING MACHINERY

Will Help you Earn More Money.

Built to stand the strain of the most severe planing mill and cabinet shop service. Has four changes of feed and will do rapid surfacing or cabinet smoothing. Send for Catalog describing Planers, Band Saws, Jointers, Saw Tables, Swing Saws, Shapers, Disk Grinders.

New Profit Builder

**SMITH of
SMITHVILLE**

No. 133-A. SEVEN INCH, FOUR SIDE HARDWOOD MOULDER

HARDWOOD manufacturers are constantly demanding machine tools of a more sturdy character. Many attempts have been made by machine builders to meet this need, resulting in added complications, with very slight improvements. We have, however, developed a moulnding sticker of the 7-inch type that is both sturdy and simple, a machine that contains all of the elements of a very heavy large size moulder, yet it is only a seven-inch machine. Write us today for a special circular.

The WHITE Saw Swages ARE BEST

Our Catalogue "B" fully describes and ILLUSTRATES them all. We will be pleased to send you one.

PHOENIX MFG. CO.
EAU CLAIRE, WIS.

The Market is Demanding,

more and more,
Lumber of Standard Lengths, with Square Ends,
as well as straight and parallel edges.

The straight and parallel edges you can obtain with a "TOWER" Edger, while

The "Tower" One-Man 2-Saw Trimmer

will give you the standard lengths and square ends with a minimum of time, labor, and waste.

In all other trimmers the manner of shifting the saws is such that every time the position of the saws is changed the operator has to go clear to the end of the machine.

In the "TOWER" one-man 2-saw Trimmer he never has to go beyond the end of the board.

Especially with short boards, this means a great saving in time and labor. It also greatly reduces the amount of waste, as it is much easier to see how to trim lumber to the best advantage from the end of the board than from the end of the machine.

In all of these trimmers there are two feeds, which may be instantly started, stopped or changed, without stopping the saws. Both are controlled by the same lever, which is located in the most convenient possible position.

Kline's Eight-Block Excelsior Machines

Are the Most Economical

- 1st. To Install on Capacity Basis
- 2nd. To Operate on Labor Basis
- 3rd. To Operate on Wood Basis

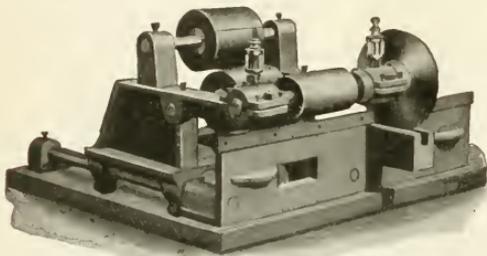

Catalog tells reason why. Mailed on request.

CHEAPER LOGGING

Means spending less money and getting out more logs. It is also the title of our handsome new catalogue, which is by far the most beautiful work ever issued on steam logging machinery. It is intensely interesting and instructive for any lumberman, as it contains over one hundred views (in color) of various operations, and clearly shows just what our machines can do and are doing for others.

CADILLAC

CELEBRATED FOR HIGH STANDARD OF QUALITY AND MILL WORK

Michigan Trees and Mitchells Products

Under this title we have made a booklet to show by illustrations the principal varieties of trees in our forests, to describe the character and uses of the different woods, and to explain our products and the form in which they are offered to the trade. We want to send you a free copy of the book and also our dry stock list of Michigan hardwoods.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

The annual meeting of the National Hardwood Lumber Association will be held at Milwaukee, Thursday and Friday, June 11 and 12.

NATIONAL LUMBER MANUFACTURERS' ASSOCIATION.

On June 16, 17 and 18 the National Lumber Manufacturers' Association will convene for its annual meeting at Minneapolis, Minn.

General Market Conditions.

The very bad weather conditions that have prevailed throughout most sections of the country during the past fortnight have not contributed to the welfare of the hardwood lumber business. The average operator, manufacturer or jobber, reports that as compared with a year ago business is averaging only about 50

per cent. Nevertheless hardwood men are taking a very philosophical view of the situation and allege that they do not expect the strenuous booming times of a year ago, but are going to try to be satisfied with conditions as they are.

Perhaps the opinion of Judge E. H. Gary, formerly of Chicago, and now chairman of the board of directors of the United States Steel Corporation, the largest business organization ever formed in history—reflects the consensus of general opinion. Mr. Gary is a thorough optimist concerning the financial and industrial future. He believes that conditions in the business world are already normal, with a few scattering exceptions, and that these weak places will be straightened out by natural causes very soon. He does not expect a boom, nor does he anticipate so active and prosperous a year as 1906 or the first eight months of 1907, but he does believe that the business interests of the country are rapidly settling down into healthy, wholesome conditions; that prices will be maintained and wages continued; that the demands for all products both of the soil and of the factories will afford a reasonable profit to all concerned in their production.

To all appearances the strong financial institutions are moving but a very moderate quantity of lumber. Buyers are holding off for snap trades, and in a good many cases are buying stock at considerably less than they have been able to for years. However, the source of these cut prices is usually the weaker financial institutions, or people who seem obliged to realize on their lumber. The strong, large operators are holding their prices firm and consequently are getting but a modicum of the going business. They seem to feel that a good stock of lumber is a better asset than money, and that with the renaissance of demand which is surely in sight they will be able to dispose of the stock at prices that will represent a fair profit.

The good end of poplar is still commanding practically as much money as it did a year ago. The same may be said of quartered oak. Plain oak is undeniably being sold at \$3 less than top notch prices, and gum is also suffering with the general decline. Of the northern woods birch is being hit harder than anything else, while maple stands up at least within a dollar of the prices of last year.

In hardwood flooring the oak product appears to be commanding a fair volume of business at good prices, but unfortunately during the last fortnight there seems to have been an over-anxiety to dispose of the maple product—and prices are being slaughtered to some extent. As a matter of fact, the current values of maple flooring are less than the cost of the lumber with manufacturing expenses added. There is to be an early meeting of the Maple Flooring Association and very likely an agreement will be made at that time which will put prices back on a logical level.

The majority of veneer manufacturers seem to be running only about half the time and prices being received for this product are far from satisfactory.

Export conditions in hardwood are a long way from what they should be; in fact, the domestic business is in far better shape than the foreign trade. Black walnut has declined both in volume of trade and in price, and the situation seems to be

decidedly discouraging to the average exporter. From the fact that there is little demand for high priced furniture both the mahogany lumber and veneer trade is comparatively dull, but what business is being received is being handled at a fair margin of profit.

In spite of this comparatively slow sales period the average operator is optimistic and is a strong believer that there will be a renewal of active buying immediately following the election.

Curtailment.

The hardwood lumber manufacturers of the country are exercising a lot of good common sense in cutting down their lumber output to correspond with current conditions of supply and demand. In spite of the legends of demoralized values that are going the rounds, as a matter of fact hardwood values are in very fair shape. The chaotic situation in yellow pine and hemlock pines as compared with the hardwood schedule, reflects no little credit on the policy that has prevailed in the hardwood manufacturing trade, in the restriction of output to such an extent that values have not been very seriously affected. It is doubtful if the aggregate hardwood output is reaching more than 50 per cent of that of a year ago, and it is equally manifest that even a month's normal demand would clean up every foot of surplus stock there is in first hands.

The hardwood manufacturers of the country should be congratulated on their conservatism and good sense in handling their end of this important crisis. Of course those river mills which had logs cut and floated down, have been and are still obliged to put their crop into lumber. This statement is also true of the Mississippi delta country, where quite a quantity of gum and other perishable logs were felled and had to be manufactured into lumber in order to preserve them. Otherwise curtailment has been widely practiced throughout the South, while in the great hardwood producing sections of Michigan and Wisconsin every effort has been made to reduce output; even new mills ready for starting have been left idle. Also in the hardwood sections of Indiana and Ohio there has been a marked curtailment.

Such conservatism will surely receive its just recompense just as soon as demand gets back to normal. In the meantime let this good and far-sighted policy continue, remembering that because some one in another part of the country starts up a mill, it may be because he is obliged to and should not be made an occasion for others differently situated to follow suit. Manufacturers who have no logical reason for starting up their plants ought to hold out just as long as they can; such uniformity of action and co-operation can have but one result, and that the desideratum for which all are anxious, whether they do their share to promote it or not—the maintenance of a general and just standard of hardwood values.

An Historical Event.

The great conference of state governors, scientists and business men engaged in all lines, which will meet with President Roosevelt

and the Inland Waterways Commission May 13, 14 and 15, at Washington, promises to be an event which will make history for the United States, and illustrates the President's well-known position in the matter of conserving the natural resources.

In calling this conference, Mr. Roosevelt sums up the gravity of the situation in his usual concise and pertinent way: "The matters to be considered are not confined to any region or group of states but are of vital concern to the nation as a whole, and to all the people. They include the use and conservation of the mineral resources, the resources of the land, and the resources of the water in every part of our territory. . . . Facts which I cannot gainsay force me to believe that the conservation of our natural resources is the most weighty question now before the people of the United States. If this is so, the proposed conference, which is the first of its kind, will be among the most important gatherings in our history in its effect upon the welfare of our people."

If there are any American citizens to whom the announcement of this gathering is a matter of indifference, or of astonishment that there should be felt the need of such a great gathering of executive heads and scientists of the nation to confer upon the vast number of problems involved in such consideration—they are not those who have rightly interpreted the signs of the times for themselves, nor those who have read and digested the repeated warnings of students of economics, scientists and competent writers. It is not only illiterate and unintelligent citizens who belong to this unthinking and improvident class, but unfortunately many of our prominent business men and even many high-up in national affairs have been blind to conditions as they exist.

It is strange that the men occupying the two most authoritative offices within the gift of the people should take positions so diametrically opposite on these great questions of public policy. In striking contrast are President Roosevelt's words—"It is obvious that the prosperity which we now enjoy rests directly upon those resources; it is equally obvious that the vigor and success which we desire and foresee for this nation in the future must

have this as its ultimate material basis,"—and the harangue of Speaker Cannon at a recent gathering, when he made his position plain by declaring that all this talk about the national resources was "boosh;" that he had always had coal enough to keep him warm and a roof over his head. "To H— with the natural resources!" he shouted.

In addition to the governors, members of the Inland Waterways Commission, and other officials, nearly three score business men's clubs and bodies of national scope and prominence will be represented at the unique conference, including associations dealing with agriculture, engineering, forestry, mining, waterways improvement, geology, irrigation, pulp and paper trade, advancement of science, law, medicine, chemistry, electricity, railroading, and in fact almost all branches of the great industries which have made this country what it is, and what—if President Roosevelt be given his way—it will continue to be.

The Axeman

(See Supplement Drawing by Thomas J. Nicholl.)

*The swinging axes wake the forest cries,
The echoes through the woodland wildly spread;
And fallen leaves, from out their dank, brown bed,
Send pungent odors to the autumn skies.
And, as he drinks great draughts of morning air,
And as he notes the flying chips so white,
The axeman, swaying, feels that might is right
And thanks the gods that living is so fair.
No narrow walls to limit what he sees;
No white-faced wealkings to accost each day;
But goodly stretches of great forest trees
And sun-browned woodmen, eager for the fray.
For him Pan's melodies are daily played
By gleaming axes in the sylvan glade.*

LAURA RAITZ LAW.

CUTTING THE KERF

Pert, Pertinent and Impertinent.

The Other Fellow's Job.

There are millions of positions in the busy world today. Each a drudge to him who holds it, but to him who doesn't play: Every farmer's broken-hearted that in youth he missed his call, While the same unhappy farmer is the envy of us all. There's a craze among us mortals that is cruel, hard to name;

Where'er you find a human you will find the case the same: You may seek among the worst of men or seek among the best, And you'll find that every person is precisely like the rest. Each believes that his real calling is along some other line Than the one at which he's working—take, for instance, yours and mine;

From the meanest "me-too" creature to the leader of the mob, There's a universal craving for "the other fellow's job." Any task you care to mention seems a vastly better lot Than the one especial something that you happen to have got. There's but one sure way to smother Envy's heartache and her sob: "Keep too busy at your own, to want the other fellow's job." —SUCCESS.

Not So Bad.

"Weren't you surprised to hear that Prude had married a divorced woman?"

"Oh, yes; but then she'd only been divorced a few days."

Can Find a Way.

It is a good deal harder to find time to do the things we don't want to do than the things we do want to do.

Tourists Beware.

The Strand publishes the following ad of a Chicago pickle manufacturer: "During the year 1905, 126,000 visitors passed through our plant."

Newly Rich.

"Did you know that Spender went through the hundred thousand he had left him, inside of a year?"

"Yes; he contracted a bad case of nervous prosperity."

A New Definition.

A pessimist is one who does not expect to get what he wants and expects to be disappointed in it if he does.

Reminiscences of Home.

Guide: Old Pompeii was a pretty live town once upon a time!

Chicago Tourist: Say, what date was it the lid went on?

These Trusts.

An exchange has developed the biggest trust on earth. It is the trade newspaper. It trusts everybody, gets cussed for trusting, mistrusted for cussing, and if it busts for trusting gets cussed for busting! So there you are.

The Shoe Fitted.

A trolley-car collided with a milk-cart and gallons of milk splashed into the street. A crowd gathered; a small man had to stand on tiptoe and keep dodging about to see past a fat lady in front of him. "Goodness!" he finally exclaimed, "what an awful waste!" The fat lady faced about and glared at him darkly. "Mind your own business," she snapped.—EVERYBODY'S.

Which?

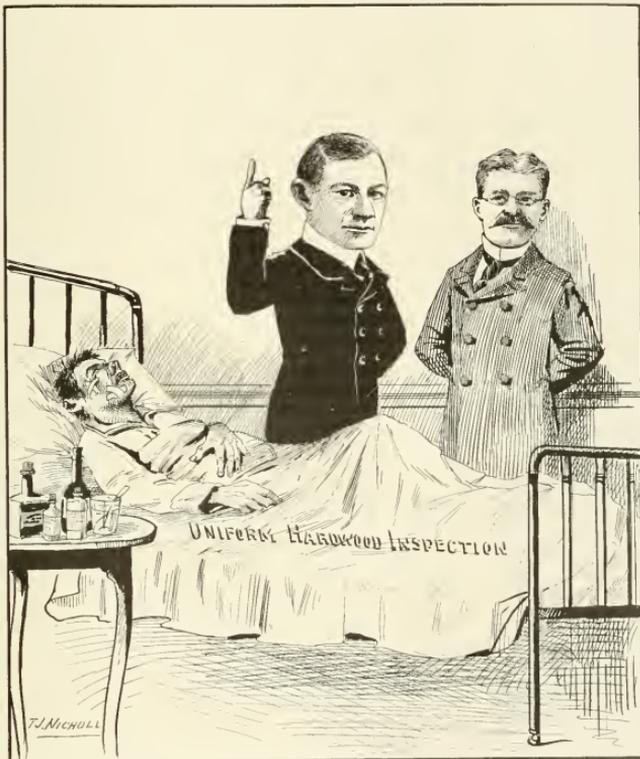

There seems to be an epidemic of alien-American engagements just now, and many a happy couple is busy getting ready for the honeymoon—or harvest-moon!

No. 2 Could Sympathize.

Bridget: P'what are ye wearin' that band of erape around yer hat fer, Mike?

Mike: Sure an' Oim wearin' it fer yer first husband, madam!"

The Consultation.

Dr. Bill Russe—He's a goner, ain't he, doc?
Dr. Munyon Palmer—Where there's life there's hope.

Should Give Thanks.

It is more blessed to give ten dollars than to receive ten days.

Too Late.

Success often means to get what others want, but what you no longer have any appetite for.

Experience.

A wise man once said that "Tomorrow never comes." He no doubt lent an umbrella at some period of his life.

Broke Even.

Hubby — You ought to know how to use money better.

Wifey — Perhaps I could learn if I had a little more practice.

All Alike.

I know the ways of women; they won't when thou wilt, and when thou won't they are passionately fond.—Terence.

Must Be a Thorough-bred.

Money makes the mare go, but it makes her cut up, too, unless she is used to it.

No Use.

As you have made your bed, why lie about it?

AMERICAN FOREST TREES.

SEVENTY-FOURTH PAPER.

Yellow Birch.

Betula lutea.—Michx.

The range of growth of yellow birch is from Newfoundland and along the northern shores of the gulf of St. Lawrence to the Rainy river; it extends southward into Minnesota and down to eastern Tennessee;

TYPICAL FOREST GROWTH YELLOW BIRCH.

cast again in its southern range to North Carolina and Delaware, covering the states embraced within the boundaries named.

The name yellow birch is most commonly applied to this species, and as such it is known in Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island,

New York, New Jersey, Pennsylvania, North Carolina, South Carolina, Illinois, Michigan, Minnesota, North Dakota and Ontario; however, in Vermont, Rhode Island, Pennsylvania, Michigan and Minnesota it is known as gray birch; swamp birch is the term sometimes used in Minnesota, and silver birch in New Hampshire; the Canadian French name for the tree is *merisier*, or *merisier rouge* as it is known in Quebec.

The yellow birch is not ordinarily a large tree, and in its southern range sometimes attains only the dimensions of a shrub. Occasionally it reaches a height of 100 feet under favorable circumstances, with a trunk three or four feet through. It thrives best in rich, moist uplands and reaches its highest development in the North, particularly in the region of the Great Lakes.

The tree when growing alone forms a broad, round top with slender, drooping branches, but when in the forest mingled with beech, maple, ash and elm, is of more compact appearance. The distinguishing feature of the tree is its wonderful bark. Says Mathews: "There are few trees which, like the yellow birch may boast of bark with a texture like satin and a sheen like silver. Those horizontal marks which characterize the *Betula* family are sprinkled over its delicate, silvery covering; notice the way the thin bark is curled and frizzled away from the trunk; it ornaments the latter with a thousand shining edges, which catch and hold the scattered, flickering sunlight of the woods so that the tree is distinctly separated from its stalwart, dull-hued, rough-seamed neighbors. Indeed, the yellow birch possesses a certain unmistakable femininity of character which is suggestive of some tattered and disheveled woodland nymph."

It is from the bark that the name yellow birch is derived—*lutea* meaning yellow and applying to the inner layer—this tint will identify the tree from others of its family, although the outer bark is grayish.

The leaves of the tree are three to four inches long, sharply serrate and pointed, the veins conspicuous and hairy beneath. In color they are a dull, dark green, with yellowish-green lining; in autumn they turn a delicate yellow.

The flowers of yellow birch appear in April, before the leaves; the staminate ones form in catkins three to four inches long, of a yellowish color, while the pistillate are reddish green and hairy, in catkins only little over half an inch in length.

The fruit is a stout green cone about an inch long, with narrow tapering scales; the seeds beneath are tiny and winged.

Yellow birch is a very desirable ornamental tree, but for some reason is seldom planted. The heartwood is light reddish-brown, the sapwood nearly white; it is very close grained, with compact structure. The wood is heavy, strong and hard; it is tough, but

is not durable when exposed to the weather. It takes a high polish, and with its beautiful grain it seems a pity it is used mostly for numberless small articles, for mallets, frames of sledges, etc. A cubic foot of seasoned yellow birch timber weighs forty pounds. It is a beautiful and little appreciated wood for interior use, and one of the best all-around timber trees; in fact, it is almost indispensable to certain woodworking industries, and

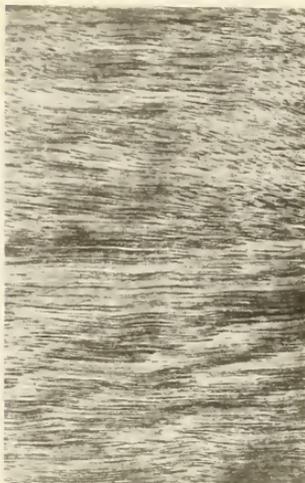

TANGENTIAL SECTION OF YELLOW BIRCH.

no satisfactory substitute has been found for it in the manufacture of a number of small articles. For instance, nearly every spool used in this country is made of this wood, or the paper birch; and quantities are shipped to England in the form of bars. Yellow birch holds its shape well after being seasoned, works easily, and yet is not easily dented; it also presents a clean, smooth surface when turned, qualities which are necessary in work of this nature. For shoe pegs and shanks it is much used, and also for toothpicks, which consume a much larger amount of lumber than would be supposed at first thought. Dowel and novelty mills employ the wood extensively, as do bobbin and shuttle manufacturers; for cart hubs it is also popular. Yellow birch takes a fine polish, and makes a handsome hardwood floor, or excellent interior finish—so it will be seen that the uses of the tree are legion, and widely diversified.

Red Tone.

Yellow Tone.

BIRCH "TRANSFORMED" BY A NEW PROCESS.

Unfortunately the tree is comparatively short lived; the heart is often inferior and is used only in the cheaper grade of turned novelties. Most of the stands near railroads have been cut out, so that what remains is difficult of access. In the case of this species, as well as so many others, the decreasing supply is being felt and conservatism in its use and substitution wherever possible must be practiced if the industries dependent upon

it are to continue without inconvenience.

The tree illustration accompanying this article and the tangential section of birch, are from Hough's Handbook of the Trees and American Woods; the other two illustrations were made from handsome specimens of yellow birch which had first been put through the wonderful "transforming" process now practiced by the Publishers' Paper Company of New York.

Exports to Africa and the Orient.

American manufacturers are thinking more of export trade than ever before; some are beginning to reach out to secure it; many are expending large sums of money in experiments upon it; and manufacturers in all lines are regarding this subject with ever increasing interest. Yet any conservative business man who understands the manufacture and marketing of his product in its minutest details, and understands the domestic trade most thoroughly should hesitate considerably before undertaking to dispose of it outside the home market. Selling goods in other parts of the world usually involves higher freight rates, different language, customs tariff, different commercial methods, better packing, and with the lumber trade at least, exceedingly long credits must be cheerfully extended.

American manufacturers in all lines, owing to the fact that their goods enter into strong competition with those from other countries, must of necessity put forth as much or more effort in getting trade abroad as they do at home; if they really wish to be successful they must needs use every means and every resource abroad that they do in the United

States, possibly more. Because they have not always done this, many a lumber manufacturer has stumbled over some or all of the points mentioned, and has abandoned the export trade in disgust, if not with serious financial loss. The United States consuls in various parts of the world often encourage the importation of lumber from this country, where the manufacturer is able to meet the very exacting demands and peculiarities of the local trade.

A recent report from Smyrna says that the houses of Asia Minor are generally built of stone with a frame work of wood, which would seem to preclude all opportunity for introducing lumber products there, but on the contrary there is a great consumption of such fittings as door and window frames, blinds, staircase parts and balconies, all of which are manufactured from imported lumber. The variety used is a kind of pine imported from Roumania, which is light, knotty and seldom seasoned, so that it invariably proves unsatisfactory. Several years ago an attempt was made to import doors and blinds ready-made from Norway, but the experiment did not prove a success, chiefly because the

goods did not conform in size and style with the requirements of local demand, and also because little effort was made to push the articles into popular favor. The consul at Smyrna reports that there is undoubtedly an opportunity there for the sale of fittings. The very fact that the home-made product is so unsatisfactory on account of the poor lumber used, would make it easier for imported articles to secure a foothold, if handled energetically enough. Several conditions must, however, be considered by the American manufacturer of lumber products who desires to start a trade in Asia Minor. If he is not willing to devote the same attention and perseverance to it that he does at home, and to study intelligently the needs of the market with a determination to eventually meet them satisfactorily, it would be better for him to never take the matter up, as failure through carelessness would only tend to retard the importation of articles which are bound to meet with eventual success.

There is said to be at the present time a growing field for the exporting of the cheaper grades of American lumber into Morocco. In the accessible districts of that country there is a total lack of timber, while building is going on at a rapid rate, particularly in Tangier, and much European timber is used. Several shipments of American lumber were sent to Tangier during the past few years, and in all but one instance were apparently most satisfactory as regards price, quality, etc., so that the consul believes there is no reason why American lumber exporters should not be able to compete satisfactorily with European dealers, and feels confident that they would soon be in a position to supply the greater part of all lumber used there. The demand for the better grades of hardwood is still small, but considerable hardwood flooring is imported; however, the lack of direct transportation facilities between this country and Morocco should receive close attention from prospective exporters; but with that one feature surmounted their success would be assured. Former lumber shipments have been sent over in foreign sailing vessels visiting our ports, which were utilized by lumbermen on their return trips; Tangier, being at the very entrance to the Mediterranean and but two and one-half hours from the port of Gibraltar, is very accessible. Spanish is the principal business language in the coast towns, although English is largely used and understood. One excellent point in favor of the trade is that business in Morocco is usually carried on a credit basis of from only sixty to ninety days, so that long time would not be required. Also most firms can give excellent European references.

Several dealers in Capetown, South Africa, prefer to buy the American lumber which they order, through their London or New York agents. One reason is that the agent is able to make better arrangements regarding freight rates, being where the chartering of vessels naturally takes place. Another reason

is that such agents, having had experience in exporting to South Africa, are able to give proper instructions as to loading, and are thus responsible for the state in which lumber arrives at destination; thus it is not so difficult to get just reimbursements in this way as when buying direct from the shipper. It is stated by concerns in Capetown that they have tried getting their lumber from companies in America, but almost without exception it has resulted to the disadvantage of all concerned. Our grading methods are so different that the difficulty in ordering direct from the lumber company which is not acquainted with the South African trade, is to make it perfectly plain just what is required, according to the methods used there. In the year 1906 British South Africa imported logs and lumber other than teak, to the amount of 7,159,277 cubic feet, of which 1,808,185 cubic feet, valued at \$433,158, came from the United States.

The island of Formosa, near the mainland of China, imports considerable American lumber for use in harbor and railroad work. At present it comes by way of Japan, and girders measuring 25 to 30 feet in length by 1½ feet square are in special demand. They are used in bridge and trestle work, in railway construction and repairs, and for piles in the extensive harbor improvements which are now in progress in the ports of Takao and Kelung; this construction work has been in progress for several years and will be carried on probably four years more before completed. One of the large importers recently stated that his contract for supplying such material ranged in amounts from \$5,000 to \$25,000 gold, from time to time. The freight rate on lumber from Japan to Kelang is \$1.60 per 40 cubic feet. At present this dealer pays 55 cents gold per cubic foot for lumber of the above dimensions.

Consul Charles C. Eberhardt of Equitos, Peru, wrote about a year ago that at that time there seemed no industry in Peru where such profits could be made on comparatively small investments, as in a planing mill run by practical lumbermen along up-to-date lines; however, the consul invariably gives the advice in reply to the many inquiries received from lumbermen in the United States regarding conditions in Peru—that no north-cruer should ever think of investing his money in tropical South America, without first having received a full report of local conditions from a source known to be absolutely capable and reliable—or better still, without making a thorough personal investigation.

Referring to a certain mill in that part of the Amazon valley, which has been unusually successful, the consul says that the machinery used was not in the beginning by any means first-class, although it has been lately much improved. While there are in all five mills of different sizes situated at various points along the Amazon within a few hours of Iquitos, this is the only one which is dependable in a business way, the others running

only at irregular intervals, chiefly because of inability at times to secure skilled labor to operate the machinery, or unskilled for felling trees. This plant, with planing mill, storage shed, tracks, dry kiln, etc., covers about three and a half acres. The buildings are made of rough native timber, covered with roofing and siding of corrugated iron. The machinery in the mill proper includes two vertical saws, two circular saws, one band-saw, winches, a 28-horsepower engine and other necessities of such an establishment, all of German or French manufacture, while in the planing mill, jointer, planer, band-saw, circular saw, a 60-horsepower engine—in fact, almost everything that goes to make up a first-class outfit, has come from the United States, and the work is in charge of an American machinist with an American assistant. The dimensions of the sawmill are approximately 100 by 200 feet, the planing mill 40 by 115 feet, and the storing shed 40 by 80 feet. The property has cost the owner approximately \$250,000 United States currency, including 2,000 acres of timberland

and improvements to date; a good share of each year's profits has been immediately reinvested, and though always earning a fair percentage on his investment, the owner states he has lost heavily at times through lack of knowledge of how such a business should be conducted; that he has paid dearly for his experience, but that after having spent about \$55,000 on improvements the past year, he feels he is now in a position to reap big profits, having cleared something like \$19,000 during that time, exclusive of the expense referred to. Other mills may in future compete successfully, but owing to his experience this manufacturer has practically a monopoly at this time. His mill has a capacity of about 6,000 feet per day, and as the demand is always in excess of supply he finds a ready market for all the lumber he can make. Logs are transported to the mill by water entirely, so that only timber near streams is cut at present. The mill also does a general jobbing business and persons needing lumber often raft their own logs to it, to be cut to required dimensions.

The Utilization of Hardwoods.

ARTICLE IV.

The Manufacture of Organs.

The pipe organ is often called "the monarch of musical instruments," because it has in it the possibilities of a whole orchestra. It is a beautiful instrument when well played,

this country, but few of any prominence commercially or artistically, and the makers worthy of the name number only about a half dozen.

HANDSOME KEY DESK KIMBALL PIPE ORGAN IN RESIDENCE.

but, unfortunately, good organists are rare, owing to the poor pay and small demand for really fine performances. However, many of these instruments are produced and there are a large number of organ builders in

gigantic dimensions and requiring a large quantity of wood in the construction. The big organ installed in Festival Hall, at the St. Louis World's Fair, was of truly mam-

moth proportions—larger than any other in America, and possibly in the entire world, though one in Sidney, Australia, may be its equal. A large instrument in the Shadyside Presbyterian Church, Pittsburg, measures about sixty feet in length and thirty feet from the floor, on which it rests, to the top of the tallest pipe, its depth being proportional. On the other hand, a small pipe organ may be less than ten feet high, something like six feet wide and four feet deep. Excellent material is always employed. The

this case particularly so, because of its subdued tone; the dull finish is very popular. In many private houses the pipe organ, especially the automatic variety, frequently holds the place of honor among the household accessories, and considerable magnificence in the way of carving is often shown, as in the handsomest organs for churches and halls.

The Pittsburg instrument mentioned above is an example of elaborate and costly carving. There are no less than twenty-eight

magnificence that is attained in private houses. The sides and top resemble a mantel of intricate decoration, while the legs are sculptured in the form of cherubs.

At the foot of the key-desk of the pipe organ, directly beneath the organist's bench, are the pedals or pedal keys, which the uninitiated might think have a function similar to the piano pedal, but which in reality are keys to pipes that form the general bass of the organ. The long keys are equivalent to the white keys of the piano or organ key-

KIMBALL PIPE ORGAN IN SHADYSIDE PRESBYTERIAN CHURCH, PITTSBURG.

exterior cabinet work on an organ is an inch or an inch and a quarter thick throughout, while pillars, cornices and mouldings may attain a depth of four inches or more. There is a great deal of solid material in the cabinet work, but a poplar base, veneered with the conventional hardwoods, is the regulation thing for many parts. The veneers and solid pieces may be of oak, walnut or mahogany, or of other wood when the popular white and gold is the decorative scheme. Oak is, of course, a favored timber always, and in

columns in the casework, and each one has an elaborate capital. Some of the cornices and columns are heavily carved their entire length. A handsome arch surmounts the key-desk, as the organist's place is called, carved eagles crown two of the pillars, while a number of medallions containing ecclesiastical designs and the paneling everywhere in evidence make what even this slight description will show to be an organ of decided architectural beauty. A key-desk in a home in Chicago may be cited as a sample of the

board and are made of maple, oak, or sometimes, as in the older instruments, with maple top and base of some other wood. The short, "black keys" may be real black ebony, an chosen wood, or walnut.

Some of the pipes are of wood and some of metal, depending on the quality of tone desired. Wooden pipes are of various kinds. There is considerable spruce used, its resonant quality making it invaluable for some purposes. The so-called soundboard is never of spruce, but of birch or maple, a fact

which will seem rather odd to people who know that the sounding-boards of pianos, violins, guitars, mandolins, harps, etc., are made of that wood. The explanation is that the soundboard of a pipe organ is not really a sounding or resonant board at all, but simply the superstructure upon which all the pipes are placed. Birch or maple may be chosen because of their strength, as the soundboard bears the brunt of the weight of the pipes. The soundboard is so named because it contains grooves that carry the wind to the pipes from the windchest, providing the proper valve is opened.

The windchest in any organ is a large-sized affair, and is of birch or maple like the soundboard. The windchest in an organ of medium size recently examined was sixteen feet high, twelve feet across the front and six feet from front to back, with a thickness of about one inch, so that this one portion of an organ alone consumes considerable hardwood. The bellows is also usually of hardwood.

Valves, when not of metal, are usually of some soft timber. The wood used for stops is immaterial, but in exceptionally fine instruments the value of the stop as a part of the decorative scheme is recognized, and carved or pearl-inlaid teak or boxwood and other ornamental woods may be employed. The black keys in the several keyboards or "manuals" are ebony. Much more of this wood is used than in pianos, for the number of manuals ranges from one to five or more.

The reed organ is no longer as popular as formerly. In farmers' homes, where it once held an undisputed position, it is being superseded by the piano, as the farmer grows prosperous and better informed as to "city ways"; while in the small church it is yielding place to the pipe organ. There may still be perhaps one organ manufactured to every five pianos, but certainly the proportion is not any greater.

It is a mistake to suppose that reed organs are cheaply constructed. While this may be said of some, the average organ is well made—must be so, in order to compete at all with the piano, which is so rapidly displacing it.

Reed organs are seen in handsome cases of mahogany, walnut or oak, and there is a good deal of solid work about the finer instruments, on account of the cases containing so many small pieces that it would be more expensive to veneer than to put in solid. The cheaper ones are solid oak, walnut of the less expensive grades, or walnut finish, probably on a poplar base. Gum is much used for cases by some makers. The variety utilized takes on a reddish-brown finish and has a grain similar to that of mahogany. The late W. W. Kimball of the piano house of that name, had great faith in gum as a timber for reed organ cases, and ordered a large part of the interior decorating in Kimball Hall, the company's Chicago office building, done in this wood. His faith is shared by Curtis N. Kimball, now president of the concern, who showed the writer about the

offices and spoke highly of its use in some of their organs.

The interior mechanism of the reed organ is mostly of poplar and pine. The soundboard is of spruce. It is above the reeds and contains air-cavities that have much to do with the tone quality of various notes. Bellows are generally of poplar, several ply, to give strength and prevent warping. The action of the reed organ is very simple and amounts to little more than this: When a stop is drawn and a key depressed a valve is opened, and wind passing through causes the reed to vibrate. Wood action parts are of poplar or pine, or both.

American reed organs are of three kinds as to exterior appearance: The kind generally found in the home of the farmer or pious workman is known as the "parlor" organ. It is distinguished by a cabinet top, which has nothing whatever to do with the tone, but is fitted out with shelves for music, lamps, vases, etc., and a "French beveled plate

glass mirror," to aid in the purposes of the toilet, thus combining utility with artistic (?) merit. Reed organs in general, and these in particular, are elaborately carved, but except in the best instruments hand work is not usual. The chapel organ is the kind used in churches, and its chief outward difference, as compared with the parlor variety, is the lack of the cabinet top. The third style is the piano case organ, which is practically identical in appearance with the piano and may have as many octaves. There is usually more carving than the piano case shows, and mahogany and rosewood finishes are common.

Reed organs are almost entirely of wood. The chief metal part is the reeds themselves, which are of brass. The reed organ of Great Britain and the continent of Europe is known as the harmonium, and differs from the American type mainly in the direction of the wind current.

CHARLES KLAUBER.

Bill's Coup d'Etat.

Last fall when Bill Bader was night watchman at the Ducktown lumber mill, and carried on his vocation with a lantern, he showed that he had inherited some presence of mind from his ancestors.

BILL BADER GOING TO THE FIRE.

It was one midnight early in September. Bill was feeding his countenance from a basket of victuals his second wife had put up, and was using the engine room as a buffet. While he was busy masticating a thunder storm came up from the horizon and made a dreadful din and commotion, souring the cream as he was about to pour it into his coffee.

This naturally made him feel mean and, picking up his lantern, he went out into the

yard to say unpleasant things to said thunder; also to see that it didn't vibrate some of the property and shake it down. But before he had journeyed very far several bolts of lightning and plenty of rain landed on the estate. One bolt hit the dry kiln, in which was stored some hardwood flooring, interior finish enough to fit out an Orthodox church and a carload of oak planks.

This surprised Bill a good deal, and for a minute he was undecided whether to call for the fire department or the tinnars: If the

THE VICE-PRESIDENT AND YARD FOREMAN DISCUSSING BILL'S FEAT.

stuff was burning it should be the former; if the roof of the kiln were leaking and spoiling the seasoned material, the latter. As he

stood there in the down-pouring dampness he saw that the bolt had become an incendiary, and without debating longer wandered off to the 'phone.

"Please give me the fire department, angel," said he.

"Line busy!" was the answer.

Hanging up the receiver, he was about to write out his resignation when an idea struck him. Hastily running to the filing room, he procured a nail and a hammer. Armed thus he continued his journey to the main building standing contiguous to the dry kiln. He procured a ladder, scrambled up the rounds to the roof, and by the illumination of the ever-increasing blaze in the kiln, punched holes in the tin gutter on the side nearest the conflagration. The heat was not at all pleasant; in fact, it was so humid and close up there that Bill had to retire across the tin roof to the far side of the structure several times to catch his inhaler and exhale so that he could continue his service.

Having punched holes in the gutter at intervals of two inches along the entire length, he sat down in the rain to watch the result of his plan. Naturally it proved a crackerjack, for where each hole was made the rain-water that was by this time pouring off the roof ran and formed a sort of waterfall from top

Imitations of Hardwoods.

Probably no people are more wide awake to the rapidly depleting lumber supply than are the manufacturers of furniture, and they are preparing themselves as fast as they can to meet the exigencies of the future by perfecting to a high degree methods of imitating oak, walnut and the other expensive and rapidly disappearing hardwoods which are so popular for high-class furniture work. Not only do they practice economy by the use of imitations wherever possible, but they employ veneer to a great extent, thus not only actually improving the quality and stability of their manufactured articles, but effecting a marvelous saving in the use of expensive woods.

During the last few years the great increase in the price of hardwoods, which has become necessary on account of their growing scarcity, has created a strong demand for satisfactory substitutes which can be used in manufacturing imitations. The two kinds most often successfully imitated are mahogany and quartered oak in the golden and darker finishes, but comparatively little deception is attempted by manufacturers, and they market the goods for exactly what they are, or under some special trade name which they have coined.

For imitating mahogany, cherry was formerly used almost entirely, but of course that wood itself is now one of the scarce ones, and its consequent increased price has led manufacturers to seek a material which lends itself more readily to the stain, shows the grain, and holds the gloss. Birch best fulfills these requirements, although in some

to bottom of the main building, thus making a barrier which the conflagration had to conquer before doing any further damage.

As Bill sat there, confident that he would win out, the vice-president and yard foreman came upon the scene. They were about out of oxygen, having run all the way from their residences at sight of the blaze. With what breath they could command they asked Bill what in — he was doing with a hammer at such a time and found fault with him vociferously.

"Wait before using unpleasant language to me," observed Bill, good naturedly, "and note what I have accomplished! With this hammer I have knocked the incendiary lightning bolt in the head!"

He explained what he had done to the gutter and its magical effect upon the flames. Having done this he was about to ask for an increase in salary, when the yard foreman told him that he would be rewarded the following day with the office of teamster, at an increase of \$2 per month. Bill thanked the foreman heartily, accepted the tempting offer on the spot, and coming down off the roof—for the fire had almost spent itself—triumphantly went home to change his wet clothes.

G. D. JAMES.

parts of furniture maple, beech and gum are used as substitutes for mahogany. Even in the better grades of furniture, birch is often used for posts and frames—panels, tops and other parts being of mahogany veneer. It is indeed a pity that birch finds its chief function in furniture work and even inside finish, as a substitute for mahogany, for its beautiful grain, color, and the high finish which it will take, eminently fit it for a high place of its own in work of this character. In making imitation quartered oak many woods can be used, as the original grain is first covered with a filler, and then the quartering is imprinted in dark ink by the use of actual quartered oak prepared by a special process. Birch, maple and poplar are much used for this purpose and after finishing and polishing, it sometimes takes an expert to detect the difference between the real and the spurious.

There are certain woods used in fine furniture construction which are exceedingly expensive owing to the difficulty of obtaining pieces with a good grain, of sufficient size for working. Such a wood, for instance, is the Circassian walnut, which comes from the Ural mountains, and which is so popular at present. It makes handsome veneers for table-tops, beds and dressers, and forms one of the most costly furniture "novelties" on the market today. The core or backing is sometimes made of American walnut in the natural finish, and again of red gum, or satin walnut, as it is called by the English trade, which has a texture very similar to Circassian walnut, while its grain is also very much like it.

Department of Forestry at Pennsylvania State College.

The profession of forestry is rapidly becoming a dignified and important one. The United States Forest Service, the large railroads, municipalities, and even individuals with extensive interests are employing foresters every day, so that the demand is now greater than the supply.

A course in forestry is one of several given by the School of Agriculture and Experiment Station of the Pennsylvania State College, located in Centre county, Pennsylvania. At present twenty-four men have classified for the four-year course in forestry. Throughout the entire time special attention is given to a practical study of the work.

From three to five hours a week are spent by students in the field, studying the characteristics of trees, collecting seeds, in planting and general nursery practice, scaling logs and lumber, studying growth and natural production, estimating timber, making field maps and plans for forest management, etc. During the senior year at least four weeks are spent in large lumber camps in some of the principal forest regions. Frequent excursions are made to nearby mills, wood-working establishments and large nurseries, and to sections in which active forestry operations are being carried on by the government, the railroads or individuals.

Students of other institutions and special students having the required qualifications are admitted to such courses as their preparation warrants, credit being given for work done elsewhere, which is permitted to apply on the required course at the Pennsylvania school.

The presence of a large variety of forest trees on the campus, and native timber in considerable quantities near the college gives a splendid opportunity to students for becoming acquainted with the characteristics of trees and their reproduction and growth. One of the largest of the state forest reservations is within four miles of the college and the State nursery is within eighteen miles, while there are several small shingle and sawmills very close by, with large factories at Williamsport and other points along the Susquehanna river. A small forest nursery was established early in 1907, and it now shows several thousand seedlings which will be transplanted this spring.

The forestry department in Pennsylvania State College is well equipped with all the necessary paraphernalia for pursuing such a course. It has fine classrooms and offices, valuable specimens and forest instruments, and a library of over 150 volumes pertaining specifically to the work.

A New Hardwood.

The Diekmann Hardwood Company of San Francisco, Cal., forwards the *HARDWOOD RECORD* a handsome specimen of Jenisero, the beautiful Australian hardwood which it is now importing in large quantities. The company reports that the demand for this wood on the Coast is increasing rapidly, and that it has all the facilities for shipping large amounts of well-dried stock on short notice and for cutting thin veneers.

The wood takes a very beautiful finish and its general appearance may perhaps be best imagined by describing it as having the rich color of "golden" oak, with the grain of Laguna mahogany. The larger the piece, the more attractive the general appearance of the wood. Jenisero is being extensively used where a handsome material is required, minus the cost of the very choicest varieties. The Diekmann Hardwood Company is enthusiastic over it and claims many excellent points in its favor, viz., that it is extremely durable, is hard yet easily worked, has a fine, smooth texture, takes a high polish, glues perfectly, does not dent or mar, and grows hard-er with age.

Of Interest to the Handle Trade.

[Under the above heading the HARDWOOD RECORD will undertake to publish items of interest to manufacturers of handles in every issue, and will be glad to have readers of the paper contribute comments on market conditions, queries, or news pertaining to this trade, which may come under the observation from time to time.]

The Semi-Annual.

The Handle Manufacturers' Association of America will hold its regular semi-annual meeting at the Louisville Hotel, Louisville, Ky., on Wednesday, May 20, at which time the entire association will be the guests of the Turner, Day & Woolworth Handle Company of that city and the I. E. Force Handle Company of New Albany, Ind. Both of these concerns are prominent members of the Hickory Division, but their generous invitation is extended not only to members of that branch of the association but to all connected with the maple and ash and oak departments as well.

They request that all who contemplate attending the meeting notify the secretary as far in advance of May 20 as possible, that they may know how many to prepare accommodations for.

An interesting program has been prepared which includes papers on "A Brief History of the Handle Business" by Charles D. Gates; "The Niceties of Handle Manufacture" by C. L. Hartwell; "My Experience With Saws" by T. R. King; "The Low Grade Problem in the Small Factory" by F. W. Peters—and others, covering different and varied phases of the handle business, by men of long experience in the trade.

Hickory Division.

The importance of the coming meeting can scarcely be overestimated. To the Hickory Division of the association it is a necessary and important one, for there is no denying that prices on hickory handles have become somewhat demoralized within the past couple of months. As usual it is principally the smaller manufacturers who are causing the trouble, or at least those who are not educated up to a proper realization of the cost of this product and its consequent value. There are those in the trade, possibly even in the association, who cannot or will not understand that the large manufacturers are not their enemies, but on the other hand are their very bulwarks. They will hold up the value of their product to the last degree, which insures protection to

other manufacturers in so doing; on the contrary the moment they do withdraw their support of a just schedule of values, the result cannot but be disastrous to the smaller dealer, for not only will he cease to make money on his product but in the majority of cases he will actually be unable to continue business for any great length of time, while the larger manufacturer naturally will feel his losses much less keenly and can hold out indefinitely.

Thus it will be seen that the coming meeting has to deal with very important questions now before the trade, and that it

department bid fair at one time to be as thrifty and to accomplish as much for its members as has the Hickory Division, but for sundry reasons it has not been thoroughly organized up to date, and it would seem that if these people are ever to get together they should do so very promptly. While the officers of the general association have done and shall continue to do all in their power to aid the broom handle cause, yet they cannot but feel that unless there is strong cooperation and interest on the part of manufacturers at the forthcoming semi-annual meeting in Louisville, they will be pardoned for feeling just a little bit discouraged in this regard. On account of personal reasons H. B. Alexander, the head of this division, resigned office some weeks ago and at Louisville a new head will be chosen, so that it is to be sincerely hoped a good representative number of broom and mop handle people will be on hand to place some one in charge of their association affairs who will be able to devote considerable time and attention to getting them into logical shape, in which he is promised the active support and cooperation of the officers.

Perhaps the following letter from the president of a well-known broom and mop handle concern best illustrates the present situation in this division: "Replying to your notice of the Louisville meeting and what you have to say about the Broom Handle Division, will say that we have been very much interested in the association, and have done our best to get it to go. Have attended all the meetings—even went to Cleveland, because of not receiving notice of postponement in time. This meeting at Cleveland being called off gave our division a pretty black eye, as all of the broom handle manufacturers in our section seemed ready to attend; but I am afraid they have now rather lost faith, for which I am very sorry, as I know great work could be accomplished if we could get together. As it is now I am afraid we will have to start all over again with the work. Have noticed the progress the Hickory Division is making and wish them all kinds of success, for they are accomplishing results that could not be obtained in any other way."

In view of the above facts, it behooves the Maple and Minor Woods Division to go to Louisville in full force and "get busy."

Two Kinds of Handles

Everything has two handles—one by which it may be borne; another by which it cannot.—EPICETUS.

HERE are innumerable cups on the table of life. Some are gilded and beautiful. Some contain bitter mixtures. Others are sweet to the taste. Every man must take such of the cups as are given him. What happens? The most bitter cup often grows sweet. You can take the morning by the handle of a frown and the whole day will frown on you. Take the stormiest day with a smile and it will grow pleasant.

Take your work by the handle of reluctance and it will grow intolerable; you, the same man, take the same work by the handle of willingness and it becomes easy. Try it! Take your pleasure by the handle of self-indulgence and the pleasure is spoiled; take it by the handle of generosity, share it, and it will last.

Take wealth by one handle and it loads you with cares; take it by the other handle and see what will happen.

Take your business as a means of getting a living and it becomes vulgar drudgery; take it as a means of social service and it will be a noble religion.

Take marriage by the handle of your self-will and it turns out a failure; take it by the handle of love and you will be more happy every day.

Handle men with distrust and you will never get on with them; handle them by good will and the same men will be your friends.

Take yourself by the handle of egotism and you waste your power. Use the handle of modesty and the world is with you.

Take pain by the handle of fear and you will always have something to suffer. Take pain by the handle of courage and nothing can hurt you.

Take sorrow with self-pity and you will become too lonely to live. Take it by the handle of your sympathy and your sorrow shall be translated into new power to help all others who suffer.

Take the world by the handle of doubt and the day grows dark. Take it as God's world and the sun and stars will always be shining.

Take death with dread and you lessen the tide of life. Take death with hope and life broadens into an infinite meaning.—CHARLES F. DOLE.

is a matter of more than passing interest. Every hickory handle manufacturer who can possibly arrange his affairs to attend should do so without fail, and a large number have already signified their intention of so doing.

Broom and Mop Handles.

To the Maple Division of the association the matter is an equally important one, but not for exactly the same reasons. This

There are certainly enough men in this branch of the trade to put through a good flourishing organization and now is the time to do it.

Plow Handle Department.

With regard to the oak department it would seem that plow handle manufacturers, having previously had an organization and knowing the benefits of it, would be anxious to get together again. One manufacturer in this particular line, who is a member of the association, writes that he has had considerable correspondence with a number of them and that recently a few met and talked the question over. They may decide to come into the association if they may do so as a distinct branch, and it is to be hoped that they will attend the Louisville meeting and take some action in this direction at that time.

Manufacturers of Ash Handles.

C. W. Sperry, vice-president of the Ash and Oak Division, writes that the department will naturally include only the manufacturers of unfinished ash stock, inasmuch as the finishers already have a distinct organization of their own along slightly different lines than that contemplated by the general handle association. This branch of the trade has long been in need of an association, and in fact it was a few people engaged in making the unfinished product who were the real originators of the present Hickory Handle Manufacturers' Association of America. However, the majority of them are very difficult to get in, seeming to think that such a proposition will hurt their trade instead of helping it. How they can

possibly have such an idea is a matter of conjecture, and certainly not one of precedent, as the history of all association work would naturally lead to the opposite deduction. The officers sincerely hope that manufacturers of unfinished ash handles will make this regular semi-annual meeting an occasion for getting together and evolving some plan for the betterment of their branch of the industry.

The Smith-Kizer Manufacturing Company of Rural Hall, N. C., reports that it will close its plant about the last of May, and probably not open up again until September. The company does only a small business in the handle line but writes that it will make an effort to get the manufacturers in South Carolina, Georgia and Alabama interested in the work of the new association for the benefit of all.

William Charlesworth Handle Company of Fayetteville, Ark., write that they have run their factory most of the winter and have at present a well-assorted stock of handles in a clean, dry warehouse. The factory is not running now and will not to any extent until conditions change for the better. Mr. Charlesworth does not believe that trade will be very lively for the next month or so, nor that low prices will get much business. He feels that he cannot make handles any cheaper than the present association quotations, and prefers to let his factory stand idle rather than to barely break even, or run at an actual loss. However, he is optimistic and believes that handles will sell readily and at good profit before long.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries as reach this office from the HARDWOOD RECORD clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

Wants Hickory.

THE HARDWOOD RECORD is in receipt of a communication from a large and well-known manufacturing house inquiring for a source of supply for 2½-inch firsts and seconds hickory for which it is in the market. Anyone wishing to be put into communication with this correspondent will be furnished the address on application.—EDITOR.

Wants Crating Stock.

PARRERSBURG, W. VA., April 24.—Editor HARDWOOD RECORD: Can you supply us with a

list of manufacturers of poplar, oak and gum crating stock? We have several customers who want considerable of this stock, cut to different weights and lengths, and would appreciate hearing from you by an early mail.—LUMBER COMPANY.

Anyone interested in the above inquiry will be furnished the name of our correspondent upon application to this office.—EDITOR.

Amend Honorable, and a Correction.

PAINCROFT, IRE., April 25.—Editor HARDWOOD RECORD: We notice in your issue of even date you intimate we cast a reflection on Perrine as a lumberman, referring to his poem "Who Would Be a Camel?" In reply will say we certainly did not mean to cast any reflections on Mr. Perrine as a lumberman, for we consider him one of the best there is. We also want to correct the stated number of feet of timber purchased in British Columbia. You have it 3,000,000—we meant to say 300,000,000 feet.—A. B. NICKER & SON.

diameter at one end. The opposite diameter was not so great by 6 inches, which made the mean diameter of the log 74, and if it had been hewn for export it would have made a fair measurement of 75 inches from wane to wane.

There is no scale card or log book that will give the contents of such a log, as the diameters are never carried over 50 inches, but Doyle's formula for finding the contents of logs in inch boards would make it as follows: Diam. 74 inches—4 inches for slab=70 inches, divided by 1=17½, squared=306¼x16, the length of the log=4,900 feet, or the contents of the log.

This is an exaggeration, and though carried out by the figures and rule, is disproved by practice. It is true that small logs, when measured by Doyle-Scribner rule on an average gain in sawing, and the smaller the log, the greater the gain; while on the other hand, large logs, or those over 30 inches in diameter, lose in sawing, and the larger, the greater the loss. It is reasonable to say, however, if this log had been sawed on a thin band saw, it would have produced about 4,000 feet of inch boards.

The task of securing a suitable log for the World's Fair was undertaken by J. H. Rudrow, one of the pioneer walnut men in the west. The tree first selected for this purpose stood on Mormon creek, in Bates county, Missouri, on land belonging to J. W. Harrelson, who lived at Belton, in Cass county, Missouri, but the task was given up by its promoters eventually. This tree, however, was a more perfect specimen than the log represented in the picture, although it would not have shown so large a diameter; the trunk was taller and better proportioned, being straight as an arrow, 42 feet to the first large limb. The original idea was to exhibit it in an upright position, as it stood in the forest, cutting off the top, or great limbs supporting the crown, of course, but leaving the long stubs of the limbs, branching out from the trunk. The tree was grubbed down, the side or spur roots being uncovered and cut off at a distance of six or eight feet on all sides from the body or base of the tree, the idea being that these would answer for braces, in holding it safely in an upright position, without the use of unsightly guys, or stays from the top, and at the same time add to the attractiveness and novelty of the exhibit. But these increased the weight of the log and made it unwieldy, and much more difficult to handle, and notwithstanding the fact that two traction engines, several teams, and a set of horse trucks were installed in this undertaking, it proved a failure. The project was so expensive that it was abandoned after dragging the huge log for over a mile at an expense of \$150. The roots and prongs or stubs of the great limbs were then cut off close to the body of the tree, which was sawed into four logs, hauled to Adrian, Mo., and hewn and shipped for export timber.

In spite of failure at first Mr. Rudrow was

The mammoth walnut log represented in this illustration was exhibited at the World's Fair, held in Chicago in 1893. It is now over fifteen years since this tree was cut, and the walnuts left standing in the country are but dwarfed and stunted trees in comparison;

today it hardly seems possible that such a tree ever grew. However, there are doubtless many lumbermen and others who saw this log while it was on exhibition, and who will be able to recognize it from the picture. The log was 16 feet long, and 77 inches widest

A Famous Walnut Log.

ENORMOUS WALNUT LOG EXHIBITED AT THE CHICAGO WORLD'S FAIR.

persistent, knowing of another tree that was more favorably situated across the line in Kansas. It stood on land belonging to a Leavenworth county farmer, P. W. Gower by name, on a creek which emptied into the Kaw river about twenty-five miles southwest of Kansas City. Mr. Rudrow now determined to make a second attempt, which resulted in securing the tree represented in the picture. The matter was brought to the attention of J. H. Verbeck, of Grant City, Mo., and S. F. Prouty, of Des Moines, Ia., who were the most widely-known and experienced walnut men in the country. They considered it practical and gave it their able and earnest assistance, so that in due time

the log was delivered to the Union Pacific railroad at the little town of Linwood, and there loaded on a car, to be soon landed in a conspicuous place in the wonderful display of American woods at the great exposition, as a product and the property of the Sunflower state.

After the Fair was over, the log was sold to a prominent exporter, and is said to have been made into souvenirs of the Fair, in the form of three-inch cubes, or paper weights, with artistic lettering. This log was pronounced by the highest authority the largest 16-foot walnut log in the world, and it was without any visible defect.

J. V. HAMILTON.

Hardwood for Motor Vehicles.

The introduction of modern motor vehicles was followed by an increased demand for several articles, such as rubber for tires, wood for various parts and various metals for the mechanism of the machines.

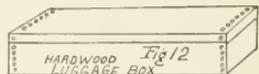

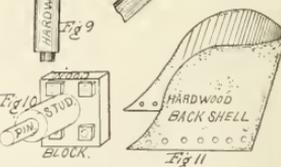

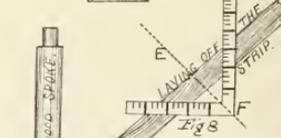

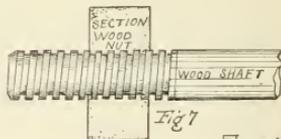

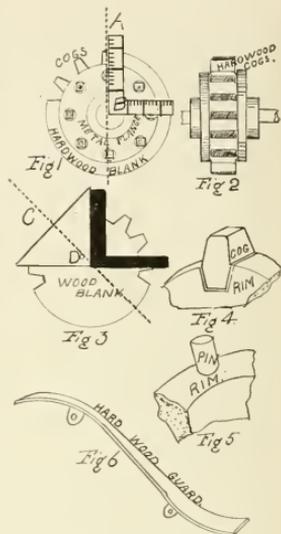

When motor cars first came out practically all the mechanical portions were constructed of iron or other metal. Then there came the framework gears, with rawhide cogs, to create a soft running motion and freedom from friction and liability to breakage existing in the common cast iron cog. In order to attain lightness and a certain character of motion, so-called wooden gears were constructed. In practice the wooden gear is generally strengthened by the use of side flanges; one might suppose that a wholly wooden gear is used, but the wooden portion is limited to the cogging. It is desirable that the cogs be of very firm wood. In fact,

some of the hardest and closest-grained species are used.

The nature of the design for a cog gear is exhibited in Fig. 1. The blank form is cut out from the chosen piece of timber. The marking center is aligned from A to B by means of the triangle. The center of the point of each cog is fixed and defined with a scratch line. The lines serve as guides for the cutting of the blanks to cog form. A metal flange is clamped on each side of the wooden disk. This flange provides the bore for the hub and therefore the wheel may be geared, set-screwed or keyed on the shaft.

The cogs are cut in various ways. In some shops the cutting is begun with hand saws, followed up by truing with common hand chisels. In other shops the chisel is employed from the start and the cogs are made by a system of chipping and gouging. Then

again, if the extreme of stability is required, the cogs are made individually, which is a more practicable manner of producing wooden gearing. The flanges are constructed in the

ordinary way, but instead of using a wooden center a metal center is employed as in Fig. 2. This metal center is provided with the necessary series of openings to receive the

wooden cogs, which are made long enough to allow a driving end. The driving end is thus inserted into the slot of the cylinder.

After all the cogs are in place, truing down is done on a lathe and the cogs are filed and cut to form. One of the ordinary wood blanks in process of marking with triangle and square is shown in Fig. 3. The defining line is marked C to D.

Some of the wooden cogs are made to dovetail into the metal or the wood rim as in Fig. 4. This is not so reliable as the former method, but answers all purposes for light work. There is also the pin system of making cogs, shown in Fig. 5. The rim of the wheel is bored to receive the wooden pin as shown. This style of gearing is employed only in remote cases in which there are light mechanical parts to operate.

Hardwood is not in demand merely for the use of wooden gearing in motor vehicles, but extends to the other parts of the machine. The guards for the wheels were made from thin sheet metal for a number of years. The weight of the metal, however, was a handicap, and the japan wore off, leaving rusty surfaces. In the event of the car getting into an accident, the sheet metal edges acted like knives and often caused serious injuries. Hence leather guards, paper pulp guards and all sorts were devised. Finally hardwood guards were constructed as in Fig. 6 and fitted with metal brackets for attachment to the sides of the vehicles. They became general, and are of course made from wood which can be bent readily. Bending is accomplished by steam devices in which the moisture is forced into the fiber by pressure, followed by compressing the wood to shape on wooden models.

There are parts of the automobile where lightness has been secured, and at the same time security, by adopting wooden nuts and shafts as in Fig. 7. Usually the English standard thread is cut on the nut and shaft. Such threads are blocky and strong. Of course small bolts and nuts cannot be made like this, but where a large bolt is needed, some saving in weight can be obtained by the application of a lighter wooden threaded shaft and nut. The threads are easily cut on a turning lathe. Hardwood spokes for wheels are becoming more and more common. For some years only metal wheels were thought to be suitable for motor cars, but when motors for carrying express came out the wooden spoke and rim, rubber-tired wheels commenced to appear, and proved to be light and strong. Consequently they were applied to passenger motors and touring cars of all kinds. Fig. 9 shows one of the spokes made in the usual way. Fig. 8 shows method of laying off a strip with the try-square. The defining lines extend from E to F.

A number of the small parts of modern motor vehicles are fitted with wooden contrivances. Fig. 10 shows a block to which a stud and pin are fastened by means of four bolts. By this system the backing is of wood, effecting a saving of weight over what

it would be if the block were of iron. There are also hardwood shells for the backs and sides of cars, as in Fig. 11. In fact, very

many parts of recently designed automobiles are constructed of hardwood. Luggage boxes are made on the plan shown in Fig. 12.

News Miscellany.

Monthly Meeting of the Grand Rapids Lumbermen's Association.

Grand Rapids, Mich., has a strong commercial organization known as the Grand Rapids Lumbermen's Association. It is made up of practically every legitimate wholesaler in that city. From the fact that this furniture center is a leading hardwood market the hardwood element predominates in the organization. It holds regular monthly meetings and brings under discussion all features of the trade and any measures that will contribute to the betterment of local market conditions.

The officers of the association for the current year are L. L. Skillman of the Skillman Lumber Company, president; I. Preston Rice of the Rice Veneer & Lumber Company, secretary, and N. J. G. Van Keulen of the Van Keulen & Wilkinson Lumber Company, treasurer.

On the evening of April 28 the association held its regular monthly meeting and served a dinner at the Livingston hotel. About twenty-five members were present and as guests, Theodore Fathauer of the Theo. Fathauer Company, Chicago; Frank F. Fish, secretary of the Na-

ting elements of the association and that he was a thorough believer in it as being manifestly fair to all elements of the trade.

The editor of the RECORD, on invitation from

I. PRESTON RICE, SECRETARY.

the president, deprecated any agitation on inspection matters and stated that the present rules were the result of the best judgment of the best people allied with the National association and that he believed due deference should accordingly be paid to this opinion, to the end that uniform inspection might prevail and a universal standard be promulgated.

On motion a committee was appointed to analyze carefully inspection results with mill run northern lumber under both the old and new rules, and to make a report at the next monthly meeting of the association, when a recommenda-

L. L. SKILLMAN, PRESIDENT.

tional Hardwood Lumber Association, Chicago, and the editor of the HARDWOOD RECORD. After the dinner considerable routine business was transacted and a general discussion of the inspection system prevailing in the National Hardwood Lumber Association was then entered into.

President Skillman read a communication from the Cincinnati Lumbermen's Club enclosing a resolution recently adopted by that organization, recommending that the National association revert to its 1905 inspection system, and deprecating the enforcement of the rules adopted at the last annual meeting at Atlantic City. The Grand Rapids Association was invited to express an opinion on this matter and to join Cincinnati in its protest against the enforcement of the new rules.

Secretary Fish explained in detail the slight differences between the new and old rules and said that the new system was a matter of joint agreement between the manufacturing and job-

N. J. G. VAN KEULEN, TREASURER.

tion will be made either for or against the new rules, to be presented to the National association at its forthcoming meeting in Milwaukee in June.

The discussion prevailing at the meeting brought out very forcefully the fact that comparatively few jobbers are thoroughly posted on either the old or the new rules; that there is considerable prejudice against the latter—of a legendary nature, owing to the fact that they have not been thoroughly dissected; and there is a feeling that they lower the standard of inspection materially. Some reports from buyers were presented alleging that grades were actually lowered to the extent of from \$3 to \$5 a thousand, which of course is far from being the fact. Other reports were made indicative of the absolute certainty that with northern woods the new rules do not lower the grades to an extent of more than 25 cents a thousand, which is likely much more in accord with the facts than the unintelligent opinions offered by sundry buyers.

The Grand Rapids Lumbermen's Association is taking a very commendable stand in the matter, and very likely after the rules are thoroughly tried out by its committee will be able to present to the National association at Milwaukee an intelligent opinion, with recommendations for any needed changes, that will bear considerable weight.

Annual Cincinnati Lumbermen's Club.

Every concern represented on the membership list of the Cincinnati Lumbermen's Club was present at the regular annual meeting and election held the evening of May 4 at the Business Men's Club. At 6:30 an elaborate dinner was

tion in increasing freight rates in the Central Traffic Association district, and specifically the proposed advance of 2 cents on lumber. The resolutions recite that this is a grave injustice at this time of depressed markets, and that lumber rates are already excessive.

The club also indorsed the "birds' home park" plan of Councilman Bob O'Brien. It was de-

second vice president; L. W. Radlma, treasurer, and W. S. Sterett, secretary.

President Thomas J. Moffett, in a short speech, surrendered the gavel to Mr. Dulweber, after which he was given a rousing vote of thanks for past good service. Mr. Dulweber stated after the election that he would, as soon as possible, announce his standing committees for the year, perhaps at the next meeting of the club in June.

Will Fight Increased Freight Rates.

The Illinois Manufacturers' Association, through its president, Frederick W. Upham, one of Chicago's prominent lumbermen and active politicians, has called a great conference of shippers to meet at the Auditorium Annex, Friday, May 15, to resist by organized action the proposed advance of 10 per cent in freight rates by railroads running east from Chicago. It is rumored that western roads will follow the footsteps of the lines who are leading the fight for a "boost," claiming that the cost of transportation has soared high of late. Traffic managers of the western lines have held conferences lately going over the situation and discussing possible ways and means of making the desired increase without calling down upon their heads the wrath of the railroad commissioners of Missouri, Ohio and Minnesota, which have been prone to hammer down the rates.

The roads will have a rough path to travel before they make the proposed changes, and President Upham and his conference will throw as many rocks in their path as possible. Not only will they have determined opposition to conquer, but it would seem that they already have their hands full in resisting the efforts of state commissions to keep their charges down to a reasonable basis.

Following is the call President Upham issued to the president of every leading industrial, mercantile and shipping organization in what is known as official classification territory, also to associations in the middle west:

"At a time when all signs point to a complete restoration of business activity and confidence and in the very face of improving conditions, the carriers in official classification territory have announced their intention to advance freight rates 10 per cent.

"Their traffic officials and vice-presidents in charge of traffic appear to be impregnable to the protests of the shippers. They seem to lose sight of the fact that the carrier is dependent upon the shipper as much as the shipper is dependent upon the carrier.

"The only way to resist the proposed advance is for shippers to organize, and a conference has, therefore, been called under the auspices of the Illinois Manufacturers' Association, to be held at the Auditorium Annex, Chicago, Friday, May 15, at 10 a. m. Your association is earnestly requested to be represented by one or more shippers. It is exceedingly important that every shipping interest in official classification territory be represented.

"Please wire the Illinois Manufacturers' Association, American Trust Building, Chicago, promptly the names of those who will be present for your association."

"The present conflict is not the first time that the Illinois Manufacturers' Association has been at variance with the railroads in official classification territory," said an official of the association recently.

"Three or four years ago, when these same roads undertook to advance the rate 20 per cent under the guise of a proposed uniform bill of lading, the Illinois Manufacturers' Association organized the territory under the banner of the American Shippers' Association and took the case to the Interstate Commerce Commission. The carriers then asked for a conference.

"If one stops to think he realizes that nearly every article of commerce passes through this process of taxation before it reaches the consumer. It seems then in advancing rates 10 per cent on each article used in advanced something like 10 per cent five times."

THOMAS J. MOFFETT, RETIRING PRESIDENT.

clared that \$30,000,000 worth of lumber is destroyed in the United States each year by worms and insects, which pests are destroyed by the birds.

J. W. Darling, F. W. Mowbray and C. H. Pense were appointed a committee to arrange for attending the convention of the National Hardwood Lumber Association to be held in Milwaukee in June. The local club strongly recommends the re-adoption of the 1905 ruling system, and they will use their power to have it again placed in order.

Election of officers resulted in a tie, and the

L. W. RADLMA, TREASURER.

winner was decided through a straw vote. For two weeks only two tickets were in the field, but about an hour previous to the casting of the ballots the third ticket sprang up before the members. The following were the successful candidates: B. F. Dulweber, president; George Littleford, first vice president; C. F. Shiels,

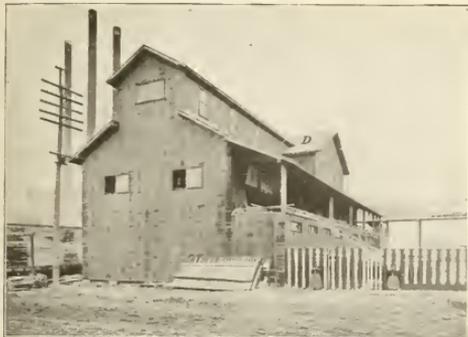

B. F. DULWEBER, ELECTED PRESIDENT.

prevail, after which President T. J. Moffett called the meeting to order.

Mr. Moffett reviewed briefly the work accomplished by the club during the year and thanked the members for their cooperation. He was followed by Treasurer B. F. Bramlage and Secretary E. J. Thoman, who presented satisfactory reports. Chester F. Kora, chairman of the Committee on Law and Insurance, reviewed matters which had come under its jurisdiction, and was followed by W. A. Bennett, chairman of the River and Rail Committee, with a brief resume of affairs pertaining to shipping rates, rights, etc. George Littleford, chairman of the Inspection Committee, announced that his committee and the club had already gone on record as being in favor of a return to 1905 rules, and that they would so declare at the meeting of the National Hardwood Lumber Association at Milwaukee. J. Watt Graham, chairman of the Membership Committee presented seven new applications for membership.

A resolution was passed condemning the positive action of the Central Traffic Associa-

VIEW OF NEW BAND MILL OF W. D. YOUNG & CO.
BAY CITY, MICH.

Prosperous Sawmill Machinery House.

In common with other lines of trade the average sawmill machinery institution is running on short hours, owing to slackened demand for its product. However, there is one prominent house of this kind which is enjoying such business activity that it has run its big plant for months past without any diminution of hours or number of employes—the M. Garland Company of Bay City, Mich.

Since last fall this company has equipped more than a half dozen new sawmills. Views of three of these plants are presented on this page. The new model double band sawmill of the Richardson Lumber Company at Bay City presents as high a type of construction for a hardwood plant as any in the country. It is doing most excellent work and its owners are highly pleased with the complete equipment of Garland machinery that has been installed.

The second plant is the model one of fire-proof construction in connection with the big modern flooring factory of W. D. Young & Co. at Bay City. This plant has been installed as a single band Garland equipment and has made the almost phenomenal record on Michigan hardwoods—cutting almost entirely inch stock—of 68,000 feet in two ten-hour shifts per day. W. D. Young & Co. have placed orders with the M. Garland Company for a second band mill to be added to this present equipment, to be installed under the same roof within sixty days. A more detailed description of the sawmill and flooring factory of this concern will appear in an early issue of the Record.

The third mill pictured herewith is that of the

HAUL-UP FROM THE LOG POND AND THE WAY LUMBER IS DELIVERED TO CARS AT W. D. YOUNG & CO.'S PLANT.

An Improved Hardwood Floorer.

From time to time inquiry is made for something above the ordinary in the line of hardwood floorers. As a successful result of effort along this line there is herewith illustrated a new and improved type of machine, which, though it has only been on the market a short time, has proven a wonder to flooring manufacturers because of its excellent work, ease of adjustment and rapid feed.

The machine will work material 5 and 10 inches wide and 8 inches thick. Its frame is solidly built, open style, heavily ribbed and sided throughout. The feed is the main feature of construction. It consists of four double-gear, down-driven rolls. The two upper in-feeding rolls are carried on a pair of side housings and are raised and lowered simultaneously by hand, as shown in illustration. This arrangement insures perfect alignment. The out-feeding rolls are driven from the in-feeding end of the machine by chain and sprockets. The cut shows the spring pressure to the upper in-feeding rolls, which does away with the old system of cumbersome weights and levers.

The matcher spindles are adjustable across the machine and may be drawn clear to the side out of the way for surfacing the full width of the cylinders. The latter are solid crucible steel forgings, four-sided and slotted. Upper cylinder bearings are rigidly yoked together and raise and lower on large square-threaded screws, mounted on ball bearings. The lower cylinder is adjustable for alignment, and with bar after-cut draws out at side of machine for convenience in setting and sharpening the knives.

The machine is equipped with patent roller

Forest Lumber Company, of Tower, Mich., which is said to be one of the model single band plants of the country.

The M. Garland Company are specialists in hardwood sawmill machinery and have built scores of hardwood mills, notably in the state of Michigan, which is famous for its accurate and economical production of lumber. In addition to this line of machinery product the company are also specialists in automatic transfer ma-

chinery, and have many original and practical devices for the handling of everything from logs to mill waste at a minimum of cost. Their assorting devices are recognized as standards the world over, and they also make many appliances for the handling of pulpwood and waste in connection with pulp and paper mills. Another line of product is the manufacture of equipment for wood-chemical plants of which they are the chief producers in the United States.

hold-down, which insures a perfectly fitting tongue and groove. The use of stud gears has been eliminated and all bearings are self-oiling. For further information regarding this machine address the manufacturers, J. A. Fay & Egan Company, West Front street, Cincinnati, Ohio.

Building Operations for April.

Official building reports from forty-seven leading cities of the country, for the month of April, 1908, received and tabulated by The American Contractor, Chicago, show a marked falling off in the value of building permits issued as compared with the corresponding month of last year. Yet, notwithstanding the loss, which amounts to nearly one-third, the operations reported are still large when contrasted with those of only a few years ago. Several things combine to reduce building operations at present—the enormous amount of construction work done within recent years, which has largely supplied the demand for buildings; the unsettled conditions incident to the recent currency stringency, and the approach of the presidential election. Only eleven cities show a gain. Most notable among these is Chicago, where the permits aggregated \$6,130,850, a gain of 14 per cent.

Portland	3		

as the eucalyptus seems to be proof against the ravages of marine pests; the oil distilled from the leaves will be used for the manufacture of linseed and other medicinal preparations.

The eucalyptus forests of southern California promise to become a source of wealth to that state in the near future, inasmuch as new wood which can be rapidly reproduced and which are adaptable for many purposes are now being eagerly sought, owing to the growing scarcity of many of our well-known timbers.

The Southern California Eucalyptus Forest Company believes that the only question which it will have to solve is its ability to supply the demand for its timber, which has been most favorably reported on by forestry experts. The company will be managed by experienced business men, aided by competent foresters, and it expects to branch out continually, the plan now being to establish a factory in San Diego as soon as conditions warrant.

Important Meeting of National Hardwood Lumber Association Interests.

On May 14 there will be an important meeting held in Chicago, comprising the various interests of the National Hardwood Lumber Association, including the Inspection Rules Committee, the Executive Committee and the special committee having in charge the grievances of the eastern jobbing element in the matter of inspection rules. This last named committee consists of Earl Palmer of Paducah, Ky.; F. A. Diggins, Cadillac, Mich.; Theodore Fathauer, Chicago, and Gardner I. Jones of Boston.

It is said that at this conference the entire inspection system of the association will be thoroughly threshed out and plans promulgated affecting any necessary changes that may be advisable, to make the current rules satisfactory to the majority of the trade the country over. It is believed that every member of the various committees and the executives of the association will be present at this conference, which undoubtedly will be the most important special meeting ever held by the organization.

Gorge in Guyan River.

A correspondent of the *Ironcom* was in Huntington, W. Va., at the time of the rise in the Ohio river and its tributaries the first of this month, and the accompanying photographs were made at that point, one of them from the bridge. The river under the bridge was twenty-five feet deep, and packed with logs clear to the bottom, forming a tremendous gorge against the piers, and with the water backed up heavily behind it. The Guyanotte was on a rampage the like of which had never been known, and the Ohio passed the fifty-foot mark considerably. In spite of the big state in the Ohio, the "Guyan" was very swift at the mouth, and all efforts to hold the

boom proved futile. It eventually gave way, and between twenty and thirty thousand logs were swept down into the Ohio, entailing great expense to many of the large manufacturers.

The Big Sandy was also very swift and high, and allowed an enormous number of logs to be carried down. Tow-boats were put out after them and all managed to get some into harbor. Numerous small creeks rose so that travel was rendered almost impossible in the country districts. Altogether the loggers and residents along these streams passed through an extremely exciting time.

Veneer Notes.

The Buena Vista Veneer Company of Des Arc, Ark., recently increased its amount of capital stock from \$10,000 to \$75,000.

The Bolted Basket Company has been incorporated at Boyne City, Mich., with a capital of \$12,000. The company is the originator of a special process by means of which a very light, strong basket or hamper adapted to the use of laundries, bakers, etc., may be made. It has a fully equipped planing mill, in which regular trade will be continued until the basket business absorbs the entire product. The basket plant is 69 by 72 feet square, three stories high, and has a brick engine house with 150-horse-power Corliss engine. G. M. Kerry is general manager of the company.

A Slater Reed has recently purchased the interest of his partner, C. Buckels, in the Lake-side Veneering Mills of Kissimmee, Fla., and is now sole owner of the plant. Mr. Reed will make a number of improvements and largely increase the output.

The New Albany Veneering Company of New Albany, Ind., has just finished one of the most up-to-date and extensive veneer plants in the country. The main building is 80 by 255 feet, two stories high. The plant also includes a boiler and engine rooms and dry kilns. The capacity of the kiln is 25,000 feet per day, and the plant is equipped throughout with modern machinery for the manufacture of veneered or built-up stock. The officers of the New Albany Veneering Company are: C. W. Imman, president; W. A. McLenn, vice-president; E. V. Knight, secretary-treasurer and general manager. The finest type of work is turned out by this plant, and experienced, expert labor employed.

On June 6, 1908, A. W. Williamson, trustee, will offer for sale at public auction the plant of the Metal Bound Package Company, bankrupt, of Mound City, Ill., comprising about six acres of ground, mill and factory buildings, offices, etc. The equipment consists of a band sawmill, with steam feed, log trip, nigger, gang edger, two large Coe rotary veneer machines with clippers, drag saw, patent metal binding machinery, power and machine shop, together with a first-class box and patent trunk slat factory. The

plant is located on the Ohio river, the Illinois Central and Big Four railways; there is a good log harbor at that point and other advantages to the conduct of such an operation.

Removal of Main Office.

Owing to continued increase in business, the Ferd. Brenner Lumber Company, large wholesale at Norfolk, Va., has removed its main office from that city to rooms in the First National Bank building, Cincinnati. The company will maintain a branch office at Norfolk, and also continue its branches at Salisbury, N. C., and Decatur, Ala. In addition, it has lately opened a fourth at New Orleans.

The Ferd. Brenner Lumber Company is a large dealer in hardwoods, cypress, gum and mahogany, and in addition to its excellent connections in this country has agents in Dusseldorf and Hamburg, Paris and London, through whom it does a large export business.

New Incorporations.

J. T. Flournoy of Newark, N. J.; L. P. Thomas of Philadelphia, and C. E. Thomas of Wilmington, Del., have incorporated the American Timber & Lumber Company.

The Hollywood Lumber & Coal Company is a new concern at Wheeling, W. Va.

The Dempsey-Hammer Furniture Company of Detroit has filed articles of incorporation; capital, \$750,000.

The Dolphin Desk Company of Grand Rapids, Mich., capitalized at \$20,000, has been formed by M. H. Dolphin, M. D. Morris, P. Schertz and G. E. Ellis.

The William H. Barkhorn Company is a new timber concern at Newark, N. J.; capitalized at \$100,000.

The Beasmont Hardwood & Lumber Company of Beasmont, Tex., capitalized at \$75,000, has been organized by W. B. Puteh of Opelousas, La., and Charles McDonald of New Orleans.

A new Toronto house, capitalized at \$200,000, is the Vending Cabinet Company.

The Chicago Dimension Lumber Company, capitalized at \$10,000, has been incorporated at Chicago by Francis R. Dickinson and others.

The Wills-Rosser Lumber Company of Pittsburg, Pa., is a new concern in that city and is capitalized at \$25,000.

M. E. Travis of Walton, N. Y., and associates have organized the Walton Lumber Company at that point; capital, \$20,000.

J. W. Rogers, John B. Holt and James Duryea have formed the Alamo Sash & Door Company of San Antonio, Tex.

Love Bros. Lumber Company is a new concern at Mishawauka, Ind.; capitalized at \$35,000.

Levin, Kronberg & Co. of Brooklyn, N. Y., will manufacture moulding, trim, doors, etc., at No. 1601 Pitkin avenue; capital, \$50,000.

LOG GORGE IN GUYAN RIVER NEAR HUNTINGTON, W. VA.

LOOKING FROM THE C. & O. BRIDGE AT HUNTINGTON.

Late Nashville News.

Nashville lumbermen are admittedly disappointed with spring trade thus far, and do not hesitate to state that it has not come up to their expectations. The market for April was better than for March, but at that was not equal to an average month of the lumbermen, however, are not attempting to disguise the situation, and are about ready to resign themselves to the belief that no marked improvement will be noted until next fall.

Poplar continues to be a leader, and the dealers have had little trouble in preventing the prices in this wood from showing the decline that is noted in the case of some of the other hardwoods. Few of the big concerns are running up to normal and the buying is in small quantities, purchasers getting what they need and no more, frequently less. Inquiries are plentiful, but the absence of the usual stream of buyers in this market is not any longer the subject of comment. Most of the plants are able to get enough business to keep things going on reduced time, and as a matter of fact are not looking for any big business. Quartered oak is holding its own in a satisfactory manner, as are also hickory and chestnut. Ash is off a bit in quotations.

Nashville lumbermen are grieved over the death of the mother of one of the most popular and one of the most prominent of the lumber men of this place, Mrs. Mary Elizabeth Love, mother of John W. Love of Love, Boyd & Co. She died Thursday night at the home of her son-in-law, J. W. Boyd, in East Nashville, and was 72 years of age. Heart disease was the cause. Mrs. Love was a member of one of Tennessee's most prominent families, a beautiful Christian character, a dutiful wife and a fond mother. She is survived by her three sons, John W., Hambley and R. L. Love, and two former local lumbermen, and by three daughters, Mrs. Frank Swope of Carthage, Tenn., Mrs. Walter Pierce of Hendersonville, Tenn., and Mrs. J. W. Boyd of Nashville. Only one of the children were at any distance at the time of Mrs. Love's death, Hamilton being in a hospital in Baltimore, where he was being treated for rheumatism. He was summoned to Nashville, however, and was able to make the trip.

A damage suit for \$150,000 has been brought in the local circuit court by Lieberman, Loveman & O'Brien against the Nashville, Chattanooga & St. Louis railway, the Louisville and Nashville railroad and the Louisville and Nashville Terminal Company. The lumber company claims that sparks from a passing engine that belonged to one of the three defendant companies set fire to its big planing mill and to some lumber stocks in the summer of 1906. A great fire ensued in which several million feet of choice stacked lumber was consumed, and also a big planing mill. The rails of the three defendant companies run close by the yard of the lumber company.

Several lumbermen of this city will attend the Hoo-Hoo convention to be held at Chattanooga. A large class of candidates is to be initiated and Vicegerent H. C. Fowler of the Case-Fowler Lumber Company will preside over the exercises. A big banquet follows the exercises.

Dull times in the lumber business had not affected one branch of the lumber industry, and that is the cross tie feature. The railroads in this section are buying ties at a lively rate and dealers are also making large shipments to other points for railroads more remote to this section.

Adveles from Wartburg, Tenn., announce that lumber conditions look good in that immediate section. Practically all of the mills which had been shut down there have resumed operation and things look decidedly busy.

Some 110,000 feet of lumber belonging to Sadler, Crabtree & Co. of Jackson city, Ten-

nessee, and recently unloaded in Nashville for sale, has been attached by bill in chancery court filed by W. T. Hardison & Co. The lumber was attached to satisfy a freight bill of \$1,155.84, the complainant company running a tow boat line.

News from Saginaw Valley.

There is more activity in lumber production than there was. Four mills are in commission that only recently started, and are cutting out stock. The Gates mill was the last to start. It will cut about 6,500,000 feet.

The old Flood mill, originally the Drake mill at Bay City, burned last week. The loss was estimated at \$15,000. The mill has been idle over a year. It was built in 1802 and changed hands a number of times.

J. E. Swackhamer, who has been employed by the Richardson Lumber Company at Bay City the past year, where the company has erected a new mill, has been appointed superintendent of the new mill. The plant is putting out 55,000 feet daily.

C. A. Bigelow went to Petoskey this week to attend a meeting of the Hardwood Dealers' Association.

James Cooper says he does not think the lumber business will be active very soon. He is doubtful if there is any boom for a year or two and believes this year will be rather slow. He says the demand for lumber is not anything near what it should be, while conditions are anything but satisfactory.

The Kneeland-Bigelow plant is running day and night and the Detroit mill is being operated ten hours daily.

The Detroit and Mackinac is hauling a large quantity of logs into Alpena. One trainload of sixty cars went in there recently.

Alex. Michaelson is building a mill in Roscommon county which will be connected with the outside world by a branch of the Grand Rapids & Indiana running in from Cadillac. A town is scheduled in connection with the enterprise.

S. L. Eastman Flooring Company recently contracted for 6,000,000 feet of maple to be cut. The prices are approximately what the same stock sold at last year.

Some fine logs have been hauled from the North to the Bliss & Van Auker mill. The mill stock comes down from Osage and Cheboygan counties.

The Cook, Curtis & Miller hardwood sawmill at Grand Marais has put on a night shift and is being operated day and night.

It is figured that the present volume of business is 40 per cent less than last year.

Yvill Brothers have just started a logging camp six miles north of Vanderbilt.

The Haak Lumber Company, that quit operations some time ago and shut down its flooring mill at Haakwood and moved west, it is said, will again locate at Haakwood. There is considerable timber available.

The Salling-Hanson Company of Grayling is reported to have about closed a deal for a chunk of timber from the Ward estate, adjacent to some of its own timber. It was expected that a large quantity of the Ward lands were to be put on the market, but this is denied.

Some manufacturers state there is little if any life in the hardwood industry at the moment and others see a little more favorable outlook. On the river there is considerable doing, with all the sawmills and flooring mills in operation. Log run quotations for maple are \$17 to \$19; beech is held at \$16 and \$17 and elm between \$20 and \$24. There is some inquiry for birch, log run bringing \$18 and \$20. Lumber is limited in supplies, but the trade will take all that is offered at \$23 and \$25. Red oak is worth \$30 and \$35. Stocks are not exceedingly large.

Miscellaneous Notes.

Bennett & Sons' lumber mill at Friesland, Mich., has commenced operations after a recent shutdown. They have nearly 2,000,000 feet of logs in the river at that point.

The plant of the Cunningham & Kitchin Lumber Company at Tinsman, Ark., was completely destroyed by fire April 24. J. E. Ritchie, a prominent farmer and millman, was also a loser in that a new sawmill outfit which he had recently purchased was stored in one of the company's sheds.

The work of planting trees in western Canada is being taken up vigorously by the Southern Pacific this spring, and many thousand young saplings will be set out along its right of way in Alberta and Saskatchewan.

The Blackstone Lumber Company has been incorporated at Marshfield, Vt., with a capital of \$20,000.

The hardwood mill of the Sawyer & Austin Lumber Company at Pine Bluff, Ark., one of the largest in the Southwest, resumed operations this week after a cessation of four months. The plant employs between 400 and 500 persons. Other hardwood plants are resuming in the South and Southwest, although the demand for hardwood lumber is not nearly up to the average for this time of year.

The Consolidated Lumber Company has been organized at Parkersburg, W. Va., to deal in timber and operate sawmills in the Green river district of Kentucky. It is capitalized at \$200,000, and the incorporators are L. Dudley, J. M. Doré, G. W. Carney, G. C. Enoch, F. P. Joats, all of Parkersburg.

The Monongahela Tie & Lumber Company has been organized at Brownsville, Pa., and is capitalized at \$50,000. E. D. Grubbe is president. The company owns several hundred acres of valuable timber land in West Virginia and its plant is now ready for operation.

The Stoddard Lumber Company of Madison, Wis., has increased its capital stock from \$120,000 to \$400,000.

The Crocker Chair Company of Sheboygan, Wis., has purchased from Y. F. Sanborn & Co. of Ashland, Wis., 6,103 acres of hardwood timber land in Houghton and Baraga counties, Michigan. The timber will be cut in the mills at Sidnaw and shipped to Sheboygan to be remanufactured. The Crocker Chair Company is on the lookout for still further purchases of northern timber land.

Frank G. Carpenter, a correspondent of the Chicago Tribune, writes from Kampala, Uganda, Africa, that an Englishman of his acquaintance has a large concession of woodland running along the Nile, just below where that great river flows out of Lake Victoria. He says the tract embraces about 150 square miles, and is so situated that the timber could be thrown in the river and floated down to Khartoum where it not far from Cairo and the Nile. As it is, the chief market will probably be British East Africa and other countries reached by the Uganda railway. The forests on the land are magnificent and the correspondent alleges that many mahogany trees are 100 feet high and four or five feet in diameter, perfectly straight, and running up to a great distance without branching. One of the other hardwoods resembles oak, and some varieties of oak almost turn the blade of an ax. The owner expects to do a great deal with the wood, because it resists the attacks of white ants and is therefore valuable for railway ties. He now has orders for 300,000 ties, with three varieties of wood from which to supply them. In addition to the timber trees, the concession contains nearly 2,000 almost pure birch. The idea is to cut the underbrush and map out the forest so that each part can be easily cared for. About 600 men are already at work, and double that number will be employed very shortly. Villages will be built on the trunk and the laborers trained for the work at hand.

The Sawyer-Goodman Company of Marinette, Wis., is busy saving on railroad ties for the

Chicago, Milwaukee & St. Paul. The ties are located on cars direct for the new Pacific coast extension of that line.

The Boone Lumber Company has filed articles of incorporation. The principal office will be at Ford, Ky. The company is capitalized at \$20,000, and the incorporators are E. S. Shippen and H. J. Gates of Louisville, W. F. Fielder of Iron Mountain, Ky., and George J. Ballard of Winchester.

The Galax Furniture & Lumber Company of Radford, Va., which was burned last fall, has been rebuilt on a larger scale, and is now running with 200 employees on the payroll.

Fire practically destroyed the plant of the John A. Bunn Chair Company of St. Paul on April 30. The loss is about \$50,000.

The Hardwood Manufacturing Company of Minneapolis, Minn., will be obliged to pay \$2,500 to Mahel Abell, who lost three fingers as a result of an accident which occurred recently in the company's plant.

A new incorporation at Columbus, O., is the Scranton Road Lumber Company, capitalized at \$25,000.

The plant and business of the Cabinetmakers' Company of Grand Rapids, Mich., manufacturers of library and dining room furniture, has been sold to W. C. Crobbisher of Sturgis, Mich. The factory will continue under the present manager.

The Richmond Cedar Works of Richmond, Va., has started up on full time and will probably so continue hereafter.

The S. Knechtel Wood Turning Company, Ltd., of Southampton, Ont., has been incorporated with a capital of \$40,000.

H. C. Seymour of Philadelphia and D. N. Farrington of New York have gone to San Domingo in the interests of manufacturing concerns of both cities to inspect a tract of 100,000 acres of land, which is alleged to be covered with fine

virgin growth of mahogany, cedar and satinwood.

The state of Tamaulipas, Mexico, has an abundant supply of mesquite wood, which is now being used to considerable extent for the manufacture of furniture. While Mexico imposes an export duty on unmanufactured wood, there is no tax on that which can be classed as manufactured, states Consul Clarence A. Miller of Matamoros, Mexico.

Scam has been turned on for the first time through the 35,000 feet, or over six miles, of pipe in the Diamond Match Company's veneering plant at Chico, Cal., and the test was found so satisfactory that next week logs will be shipped to Chico for testing the machinery, and it is probable that orange slats and matchwood will be the first products.

Rev. A. A. Turner has patented a preparation designed to take the place of veneer in many instances, and a company capitalized at \$25,000 has been organized at Elkhart, Ind., to promote the invention. Several of the ingredients of cement are contained in it, it is said, and the material can be stained to any wood finish. It is said to have great possibilities as a building material.

The Yawkey-Bissell Lumber Company is a new company at Wausau, Wis., with a capital stock of \$68,000.

R. S. Monroe, a timber broker of Fairmont, W. Va., has sold the property of the Birch River Boom & Lumber Company at Glendon, Braxton county, to George H. Austin and others, who will form a company to be known as the Glendon Boom & Lumber Company.

The Nuevo Mahogany Company of Hartford, Conn., has filed articles of incorporation. It is capitalized at \$50,000 and proposes to acquire timberlands in Mexico and manufacture lumber. The incorporators are A. I. Jacobs, C. F. Wood and L. E. Stoner, all of Hartford.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

Walter Winchester, a prominent Grand Rapids Mich., lumberman, was in Chicago the past week. Mr. Winchester is interested in extensive lumber operations in Wisconsin.

Fred W. Black, president of the Fred W. Black Lumber Company, is paying a visit to his veneer mill at Nashville.

Walter L. DeWitt, formerly with the Kelley Lumber and Shingle Company of Traverse City, Mich., has taken the position of sales manager with the Estabrook-Skeele Lumber Company of this city.

W. E. Barrett of W. E. Barrett & Co. has returned from a recent trip to British Columbia.

A. R. Owen of the John S. Owen Lumber Company of Owen, Wis., was a visitor to this market early in the week.

C. F. Liebke of the Hardwood Mill and Lumber Company, St. Louis, was in town a few days ago in the interests of business.

The HARDWOOD RECORD regrets to learn of the recent death of Mrs. George F. Williams, wife of the head of Williams Brothers Company of Cadillac and Manton, Mich., which occurred recently at Manton.

John C. Spjry, the well-known timber owner and dealer, has removed his offices from the Chamber of Commerce to handsome quarters in the Corn Exchange Bank building, corner of La Salle and Adams streets.

W. W. Dings, secretary of the Garetson-Greaves Lumber Company, St. Louis, was a well-known caller on the Chicago trade last week.

Edward Germain was in the city last week en route to St. Louis, where he held a conference with George Boyd, his associate in large southern yellow pine enterprises.

Joseph Campbell, has left for an extended trip to the Pacific Coast, where both have considerable timber interests.

L. P. Groffman of the St. Louis Basket & Box Company, St. Louis, Mo., was a caller at the Kroon office on May 1.

Max L. Pease of the Galloway-Pease Company, Johnson City, Tenn., was calling on friends in the Chicago market May 5 and 6.

E. B. Nettleton, formerly of Marysville, Fla., but now engaged in the manufacture of refrigerators at Kansas City, Mo., was in the city May 6.

The R. E. Wood Lumber Company of Baltimore started up its new band sawmill at its plant near the mouth of Eagle Creek, Tennessee, at Bushnell, on April 24. It is one of the finest popular oak and chestnut lumber properties in the United States and will add new laurels to the fine quality of lumber product turned out by the Wood concerns. The company is sending out as a souvenir of its first day's saving an envelope of popular sawdust. If the lumber comes out as fine as the dust—as it undoubtedly will—it will surely be a "crackerjack" lot of material.

H. H. Mader, who for a long time has been a general sales representative of W. B. Mershon & Co. of Saginaw, Mich., has been appointed Pacific coast agent for the Mershon resins, and in future will be located at 617 Lumber Exchange, Seattle.

The wholesale lumber house of Soble Brothers, formerly located in the Land Title building, Philadelphia, has moved its headquarters to No. 1 Madison avenue, New York city. The office will be in charge of John J. Soble, who will be assisted by Charles Soble. Harry I. Soble of this firm has removed to Honaker, Va., where he will maintain a branch office and take charge of the interests of the firm in that vicinity. Soble Brothers have made a distinct success of the jobbing lumber business since they entered the trade in Philadelphia a few years ago, and their removal to New York will very likely contribute to their further advantage.

The co-partnership heretofore existing between Frank R. Crane and Fred D. Smith, under the firm name of F. R. Crane & Co., was dissolved by mutual consent on April 30. Mr. Smith has purchased Mr. Crane's interests, assuming all assets and liabilities, and will continue the business under the name of Fred D. Smith. Since the organization of the original concern in 1880 Mr. Smith has had the entire management of the business, and therefore the same policy of good service and fair treatment may be expected in the future.

The HARDWOOD RECORD has received a neat case containing six handsome specimens of bay poplar from the Southern Cypress Manufacturers' Association of New Orleans. They were furnished by Berry Brothers, Ltd., of Detroit, Mich., in Florida green, natural, silver gray, dark mahogany and Filipino water stain, and Luxeruby wood finish, rubbed to an egg-shell gloss, and are fine examples of the possibilities of bay poplar.

A. E. Gilbert of the Red Cliff Lumber Company, Duluth, Minn., was registered at the Annex May 6.

J. W. Dickson of the J. W. Dickson Lumber Company, Memphis, was a Chicago visitor April 30. Mr. Dickson had been making a tour of a number of the large markets and found business rather dull. Believing that with prevailing conditions curtailment of production is the wise course, he has closed down his Memphis mill until the woods roll by.

J. L. Scheve of the W. B. Reeves Lumber Company, Helena, Ark., has been visiting the Chicago trade during the last few days. Mr. Scheve is one of the best known lumber salesmen in the country and has a large clientele in the Chicago market.

Theodore Fathauer of the Theodore Fathauer Company left early in the week for a visit to northern milling plants.

D. F. Clark of Osborne & Clark, Minneapolis, was a Chicago visitor of a few days ago. J. H. P. Smith of the newly organized Hard-

Both W. B. and E. C. Mershon of Saginaw were Chicago visitors a few days ago. E. C. Mershon is just back from an extended Pacific coast trip, where he booked a large number of orders for both sawmill and planing mill resaws. He says there is no evidence of a slowing down of trade in the Mershon plant. They have not shortened their time nor reduced output in the least since the "panic," and now have orders enough in advance to keep them running for a good while to come.

W. W. Mitchell of Cadillac, Mich., accompanied by his wife, spent several days in Chicago last week. Mr. Mitchell and his family have spent the past three months on the Pacific Coast and were on route home. He expresses himself as having had a very delightful winter.

C. H. Holden, representing the Pardee & Curtin Lumber Company, the big West Virginia hardwood manufacturing house, with office headquarters at Clarksburg, was in Chicago a few days last week and secured some very handsome orders.

J. C. West, secretary and general manager of the Middle Lumber Company, Packersburg, W. Va., visited this market May 2. Mr. West enjoys a very good trade in this territory.

According to the report of the Bureau of Statistics of the Department of Commerce and Labor lumber exports to Germany in the nine months ending with March, 1908, show a marked decline as compared with the same period of the previous year. The export trade with Germany for the nine months ending with March amounted to \$1,476,644, while the corresponding exports of the latter period total only \$1,290,840.

A. F. Anderson of Cadillac, Mich., accompanied by his partner in the Wexford Lumber Company,

wood Lumber Company of Ashland, Ky., called on Chicago friends last week.

E. J. Young of the Brittingham & Young Company, Madison, Wis., was a recent visitor to this market.

G. J. Landeck of the Landeck Lumber Company, Milwaukee, was in Chicago a few days ago, arranging details pertaining to the entertainment of the National Hardwood Lumber Association at Milwaukee in June.

A new Chicago organization is the Illinois Embossed Molding Company, capitalized at \$5,000, which will engage in a general wood-working business. The incorporators are Otto Ledvinske, Edward L. Fransted and Edward Toieck.

We are advised that the North Branch Flooring Company of this city, whose plant was completely destroyed by fire last fall, are again in full running order, with their factory better equipped to fill orders than ever before, having installed newer and more modern machinery, which enables them to almost double their former capacity. They therefore continue to be the usual clean, perfectly kiln-dried stock, well manufactured and up to grade, which they have heretofore turned out. They will confine their output solely to oak and maple flooring in future.

The Foster Minihnick Lumber Company, located in room 918 Fisher Building, is another new Chicago organization. They will engage in the manufacture and sale of timber and lumber products, and are capitalized at \$10,000. The incorporators are William Foster, William J. Minihnick and Frank J. Ruth.

Boston.

Gardiner I. Jones of the Jones Hardwood Company, Boston, returned late in April from a trip to Pennsylvania and Virginia. Mr. Jones reports that his business for last month shows a good gain over the same month a year ago.

H. Fugate of the H. Fugate Company, Richards, Va., was in Boston last week.

Samuel Sizer of Robert R. Sizer & Co., Inc., New York, visited the trade in this vicinity recently.

R. S. Usher of the Ronooke Railroad and Lumber Company, Norfolk, Va., was a recent visitor in Boston.

A. W. Hayford, one of Boston's prominent wholesalers, has moved into new quarters in the Atlantic Bank Building, Boston.

Mr. Henderson, representing the Santee River Cypress Lumber Company, Ferguson, S. C., made his first trip east for this house about two weeks ago.

W. N. Ames, manager of the flooring department of the M. R. Farrin Lumber Company, Cincinnati, O., has been calling on the eastern trade.

The Palmer & Parker Company, hardwood dealers and manufacturers of veneers, Boston, has been busy stock taking. This company has a good stock of veneers and is well prepared to take care of trade when it starts up.

Pope & Cottle, lumber dealers, Chelsea, Mass., recently added a sash, door and blind department to their already extensive business in that city.

New York.

The Wolfe Lumber Company, retailers and mill workers of 657 South Tenth street, Newark, N. J., called a meeting of its creditors on April 22. A settlement covering four, eight and twelve months was made and the same was taken under consideration by the creditors.

B. F. Van Dusen, one of the well-known salesmen of the Metropolitan district, has severed his connection with the wholesale house of Frederick W. Cole, 29 Broadway, to assume the position of local sales representative for the Skillings, Whitney & Barnes Lumber Company, branch office at 1 Madison avenue, and headquarters at Boston, Mass., and Ogdensburg, N. Y. Through

the recent death of H. L. Tibbets, treasurer of the company and manager of the Boston office, a number of changes in the general management of the Skillings, Whitney & Barnes company were made, which included the election of J. D. McLaurin, manager of the New York office, as treasurer, which made necessary a change in the local sales office to permit Mr. McLaurin to devote proper attention to his new duties.

O. R. Stoutenour, who is head of the new sales office of the Goshen Sash & Door Company, Goshen, Ind., located at 16 Court street, Brooklyn, is making an active campaign for eastern business. The Goshen company has been manufacturing its products for nearly forty years and its success is due to the quality of its goods and the fact that it ships out orders within four to seven days.

I. T. Williams & Sons, the prominent hardwood house of Twenty-fifth street and Eleventh avenue, announced the retirement of Lloyd Williams from that firm effective May 1. Mr. Williams' retirement is due to ill health and the consequent demand of his physician that he retire to quiet and restful life in the country. Thomas Williams, senior head of the firm, returned last week from a six months' European pleasure tour.

James C. Place, who recently left the hardwood house of George M. Grant & Co. at 74 Cortland street, to take up the local representation of Schofield Brothers, the prominent Philadelphia hardwood and general wholesale house, has just opened new office quarters at 74 Cortland street as a convenience for his friends and customers in the trade.

E. H. Lewis of the E. H. Lewis Lumber Company, Seattle, Wash., local office 18 Broadway, is on a visit to the city for several weeks, going over matters at this end of the line.

Soble Brothers, who for several years past have been prominent in the Philadelphia wholesale hardwood trade, with mill at Honaker, Va., have removed their headquarters from that city to Madison avenue, where J. J. Soble will conduct the general selling end of the business. H. J. Soble will make his headquarters at the Honaker mill, superintending shipments, etc.

W. F. Hopping, for many years prominent in the wholesale and retail trade of the Metropolitan district, has succeeded the late Clifford A. Bockoven as secretary and treasurer of the Bockoven Brothers Company, prominent retailers of Newark, N. J.

Henry L. Doolittle, son of H. N. Doolittle, the prominent manufacturer of Newark, N. J., was united in marriage at the Hotel St. Andrew, Manhattan, on April 23, to Miss Mary Blodgett, a charming young lady of Cranford, N. J. Mr. and Mrs. Doolittle after an extended honeymoon will reside in Newark, where Mr. Doolittle is associated with the conduct of public works has announced the opening of the Erie and other state canals on May 5, which is five days later than last year. Considerable activity is already being manifested in the matter of lumber shipments via that channel.

The Transfer Lumber & Shingle Company of North Tonawanda, N. Y., has opened a local office at 1 Madison avenue, in charge of R. D. Larkin. Mr. Larkin will solicit business in New Jersey and throughout New England.

L. J. Hatties, who for some time past has been buying for White, Frost & White, has taken up his quarters at the local office, 1 Madison avenue, to assist Mr. Frost in the conduct of their local office.

W. E. Ellis & Co., wholesale and export dealers of 29 Broadway, have closed a deal with the Bryan Lumber Company of Bristol, Tenn., for the entire cut of its Cransberry mill, consisting of one million feet of choice hardwoods. There is already 1,500,000 feet, last year's cut, ready for immediate shipment. W. E. Ellis & Co. have also arranged with the Bryan Lumber Company to act as sole agents for their other six mills, there being about 5,000,000 feet of dry lumber ready for shipment, including ash, oak, both

plain and quartered; poplar, basswood and other hardwoods in all thicknesses.

W. J. Zaitsev, the general sales manager of the Kaul & Hall Lumber Company of St. Marys, Pa., was a visitor in town during the fortnight renewing acquaintances in the trade.

Collins, Lavery & Co., the prominent Jersey City house, with local office at 39 Cortland street, removed the latter on May 1 to the fine new Hudson Terminal building, 32 Cortland street, where they have secured larger quarters to take care of their growing business.

George M. Grant & Co., the well-known hardwood house, which recently opened fine new quarters in the Hudson Terminal building, are delighted with their new location in view of the indications that these twin terminals will be among the most popular office quarters with the opening of the new Hudson river tubes, which are now completed. The convenience thereby attained will be a great advantage to the conduct of business, and in view of the fact that they have extensive water interests in Jersey City their location in that building is of special advantage.

The many friends of F. E. Longwell, the popular hardwood buyer of the National Casket Company, headquarters Pittsburg, Pa., are extending sympathy to him in the loss of his wife, which occurred last week.

A bankruptcy petition was filed on April 20 against Herts Bros., large manufacturers of architectural woodwork, 28 West Thirty-eight street. It is desired that the business should go on without interruption by the creditors to carry out large contracts in hand. The liabilities are estimated at \$200,000, of which \$50,000 is for merchandise and \$150,000 to banks and other creditors. The failure is attributed to inability to raise money to carry on extensive contracts. This concern has furnished the interior woodwork for some of the biggest hotels and other improved properties in recent years.

Schedules in bankruptcy of the American Palace Car Company of 27 William street show liabilities of \$40,575 and assets consisting of office furniture, \$1,843; claims for \$11,288 against two agents for the sale of stock, patterns and equity in three patent cars held as security, amount unknown. The cars are estimated at \$20,000 each.

The New York office of the General Electric Company has been moved from the Edison building, 44 Broad street, to the Cortland building, 30 Church street, one block west of Broadway and three blocks east of the North river. Approximately 31,000 square feet, or the entire seventeenth floor, will be occupied by the General Electric Company. The building is admirably situated for office purposes, being in close proximity to the principal railroads and the river tunnels. There will also be a connection with the present subway under Broadway.

Considerable surprise was occasioned among the trade on May 2 when a petition in bankruptcy was filed against the Tyler Lumber Company, with offices at 111 Broadway, and extensive express operations at Tyler, Fla., by three stockholder-creditors, as follows: W. H. Lynn, \$14,375; Alice Truax, as administratrix of Charles H. Truax, \$14,375; and Margaret M. Helly, \$2,250—all on notes for money loaned to the company. The company is a New York corporation, organized in 1904 with a capital of \$400,000, and succeeded to the business of the H. M. Tyler Lumber Company of North Tonawanda, N. Y., and Tyler, Fla. It had no rating in Bradstreet's. W. H. Lynn was president up to a few months ago, when he was succeeded by E. J. Zaitsev. A. S. Swifert was treasurer and G. H. Porter was secretary. It is said that Mr. Lynn and his friends put about \$250,000 into the company. In addition to the capital stock there are bonds outstanding for \$100,000. The Jan. 1 statement of the company showed assets of \$556,208 and liabilities of \$13,709 in accounts payable. In the assets the mill plant and property was placed at \$321,960, with cash

on hand of only 8952. The company owns 30,000 acres of timber land in Florida, with a fine plant at Lee, which cost more than \$150,000, and also a turpentine plant which cost \$25,000, also ten miles of standard gauge railroad with locomotive and logging equipment. A few months back Van W. Tyler, who has been closely identified with the company, organized the Lumber Mills Company in this city to conduct a wholesale business, which corporation is not involved in the difficulties.

Philadelphia.

The first monthly meeting of the Lumbermen's Exchange under its newly elected officers is called for April 7. For the coming year the office and entertainment committee will be composed of George A. Howes, chairman; Edwin B. Malone, Howard Ketcham, George Rodgman and Flsher Dalrymple. The recent visitors to the exchange were W. W. Heuritz, vice president and general manager of the Welch Lumber Company, Welch, W. Va., and George P. Morgan of R. M. Smith & Co., Parkersburg, W. Va.

The J. S. Kent Company reports that though business continues "spotty" they have little fault to find with total sales. It regards the outlook as very fair. The newly elected officers of this company for the coming year are: President, A. W. Kent; vice president, I. C. Kent; secretary and treasurer, J. E. Froth.

The Pennsylvania Lumbermen's Mutual Fire Insurance Company is prospering. Its fire losses so far this year have been below the average and the largest volume of business that has ever been recorded in a corresponding period of the company's history has been written in the first four months. The company has applied for admission to Michigan, and is now about to take admission to Massachusetts. This company is paying a 35 per cent dividend, and giving to its policy holders the very highest class of indemnity.

Wistar, Underhill & Co. send their men to scour the consuming districts, and where goods are likely to be desired a representative of this firm is unfailingly on the spot. T. N. Nixon is making an extended business trip through northern Michigan and Canada; H. E. Bates is gathering in some good orders in western New York. James W. Anderson, another representative, has been ill, but his friends will be glad to know he is convalescing. This firm is placing on the market at this time a lot of 4x4 and 8x4 well seasoned red and white oak, reputed to be of excellent quality.

Samuel H. Shearer & Son, placidly meeting conditions as they arise, testify to a fair share of trading. William P. Shearer recently returned from a selling trip through eastern Pennsylvania, and makes no complaint over results. J. Gibson McIvaine & Co. admit a lack of snap in trading, but go diligently after business and, considering conditions, are not ashamed of their present showing.

Emil Guenther has just returned from the South, where he claims to have gone to lead the "simple life." He did considerable sharp looking about in the lumber fields, acquainting himself with stock conditions and tapping the stump man as to outlook for business. He is much pleased with information obtained, and reports that though the majority of manufacturers are reducing their output, they are optimistically inclined, and only waiting, evidently, for the political quietus to pass when they expect normal trading.

Robert C. Lippincott, complacent over conditions, reports that he is keeping up fairly well with promising outlook.

The Righter-Parry Lumber Company has no cause to complain of trading, as April has proved the third best month it has ever had in point of orders.

R. D. Wheeler & Co. state that though trading is a little slow and lacks usual vim there is always something doing. As buyers are inclined to conservatism, the advice is to pursue

diligently if you want business. They think, on the whole, there is no reason to complain, as undoubtedly after the troublous period preceding an election shall have passed matters will adjust themselves satisfactorily.

L. Power & Co. report a better showing of late and so anticipate a fair summer trading. They are fitting up the plant of the Lingo Box Company, Wilmington, N. C., West Lumber Company, Fayetteville, N. C., and are installing their machinery in the Ashburn, Child & King plant at Pocomoke City, Md.

Scale Bros. recently given up their Philadelphia office and opened offices at 1 Madison avenue, New York City.

Frank F. Rarabe, who has been conducting a retail lumber business for a number of years, called a meeting of his creditors for April 27, when he tendered a settlement, 100 cents on the dollar, secured by his notes for six, twelve, eighteen and twenty-four months. The statement of his affairs evidently proved satisfactory, for it is understood that the creditors are perfectly willing to sign an agreement for extension, with the understanding that new purchases are to be paid first and as per terms.

Among the recent visitors to the Philadelphia trade were George M. Stevens of the Stevens-Eaton Company, New York City; W. W. Miller of Northern Lumber Company, Birch, Mich.; W. S. Parker of Cherry Brothers, Findlay, O.; Harry Armstrong of Cherry River Boom & Lumber Company, Scranton, Pa.; A. C. Schuyler of Henderson Lumber Company, Pittsburg, Pa.; Waldron W. Williams of L. T. Williams & Son, Waldron W. Williams of L. T. Williams & Sons, York.

Robert Reid & Co., cabinet makers, this city, were recently adjudged involuntary bankrupts. The petitioning creditors and amounts are: Walker & Co., Philadelphia, \$207.04; Lawrence McFadden Company, \$60.04, and J. Gibson McIvaine & Co., \$4,917.

The Bangor Woodworking Company, Bangor, Pa., was chartered under Pennsylvania laws on April 24; capitalization, \$20,000.

The Grandin Lumber Company expects to finish its lumbering at President, Venango county, Pennsylvania, in July. The company will have been occupied in this locality for five years in September. It has employed many men and has been the main concern of the place.

Lieut. H. C. Seymour of this city and D. N. Carrington of New York have gone to San Domingo in the interests of manufacturing concerns of both cities to inspect a tract of 100,000 acres of land which is covered by a virgin growth of mahogany, walnut, cedar and satinwood forests.

The Philadelphia Furniture Manufacturers' and Bedding Association is pushing its project for an exposition to be held here in July. A committee has been appointed to interview firms in this city on the matter, and the result will be made known at a special meeting to be called soon.

The J. G. Brill Company, extensive car builders of this city and elsewhere, has just acquired the plant of the Danville Car Company at Danville, Ill. Negotiations were completed some time ago and the formal transfer of the property was accomplished recently. The Brill company also owns the American Car Company of St. Louis, G. C. Kuhlman Car Company of Cleveland, John Stephenson Company of Elizabeth, N. J., and the Wasco Manufacturing Company at Springfield, Mass.

Considerable pine and oak timber was destroyed recently by forest fires about five miles below Mays Landing, N. J.

Harold K. Beecher, engaged in the lumber business at Pottsville, Pa., was married on May 2 to Miss Ethel Bullock, daughter of E. L. Bullock, the Beaver Creek coal operator.

Baltimore.

Though former United States Senator Johnson N. Camden, who died at the Belvidere Hotel here

last month, was usually classed as a lumberman, he had done perhaps as much as any other one person for the development of the timber industry in West Virginia. His interests were of a far seeing character, and while he did not apply himself actively to the actual operation of sawmills, he gave encouragement to the erection of many such plants and through the medium of the railroads constructed by him made accessible to the markets of the country vast tracts of land. Senator Camden had stopped in Baltimore on the way to his home at Parkersburg, W. Va., from Miami, Fla., where he had spent the winter, to consult Johns Hopkins Hospital physicians as to his health, which had been poor for some time past, when he suffered a fatal attack of kidney trouble. He was seriously ill only a few days.

Another death which has caused many expressions of regret is that of John Edward Libbey of the Washington lumber firm of J. E. Libbey & Son, who died April 27 of heart failure, superinduced by the grippe, from which he suffered last winter. Mr. Libbey was held in the highest esteem and had almost as many friends in Baltimore as in the National capital.

The well-known firm of Carter, Hughes & Co., which for some time had an office on Union Dock, and about the first of the year removed to Troutdale, Va., where the Iron Mountain Lumber Company, the manufacturing end of the firm, is located, has been dissolved, David T. Carter, the senior member, retiring and Thomas Hughes assuming all liabilities, as well as assets. Mr. Hughes, it is stated, will give his personal attention to the operation of the three sawmills at Troutdale. Hitherto Mr. Carter had looked after this work, having spent the better part of a year there. At the close of the year the firm decided to discontinue the yard business, limiting itself to a car trade, and this, it was decided, could be attended to just as well from Troutdale as from Baltimore; hence the removal. Mr. Carter has returned to this city. Richard W. Price of Price & Heald spent the last two weeks in Bristol, Tenn., and vicinity calling on mill men and otherwise informing himself as to trade conditions. He found business far from active in the localities visited.

Among the visiting hardwood men in Baltimore within the past ten days was Mr. Snodgrass of Johnson City, Tenn., who came here to place stocks. He called on various firms and reported that he had found business decidedly quiet wherever he went.

George F. Craig, a well-known lumberman of Philadelphia, and vice-president of the National Wholesale Lumber Dealers' Association, was a recent visitor here.

The managing committee of the Lumber Exchange held its monthly meeting May 4. President E. P. Gill occupied the chair, but transacted only routine business.

Secretary E. M. Terry of the National Lumber Exporters' Association, is in communication with the London Timber Trade Federation relative to complaints about shortages in measurement. The committee has become so frequent during the past year that the association felt impelled to take action, and the secretary was directed to make suitable representations. Mr. Terry in his letter suggests that the federation take joint action with the merchants and dock companies to determine who is responsible for the shortages. Mr. Terry is also in receipt of letters commending the action in respect to shipping on consignment. The writers of the letters say they realize the evils of the practice and that they are prepared to aid in suppressing methods which are highly injurious to the trade and which especially at the present time, when the Liverpool market is demoralized, do serious harm. One of the letters comes from Antwerp.

E. E. Tazner of E. E. Tazner & Co. of Memphis, Tenn., was here last week looking after some business matters.

R. P. Baer of R. P. Baer & Co., Keyser build-

ing, is back from a trip of several weeks in the Asheville (N. C.) territory. He covered a great deal of territory and came in direct contact with a number of millmen. Everywhere he found business quiet.

J. Roush, vice president and general manager of the Swathmore Lumber Company, which is conducting operations five miles from Hendricks and twenty-five miles from Elkins, W. Va., on the Dry Fork railroad, has gone up to the mill for a week or ten days to supervise operations. The company owns 4,000 acres of timber.

Pittsburg.

The Goodwin Lumber Company, which recently started a Pittsburg office in the Farmers' Bank building, is getting shaped up well for its hardwood activities and from its big mills at Elbe Jay, W. Va., is shipping a nice lot of hardwood. Few firms are so well prepared to take care of the general hardwood trade as the Goodwin, and it is certain to work up a good business here in the near future.

A. E. Murphy, who was a partner of A. J. Diebold's in forming the East Lumber Company eight years ago, has withdrawn from that concern and is now selling lumber for himself at 605 Commonwealth building. Mr. Murphy is a thoroughly experienced lumber wholesaler and has a list of connections which are bound to make him a prominent factor in the Pittsburg district.

W. E. Pownall, president of the Colonial Lumber Company, reports a better call for timber and in general a better spirit in the lumber market. Recently the Colonial has made some nice sales of cherry to yards and furniture concerns in Cincinnati.

Fred R. and E. V. Babcock of the Babcock Lumber Company, R. H. Erving of the Flint, Erving & Stoner Lumber Company, and W. J. Craig, the Whitmer manager in Pittsburg, are attending the convention of spruce dealers in Philadelphia this week.

The West Virginia Lumber Company is running its two mills, in northern Pennsylvania steadily with a total output of about 80,000 feet per day. W. W. Dickey, president of this company, announces a better trade with the country yards and believes that in hardwood a noticeable improvement will be shown from this date forward.

L. J. Satler, president of the Satler Lumber Company, has been spending a few days in Mount Clemens, Mich., taking baths for his rheumatism. The Satler operates at Blackstone, Va., and is progressing well, and his box shoop business is taking much of its attention.

The Railroad & Car Material Company was lately owned by C. W. Cantrell, formerly manager of the Herman H. Hettler Lumber Company, and J. W. Seull, who was connected with the Pressed Steel Car Company, and reports a surprisingly good inquiry for timbers. Its first month of business was very encouraging to the company, and in addition to getting well grounded in lumber connections it has taken on several important agencies for railroad and car machinery.

William R. Cornelius has established a good hardwood connection in Virginia and may now be expected to get into the hardwood business with both feet. He is well satisfied with the slight upward tendency that he notes in his correspondence and believes that after the presidential nominations times will be better in the lumber business.

H. V. Carl of the Curll Lumber Company is mourning the loss of his aged mother, whose death occurred at Clarion, Pa., a few days ago. He has been looking up some good timber properties in West Virginia recently.

The Westmoreland Coal Company of Irwin, Pa., has started to plant 50,000 black locust seedlings at Export, Pa. The trees are planted in rows of feet apart and are intended for mine roads for the company's future use. The same company planted 50,000 catalpa trees last year.

The Flint, Irving & Stoner Lumber Company reports excellent shipments in April, considering the general trend of things. It is running its plant at Dunlevy, W. Va., eleven hours a day and has been getting out a large amount of spruce recently. J. B. Flint says that business is mighty hard to get, but persistent plugging will bring considerable trade.

J. N. Woollett, general manager of the American Lumber & Manufacturing Company, is in Chicago this week looking after western orders. The trade of the American in hardwoods this spring has been its chief hope producer and especially its southwestern business has been satisfactory.

The Wilson Bros. Lumber Company is getting a fair amount of hardwood business, according to J. F. Baisley, and finds that the small manufacturers are buying a little more freely than last month. The yards are taking just as little stock as will actually meet their immediate demands.

The Furnace Run Sawmill & Lumber Company has all its salesmen out and is doing its best to keep things lively in its new quarters in the Curry building. Popular orders have been plentiful of late and the company has also taken some nice spruce business. President Bell reports price conditions about the same as April 1.

Philip C. Clarke, hardwood manager for Pemis & Voshburgh, has been touring New York and doing the eastern trade in general. He reports some good business to be had and finds that competition is great.

The J. M. Hastings Lumber Company has sold every bit of its hickory on a tract of 1,000 acres at Jacksborough, W. Va., and will proceed at once to cut this and other minor hardwoods on the tract. The company cut off most of the oak during the past two years and the hickory it has been operating there. Mr. Hastings was in Nova Scotia ten days or more looking after the affairs of the Davidson Lumber Company, of which he is president.

R. O. McCall, who formerly had charge of the mill work department of the H. Murphy Lumber Company, and Albert J. Bartlett have formed the McCall Lumber Company, and will do a general wholesale business from Penn and Shady avenues, East End. Both men are well known to the Pittsburg trade and have an intimate knowledge of the hardwood lumber business.

H. E. Ast, sales manager of the J. R. Drozey Lumber Company of Watoga, W. Va., has been calling on Pittsburg firms for ten days or more looking up orders for his company. The Drozey Lumber Company has built up a big trade not only with the yards but the wholesalers here, and last year shipped a large stock to this city.

The Webster & Keasey Lumber Company is still running its mill in Indiana county, and will shortly start to cut hardwoods. It is giving much attention to oak and chestnut, as the inquiry from manufacturers for this stock is more urgent than the last few weeks.

Joseph Leuchan of the Linehan Lumber Company made quite an extensive trip through the East recently and brought back some good business. In maple and oak the Linehans have been having a nice trade all spring.

The Acorn Lumber Company has secured a Pennsylvania charter, its capital being \$5,000. H. F. Dombhoff formed the company nearly a year ago, and he with H. A. Dombhoff and K. L. Grundel compose the present directorship.

The Bucekey Lumber Company has added a splendid connection the past week by contracting for 2,000,000 feet of lumber to be cut in Pennsylvania. This stock will be largely hardwood and will be used to supply the eastern trade of the company.

The Stover Lumber Company has been making some good sales of spruce lately, most of it being for the mill. Mr. Stover also sold last week 30,000 mixed oak lots for trolley purposes. The company has recently secured a new

West Virginia connection, which will put it in still better shape to handle the hardwood trade of Greater Pittsburg.

The C. P. Cautley Lumber Company is feeling justly proud of an order for 300,000 feet of oak to be used in the wickets of dams Nos. 8 and 11 in the Ohio river. This stock will be white oak, and most of it will be cut 12x12x15. It will be taken from Washington and Lawrence counties, Pennsylvania. This concern has been very fortunate in getting river contracts the past two years, and last year furnished all the timbers at Glenfield and Glen Osborne in the Ohio river below Pittsburg.

Buffalo.

Hardwood lumbermen are taking a leading part in the establishment of a lumbermen's club, which is expected to be made an auxiliary of the Manufacturers' Club, now opening rooms in the Coal & Iron Exchange.

At the annual meeting of the Hardwood Exchange on May 2 Frank A. Beyer was elected president; Anthony Miller, vice-president, and Fred M. Sullivan, secretary and treasurer.

The proposition of D. Y. Leslie to settle with his creditors at 40 cents on the dollar to wipe out some long time accounts has been accepted by nearly all business, which has not been interrupted, will proceed as before.

Beyer, Knox & Co.'s city yard is not likely to be disturbed very soon, as the grade crossing operations at that point are proceeding slowly. Trade is reported quiet.

O. E. Yeager has finished the task of revising the National inspection rules and is now ready to present his list to the National association. Business has been good with him, but runs unsteady.

J. N. Stewart & Bro. have lately sold a good block of cherry and will not fail to get enough more to make good their stock, though it is not an easy matter to find it. Quartered oak is making a pretty good run also.

The lake trade of T. Sullivan & Co. is coming in strong, with plenty of stock in sight by that route. The estimate is that business is two-thirds what it was a year ago and the firm is satisfied, considering business in general.

The office of the Buffalo Hardwood Lumber Company is always busy and able to report a good trade. There is a large proportion of mixed car orders though, which shows that the buyers are proceeding with caution.

A. W. Kreinheder is on the other side of the Ohio looking after the interests of the Standard Hardwood Lumber Company and shipping quite an amount of oak and other hardwoods in this direction, though the home yard is always well stocked.

The Memphis mills of Scatcherd & Son are running now and will turn out a good amount of stock, mostly oak lumber. Business seems to have taken a quiet turn of late.

The lake trade of G. Elias & Bro. is always a prominent feature and there are already two barges loading for Buffalo, so the amount to be taken this season ought to be large. The door mill is also very busy now.

A. Miller is back from his eastern trip and is looking after people who need good hardwood lumber. He finds trade when he goes after it, but does not think it is improving very fast at present. His elm and basswood specialties always go.

The mills of the McLean companies are running, Angus McLean still spending much of his time at the two at New Richmond and Bonaventure on the St. Lawrence. The burned mill at Bathurst in that district will be rebuilt this summer.

The yard of F. W. Vetter is well supplied with the hardwood lumber that sells, the plan being to keep a complete assortment always on hand. Sales are fairly good and are expected to be better before long.

Grand Rapids.

"We feel encouraged over the trade outlook," says Henry S. Holden of the Henry S. Holden Veneer Company. "Business is improving, we think. This is especially true in the building line, and while the furniture trade is still off, there are indications of a better trade in that line."

The Davis-Shally Lumber Company of Grass Lake has filed articles of association in Jackson county. The company has \$8,000 capital, stockholders being Archie M. Davis, W. A. and I. D. Shally.

Don G. McAfee of Manton is convalescing from a severe illness. His physician has advised a rest of three or four weeks and he is spending most of the time in Grand Rapids.

The Diamond Lumber Company of West Branch has increased its capital stock from \$150,000 to \$200,000.

The Wilson Saw Company, located at South Park, a suburb of Fort Huron, has plans for building an addition to its plant which will double its present capacity.

Work on the construction of the new factory for the Badger Woodware Company at Boyne City is being pushed. This is a particularly desirable industry, in that the articles to be manufactured are all small and do not consume much timber but require a lot of labor.

A. J. White of Cedar Run, who has a contract with Smith & Hull of Traverse City to cut all their timber on North Manitow Island, is building a mill which will cut from 40,000 to 50,000 feet a day with one circular and one resaw. He is also erecting other buildings and will employ about 150 men.

The Brunswick-Balke-Collender Company has plans for installing its own electric lighting plant at its Muskegon factory.

Walter C. Winchester is in Wisconsin for a few days looking after his interests there.

The Nichols & Cox Lumber Company has built another warehouse and added another dry kiln to its sawing plant. The company's maple flooring plant is being operated full time. "We are not going to cross any bridge of sights till we come to it," remarked Mr. Cox to the HARDWOOD RECORD correspondent recently. The company keeps after trade constantly and is doing well.

Cleveland.

The recently organized Cleveland-Oceone Lumber Company, which has 3,000 acres of excellent hardwood timber near Gardner, on the Oceone river in Georgia, Macon being the nearest city of any size, has now completed its plant. Since the first of the year a new hand mill with a capacity of 40,000 feet a day has been set up and is now in active operation. Five miles of logging railroad have been built and a number of standard gauge cars with a locomotive have been installed. George E. Meier, manager and president of the Interstate Lumber Company, Superior Arcade, Cleveland, is president and general manager of the new company. Noel Meier is secretary and M. Powell is treasurer. Mr. Meier reports that there are 40,000,000 feet of the finest hardwoods in America on the reserve, oak, hickory, ash and red gum. Quartered oak boards twenty inches in width have been cut on the property and much of the timber is of large dimensions.

Declaring that there is a school desk trust, the Cleveland Board of Education has let the contract for 1,025 school desks to Theodore C. Kundtz of this city for \$3,759. The desks will be of hard maple. This is a new departure for Mr. Kundtz, who has been in cabinet work for years, making sewing machine woodwork and automobile bodies mostly. He is preparing to put in quite an elaborate equipment and will bid hereafter for school work of this character. Mr. Kundtz has about the largest wood-working plant in Cleveland.

The demand for bar fixtures in Cleveland is slack just now on account of the prohibition wave which threatens the state. As a result a

number of the woodworking companies of Cleveland have allied themselves with the new Liberty League, which has for its purpose the side-tracking, if possible, of the prohibition wave which is surely spreading over the state like a blanket. The league is working in the big cities and industries in which woodworkers and coopers are associated are lacking the movement.

Charles Bartels, representing the Kentucky Saw Mill Company of Jackson, Ky., called on the Cleveland trade during the past week.

E. L. French of W. A. Cool & Son says that despite the dull season his concern is quite busy. Two ten-car shipments of hardwood to a large eastern railway were made a few days ago, in addition to many others orders of considerable size.

Robert H. Jenks, the well-known Cleveland lumberman, who has been absent from his desk for six months through illness, has returned home and is again at his office. He has about recovered from his recent illness and expects to put in a busy summer.

Frederick Guild, a Philadelphia man, has succeeded E. W. Caldwell as manager of the Sigaum Building Company. Mr. Caldwell has associated himself with the Woodland Lumber Company, a concern which specializes in hardwood flooring.

The Gray Lumber Company has been busy for several months making extensive alterations to its plant on West Third street. A new band saw has been installed and individual motors placed on each machine. The general arrangement of the mill and yards has been shifted.

The Martin-Harris Company has received several shipments of mahogany during the past month, one from Mexico and another from Cuba. The latter was found to contain some splendid wood, the logs being unusually large and choice. Mr. Martin says they are the finest his company has received in ten years.

Columbus.

Preparations are being made by the General Lumber company of this city to resume operations at its mills at Ashland, Ky. H. W. Putnam, president and general manager of the company, returned recently from Ashland, where he went to inspect the property of the company. He reports a large number of logs drifted down the Big Sandy and Ohio rivers to Ashland, where the company has a large protected harbor. The mills are being repaired ready for operation when market conditions warrant such action. Mr. Putnam reports business showing improvement. While the market is not as active as was expected some time ago, still there is a demand and a number of large shipments have been made recently.

M. J. Bergin, president of the M. J. Bergin Lumber Company, said: "The past week in the lumber business has been quite dull. The unfavorable weather has had a bad effect on demand and as a result sales are rather short. The prospects for the future are still bright and I believe that better prices will prevail soon. Hardwoods, especially, I think, will become better."

A cablegram from W. M. Ritter, president of the W. M. Ritter Lumber Company, from Liverpool brought the information of his safe arrival at that place last week. Mr. Ritter will make an extended trip abroad, as is his custom yearly. He will inspect the company's branches at London and Liverpool.

The Columbus Furniture Exposition Company, recently incorporated to conduct "furniture sales" in Columbus, similar to those held in Grand Rapids and Chicago, started active business May 1. A large stock of furniture has been placed in the six-story building at Front and Vine streets, leased for the company. A. G. Hancock is president, general manager.

While the inclement weather has been mitigating against active building operations, still considerable contracting is being done. One of the largest contracts awarded recently provides

for the erection of the Lazarus block, at Town and High streets, which means an outlay of nearly \$250,000. Several other large contracts will be awarded soon.

The Clear Creek Coal and Lumber Company, which has headquarters in Columbus, has purchased a tract of 7,100 acres of timber and coal lands located in Cumberland county, Tennessee. The property was purchased from Pennsylvania people through J. H. Johnson of Crossville, Tenn. The land is covered with a heavy growth of hickory, poplar and oak. A party of Columbus and central Ohio capitalists left Tuesday evening, May 5, to inspect the property. The party consisted of about thirty and was in charge of President W. V. Smith and Treasurer John L. Barr of Mansfield.

Indianapolis.

Building permits issued in the city last month amounted to \$747,791 as compared with \$788,346 in April, 1907, the decrease being due to the bad weather.

E. C. Phillips, for many years purchasing agent of the Udell Ladder Works, died at his home in this city a few days ago. His death was unexpected, and at the time he was planning a western trip.

The Wunch Spoke Company, for thirty years in business at Fort Wayne, is moving to Branson, Mo., to be nearer an abundant supply of second-growth oak and hickory timber.

Mrs. Mercy Murry, the only woman who ever conducted a lumber business in this city, died a few days ago at the age of seventy-seven. Following the death of her husband, thirty-seven years ago, she continued his lumber business for a number of years.

The Hyde Lumber Company has been organized at South Bend and will conduct a general lumber business, including a line of hardwoods. The capital stock is \$30,000 and the directors C. W., W. E., C. E. and R. E. Hyde, all of that city.

An increase in its capital stock from \$8,000 to \$15,000 has been made by the Ziegler-Stickler Lumber Company of South Bend, the addition to be used in extending the business of the concern.

About 100 employees of E. C. Atkins & Co., saw manufacturers, have organized the Atkins Saving & Loan Association with \$300,000 capital. Fred C. Gardner and Henry C. Atkins are among members of the board of directors.

Frank May of May Brothers, Evansville, has gone to Memphis, Tenn., to reside. The company has a large mill at Dumas, Ark., and it will maintain its Evansville yards, shipping lumber to northern markets.

Cooperage, lumber, iron and glass manufacturers of this state have organized the Indiana Manufacturers' and Merchants' Club, for the purpose of opposing the extensive prohibition movement in Indiana. Fred Bachman, president of the F. M. Bachman Company, local lumber manufacturers, is among the members.

Milwaukee.

Gustave Kitzinger of Manistee, Mich., one of the old time lumbermen of the Northwest, has been a visitor among Milwaukee lumbermen the past week.

J. A. Morgan of J. T. Morgan & Co., lumber manufacturers of Paducah, Ky., recently called on the lumber trade here. Mr. Morgan reports that he finds a decided revival in the lumber business, the sale of ten cars per week being his record of late.

B. E. Jones, one of the well-known lumber dealers of Port Washington, Wis., was recent Milwaukee visitor.

Cooper & Maxson, wholesale and retail lumber dealers in hardwood and other woods, are now installed in their new suite of offices at 915 Majestic building, one of the newest and largest of Milwaukee office structures.

Frank N. Snell, wholesale lumber dealer, has

just been elected president of the Milwaukee Athletic Club after one of the most interesting campaigns in the history of the organization. Mr. Snell won on a comfortable majority and led the ticket which favored the building of a new club house in the near future. Mr. Snell has recently returned from an extended business trip in the West and is very optimistic over the trade outlook.

Miss Grace Corwin, one of the few "lady lumbermen" in the country, secretary and manager of the Noble-Corwin Lumber Company, with offices in the Palub building, has just returned from a trip through the East.

J. Jung of Milwaukee, for twenty-seven years connected with the A. A. Meinecke & Sons Company of this city, is soon to establish a woodware factory at La Crosse, Wis.

Heavy rains quenched forest fires in northern Wisconsin after damage to the extent of \$20,000 was done and thousands of acres of reforested lands were burnt over. The loss was heaviest in the vicinity of Mosinee, where the fires raged for two days and nights. The Joseph Dessert Lumber Company lost a million and a half feet of timber valued at \$12 per thousand. The Weeks Lumber Company had a narrow escape in saving 3,000,000 feet of logs, as three fires at times scorched the piles. Fires at Hatley and Rib also did considerable damage, which would have been greater but for the timely rain.

The Miller Sash & Door Company of Marinette, Wis., has recently secured large contracts in the copper country, which will keep the plant busy for some time to come.

The Wisconsin Chair Company has discontinued its plant at Boyd and moved the entire equipment to the new location at Evansville, Ind.

If the plans of Charles Zeiser of Menominee, Mich., materialize that city will be the location of a sawmill which will be operated entirely by electricity. The plant will be one of the first of its kind in that section, and the mill will be equipped to cut from thirty to forty thousand feet of lumber each day.

The Milwaukee Board of Public Works has awarded to the John Schroeder Lumber Company the city lumber contract for the year. The contract calls for a large supply of oak timber, and this will be furnished at \$22.50 per thousand; it must be perfectly sound and free from defects. A quantity of pine at \$21 per thousand and hemlock at \$16 per thousand will also be supplied by the Schroeder Lumber Company. The Lincoln Farm & Timber Company, to be located at Merrill, Wis., has been incorporated with a capital stock of \$25,000 by T. H. Ryan, R. B. Runke and A. T. Curtis.

The Konrad Furniture Company has been organized at Oshkosh, Wis., with a capital of \$25,000 by William Konrad, Sr., and Otto Konrad.

Bristol.

J. H. Burrell, a prominent lumber and timber dealer of Liverpool, England, and an extensive importer of American hardwoods, was a visitor in Bristol this week. Mr. Burrell is spending some weeks looking over the situation in several hardwood centers in the United States with a view to placing large orders. He did considerable business with local manufacturers while in the city.

The Sugar Grove Lumber Company has been organized and incorporated at Marion, Va., thirty miles east of Bristol, by C. C. Lincoln, and others, with a capital stock of \$25,000, and will do a general manufacturing and wholesale business.

The Western Carolina Lumber Company, recently reported organized at Swannanoa, N. C., expects at once to begin the erection of a mill at Swannanoa, with a daily capacity of 40,000 feet, in close proximity to its timber production.

J. Minor Bentley has purchased a tract of

timber in Wise county, Virginia, and will soon begin the installation of small mills near Pound, for the development of same.

M. L. Pease of the Galloway-Pease Lumber Company of Johnson City, Tenn., is spending some time in the east on important business.

W. B. Coon of Johnson City is negotiating the sale of a \$15,000 tract of timber in Sullivan county, near Hall's Gap, owned by the Holston River Lumber Company, of which he is an officer.

Lumber shipments on the Virginia and Southwestern railway, one of the principal hardwood carriers of this section, have increased very materially since March 1, according to statements and reports obtainable at the general offices of the company in this city. Much lumber is now being hauled to the railroad by the country mill men and further increase is expected on this account, as well as the general improvement in the lumber market.

The Carolina, Clinchfield and Ohio railroad will be completed to Marion, N. C., and in operation between this point and Johnson City, Tenn., by August 1. This will open up a large timber territory in western North Carolina and many new mills will be installed for the development of the property, which has not heretofore been accessible by transportation facilities.

Nearly all of the mills in this section are running, and a number of those which have been closed have lately resumed operation.

Upon application of the Vestal Lumber and Manufacturing Company of Knoxville, Tenn., and the Frick Company, Inc., of Waynesboro, Pa., Frank Graham has just been appointed receiver for the Gartner-Hancock Lumber Company of Johnson City. It is alleged that the firm is insolvent. Walter Gartner of the concern, which is a partnership, was recently injured in a railroad accident and an injunction was procured against the accident insurance companies, restraining them from paying ever to him about \$10,000 due on his policies.

Cincinnati.

W. E. Delaney of the Kentucky Lumber Company returned from a business trip to Williamsburg, Ky., where he went to look after the mills of the company.

Thomas P. Egan, president of the Cincinnati Chamber of Commerce and of the J. A. Fay & Egan Company, manufacturers of woodworking machinery, returned last week from Cuba, where he had been about a month with his wife.

M. E. Farrin of the Farrin-Korn Lumber Company returned from a successful business trip to Chicago and vicinity.

H. J. Lewin of the A. M. Lewin Company, dealers in hardwoods, reports business as showing a healthy increase, which is principally perceptible in building material. He added that the inclement weather which has been prevailing over this district has had a slight effect on the lumber trade, but as soon as the weather improves the lumber conditions will also be much better.

Samuel G. Boyd of Charles C. Boyd & Co., manufacturers of hardwoods and veneers, left last week for a trip to the South to visit the mill of the company. Business with this concern has been fairly good and it looks for a steady increase in trade from now on.

Max Pease of the Galloway-Pease Company of Johnson City, Tenn., was in town during the past fortnight and made several large sales of chestnut.

J. E. Tutbill with E. L. Edwards has returned from a successful business trip to the East. He says that business with his company is fairly good, and that if the weather shows more improvement that the lumber trade will also be more active.

William Harty of the Furnace Run Saw Mill Company of Pittsburg was in town during the past fortnight and unloaded several carloads of poplar. Some of the grades sold were of the choice variety and were disposed of at \$55, while

the lower grades were sold on a range of from \$25 to \$35.

F. W. Mowbray of Mowbray & Robinson has returned from a successful business trip to Chicago and vicinity.

W. B. Hays of the Wiborg & Hanna Company says that the company is doing a good business, due to the good work of the men on the road. W. P. Hanna is still at the mill of the company in the South, while H. P. Wiborg is touring the Hoosier state and is meeting with much success.

J. W. Wehry, who for years was connected with the George Littleford Lumber Company, has severed his connections with that concern and accepted a position as salesman with the I. M. Asher Lumber Company. He is well known in the trade.

John Domasta, formerly connected with the T. P. Scott Lumber Company here, has accepted a position with the Louisville Veneer Mills of Louisville.

A. M. Scutt and O. B. Von Cannon of the J. Walter Wright Lumber Company of Elizabethton, Tenn., were in town recently on business for their concern.

R. L. Gilbert of the J. W. Darling Lumber Company has returned from a successful business trip to Joppy, Ill., where the concern's yards are located.

T. B. Stone, president of the T. B. Stone Lumber Company, with offices in the Union Trust Building, has returned from a business trip to North, where he visited the mills of the company. He returned just in time to celebrate his fifty-fifth birthday anniversary and also his thirty-first marriage anniversary.

J. H. Hankinson and G. H. Hankinson, brothers, of Carlisle and Franklin, Ohio, respectively, were in town last week looking after some business transactions with local concerns. During their stay they called on the Richey, Halstead & Quick Lumber Company.

The Hinger Timber Company of Bloomville, Ohio, was incorporated last week with a capital stock of \$30,000 by W. H. Klicawley, D. F. Hager, N. R. France, J. P. France and W. E. Hiler.

The Meador Furniture Company has acquired quarters at the northwest corner of Front and Smith streets. The property will be enlarged in order to cope with the increase in business.

The S-ranton Road Lumber Company, Cleveland, with a capital stock of \$25,000, was incorporated last week by George V. Brown, C. H. Foote, John H. Hoag, C. T. Kirkbride and L. E. Yrsgl.

The amount of business transacted during April was much better than that of March, which is proved by the following figures: The receipts of lumber during April reached 5,584 cars, while last month only 4,728 cars were received and for April last year 7,561 cars. Pleasing news to the lumber dealers is the increase in the shipments of lumber from here. During the past month 2,561 cars were shipped; the previous month only 2,193 cars, and for the month of April of last year 5,457 cars. Local lumbermen conceded that this year's business would not be as good as last year, but their statement that each month would be better has proved true thus far, and they look for further improvement during May.

Creditors of the E. M. Schantz Lumber Company are leaving nothing undone in order to realize as much as possible on the property of the company. At a hearing of the creditors held last week in the office of Referee Whitaker was heard the examination of Mrs. Schantz, mother of E. M. Schantz and Mrs. Latif, his sister. Mrs. Schantz holds a mortgage of \$15,000 on several hundred acres of timber land in Tallahassee county, Florida, Mississippi, owned by the bankrupt concern and Mrs. Latif holds a mortgage on the same property. Both mortgages are being attacked. The machinery and dimension lumber of the company was sold at auction as

advertised and brought \$1,136. Several of the local creditors declare that they will sift everything to the bottom to get all possible out of the concern.

Charles F. Bassett, a lumber merchant of this city, last week declared in a petition that he owes debts which he is unable to pay in full, and that he is willing to surrender all his property for the benefit of his creditors. He made an assignment in February in the year of 1897. All of the money realized on his property has been disposed of. He owes unsecured creditors \$4,503.57; no assets.

Evanville.

A. B. Harmon, purchasing agent for the Yawman & Erie Manufacturing Company, Rochester, N. Y., was in the city a few days ago. Mr. Harmon said business had been rather quiet with them, but prospects are a little brighter now.

The mill of the Heltrich Lumber & Manufacturing Company has been closed for several days as a result of the snapping of a large chain that was used to draw logs up out of the river. The chain slipped into the river and has not been recovered.

Mr. Cornell of the Nichols & Cox Lumber Company, Grand Rapids, Mich., was in the city a few days ago visiting local mills.

Henry Maley of Edinburg, Ind., passed through the city recently on his way to Yazoo, Miss., to look after his mill interests there.

The firm of J. M. Blood & Bro., Grayville, Ill., will soon be ready to install its new hand mill, which is to be of the latest type, with all modern improvements. However, under present market conditions the firm is in no hurry to get the mill in operation, as it prefers the standing timber to lumber, having plenty of lumber on hand to take care of trade. Paul Blood, son of J. M. Blood, will leave soon to attend the Biltmore Forest School at Biltmore, N. C.

Nathan Thayer and O. W. McCowen of Thompson, Thayer & McCowen were in Memphis this week looking after their lumber interests.

Thayer & McCowen were in Memphis this week looking after their lumber interests. Thayer & McCowen, who has for years been the world's champion bicycle rider, will retire from the race track and will go into the lumber business here adjoining the New York Dimension Supply Company's mills, of which, Louis Kramer, his father, is proprietor. He has been on the race track for ten years, being twenty-eight years old, and has raced before all of the crowned heads of Europe.

St. Louis.

The National Prosperity Association of St. Louis was organized here last week by a group of business men for the purpose of inaugurating a national movement for the restoration of confidence and a general revival of industrial and commercial activity. The purposes of the association are:

- To keep the dinner paid full.
- To keep the pay car going.
- To keep the factory busy.
- To keep the workmen employed.
- To keep the present wages up.

Assurances have been received that mercantile associations all over the country will join enthusiastically in the campaign. The lumber interests not only in St. Louis but in other cities are foremost in approving the platform and prospectus of the association. The Implement, Vehicle & Hardware Association of St. Louis, the St. Louis Furniture Board of Trade, the Yellow Pine Manufacturers' Association, the Lumbermen's Exchange and the Lumbermen's Club at their next meetings will endorse the movement, and the Hardwood Lumber Exchange of Chicago and the Lumbermen's Club of Memphis have wired that they will assist in every way possible.

The April report of the building commissioner at St. Louis shows building operations amounted to \$2,035,006, against \$2,560,447 for April last year.

The receipts of lumber by rail for April this year were 9,802 cars, as compared with 15,351 cars during April last year. The receipts of lumber by river during April this year have been 152,000 feet in April last year there were 189,000 feet. During April 1908, there were 7,597 cars shipped by rail, as against 10,223 cars during April last year. There were 115,000 feet shipped by river during April this year, as against 164,000 feet shipped by river during April last year.

The following table shows the number of feet of lumber inspected and measured by the Lumbermen's Exchange of St. Louis for April, 1908, and the corresponding month last year:

	1908	1907
Plain oak	254,311	520,972
Gum	144,955	29,937
Cottonwood	3,323	16,334
Ela	12,006	2,190
Louist	25	115
Cypress	283,626	197,119
Poplar	8,216	30,765
Chestnut	8,623	2,214
Hickory	3,369	48,285
Ash	4,569	16,690
Maple	12,573	16,690
Sycamore	28,929	164,642
Quartered oak	28,929	164,642

Total 1,070,272 1,080,868
This shows a falling off of 87,596 feet.

W. A. Bousack, president of the Lumbermen's Club of St. Louis, has appointed W. E. Barnes, Henry G. Rolfe and Thomas C. Whitmarsh a special committee of three to attend the annual meeting of the National Hardwood Lumber Association to be held at Milwaukee, Wis., June 11 to 14 and invite that organization to hold its convention in St. Louis in 1909.

Col. E. H. Warner is getting ready for a big business this spring. He says that just now there is not as much doing as there ought to be, but he has faith in the future demand, so is laying in a good line of all items of hardwood.

W. E. Cowen of the International Hardwood Lumber Company, who has been down in the Arkansas hardwood districts, says that the small hardwood millmen have little or no stocks of lumber on hand and have closed down.

Jacob Mossberger of the Mossberger Lumber Company, reports a little betterment in trade. Country buying is the best because the farmers having realized on their crops are spending a certain portion of the money in improvements.

The Bross Lumber Company has changed its name to the Weymann Lumber Company. Otto F. Pfeffer has withdrawn from the company.

A recent visitor in St. Louis was Franklin Greenwood, general sales manager of the Great Southern Lumber Company. He came to look over the situation.

A steadily improving business is reported by George E. Hibbard, vice president of the Steele & Lumber Company. The volume of business done is much better than it has been and prices are more satisfactory.

E. W. Blumer, sales manager of the Loftham Cypress Company, is out on the road looking for business and getting it, for he is sending in some right good sized orders.

E. W. Luehrmann, vice president of the Charles F. Luehrmann Hardwood Lumber Company, was not satisfied with the lumber business, although it was better than that of March. He expects a fine business this month, as conditions are much brighter.

The secretary of the Lumbermen's Exchange, A. H. Bush, received last week a sample of bay poplar from the Southern Cypress Manufacturers' Association, finished by Berry Bros., showing the different kinds of wood that bay poplar can be used for.

S. Smith, president and treasurer of the Emigh Land & Lumber Company of McGehee, Ark., was a visitor at the Lumbermen's Exchange last week.

S. C. Major, president of the S. C. Major Lumber Company, Memphis, paid St. Louis a visit recently. He says that the situation at Memphis shows but slight improvement.

T. W. Bone, vice president of the Blummer Lumber Company, says that out in the country, where he has recently made a selling trip, he finds conditions a little better, but prices are not at all to his liking.

The stockholders of the J. A. Holmes Lumber Company held their meeting May 4 at the offices of the company and elected the following officers and directors for the ensuing year: Robert Holmes, president; H. Heferkamp, vice president; J. Howard Holmes, treasurer; Robert H. Thompson, secretary. The officers, with J. A. Holmes, constitute the board of directors.

Lumber Company, has returned from a two weeks' trip to Mercedes, Tex., where he has been visiting his son. He visited several other points in Texas while away. At the office of the company business is reported to be fairly good and showing some improvement.

W. A. Bousack, president of the Bousack Lumber Company, says he does not see any material change in the situation. Buying is being done, but not as lively as it should be. Prices are uncertain and vary.

Memphis.

F. E. Stonebraker, who for two years has served as manager of the southern business of the Lansing Wheelbarrow Company at Parkin, Ark., recently sold his interest and the Memphis branch of that company will be discontinued.

Mr. Stonebraker will continue the office for his railroad and other personal business. Just what his plans are is not known, but it may be authoritatively stated that he will not long remain out of the lumber business. For the present he will give his attention to the Crittenden railroad, of which he is president, and to his farm in Arkansas. He proposes to take a rest from the lumber business for a time, as he has not been for fifteen years free from the cares of a sawmill. Mr. Stonebraker is one of the best known lumbermen of Memphis. He has been engaged in the lumber business in Memphis since 1893. For some years he was employed by the L. H. Gage Lumber Company, Providence, R. I., and Memphis, and in 1899 acquired an interest in the Crittenden Lumber Company, with mills at Earle, Ark. He left the latter two years ago, when he became interested in the Lansing Wheelbarrow Company.

It is definitely stated that the big mill of the Lamb-Fish Lumber Company at Charleston, Miss., is about completed and everything is in readiness for operation. This is not only one of the largest plants of its kind in the entire South but it is one of the best and most modernly equipped. General Superintendent W. B. Backus, who has had charge of the construction of the plant, is receiving the congratulations of his friends on the splendid piece of work he has turned out.

John Dwyer, who on May 1 resigned his position as assistant general freight agent of the Illinois Central and Yazoo & Mississippi Valley railroads, to become traffic manager for the Lamb-Fish Lumber Company, was the guest of honor at a banquet given by the railroad men of this city Saturday evening. In addition to tendering Mr. Dwyer this special token of their appreciation, the railroad men presented him with two handsome gifts—a walrus traveling bag and a pair of cuff buttons set with sapphires and diamonds, both made especially for him. Mr. Dwyer was one of the most popular officials among the railroad fraternity in this city and, while unusual regret is expressed that he has left the railroad service, he is the recipient of many congratulations because of his embarkation in the lumber business.

Yandell Haun and E. A. Dix were recently appointed receivers for the Bodley Wagon Company of New South Memphis by Judge McCall of the federal court for the Western district of Tennessee. The order of Judge McCall also enjoins all suits against the defendant com-

1913: A general creditors' bill was filed by the Whitney Central National Bank of New Orleans early last week in which it was alleged that the plaintiff held notes of the defendant for large sums past due. It was further alleged that the total indebtedness amounts to about \$40,000. The defendant company in its answer denies it is insolvent in any sense, but sets forth that it is at present unable to meet its obligations. The recent financial panic and the many suits threatened against the company are given as the main causes of its present trouble. Mr. Dix was formerly vice-president of the company and is thoroughly familiar with the workings of the big plant in New South Memphis.

The plant of the American Car & Foundry Company at Elginham, a suburb of Memphis, began operation May 4 with a small force. The management, however, states that it will increase the number of employees daily until it reaches 800. When the plant is running at full capacity it gives employment to between 1,200 and 1,500 persons, but there will have to be further improvement in the demand for cars before it will be necessary for the company to put on its full quota.

The outlook now is bright for the new Union Station. After the apparent breach of negotiations between the Memphis Terminal Company and the legislative council a basis has been reached upon which everything promises to be worked out all right. The council has receded from its position in some respects and the officials of the Memphis Terminal Company, representing the railroads, have shown a decided disposition to adopt the policy of "give and take."

The lumbermen of Memphis won their fight for the election of J. F. Foster, assistant treasurer of the J. W. Thompson Lumber Company, as first vice-president of the Business Men's Club. The new officers will be installed May 9, at which time a smoker will be given. Mr. Foster is the only lumberman on the official roster. The lumbermen of Memphis have a considerable membership in the Business Men's Club, and they felt that they were entitled to representation on the official board. W. Barksdale, of the Barksdale-Kellogg Lumber Company, who has served as president of the club for the past year, will surrender his mantle at the coming smoker.

Retiring officers and directors of the Business Men's Club will, at the coming meeting, recommend the establishment of an industrial department. Many inquiries regarding opening for various enterprises in Memphis have been received by the club since the last year. These have led to the forming of the Memphis Industrial League, which made a specialty of locating new factories in this city. Colonel I. F. Peters, who has been at the head of the league for the past four years, has handed in his resignation, however, and it is therefore expected that the latter organization will be discontinued. It will be incumbent upon the Business Men's Club to carry on this work if it is to be continued. The importance of such an agency is regarded as vital and it is more than likely that the club will act favorably upon the recommendation.

E. N. Case, who was for some years identified with the Case Manufacturing Company at Dothan, Va., has purchased a large tract of hardwood timber land near Sandover, Miss., approximately 6,000 acres. He is preparing to locate a mill in that section, the operating company to be known as E. N. Case & Son. Mr. Case was attracted to this section by the splendid quality of timber available and because of its accessibility as compared with other portions of the country.

The Nashville Lumber Company, Nashville, Ark., has filed an amendment to its articles, whereby its scope of business is increased. It is allowed now to deal generally in lumber and to engage in the manufacture of lumber and

building material; also in the handling of real estate.

It is reported in dispatches received here that interests identified with the Gould Southwestern railway have made preparations to build that road to Star City, Ark. The line at present connects with the St. Louis, Iron Mountain & Southern at Gould, Ark., and, when extended to Star City, will offer facilities for the development of a good timber section and will prove a splendid feeder to the Iron Mountain line.

The Ozan Lumber Company of Prescott, Ark., has suspended operations at night. The company laid off its entire night shift when the financial depression manifested itself and has just now reached a point where it feels justified in running both day and night.

Production of hardwood lumber during the past fortnight has been rather below the recent average on account of unfavorable weather. Heavy rains have fallen throughout this section, interfering with logging and preventing much headway in actual operation. There is no doubt that a number of mills are beginning to resume, but it is equally true that some of the larger ones which have been in operation during the past few months are preparing to close down. Several of the big manufacturers at Memphis state that they are doing no logging at their mills and that, as soon as they have completed cutting their present stock of logs, they will close down. The demand is improving somewhat and conditions are regarded as rather more hopeful, but these mills have had to run during a period when they did not desire to do so in order to save their timber, and they are perfectly willing to allow their plants to remain idle for a time, pending further development.

A new box factory is being erected at Huntland, Tenn. The company is capitalized at \$100,000, and will manufacture all kinds of boxes and crates. It is expected that the plant will be in readiness for operation in a very short time.

The Ferguson & Wheeler Lumber & Handle Company, incorporated under the laws of Missouri, has filed copy of its articles of agreement and incorporation, as well as its charter, with the secretary of state of Arkansas. It claims to have assets amounting to \$180,000, with liabilities of only \$40,000. Its capital stock is \$900,000, and it says it has \$100,000 invested in Arkansas. H. W. Lasater is named as agent for Arkansas, with headquarters at Corning.

The Eldon Handle Company has also filed articles of incorporation and agreement with the secretary of state of Arkansas. It is capitalized at \$25,000, all subscribed. It will engage in a general saw mill and handle business at Dardanelle. J. T. Miller, J. F. Stevenson and others are the incorporators.

There will be an important meeting of the Lumbermen's Club at the Hotel Gayoso May 9. President Geo. C. Ehemann has asked a number of prominent lumbermen to be present and express their views on the causes which have led to the recent depression in hardwood lumber circles and their ideas of the outlook. Mr. Ehemann in adopting this plan expresses the belief that the trade is on the verge of decided improvement, and it is expected that there will be a much more hopeful tenor to the views expressed by lumbermen over the outlook than would have been possible even a short time ago.

The railroads passing through Memphis have decided to grant to all persons holding tickets through the Memphis gateway a stop-over privilege for the better part of the year. The organizations took this matter up with the railroads a short time ago and the latter acquiesced when assured that ticket scalping would not be allowed. This stop-over privilege will be of particular interest to lumbermen who pass through Memphis. The only instance where the stop-over will not be allowed is in case the extension makes it neces-

sary to increase the time the ticket has to run. The commercial organizations are very much pleased with the readiness with which the roads have acquiesced.

Geo. D. Burgess has returned from a trip to New Orleans and Vicksburg, made in the interest of his firm.

The York-Browning Lumber Company has made application for a charter. The capital stock is \$50,000. J. B. and Robert York of Pine Bluff, who bought the plant of the Annesdale Lumber and Manufacturing Company in Memphis at the recent bankrupt sale, are the principal incorporators. The new company will operate this plant.

There is a better demand for hardwood lumber and the volume of business, while somewhat below the average for this time of year, is considerably in excess of what it has been for some months. Buyers are not disposed to anticipate their wants, but they are finding larger needs to fill, and are showing more disposition to meet the views of holders than heretofore. As a consequence prices are better. Export demand is rather slow and the trade believes that this condition will continue for some time, as the foreign markets are flooded with consigned stock which is offered at attractive prices in the auction sale. The market has not yet reached a point where the trade can count upon a steady flow of orders. As a matter of fact, there are sporadic symptoms, as shown by buying being good one day and rather slow the next. Palms oak is one of the items that is coming into more prominent notice. The supply, while larger than in the case of quarter-sawn, is none too large, and holders are finding it impossible to secure better prices than a short time ago. They are also finding that they are more largely for this class of material. Quarter-sawn oak occupies a strong position as at any time this season. Offerings are exceptionally light and this is the secret of the pronounced strength shown. Very few members of the trade in this market have any quarter-sawn stock for sale. Cottonwood is in slightly better request in the upper grades, but these are still relatively slow as compared with the lower. The latter are in excellent call, all offerings being absorbed by box interests at very satisfactory prices. The amount of low grade cottonwood available is not large, and this is responsible for the decided strength shown thereby. There is a slight improvement in the demand for box boards, but these are not selling at anything like the price offered a few months ago. Offerings are not particularly large, but they are plentiful enough to meet the requirements of the present demand. Some holders complain of the slowness of ash. Cypress has also found that the demand toward improvement during the past few weeks, and there is a fairly satisfactory movement in this lumber. Poplar is offered in only a limited way and prices are well maintained thereon. Gum occupies about the same position as heretofore. There is a fair movement in the upper grades, while the demand for the lower grades is rather better than that for the upper.

New Orleans.

The handsome trophy awarded the Southern Cypress Producers' Association by the California Wine Growers' Association for having demonstrated that cypress is the best substitute for white oak in the manufacture of wine barrels has been placed on exhibition in the show window of Coleman E. Adler, a prominent Canal street jeweler, and has attracted a great deal of attention.

The Dover & Hoffman Company has been incorporated in this city with \$10,000 capital to manufacture furniture and other hardwood products. A. D. Maguire, Gus Hoffman and Herman Dover are the incorporators.

On application of James W. Martin, Christopher Schaefer has been appointed receiver for the King Lumber & Manufacturing Company of this

city. Mr. Martin, in his petition, alleged that he was a stockholder in the company and that it was unable to meet its obligations.

The Gulf Coast Lumber Exporters' Association met in regular session at Gulfport, Miss., April 27, and transacted routine business. President Hunter of Mobile, Secretary Thurley and a large number of the members were present. The general lumber situation was discussed and it developed that the exports from Gulf ports during April had been very satisfactory in view of conditions which have existed recently.

Considerable interest is manifested here in the status of the affairs of the T. E. North Lumber Company, which is figuring prominently in a number of litigations in the Mississippi courts. S. D. Thayer, a prominent exporter of Gulfport, has resigned as receiver and I. C. Enoch of Jackson has been appointed. In the meantime Chancellor T. A. Wood has overruled the motion of the Lincoln Trust Company of St. Louis for the transfer of the case to the federal courts. Chancellor Wood held that the state courts have competent jurisdiction over the case.

Fire recently destroyed the dry kilns and a large amount of lumber in the yards of the Haces Express Company at Patterson, La. The loss approximates \$12,000.

That the Legislative Port Investigation Commission which has been in session here several weeks will make a strong recommendation for more wharf space on which to handle lumber is admitted by all members of the commission, and the report of that commission, to be submitted to the legislature this month, will call for a big wharf to be specifically developed for the handling and commutation of lumber shipments.

Lumber exporters are much concerned over the statement that the Interstate Commerce Commission will shortly issue an order fixing the free time for cars of lumber and other commodities received here for export at five days. The belief that such action will be taken is based upon recent correspondence, which the officials of the various railroads have had with the commission on the subject, and it is stated that within a short time the order will be published and become effective. This will be a further reduction of the free time on cars for export received f. o. b. this port, from ten days' free time, to which they were reduced by a decision of railroads made effective last year.

One of the largest lumber enterprises launched in Louisiana in some time has been incorporated by the Dantzier and affiliated interests of Mississippi and will shortly begin operations in Nicaragua. It is known as the Louisiana-Nicaragua Lumber Company, and was formed by a syndicate of lumbermen which holds concessions to 5,000,000 acres of desirable timber land in Nicaragua. The new corporation, the charter of which has just been recorded in this city, is capitalized at \$2,000,000. It is already operating a small plant in Nicaragua, but will soon begin the development of plans for extending its enterprise. Inasmuch as the company will market a good deal of its timber through New Orleans, this city is much interested in the plans. John L. Dantzier, president of the Standard Export Lumber Company of New Orleans and the head of the Dantzier interests in Mississippi, is president of the new concern. The other officers and directors are: Lennox S. Anderson, vice-president; Lorenzo N. Dantzier, treasurer; Edgar R. DeMont, secretary; James T. Ford and Frank H. Benn.

With a view to tapping rich timber land in the valley of the Aquan river in Honduras, Chicago lumbermen and capitalists, it is reported, will shortly begin work on the new Honduras Central railroad that is to be built from Truxillo, on the Coast, to Tegucigalpa, the capital of the Central American republic. Dr. J. P. Henderson, of Chicago, who is said to be the promoter in the new enterprise, passed through New Orleans several days ago, and while here discussed the company's plans. He said the length of the road's main line would be 280 miles. It will be built through some splendid timber country,

which will be developed by interests affiliated with the new railroad company. The lumber will be shipped to the coast and then transported to the United States.

Norfolk.

The Ferd Brenner Lumber Company, among the largest wholesalers in the South, has decided to remove its main office from Norfolk to Cincinnati. In speaking with Mr. Brenner regarding the removal he said his decision was caused by the recent action of the Interstate Commerce Commission forbidding the railroads of the South to realize freight rates on export shipments. This nullifies the leading exporters consider a great hardship, and the Ferd Brenner Lumber Company is assisted by the Dickson Lumber Company of Norfolk and a number of firms in New York and Baltimore in their fight to have this verdict rescinded. The National Lumber Exporters' Association, through its secretary, E. H. Terry of Baltimore, have also joined in the effort. The Brenner Company, although having its headquarters in Cincinnati, will maintain a sorting shed and yard in this city and a branch office, which will be in charge of Hugh E. Gray.

The two "lumber trust investigators" who have been compiling data from the books of the leading firms in this city during the last three weeks have left for Washington, where, it is expected, the data will be issued in pamphlet form to the lumber trade at large, and the general public. From Norfolk the gentlemen carry the investigations to New York city, Buffalo and other New York state points, compiling statistics on other woods than North Carolina pine, which was the specie detailed for Norfolk.

John H. Burrell of John H. Burrell & Co., lumber brokers of Liverpool, was in the city recently as a guest of H. M. Dickson of the Dickson Lumber Company. From Norfolk Mr. Burrell goes to Bristol, Memphis, Asheville, N. C., and Chicago and other northern cities. Mr. Burrell's opinion of the cause for the dullness in the export trade is the consignment shipments. Mr. Burrell is a lumberman of twenty-five years' experience, and is well versed in the trade.

M. J. Skerritt of the Associated Lumber Company, New York city, was a recent visitor to this city, as was also Charles E. De Haven, buyer for Edmund A. Souder & Co., Philadelphia.

W. L. Rudy of the Diamond Lumber Company, Pacific City, Va., has returned from a short trip to Baltimore. Mr. Rudy looked over the hardwood trade in Baltimore, and says that while there is some business moving, he found things quiet wherever he went.

I. E. Williams and Harry Reichenberg, representing the Ferd Brenner Lumber Company, Norfolk, were in London recently visiting the principal buyers. Mr. Reichenberg is making an extensive tour of Europe looking over trade conditions.

James T. Reid, one of Norfolk's most widely-known citizens, died April 29 after a month's illness. Mr. Reid for a long time was engaged in the stave exporting business in Norfolk.

Going to show the extent of Norfolk's commerce and the distance from which its trade comes is the shipment of oak timbers on the 25th for Amherst, Nova Scotia. The Virginia Railway, which has been financed by H. H. Hooper of Standard Oil fame, is fast nearing completion, and these oak timbers come from newly-opened territory on its line, now tributary to Norfolk. These shipments are made from the road's pier on the southern branch of the Elizabeth, and have been extensive, three vessel loads having left this port during the past fifteen days.

Toledo.

A water shipment of 16,604 posts came in last week from Alpena, Mich. It was consigned

to the Ohio Central Railway Company and was the first water shipment of its kind this season.

Charles H. Hoover and William H. Roush have purchased the stock and good will of the Simon-Roush Furniture Company at Lima, O. The sale was made on account of ill health of Albert Simons, president and manager of the old concern. The new owners have already taken possession of the business.

The Columbus Lumber Company of Toledo was incorporated last week with a capital stock of \$10,000, to operate a planing and sawmill. The incorporators are James M. Cameron, A. B. Creps, W. C. Trempf, Charles L. Dehn, C. A. Richardson, John J. Hoffman and E. H. Perrin.

Ten cars of walnut logs were recently shipped to New York from Washington Court House, O., by way of Mansfield, Wis. It is destined for export. This is the largest consignment of walnut made from this section for a long time.

Minneapolis.

D. F. Clark of Osborne & Clark has returned from a trip to the South, during which he looked over the lumber situation in Arkansas, northern Texas and in Tennessee, with a short stay at Hot Springs to recuperate from an attack of grip. Mr. Clark says that hardwood mills in that territory are doing more business now than a while back, and are pleased with the outlook. The cut down there was not so much curtailed as it was in the north, but in some of the mills are reported so they can run right along.

S. C. Major of the S. C. Major Lumber Company, Memphis, Tenn., was in Minneapolis a few days ago calling on the leading hardwood consumers, and visiting with some of the local wholesalers.

E. Payson Smith of the Payson Smith Lumber Company is back from a business trip to Chicago and adjoining points, on which he disposed of a couple of million feet in small lots. He says that so far the buyers are taking stock only for immediate needs, but their wants are increasing and the situation looks better than it did a short time ago. There is a fair call for maple, basswood and ash, and some birch is moving.

The mill which has been projected since the organization of the Atwood Lumber & Manufacturing Company last season will be built at Fildel, Wis., on the Wisconsin Central road. This company owns a tract of pine, hemlock and hardwood timber estimated to contain 300,000,000 feet, and a good mill will be built at Fildel to work it up. Homes for the employees will probably be built by the company there, as there is no accommodation for them at present. Frederick Weyerhaeuser of St. Paul is president of this venture, and George H. Atwood of Stillwater, who has long been manufacturing lumber at that place, is general manager. The Hawkins Lumber & Land Company, which maintained offices last winter in this city at 1018 Lumber Exchange, has decided to close the Minneapolis office, and hereafter it will do all business at the mill at Hawkins, Wis.

Anthony Hein of the John Hein Lumber Company, Tony, Wis., was a business visitor in Minneapolis last week. He reports that the production of hardwood lumber in that section has been much lighter than last year, and says they have been enjoying a very fair demand.

The plant of the John A. Bunn Chair Company at St. Anthony Park, St. Paul, was destroyed by fire last week with a loss of \$36,000. There was very little machinery in the building, as the furniture is made in the East and shipped to St. Paul, to be put together, so the loss was on the building and stock, which was quite heavy.

A Wisconsin hardwood man who was in the city the other day predicted an early shortage of basswood. He said prices on the new stock would start in right at the high point reached last year. His estimate was that the basswood would cut in more than 35 to 40 per cent of what it was last season.

H. J. Clark of the J. R. Clark Company has returned from a short trip to California with his family.

Charlotte.

An indication of renewed activity in the lumber business in the Carolinas is the fact that during the past two weeks quite a number of new companies have been organized and numerous mills that had closed down earlier in the year have resumed operations.

Among the new companies chartered are: The Atlantic Manufacturing & Stave Company of Washington, D. C., with a capital stock of \$50,000. C. T. Hobart of Lima, O., is the principal stockholder.

The Gum Veneer & Lumber Company of Rural Hall, N. C., is a new company having a capital of \$25,000 and proposing to manufacture and handle sash, doors, blinds, furniture, veneer, etc. A. M. C. M. and T. G. Gum and P. B. Law are the incorporators.

A new concern has just been chartered for Millboro, N. C., known as the Harris Chair Company. The capital stock is \$50,000, and the incorporators are T. D. Harris, J. W. Alfred and J. E. Williamson. Chairs, chair stock, etc., will be manufactured.

The Bailey Lumber Company of Bakersville, N. C., has been chartered with a capital of \$25,000 by I. H. and L. P. Bailey and others.

News has reached this city of the destruction by fire recently of between 400,000 and 500,000 feet of hardwood lumber, belonging to the Asheville Lumber Company of Asheville, N. C. The lumber was stacked on the yards of the company at Rhodo, N. C., and the loss is said to be \$10,000, partially covered by insurance.

The Howard-Fitch Furniture Company of Winton Salem, N. C., has just been chartered with a capital of \$25,000 by F. M. Fitch, K. Howard and others. The company will do a general furniture business.

A large cargo of lumber to be shipped from Georgetown, N. C., in a sailing vessel cleared that port a few days ago, consisting of 19,225 cross ties from the Georgetown Grocery Company and H. Kaminski & Co. for the New York market.

Judge West, in the circuit court of Brunswick, has just handed down a decision of the greatest interest to lumbermen in North Carolina and Virginia since the points raised have never been passed upon by the supreme courts of either state. The cases were the Camp Manufacturing Company vs. W. A. Young and R. B. Young vs. the Camp Manufacturing Company. The issue in both cases being the validity of a style of timber land lease used by the Camp company, the two cases were joined and the decision applies to both. The company had held title to a standing timber to the value of \$1,000,000 under a form of deed which provided that the grantee have five years to cut and remove the timber conveyed, and in the event of failure to meet this provision the period of grace be extended as long as the company desired, but that interest at the rate of 6 per cent per year be paid on the purchase money for the additional time required. The five years had expired on the timber involved and Messrs. Young and Wright contended that the title reverted to the grantors because the extension clause was vague and uncertain, and therefore void, and also for the reason that it conflicted with the law against perpetuities. Judge West held that the extension clause was void on the grounds set up by the grantors, but that it was obviously the purpose of the parties in interest to extend the time beyond the five years, and that the company was entitled to a reasonable period in which to cut and remove the timber. In view of the language used in the grant and because of the magnitude of the Camp company's operations the court decided that ten years would be a reasonable time, interest to be paid according to the terms of the deeds. The cases were hotly contested and the decision of Judge West

will be appealed from and the supreme court of Virginia will have to make the final decision.

It is stated on what is considered good authority that northern and southern coal fields will be linked by a line of railway from Charlotte to Atlanta, Ga., the promoters intending to buy up all the yellow pine in southern Georgia available. The company is said to be backed by \$5,000,000 and will have as its sea outlet Charleston, S. C. It is said the present low prices of lumber, rails, labor, etc., will be taken advantage of by this company, which also proposes to manufacture most of the lumber bought. It is likely more comprehensive details will be given out later.

Wausau.

Wisconsin lumbermen have lost considerable through forest fires during the past month, but at present writing rains have conquered this destructive element.

Walden Bros. mill and canthook factory at Nadeau, Mich., were recently burned; loss about \$10,000. Some lumber was also destroyed. The firm carried no insurance because of excessive rates. This is the second fire the concern has had in the past few years. The other time the plant was destroyed a discharged employee was arrested charged with arson, convicted and sent to the Marquette prison.

John Holmes, Marinette man, recently lost a camp and logging outfit near that city by fire. The fire originated from settlers burning brush heaps.

Every sawmill and factory in Marinette is in operation at present, the last mill to start being the Sawyer-Goodwin Lumber Company's plant No. 2.

R. W. Roberts of Milwaukee died during the latter part of April in a hospital in Rochester, Minn., following an operation for relief from gall stones. He was fifty-one years of age. Mr. Roberts was engaged extensively in the timber and sawmill business. He held large interests in various places in Wisconsin.

The Viking Lumber Company of Wittenberg recently installed a 26,000-pound turbine. The company has recently expended about \$15,000 in improvements on its plant, including a new dam.

Log drivers working on Pense river for the Kimberly-Clark Company of Appleton recently met with a curious experience. The drive was progressing nicely when a colony of beavers built a dam across the river and stopped it. The dam was strongly constructed of dirt and logs and it was necessary to use dynamite to break it up. The Scott & Howe Lumber Company of Bessemer, Mich., lost 60,000 feet of logs at the time of the recent forest fires in Wisconsin.

The proposed sites for three sawmills to be erected on the Menominee Indian reservation have been selected. Millions of feet of hardwood, pine and hemlock have been hauled to the sites. This timber was blown down in a cyclone three years ago. It was thought that the hardwood, lying on the ground so long, would be worthless, but when logging was started most of it was found to be in excellent preservation.

Wisconsin lumbermen are interested in a new hardwood plant located at Phillips, Miss., owned by the Talnhatchee Lumber Company. W. H. Hatten is president and treasurer and W. H. Dick vice president and secretary. Both are residents of New London, Wis., where they have been operating for years as the Hatten Lumber Company. They are also heavily interested in the Lathrop-Hatten Lumber Company of Birmingham, Ala. Mr. Hatten is also interested in the Ingram-Day Lumber Company of Lyman, Miss. The plant at Phillips is considered one of the best hardwood plants in the Mississippi valley and was purchased about a year ago from the John O'Brien Land & Lumber Company and was rebuilt. The concern owns a large tract of timber surrounding the mill. The company has been in operation since last October and has a large stock of lumber on hand. Only recently has any shipping been done. The com-

pany is organized to do both an export and domestic business in hardwood.

During the past winter about 40,000,000 feet of lumber, some part of which is hardwood, was cut on the Menominee Indiana reservation. There were about thirty-five camps in operation and about 1,200 men were employed. The government will soon open bids for the sale of the logs.

The J. W. Wells Lumber Company of Menominee, Mich., is employing an improved log hoist which is proving a pronounced success. Logs can be lifted and carried from any part of the yards into the mill.

Theodore S. Wilkin of Oshkosh was recently found dead in his bed in Kentwood, La., where he was superintending the building of a mill for the Amos-Kent Lumber & Brick Company. He retired the night before feeling in the best of health. Mr. Wilkin was a member of the Wilkin-Chalmers Company of Oshkosh, builders of sawmill machinery. He was an inventor and held patents on most of his machinery, and he was known to have a practical knowledge of sawmill machinery equal to that of any man in the country.

Ashtand.

Edward Barber of Cincinnati, manager of Hingham & England, was here several days superintending the loading of export oak which he was receiving and exporting direct from the Licking River Lumber Company of this city.

The Wright-Salsbury Lumber Company of this city is loading out several cars of export stock this week and reports business improving.

Mr. Menses of Cincinnati, representative of James Kennedy & Co. of Liverpool, England, was here several days in the office of Charleston, W. Va., were in the city a few days this week. These gentlemen are securing considerable export oak for their firm from this section, and while here placed some very good contracts with local dealers. They seemed well pleased with the general outlook.

The Licking River Lumber Company is loading several cars of export oak this week at its mill at Farmers, Ky. It continues to receive an increased amount of inquiries and orders.

L. C. Smith, a Prestonburg lumberman, was a business visitor in the city a few days this week. Mr. Smith reports lumber business fair, with better prospects than existed a few months ago.

Mr. Jackson of Ault & Jackson of Cincinnati was in the city this week looking for oak and poplar lumber. Mr. Jackson expected to visit Huntington and Charleston, W. Va., before returning to Cincinnati.

H. V. Curll and son, D. B. Curll, of the H. V. Curll Lumber Company of Pittsburg were business visitors in the city this week. Mr. Curll and son, who were formerly members of the Curll & Lytle Lumber Company, have recently formed a company to do a wholesale business. Mr. Curll, Sr., has charge of the Pittsburg office and Mr. Curll, Jr., the branch office at Philadelphia. These gentlemen are experienced lumbermen, and their success is assured. They reported business improving, and stated that they had received more orders during the month of April than in any previous month this year.

Prior to their visit here on this trip they made several cities in West Virginia and Ohio, returning to Pittsburg direct from this city.

The W. G. Ward Lumber Company of Ironton, O., who make a specialty of the planing mill business, and who operate one of the most complete plants of its kind in this section, report a nice lot of orders for poplar siding and interior finish.

H. N. Fischer, a leading lumberman and general merchant of Tebbelville county, Kentucky, was in the city this week calling on some of the local lumber dealers. Mr. Fischer said that while there is practically no stir in his vicinity in the lumber line, yet future prospects are much brighter than they were two months ago.

The Licking River Lumber Company of this

city state that they had one of the largest tides last week at their Farmers plant they have had this season. The heavy rainfall in the headwaters of Licking river caused a sudden rise in the river, bringing with it logs in such numbers that it was impossible for the log crews to boom the logs. It was necessary to jam the river, forming a gorge, in order that they might save the poplar and oak timber. The gorge was near Farmers, and extended over a mile up the river, with logs piled six to ten deep, the total number over thirty thousand. The company have night and day crews working on the logs in order to get the gorge cleaned up as soon as possible, as there are a number of raftsmen above this point waiting until they can go down the river with logs they have for various firms below Farmers and Cincinnati.

W. E. Berger of the W. H. Dawkins Lumber Company of this city has returned from his western trip with several nice orders, and he reports that business shows a great improvement over sixty days ago.

Levis Doster of Nashville, Tenn., secretary of the Hardwood Manufacturers' Association, was in town several days this week calling on the various large mill operators here and in Coal Grove and Ironton, O. Mr. Doster stopped off here from an eastern trip, having visited Philadelphia, Washington and other points. He believes that there exists generally a much better feeling among the northern and eastern lumbermen, and, judging from the low stocks of the consuming trade and the enormous curtailment in manufacture of lumber, that before long there will be good demand for all hardwoods. Mr. Doster leaves the city Saturday for Columbus, where he will visit prominent lumbermen of that city and meet J. V. Hill, chief inspector of the association.

The R. G. Pace Lumber Company of this city reports the receipt of some desirable orders for bill oak and oak ties in the past week at the right prices. Inquiries continue to increase and more orders are being received on quotations than any previous month of 1908. This company has the contract to furnish all the ties for the new street car railway being constructed in one of the northern cities in Michigan.

The Standard Planing Mill Company of this city reports the receipt of a nice line of con-

tracts for furnishing building material this season for several new houses to be built in this and neighboring cities. Under the management of J. R. Kitchen this firm is doing a thriving business with a good outlook before it.

The Yellow Poplar Lumber Company of Coal Grove, O., continues to operate its double band mill full time, manufacturing some fine poplar lumber. Its large planing mills are busy getting out supplies of poplar interior finish, beveled siding, moulding, etc. This firm makes a specialty of the finished products made from poplar and report business improving. The word "improve" is certainly encouraging to the business man in general, and is a good indication of a steady and sure return to normal business.

J. F. Daniel, a Catlettsburg timber merchant, was in town this week. Mr. Daniel advises that the timber business has been active for the past few weeks, and large amounts of oak and poplar were sold in the Catlettsburg market, some of the timber, especially poplar, being of the finest quality.

Vansant, Kitchen & Co. continue to operate their double band mill, manufacturing poplar lumber. Charles Kitchen, secretary of the concern, is a candidate for nomination as congressman from this district.

J. H. P. Smith, president of the Hardwood Lumber Company, has returned from a western trip with some good orders. Mr. Smith says he found the consuming trade with a very limited amount of stock on hand, which is sure indication of an increased business in a short time.

The W. H. Dawkins Lumber Company is again shipping from its mill in West Virginia on the Guyandotte railroad. For some time they were unable to make any shipments from this mill on account of recent high water, putting the railroad out of commission. W. H. Dawkins spent several days at the mill at Saginaw, N. C. He advises that it will be before general business improves enough to develop a normal demand for hardwood is an open question. Many dealers believe trading will become more active inside of two months, while others put the date of active business off for several months at least.

Consuming manufacturers are not busy. Piano manufacturers have been running on short time and have been slow buyers of materials. Furniture plants have been operated on part time. The demand for veneers has therefore suffered. At present the manufacturers of veneers have rather large stocks, but prices in most instances are well held. Veneers of white holly are selling well for export and these are coming in for more attention in this market.

The call for quartered oak is not heavy, but prices are very well held. Offerings of desirable stock from mills are not large and dealers predict higher prices as soon as the demand warrants an advance. Piano and furniture in free offering and prices show but little strength. The call for basswood is moderate. Birch and maple move slowly. Ash is fairly well held. Whitewood has not gone off in price as much as many of the other woods. At present it can be purchased at lower prices than it could the first of the year. Cypress is still unsettled, although

during the past week it seems that mills are cutting a little nearer together on prices. The same is true of North Carolina pine. Some kinds of mahogany are easier than they were, and dealers have been fair buyers in primary markets at the decline.

New York.

While the hardwood trade so far as consumption is concerned continues irregular, there are nevertheless increasing indications of a slow but steady improvement all along the line. So far as high-grade hardwood stocks are concerned, the market seems quite satisfactory. There are some offerings on presumably standard stocks at old prices, but these sales are being bought by buyers to represent manipulated grades to an extent which is benefiting the straight-grade shippers. Well manufactured hardwoods in the higher grades are holding their own, while supplies are not sufficient to create much tendency toward price concession.

In low-grade stock the manufacturing trade is picking up some, and the movement is considerably better all along the line. There is every indication that the tendency of the market from now on will be toward improvement.

Yard stocks are low, and on many items dealers are selling pretty close to the wind. This attitude is being taken through the assumption that prices may show a further easing off, but as this idea is being rapidly dispelled there certainly should be an increased volume of buying during the late spring and summer. Taken as a whole, while the volume of trade could be considerably better, there is nevertheless little in the hardwood situation to cause anxiety. The most active stocks are ash, chestnut, plain oak and poplar, with a fair sprinkling of orders for the other woods. Quartered oak is also stiffening in demand and prices, and with any material increase in the consumption of hardwoods, prices should show a sympathetic advance because of the general conditions governing supplies.

Philadelphia.

Although there is but a slight release from the tension of continued dull times to chronicle, the feeling as to the outlook for hardwood trading is far less doleful than for some time back. While many of the consumers are playing a waiting game and others are buying on a conservative basis, there has been a fair volume of hardwood lumber moved during April, though far below the total amount of the same month a year ago. Although the prospect is far from alluring at times, in many instances the hustler, by being opportunely on the spot, gathers some good orders. In the producing districts it is noticeable that the majority of the manufacturers are curtailing their output, but these same manufacturers express themselves as confident that as soon as the absorbing political questions are settled business will again resume normal conditions.

Statistics show that the total amount of building permits taken out in April of this year show an advance of \$688,555 over the figures for March, but this is a serious falling off compared with same month in 1907, a total of \$3,711,935. Of course the excessive reduction is attributable to the recent financial depression, but notwithstanding these conditions the sash and door mills are working, and the flooring men are not inclined to borrow trouble, as a large portion of the work now going on is of the better class of building, including considerable alteration work, which calls for good hardwood flooring. The furniture factories are moving slowly, as the retail market is more or less influenced by the inactivity among the large textile and iron mills in this and nearby sections, which are all working on reduced capacity. Cigar box and veneer industries, considering the general instability of affairs, are fairly busy, but whichever way you look in the hardwood field there is undeniably a

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

The average Chicago hardwood jobber reports business only about fifty per cent of what it was a year ago. Building operations in this market have not ceased by any means; in fact, there is still great activity, especially in the construction of flat buildings. The furniture people are complaining that their trade is only about half that of a year ago and their purchases are restricted to the hand-to-mouth variety. There are some Chicago jobbers who are making large contracts for future delivery of mill cuts, believing that a great many of these contracts in this market have not been made. Builders in sight they can make handsome earnings later on purchases at present prices. There is very little railroad business being booked at the present time, but it is believed that there will be some large orders from this source within a few weeks.

Boston.

There has been very little improvement in the demand here during the past fortnight, although a great many orders are being taken about the retail business before long. New business is not evenly distributed. One dealer reports a larger April trading than he had a year ago, while others say it was one of the slowest months for new business they have ever experienced. Few buyers are willing to anticipate their wants

lack of snap in trading. Values have, as a rule, held steady; quartered oak still remains scarce and high; poplar, ones and twos, keeps firm—in fact, all the better grades are steady; in the lower grades there is some fluctuation.

Baltimore.

There has been no pronounced change in the hardwood trade during the past fortnight. Supplies at the mills are reported small, and plants are being operated only on part time and some are shut down altogether. Yet offerings seem to be quite liberal, with no snap in the inquiry, so that the range of values is easy. Such manufacturers as have visited this market in the last two weeks are unanimous in reporting business generally as without spirit and quotations low.

One of the most troublesome features, of course, is the state of the foreign business, which suffers by reason of the heavy accumulations of stocks, that have forced prices to so low a point as to put it out of the question to continue forwarding. The closing of the foreign market naturally leaves much more lumber to be taken care of at home. There are some indications of improvement, however. Some of the large consumers are apparently getting ready to augment their purchases; railroad improvements are being taken up once more, and prices are being made for additions to rolling stock. The furniture manufacturers seem to be purchasing more liberally, and the needs of the yardmen are unmistakably greater, though the retailers still adhere to the policy of filling only their immediate wants. Stocks in the hands of the yardmen are as a rule depleted, and any queleeking in the requirements of these consumers must tend to bring out a number of orders. Poplar is still without spirit and the range of prices is easy. The needs of the box manufacturers are very moderate, and other consumers are in a similar position. The foreign business in poplar, like that in oak planks, suffers from excessive shipments, and the low range of values abroad keeps stocks here to congest the home market.

Pittsburg.

In some respects Pittsburg lumbermen are encouraged over the outlook. In other ways the market has apparently gone back a little from the point where it stood two weeks ago. So far as inquiry is concerned, it is manifestly better, but when there is considered the actual amount of business placed little apparent improvement is seen. During the past two weeks there has been quite an active call in some quarters for hickory, ash, elm, beech, cherry and poplar. Most of these woods have been wanted by furniture factories or by country plants which manufacture on a more or less extensive scale carriages, implements, etc. Salesmen who have been out on the road since April 15 have been doing more business with these concerns and prices have not been cut as much as a few weeks ago.

The demand for poplar has been better than could be expected under existing conditions. Poplar prices are well held. Stocks are yet large, but they are in strong hands for the most part. The oak trade has slid back since April 1 and prices have weakened. In the past week, however, there have been indications of a stronger market and wholesalers believe they will have little trouble in maintaining list after this date. For timbers and ties there is a better call than any time this spring.

The industrial situation is so dismplementing as to afford little relief in the lumber business. While progress is steady, it is very slow, and meanwhile every concern is curtailing its expenses to the limit. Building operations, so far as Greater Pittsburg is concerned, are practically at a standstill. Spring is far enough advanced to show pretty definitely what is in sight in building, and it must be admitted that the outlook here is anything but favorable. This means little activity in yard buying.

Buffalo.

Hardwood dealers give a less hopeful report of the situation than a month ago, as they are afraid that the consumption of hardwood lumber, especially in certain manufacturing lines, is not as large as the sales of the rough lumber have been. Still furniture and other factories that consume such lumber are reported to be doing well and look for a fair season at least. It will be some time before this apparent conflict of opinion can be reconciled, if it ever is. Then there is a third side to the question: Some good business men say that it would not be a good thing for the country to resume big sales now. They say that to run back to the active business of the past three or four years would be to return to the dangerous condition that precipitated this breakdown, which would be the height of foolishness.

"I have been in active business thirty years," said a leading manufacturer the other day, "and I have passed through these depressions before. I am willing to wait a little now. It would be just the way a thing possible now to go out and insist on doing a business such as we were doing a year ago. Let us rest a little. It will do us all and the country good."

There is a good demand for poplar and quartered oak; maple is moving; elm and basswood are doing something, and only plain oak, birch and chestnut are slow. Cherry and the other high-priced woods sell fairly well. White ash is quiet, but black is more active.

Cleveland.

Two or three months ago it was thought that the business lull was but temporary, but now lumbermen are beginning to believe that the outlook points to a bleak year. Not until after the presidential election is a boom looked for, and then the end of the season will have arrived. Next spring, however, good times are confidently expected.

Poplar continues to hold the top place in demand just now. Prices are quite firm, with the demand and supply fair. Quartered oak shows more strength than for some weeks and is now selling around \$80. Plain oak is a little better than it was a month ago and is moving at from \$45 to \$50. Ash is quiet at from \$48 to \$65, according to condition. Hickory is very dull, there being almost no market for it.

Mahogany is also quiet. It is selling from 15½ to 16½ cents a foot. Creossum walnut continues to hold its price of 45 cents a foot, though rough grades can be secured as low as 15 cents.

Some price cutting has been apparent during the past month, but it is hoped that the hardwood industry at least will be spared much embarrassment on this account. Most of the industries using hardwoods in this city and locality are running on short time at present. The call for flooring and interior finish is brightening up with the advance of the building season.

Columbus.

The market has shown but little improvement the past two weeks. There is some activity in the demand from manufacturing establishments, but the improvement is not as prospective as was anticipated. Prices are fairly firm under the circumstances and the prospects for the future are still considered good. On every hand are heard reports of depleted stocks, which is taken as an indication that there must be more lively buying in the near future.

Poplar is steady and prices are unchanged. Oak is in demand and the quotations as quartered are firm. The lower grades are weak. There is some demand for ash, hickory and elm.

Indianapolis.

The local hardwood market has shown some improvement during the last two weeks, a good amount of inquiries being followed by orders. Manufacturers are showing a strong disposition to hold up prices.

This season has developed a good deal of big building and Indiana concerns have also been successful in obtaining some substantial contracts for buildings outside of the state.

Furniture factories are now running steadily with a good supply of orders ahead. They are beginning to place some orders for material, and on the whole the hardwood situation is more encouraging than it has been for some time.

Milwaukee.

A better tone is found in the Milwaukee hardwood trade, and improvement that is gradual but steady is noted. The mills and factories in the city have been buying more heavily the last few weeks. Stocks at the factories are becoming low, and this is taken as a good sign by hardwood dealers. The active building season is affecting trade, and many orders for future delivery are being placed. The call for interior finishing lumber is especially strong and inquiries in this line are plentiful.

Little change is to be noted in prices, although it is evident that a more even schedule is being maintained and there is less cutting among the dealers.

There is an increased demand for quartered oak and the call for plain oak and birch is growing. Birch has been at rather a low stage, but a healthy improvement is now taking place. The supply in most cases is not heavy. Poplar is holding up well and the demand is heavier than a few weeks ago. While orders for maple flooring are larger and more frequent, the greatest demand is looked for a little later. Basswood is holding its own, owing to the limited supply, and the same is true of hickory. The general industrial outlook in the city is much improved, money is becoming plentiful and collections in the lumber field are now quite satisfactory.

Bristol.

Continued improvement is noted in the hardwood situation in this section and lumbermen are more optimistic than they have been for several months. There is steady improvement in all stocks and prices show a slight upward tendency. Many mills have lately resumed and it is estimated that fully 75 per cent of them are running to their fullest capacity. There is a fair volume of business being done, especially by the lumbermen who are hustling for business. They generally realize that there is a certain amount to be done, and all are anxious to get their share of what is going. The yards are pretty generally well stocked, though they do not contain as much lumber as they did in March, when shipments were much lighter.

Cincinnati.

Transactions during the month of April were more satisfactory than the previous month, and every item on the list showed improvement. The demand for poplar is still urgent, and some sales of the choice grades are being made as high as \$55, while the lower grades are selling at \$25 to \$35. Stocks of poplar are generally low. Another item that has shown vast improvement is quartered oak. The building element is purchasing a great deal of that wood, as well as furniture manufacturers. Plain white oak is not as urgently requested as quartered white and red, but some sales are being recorded at good prices. The demand for walnut, hickory, chestnut and mahogany is more urgent than last month, and the general impression is that every item has seen its lowest price level. Lumber dealers are sanguine of an improvement during the first part of May, and conditions seem to point that way.

St. Louis.

There has been quite a noticeable increase in the volume of hardwood business which has been done recently. It is encouraging, too, all the time, as well as fairly quiet as large as it should be. With the building season at hand, buying is more noticeable, but the amount is not nearly as

large as it has been in past seasons. The trade from the factories is better than it was, particularly in some lines. The planing mills seem to be buying a fair amount of hardwood, especially oak and cypress. The furniture and box factories are also increasing the amount of their purchases, but these two interests are not doing a great deal of business, hence probably the small buying done by them. The agricultural implement factories are doing a little buying and it is more than likely that the demand from this industry will soon begin to increase. The demand from the railroads and car shops is light, but their stocks are getting smaller all the time and they will be compelled to replenish soon. Hardwood prices are keeping up pretty well. There is not much cutting in prices reported. Gum and cottonwood conditions are unsettled. Cypress is getting better, but other items show no change.

Evansville.

The local hardwood market has changed little during the last two weeks. There has been but slight improvement, but it is certain that conditions are no worse. There has been quite a little lumber moving during the past two weeks; however, most of it was mixed carloads, the trade buying only for immediate needs. Most of the local factories have cut down their working forces, also shortened hours. Buyers are more plentiful just at this time, but they are all looking for concessions in prices. Several of the local mills have been shut down most of the time the past two weeks, having sawed up their stock of logs, and are not doing any logging, and it is almost certain there will be more of them shut down in the next two or three weeks.

New Orleans.

Because of the slack foreign demand on hardwoods and the absence of an interior call for this class of lumber, the hardwood mills of this territory have been doing comparatively little during the past fortnight. Advances from the various sections of the state in which hardwood timber is cut are that the mills have been running unsteadily because of the scarcity of orders, and will probably continue to do so for some time. Little exporting is being done at this point and the general situation has changed very little within the last several months. Generally the situation is unsatisfactory with the exporters, and these declare that no improvement is yet in sight.

San Francisco.

Conditions in the hardwood line in San Francisco continue active and the demand steady, particularly for quartered oak. Contrary to expectations, a good many new buildings have lately been started, and many of which call for hardwood for interior finish, flooring, etc. Quartered oak veneers in thicknesses of 1/20-inch for panel work and 3/16 to 1/4-inch for rails and sills are also specified, while 3/4-inch and inch are popular for moulding and framing. Demand has really been so active that frequent complaints are heard at the different hardwood yards that they cannot keep stocked.

Mahogany continues to receive a great deal of attention, and one large building has lately been specified to be finished throughout in this handsome wood.

In order to protect themselves against eastern competition, the millmen and interior trim contractors in this city and around the bay are organizing so as to work together in the protection of their business. It is reported that, although there is keen competition in figuring among themselves, they will pull together in an effort to keep San Francisco work from going east or even outside of the city.

It is reported on the streets that some large eastern firms who are submitting bids with the intention of getting some of the large contracts here will find it extremely difficult when the time comes to deliver their work and install it. The distribution of jeniseiro from this market is increasing, and the other principal coast cities where this wood has been introduced are sending in their requisitions regularly to the wholesale manufacturers of this wood in this city. There have been reported here quite a few inquiries also from eastern dealers, and with the decrease in production of quartered oak this wood will no doubt receive more and more attention.

Money is more plentiful and collections are quite satisfactory. Savings banks are again beginning to loan money and large insurance companies and other heavy holders of ready cash are advancing large sums on good San Francisco collateral and at very reasonable rates.

Norfolk.

It is not thought that as much business was transacted during the past fifteen days as during the latter part of March and the first of April. The exports of hardwood lumber for the month of April show a decrease, both as compared with the same period last year and with the month of March. This decrease is probably due to the large shipments made on consignment, which have begun to tell on the foreign market and have weakened prices.

Building operations in this city are active, and there are close to four hundred residences and one course of erection. This, of course, predicts good business locally in lumber and trim. Domestic sales show no signs of any great improvement, but are being made at about the same gait as since the first of the year.

Toledo.

A fairly satisfactory condition prevails in the local hardwood market. Retail trade is active and this has resulted in the placing of some good orders. Noticeable among the incoming shipments was a lake shipment recently of 450,000 feet of mixed hardwoods, chiefly elm, from Michigan. Prices on most hardwoods have held firm with little disposition to decline. Poplar is in good demand and while there is some shading of prices on boards and on siding, the standard stocks are firm. Hickory, ash, oak and all furniture materials are on the move. Factories are all consuming their regular quota, and the activity in building has caused considerable stimulation. Stocks are all in good shape, with sufficient material on hand to care for present needs, although there is some shortage in certain lines. Basswood and ash are scarce, but that is not unusual in this market. There is no complaint heard from the local dealers, and conditions show improvement.

Minneapolis.

The Twin City factory trade continues to buy only to fill immediate wants. The conservative policy inaugurated last fall is being kept up, and the theory is that the leading consumers are going to wait until after the national conventions to see what sort of candidates are put up for president before banking too much on the future. The plants are all fairly busy, and the consumption of hardwood is calling for considerable stock in small lots. Oak is not in brisk demand, but northern stock is being taken pretty well. Prices are holding steady at about \$46 on plain oak laid down here, and \$34 for

common. The quartered is held at \$76 to \$80 in Minneapolis.

Basswood stocks are reported to be light and prices are stiff, ranging down from \$36 on firsts and seconds to \$17 for mill cuts, with a prospect of higher prices in the summer. Birch is about holding its own at \$25 for firsts and seconds, and \$18 for common. Ineb maple stock is selling at about \$26. The slowest buyers in this section are the railroads, which do not seem to be doing anything. They are not buying lumber of any kind, though purchasing departments put in requisitions for it right along. The country trade is quiet and runs mostly to wagon stock in maple, oak and basswood. The retail yards are buying little of anything at present.

Charlotte.

One of the best indications of renewed life in the lumber business of this section is the formation of new companies and resuming of operations that were closed on account of the panic and demoralized market. From most parts of this state inquiries are coming in more freely and woods work is taking on new vigor. All in all, the hardwood situation is better than it was a fortnight ago. However, it is hardly expected that business will be as active as last year for some time yet, for a number of mills are still closed and prices are yet below normal.

Labor is plentiful and improved weather conditions, as well as satisfactory shipping facilities are adding to the general improvement of conditions that is being felt in the Carolinas. Lumbermen are decidedly more optimistic than they were a few months ago. The furniture factories of the state report a much improved trade and most of them are running on the old hour scale and turning out a normal output.

Ashland.

There is considerable activity among the planing mills and retail yards in this section, supplying buildings with poplar and oak and other building materials. Prices remain about the same for these woods. It is expected that, with the increased demand for the output of the planing mills and retail yards, the demand for rough lumber will show increase shortly.

Liverpool.

Trade conditions on this side are extremely flat, and this, coupled with large import, is making values very much lower. The fall in prices has been felt only on consignment parcels and shippers do not show any tendency to cut prices for contract goods. The low prices ruling for consignments now landing have frightened buyers off and consumers will not speculate beyond their immediate needs. This makes it practically impossible to find anyone who will buy "arrive" at prices asked by shippers. Undoubtedly it would pay shippers to ease their prices for contract goods and ship a little less on consignment.

Wagon oak planks are perhaps the weakest spot on the market, and the port is flooded with consignment parcels which have been sold at about 2 shillings. This makes the merchants who bought on contract at 2 shillings 6 pence feel rather glum. It is hard to understand why shippers do not send larger quantities of prime hickory logs, as this is practically the only line for which there is any real demand. Ash logs are weak, though there is some demand for first growth logs of fair size. Small second growth logs, both at Liverpool and Glasgow, are absolutely unsalable. The mahogany position is sharing the general despondency and values are lower than for some years past. Poplar and oak boards have both been sold during the past week at prices which must have resulted in a big loss to the shippers. Pitch pine is also lower and general expectations at this market are that this wood is to be lower still. In fact, depression reigns everywhere; the turnover is only half the average, and prices have fallen to a very low ebb.

SOUTHERN IRON & EQUIPMENT CO.,
Atlanta, Ga.

RAILS AND LOCOMOTIVES.

All inquiries for industrial railway equipment listed before Record readers will find ready response.

HARDWOOD RECORD, Chicago, Ill.

BUSINESS OPPORTUNITIES

BOX AND VENEER FACTORY AT AUCTION.

By order of United States Court, I will offer for sale at public auction, on June 6, 1908, the plant of the Metal Bound Package Company, bankrupt, at Mound City, Ill., consisting of about six acres of ground, mill and factory buildings, office, etc. Band saw mill, with steam feed, log trip, nigger, gang edger, etc. Two large Coe rotary veneer machines with clips, pers, drag saw, patent metal binding machinery, etc. Large, first-class and completely equipped box and patent trunk slat factory, power and machine shop. Located on the Ohio river, Ill. Cent. and the Big Four railroads; good log harbor, at the best milling point in the United States. For further particulars, address

A. W. WILLIAMSON, Trustee,
Mound City, Illinois.

AN OPPORTUNITY WORTH INVESTIGATING.

Either to purchase all or a part interest in a new, up-to-date planing mill with dry kilns, etc., adaptable to any kind of woodworking in heart of the Southern hardwood field. City location. Address

"BOX 500," care HARDWOOD RECORD.

FOR SALE.

Woodworking plant in western Wisconsin on W. C. R. R., with 15 acres of ground, buildings rebuilt in 1907, 40,000 sq. ft. floor space. Two 120 h. p. tubular boilers, with Dutch ovens and stack. A quick buyer will get a bargain. For detailed information address E. J. BARRETT, Shelbygan, Wis.

WANT TO CONTRACT

The cut of our new band mill, sawing principally Oak and Poplar—2 million ft. of choice hardwood logs now at mill. Address THE KENTUCKY SAW MILL CO., Hays, Breathitt County, Ky.

MISCELLANEOUS

SPECIAL NOTICE.

The undersigned receivers of the Bodley Wagon Co. at Memphis, Tenn., beg to notify the patrons of the company and the public in general that there will be no interruption in the business of the company, which will be continued as heretofore, and that any orders they may be favored with will be executed with dispatch and receive the same care and attention as in the past.

BODLEY WAGON CO.,

E. A. Nix and Yandell Haun, Receivers.

FUEL WOOD WANTED.

We are in the market at all times for fuel hardwood in lengths of 24", 30" and 36". Must be dry. ALWART BROS. COAL CO., 105 W. Webster Ave., Chicago, Ill.

FACTS FROM PRACTICAL MEN.

The HARDWOOD RECORD is always in the market for articles to say every feature of the hardwood industry. It wants practical statements of fact from practical men who know how certain things can be done in the best way. Literary quality not essential. Liberal pay for acceptable articles. Address Editor HARDWOOD RECORD.

TRY A FEW LINES

In the Wanted and For Sale Section of the Hardwood Record :: ::

IT BRINGS RESULTS

WHO BUYS HARDWOODS?

Do You Want the List?

The Hardwood Record supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of consumers of those materials throughout the United States and Canada.

Specifically, the items of the bulletins recite:

Name of state and town

Name of concern

Name of buyer

Line manufactured

Kinds, grades and thicknesses of Lumber

Kinds and sizes of dimension stock

Kinds and thicknesses of veneers

Kinds, thicknesses and sizes of panels.

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber **not** used are removed, and the cards are filed in alphabetical order between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete roster of the hardwood requirements of all users, and is an invaluable adjunct to the sales department of every manufacturer and jobber.

This service is free to all advertisers, save the patent index cards which show at a glance the kinds of lumber used by each concern, and which are sold at \$3.50 a thousand, the state guide cards costing 75 cts. a set.

Write us about this service.

**SMITH of
SMITHVILLE**

No. 133-A. SEVEN INCH, FOUR SIDE HARDWOOD MOULDER

HARDWOOD manufacturers are constantly demanding in machine tools of a more sturdy character. Many attempts have been made by machine builders to meet this need, resulting in added complications, with very slight improvements. We have, however, developed a moulding stickler of the 7-inch type that is both sturdy and simple, a machine that contains all of the elements of a very heavy large size moulder, yet it is only a seven-inch machine. Write us today for a special circular

OUR — LATEST

In the way of Band Rip Saws

The Feed is very powerful, consisting of one in-feeding and one out-feeding roll, which are placed close together, enabling short stock to be worked to advantage. They can be raised by long lever to receive material 12" thick. Has solid lower wheel which prevents the upper from over-running

**We Guarantee this Saw
to Stand Up to the
Hardest Kind of Work**

No. 180. Aut. Band Rip Saw

It is equipped with our Patent Sensitive Straining Device which permits of running the thinnest gauge blade at twice the speed of any other saw without danger of buckling or breaking. We can point you to cases where a single blade of 4" in width has been worn down to less than half its width without cracking or breaking

32" Spoke Lathe

For turning common, sarven and sharp edged Spokes. Will turn 2500 to 3000 per day

DO YOU LACK STEAM? WE CAN HELP YOU.

*The Gordon
Hollow Blast
Grate.*

THE MOST EFFEC-
TIVE DEVICE IN
EXISTENCE FOR
QUICKENING THE
COMBUSTION OF
SAW MILL REFUSE.

IT SAVES EXPENSE, because you can burn your sawdust and odds and ends of every description under your boilers.

IT INCREASES YOUR OUTPUT, because you are never short of steam.

IT MAKES IT EASIER TO FIRE, because the fuel burns freely and requires a minimum of attention.

IT IS ECONOMICAL—far more so than any draft grate, because the pipe and bars are always filled with a current of fresh air, and so last for many years without requiring repairs.

YOU TAKE ABSOLUTELY NO RISK, because we give thirty days in which to thoroughly test it. In the event of rejection, WE pay the freight BOTH WAYS.

Equally efficient in ordinary furnaces or Dutch ovens.—Adapted for any number of boilers, from one up.—No change in construction necessary. A hole must be made through the furnace walls for the pipe; aside from this, not a brick need be disturbed.—Can be put in over Sunday.—No difficulty about maintaining a fire at night, when the blower is idle, and no objection to so doing, as the bars are still filled with a current of air, due to natural draft.

Remember, we sell ON APPROVAL.
State how many boilers you have, and whether you have plain furnaces or Dutch ovens, and give width and length of grate surface or surfaces.

We also manufacture the celebrated
"TOWER" LINE OF EDGERS AND TRIMMERS
consisting of forty different sizes and styles.

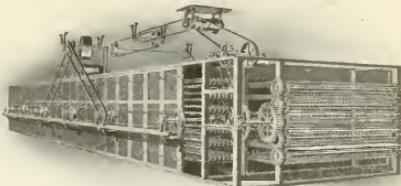

GORDON HOLLOW BLAST GRATE CO., Greenville, Mich.

CHEAPER LOGGING

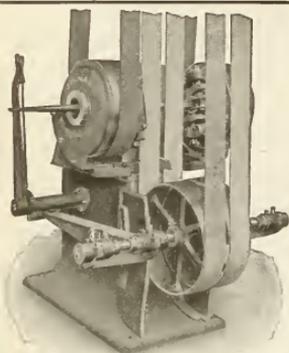

Means spending less money and getting out more logs. It is also the title of our handsome new catalogue, which is by far the most beautiful work ever issued on steam logging machinery. It is intensely interesting and instructive for any lumberman, as it contains over one hundred views (in color) of various operations, and clearly shows just what our machines can do and are doing for others.

811 Railway Exchange, Chicago
Jacksonville

617 Lumber Exchange, Seattle
Shreveport

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock 17½ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

BUILT-UP PANELS FOR FURNITURE MANUFACTURERS

We can furnish you 2, 3, or 5-Ply Panels in Quartered Oak, Mahogany, Plain Oak, Ash, Elm, Birch, Maple or Basswood, and guarantee same in every respect. We use high-grade Glue in our work, and our Veneers are thoroughly dry and our Machinery up-to-date.

We manufacture high-class Panels for Commode and Dresser tops, Commode and Dresser end Panels, Drawer bottoms, glass backs, case backs, foot and head board panels for beds, etc.

If you wish to buy Panels that are **Right and Will Stay Right**, give us a chance to figure with you and submit samples and prices.

THE CORHAM BROS. CO.
MT. PLEASANT, MICH.

We do not claim to be lower in price, but we do claim our PANELS are cheaper in the long run as they

will not come to pieces after they are in the furniture

Do you see the point 
Submit your wants and let us make you happy

The Spring clean-up shows that we have a much larger stock of HARDWOODS in our Philadelphia distributing yards than we desire to carry; in order to alleviate this condition, we have decided to name the lowest possible selling price and we assure you that this is LOW, when the condition and grade of this stock is taken into consideration. If you are in the market now for present or future requirements, it will mean money in your pocket to take advantage of this extraordinary offer. Let us have your inquiries and see for yourselves.

Coming Association Meetings.

NATIONAL VENEER & PANEL MANUFACTURERS' ASSOCIATION.

The National Veneer & Panel Manufacturers' Association will meet at the Ponchartrain Hotel, Detroit, Mich., Tuesday and Wednesday, June 9 and 10.

NATIONAL HARDWOOD LUMBER ASSOCIATION.

The annual meeting of the National Hardwood Lumber Association will be held at Milwaukee, Thursday and Friday, June 11 and 12.

NATIONAL LUMBER MANUFACTURERS' ASSOCIATION.

On June 16, 17 and 18 the National Lumber Manufacturers' Association will convene for its annual meeting at Minneapolis, Minn.

General Market Conditions.

The times are admittedly peculiar. Bank clearances are standing up pretty well to normal and in some lines there is a large average of business moving. At the same time it is equally undeniable that from general merchandising to the iron trade business is being done on a declining market and at a very close margin; in fact the margin is so close as to render business unsafe and undesirable. Yellow pine, hemlock and the Pacific coast woods seem to be hardest hit in lumber lines. Prices are certainly ruling very low—so low in fact that very little can be figured for stumpage at prevailing values.

Hardwoods are standing up better than anything else in lumber and with a few exceptions do not show declining values to exceed \$2 a thousand, and in most cases not over 50 cents to \$1, if at all. In fact standard stocks are on the upward trend. The good end of

poplar and quarter sawed oak are still strong, at about the values of a year ago. Plain oak is being offered at a good \$3 less than last autumn's prices, while gum is dragging at better than \$3 off.

Northern woods are keeping up well, although the coarse end is suffering to the extent of \$2 or \$3 a thousand below autumn prices. It would almost seem that there is concerted effort on the part of buyers to "bear" the market. Such a combination is claimed in some quarters, but there is no truth in any such statement. As a matter of fact buyers are trading one anxious seller off against the next one, and on what lumber they buy are getting just as good a trade as they can, and from the very fact that they are occasionally digging up a soft spot are satisfied that lumber is going still lower and are buying only in homeopathic quantities.

However, the average manufacturer and jobber looks upon the situation very optimistically and apparently is satisfied with forty to fifty per cent of normal trade, and is not hugging any glorious prospects of a full volume of business until after elections are over. It is believed that even a month's normal demand would clean up surplus lumber, and that the year will finish in very good shape in both volume of business and in price schedule.

Reports from all over the country indicate a very spotted situation. A seller will get a million feet order today and for the next week only scattering odd quantities. The eastern situation is still far from reassuring although in the aggregate there is considerable lumber moving. Pittsburg is still quiet and the Chicago trade is far from satisfactory; in fact these markets and the chief Atlantic coast cities represent the hardest situation that there is in the hardwood trade at the present time.

The secretary of the Hardwood Manufacturers' Association reports that very few mills are running in the mountain districts, and practically none on full time. Some few are running on lumber contracted for. In the river sections where hertofore production has been largest, arrangements are being made to "dead-pile" a large quantity of stock being produced this year and hold it in this form till the market will take care of it. The secretary avers that production shows a tremendous falling off in output for the year, and that very little logging is taking place to provide stock for next year.

In the south and southwestern hardwood section output is generally down to fifty per cent of normal, and about the same situation prevails in Michigan and Wisconsin hardwood belts. Comparatively little is being manufactured in the Pennsylvania, Adirondack, Vermont and New Hampshire districts.

Veneer manufacturers claim that their orders are still of the hand-to-mouth variety and most of them are running only half or less time, or with only part of their equipment in operation.

Both maple and oak flooring plants are generally running on slightly shortened hours, but are still having a fair trade at slightly reduced prices.

The foreign woods trade, with cherry and walnut, is comparatively slow, considered in relation to that of a year ago, but prices are fairly well maintained.

Handle producers contend that there is only about forty per cent of normal business in sight and a good many have shut down, while the remainder are running on short time and with limited output.

Selling Lumber in Times Like the Present.

It is not easy to make advantageous sales of lumber in liberal quantities at the present time. A good many lumbermen seem to be convinced that it is impossible to crowd sales, and are merely "lying low" without making any serious effort to do much business. Probably fully half the traveling lumber salesmen are laid off. Letter writing has gone into "innocuous desuetude" and about three lumbermen out of four are showing up at their offices very late in the morning and going home very early in the afternoon, spending the rest of their time playing golf or seven-up.

On the contrary the energetic industrious minority have doubled their efforts and are working like the deuce to secure trade, and being rewarded to a considerable extent. The experience table of the editor of the *HARDWOOD RECORD* demonstrates that the average cost of calling on a prospective customer to sell lumber is approximately \$2 a visit. This table also shows that the average duplicate letter, including postage under a two-cent stamp costs five cents. It can therefore be easily figured out that a lumberman can reach by mail forty prospective customers at the same cost entailed in reaching one prospective customer with a salesman. There is no gaining the fact that the visit of an intelligent salesman is more effective than any letter, but the chances of effecting a sale from forty intelligent, forceful, convincing letters are greater than the possibilities of one call made by the average traveling salesman.

Therefore it is that the alert minority of hardwood manufacturers and jobbers are pretty thoroughly experimenting at the present time in selling lumber by mail, and only personally visiting regular favorite customers occasionally. They are utilizing the *HARDWOOD RECORD*'s list of wholesale consumers, and sending out ten, fifty, a hundred or five hundred letters daily about particular woods which they are desirous of moving, and which they know by the evidence at hand are ordinarily consumed by the houses to whom they write. These people report that they are digging up a considerable quantity of new trade at very fair prices.

The project of securing business by mail is no new one, but very few lumber sales managers have ever evolved a comprehensive and accurate system of letter writing on the "follow-up" plan. The *HARDWOOD RECORD*'s regular bulletin service of buyers is at the disposal of every lumber advertiser in the paper, including specific suggestions covering letters to be issued in duplicate form, which cannot be recognized as of a circular nature.

Why Is It?

For some unknown reason all forestry legislation introduced into Congress has met with determined opposition. In spite of the powerful and intelligent adherents which the cause has gradually enlisted, every step of the reform movements advocated so earnestly by President Roosevelt, Hon. Hoke Smith and others, have been fought "tooth and nail." Repeated attempts have been made to discredit the work of the Forest Service. Senators Heyburn, Clark, Carter, Patterson and others have been ring leaders in this opposition, while in the House Speaker Cannon has been openly and frankly opposed to further forest legislation, declaring that we've always had timber enough to cover us and keep us warm, so he "guesses" we always will; anyhow, he doesn't believe in "borrowing trouble."

It is evident that the only way in which great forestry movements may be carried forward to ultimate success is by enlisting a superabundance of popular sentiment in support of them. The movement should be given an immense impetus by the recent remarkable conference of executives held at Washington to consider the perpetuation of our national resources. This great work will largely devolve upon the press of the country, and will take constant, steady hammering away to accomplish it. Stuart Edward White had a recent forceful article on "The Fight for the Forests," in the *American Magazine*; and Emerson Hough, writing in *May Everybody's* on "The Slaughter of the Trees"—will no doubt succeed in opening the eyes of a large number of intelligent citizens to a series of important and indisputable facts regarding the timber supply, though sundry statements toward the close of the article, wherein

certain lumbermen are heavily scored, must be flatly and honestly denied.

However, the people must be made to realize the importance of this forestry legislation and work, that they may instruct their senators and representatives in no uncertain terms, to pursue a rational course. Then and only then will measures introduced at Washington be permitted to meet ultimate fulfillment.

Fire Losses.

The recrudescence of fire losses is noted in every period of business depression, and the present one is no exception. Every day records the destruction of some sawmill or woodworking plant. The frequency with which these fires occur would almost lead one to concede that the moral hazard is a pretty serious one in times of business depression, but this fact is far from true in the lumber and general woodworking industries. The chief reason for disastrous fires lies in the fact that many plants are idle and watchmen's efforts are relaxed or in some cases dispensed with entirely, for the sake of reducing the cost on idle mills. Again, during a time when plants are not run, or are running short hours with diminished labor crews, the "housekeeping" becomes had and the opportunity for fire increases. In all the sawmill, lumber and woodworking plant fires of the last three months there is scarcely a suspicion attached to one of them that it was of incendiary origin. Fire losses during dull periods seem to come about "just naturally."

Report of the Forester.

The report of the United States Forest Service for the fiscal year ended June 30, 1907, together with an outline of plans for the work of the current year, has been issued by Hon. Gifford Pinchot, Chief Forester.

The Service has succeeded in effecting a far more active and intelligent realization on the part of people throughout the entire country of the practical importance of forest preservation and the necessity of concerted action to avert the calamity of an exhausted timber supply; and it has awakened in the mind of the general public a growing discernment of the great principle that our national welfare demands the conservation of all natural resources, including the forests themselves, of water for agriculture, domestic supply, power, and navigation, which the forests greatly influence, and of the soil which the forests hold in place.

Had the Forest Service failed to accomplish a single other thing, its work for the year would have been a great one, but in addition to this educational campaign which it has vigorously conducted, it has promoted a marked growth in the support of the national forest policy by the people of the West, who have taken hold of it and made it their own; an increase of the national forests now held and managed by the government to serve the best interests of the people, not only now but in the future—from 107,000,000 to 150,000,000 acres; the extension and improvement of the system of inspection of existing national forests and others, through which the office of the Forester is kept informed as to the efficiency of work in the field; six inspection districts with headquarters at Missoula, Denver, Albuquerque, Salt Lake City, San Francisco and Portland; a radical change of organization which insures closer cooperation of allied lines of work, and better control by the chief forester through a large reduction in the number of administrative heads reporting directly to him; closer touch between office and field work in that supervisors are now brought from their forests to fill for definite periods the positions of the six district foresters at Washington. Notable success has been achieved in the control of grazing in forests, with satisfaction to owners of stock entitled to use the ranges and to the protection and improvements of the tracts; there has also been a striking reduction in fire loss, and better methods for securing reproduction after lumbering have been applied; experiments in seasoning and treating chestnut and arbor vitae poles have been conducted in cooperation with the American Telephone and Telegraph Company, and hemlock, tamarack, fir, larch, and other ties have been treated and laid in cooperation with several railway companies, while fence posts and wood paving have been studied in most practical and systematic ways.

Pert, Pertinent and Impertinent.

The White Mountains.

Stern of visage, gaunt of form,
Monarchs grin in realm of storm—
All the fleet of nebulous boats;
Every craft-of-cloud that floats,
Heaped high with vaporous cargo,
Renders toll to your embargo.

Stern of visage, gaunt of form,
Spinners clad in cloaks of storm—
From your distaves wrapped with mist,
Tirelessly ye twine and twist.

Winding out in glistening skein,
Slender filaments of rain.

Stern of visage, gaunt of form,
Weavers on the looms of storm—
Dashing streamlets now ye braid,
From silvery strands so deftly made;
Binding all these fluid rivers
Into power-producing fibers.

Stern of visage, gaunt of form,
Wrestling strength from out the storm:

Pouring wealth on plains below,
Where your cloud-wrought rivers flow,
Turning mill-wheels as they glide,
To meet the ocean's brimming tide—

Pause ye not from toll, we pray,
Ere our race has lived its day;
Masters of the wind which rages,
Reign ye on through endless ages;
Enthroned eternal midst the storm,
Stern of visage, gaunt of form!

AMERICAN FOREST TREES.

SEVENTY-FIFTH PAPER.

White Spruce.

Picea canadensis—Mill.

The range of growth of white spruce is from Labrador nearly to the shores of the Arctic Ocean, extending to sixty-six degrees north latitude and westward to the shores of Bering Strait; the species extends southward along the Atlantic Coast as far as the

TYPICAL FOREST GROWTH WHITE SPRUCE, ADIRONDACK MOUNTAINS, NEW YORK.

northern New England states and New York; westward along its southern boundary in Michigan, Wisconsin, Dakota, along the Rocky mountains of northern Montana and up into the interior of Alaska. The tree is often planted for ornamental purposes in the northern states and Canada, but if taken

much further south perishes from heat and dryness.

Its preferred habitat is the shores of lakes and streams, and along ocean cliffs; in the far north, the rocky slopes of foothills. Along the southern boundary it requires considerable moisture, and near the coast line of southern New England and New York it is found thrifty and well developed in many a swamp and bog. Under favorable conditions and with ample space around it, it forms a symmetrical, pyramidal head with dense foliage, but when in the heart of the forest it attains a much greater height, and of course shows less tendency to branch out. In the latter case it sometimes reaches a height of 150 feet, with a trunk three to four feet in diameter, but such specimens are rare.

White spruce is the common name applied to the tree in Vermont, New Hampshire, Massachusetts, New York, Wisconsin, Michigan, Minnesota and Ontario; it is known as single spruce in Maine, Vermont and Minnesota; as bog spruce in New England; as skunk spruce in other parts of New England, Wisconsin and Ontario—the latter name being applied to it because of its ill-smelling foliage and twigs; it is also known as cat spruce and double spruce in New England, and as pine in the Hudson Bay district.

The bark of white spruce is grayish brown, breaking up into scaly discs. The leaves are a light olive green, needle shaped, and sharply pointed; half to three-quarters of an inch long, pubescent and glaucous when young.

The staminate flowers are a dull red, soon appearing yellow from their dense coating of pollen; the pistillate flowers are pale red. The fruit is a cone from one to two inches long, of a pale green color, later turning to a tan, and shed almost as soon as opened; it is terminal, growing at the ends of the branchlets.

The wood of white spruce is light, yellow, brittle, soft and not very strong; it is straight-grained and the sapwood can hardly be distinguished from the heart; in the eastern provinces of Canada and to some extent in Alaska it is manufactured into lumber, but used only as a handy substitute for more desirable species; occasionally, however, it is employed as interior finish, and good specimens have been compared to satinwood in appearance.

The pale bark and light foliage and wood easily account for the name white spruce, and by these features and its ill-smelling leaves and twigs, it may be easily known. In distinguishing the tree from other conifers, Lounsbury says: "As the tall shaft of the white spruce raises itself above the level of surrounding things and spreads its branches until they form a cone-shaped outline, it stands distinct and clear against the monotonous sky-line. Nature shows us many little

differences; nothing to her is insignificant. We notice therefore that the needles of the spruces have fine and sharp points, and that they are arranged all about and on every side of the little branchlets. The fir trees have blunt-pointed needles, and the under sides of their twigs are not covered by them. That this tree may not be confused with the black spruce, its bark and foliage are both lighter in coloring; and the scales of its cones are thinner and more papery to the touch than either those of the black or red spruce."

The inferiority of white spruce lumber for commercial purposes has been the means of saving it for a comparatively new industry, paper pulp manufacture. While large quantities have been lumbered for this purpose, the tree readily reproduces itself, and cut-over mountain sides, if not burned, come up

FOLIAGE AND CONE OF WHITE SPRUCE.

densely to spruce and fir, and elsewhere reproduction is good as a rule.

A trained forester at present in the employ of a large eastern concern engaged in the pulp industry relates that when placed in charge of the company's spruce tracts in Maine and New Hampshire he was astonished at the great and needless waste in logging, and doubtless the methods of this company are similar to those of a great many others in this respect. Economy had been given little thought, and strange to say the worst offenders were some of the company's most valued men. The amount of effort necessary on the part of the forester to get them to pick up small items was amazing. For years they had been judged mainly by the cost of their logging. "Cheap logs, cheap logs," had been dinned into their ears until they

BURDIS ANDERSON
MUNISING, MICH.

could hardly recognize any other tune, and consequently it took two years of steady hammering before they could be made to realize that the company was actually willing to go to extra expense to pick up inferior material. The waste of logging occurred in the high stumps left standing; in large tops left in the woods; in dead or fallen trees, part of which were available, not being taken, and in merchantable logs being used for skidways and camps. The forester in charge of the operation, after two years' enforcement of a rigid policy, found that the total loss and waste in 15,600,000 feet cut by six crews was 250,000 feet, or 1.47 per cent. The gross gain from close inspection alone, without reference to written orders, he believes to have been at least 1,000,000 feet out of the 15,600,000 feet above referred to, which in a cut of 70,000,000 would represent a stumpage value of \$25,000.

This experience only serves to show that a vast saving might be effected in many logging operations, not confined by any means to spruce timber, and that such economy is not only desirable but necessary will not be disputed by any one in these days of our

rapidly decreasing timber supply. In considering the advisability of conservative cutting the company referred to took into consideration all factors for and against it, and formulated in their own minds what they believed was the best policy to pursue in their logging work. Certain tracts where the fire risk was great, especially bordering railroads, they determined to cut clean. Land very expensive to operate they disposed of in the same way. Other tracts not seriously jeopardized by fire, and where drivable streams and the lay of the ground made lumbering fairly cheap, they determined to cut more lightly, with a view to a second crop, and perhaps later ones. This policy was the company's own, and to every one qualified to judge it seemed before trial, as it seems now, a sound one, and one which may well serve as a matter of careful study and emulation by lumbermen who are able and willing to take some active part in the conservative policy necessary for perpetuating the timber supply.

The illustrations accompanying this article are from Hough's Handbook of the Trees, and were made in the Adirondack Mountains of New York.

Builders of Lumber History.

NUMBER LXVII.

Burdis Anderson.

(See Portrait Supplement.)

A commercial organization which, though a comparatively new one, has nevertheless done wonders for men engaged in a special phase of the lumber business, is the National Veneer and Panel Manufacturers' Association. Though only about three years old, the association is composed of sincere, well-posted men who have the good of their industry at heart, and who are willing to sacrifice no end of time and money toward making it a live up-to-date organization, and a power in the general lumber trade.

One of the prime movers in this work, and one to whose efforts much of the success already attained may be attributed, is Burdis Anderson, chairman of the first meeting ever held by single-ply veneer manufacturers in February, 1906, and now president of the National Veneer and Panel Manufacturers' Association, whose portrait is herewith presented in supplement form to the readers of the Record. Mr. Anderson is a lumberman in the strictest sense, having been trained for that work exclusively and having made it his "calling" since a very young man.

He was born at Paw Paw, Mich., Feb. 27, 1869, and is justly proud of his ancestry; he is a direct descendant of the Scotch house of Douglas and the lords of Kilbourne Manor, Yorkshire, England. His father is the Rev. D. R. Anderson, pastor of the Congregational church of Two Rivers, Wis., a man well known in religious work in the middle West, having been state evangelist of Illinois for several years.

Mr. Anderson attended high school at Racine, Wis., and later went to Northwestern

University at Evanston, Ill., for two years. During his school days he studied vocal and instrumental music at the Racine School of Music, under well-known Chicago and New York instructors, so that he was able while in college and afterward, to turn his ability to considerable account financially by singing and playing the pipe organ in church, managing concerts and like work.

In 1891, soon after leaving the university, Mr. Anderson began his preparatory training for the lumber business, going to Boardman, N. C., to take a position with the Butters Lumber Company, which had one of the largest and most complete plants in the South for the manufacture of rough and dressed lumber. In four months he was made manager of the company's large general store, and a year later was given control of the general office and the buying of all materials and supplies.

His various duties placed the young man in a position to take advantage of many conditions and circumstances, which enabled him to learn the practical side of the business, scaling logs, inspecting lumber, etc., and he made the problem of costs in every department from stump to car a matter of careful study.

In 1895 the Butters interest sold out to Boston capitalists, and Mr. Anderson remained with the new owners seven years. At the end of 1902, after having spent eleven years in the lumber business, he resigned to undertake the development of some rice lands near Wilmington, N. C. A superabundance of rains, high tides, and the competitive Texas product soon convinced Mr. Anderson that Carolina rice lands were not the bonanza he had imagined, and in May, 1904, he decided

that his wisest course was to remain in the lumber trade. Accordingly he accepted an offer to go to Grand Marais, Mich., and act as trustee for the Walker Veneer & Panel Works, an enterprise which was at that time in financial distress.

Under Mr. Anderson's capable management this company was reorganized as the Great Lakes Veneer & Panel Company, continuing to operate under that name until the autumn of 1906, when Mr. Anderson organized the Great Lakes Veneer Company, with increased capital, which purchased all rights and property of the old company. The business was transferred to Munising, Mich., where abundant timber supply and more favorable freight rates were to be had, and an up-to-date veneer plant was erected at that location.

The company's timber supply is secured by long-term contract with the Cleveland Cliffs Iron Company, one of the largest holders of hardwood timberlands in this country. The desirable logs are taken out by Mr. Anderson's woodsmen, ahead of the choppers for the iron company's furnace operations. The company manufactures the chief species of northern hardwoods, both the plain and figured varieties, into high-class face veneers, panel centers, cross-banding, drawer bottoms, pin blocks, lining stock, etc., for the piano and furniture trade. It makes a specialty of bird's-eye maple, and was awarded a medal for this stock and hirsch veneers at the Jamestown Exposition. The company has large contracts for bird's-eye maple stumpage, and three solid concrete kilns for bleaching and drying this special product. The plant is equipped with three rotary machines, two Proctor automatic dryers, barking machine and all other necessary appliances for turning out the very best kind of material.

The officers of the Great Lakes Veneer Company are William Chandler, president; E. L. Stanley, vice president; Burdis Anderson, secretary, treasurer and manager; these officers, with George Kemp, M. J. Weaver and S. T. Handy, form the board of directors, and are all residents of Sault Ste. Marie, Mich., with the exception of Mr. Anderson, who is in active charge of the plant at Munising.

Mr. Anderson married a daughter of the late Horace Butters of Ludington, Mich., and has three children. He is a Knight Templar, and very prominent socially, being known to a large circle of acquaintances in and out of the lumber trade as a famous host and clever entertainer. Although extremely fond of outdoor sports, as evidenced by the fact that he is president of the Grand Island Rod and Gun Club, he is equally fond of study and has a fine private library, in which he spends much of his spare time.

Mr. Anderson makes an ideal presiding officer, and in his association work as well as in the management of his business, is a believer in thoroughness and taking infinite pains with even the minutest details of the work at hand, a trait which makes his authority count wherever it is exerted. With regard to personality, Mr. Anderson is unique and wonderfully attractive in that he possesses to a marked degree the rare combination of practical, hard-headed business ability with versatility and the aesthetic sense.

The Utilization of Hardwoods.

ARTICLE V.

The Manufacture of Carriages.

The carriage doubtless developed from the chariot, or some other form of primitive cart. Thus it was probably the necessities of war that brought "man-carrying" vehicles into use. Chariots were used in Egypt at a remote prehistoric period, but it was among the Romans that carriages began to gradually as-

vehicles generally are quite different from those employed in heavy wagons. Longleaf pine, almost universally in use for the bottoms of heavy wagons, is never utilized; again, oak, which in heavy vehicles is the timber most widely employed for all parts of the gear except axles, is altogether unavail-

able as to method of construction so they are as to materials. As already stated, ash is the favored timber for carriage framework. This wood, because of its toughness, elasticity and comparative lightness, has always been rightly regarded as invaluable in carriage building, and was formerly used for framework to the practical exclusion of all other timbers; but nowadays, on account of its scarcity and high price, substitutes are much utilized, among them maple, oak, beech, red gum, rock elm, white elm, hackberry, butternut and pecan.

For panels poplar is now the standard wood, its lightness recommending it, since it is sufficiently strong for the purpose. Its increasing scarcity, however, is causing many carriage builders to look elsewhere for panel stock. Cottonwood is very widely employed as a substitute; other timbers so utilized are red gum, basswood, silver maple and buckeye. Red gum is much used for buggy bottoms. Metal panels have been tried by some manufacturers, but are declared to hold paint poorly and to dent easily, thus being quite unsatisfactory. Steel panels have been used with apparent success in some makes of automobiles and therefore it would seem that a metal carriage panel need not necessarily prove a failure.

In former times, indeed up to twenty-five years ago, carriage panels of Honduras mahogany were made in England, but in the United States mahogany and rosewood are nowadays seldom impressed into the service by the manufacturers except when carriages of state are made; then woods of great value are turned to account, and rich carvings and ornate trimmings, together with the best skill of the painter on wood, are lavished upon the body of the vehicle; however, the making of state carriages is mainly confined to Europe.

EXTENSION BROUGHAM OR DEMI-COACH

sume a practical form. They were supposed to belong exclusively to the nobility, just as today the closed carriage gives its owner a certain degree of social distinction in the eyes of the less fortunate. The Roman carriages were often decorated with gold and precious stones, and the covered vehicle dates back to the Cæsars.

Ash is employed extensively for the framework of carriages and the great majority of light vehicles. This is not the case with heavy vehicles, where ash is now little used, and of course the construction of the carriage differs from them in several other essential particulars. Great bulk is undesirable, and therefore framework and panel construction is used in the body or "box" instead of the solid board construction seen in the farm wagon. This construction is also used in the light delivery wagons—that is, the covered wagon type so common among retail merchants. But there are secrets in the art. One of these is the manner of making side panels. These, when properly made, are shuped up to vary slightly from the straight edge, having an outward "bellying" to offset the effect of shrinkage, which would otherwise give the side of the vehicle a crestfallen look. Carriage panels are from three-eighths of an inch to one and one-quarter inches thick; sills and body pillars deeper.

The woods selected for buggies and light

able for that purpose in the making of light vehicles.

Odd as it may seem, there is hardly a point of similarity in the choice of woods for the various parts of light and heavy vehicles. As the bodies are generally altogether different

PARK DRAG.

When ash was plentiful it was much used in the gear work of carriages, but at present hickory is practically the only timber utilized, except in the hubs and axle caps. For the hubs the favorite wood is rock elm, whose elastic toughness, coupled with a certain degree of hardness, has given it the preference for light work. These qualities allow the

great importance, far more so than is the case with the wagon, where it is nevertheless an essential part of the work, at least in the higher class vehicles. But where three or four coats are deemed sufficient for the best farm wagon the good carriage maker will sometimes put on as many as seventeen coats or more; in England manufacturers are very

finished. They are not glued on nor screwed on, but form a solid and component part of the body. A regular stock style, manufactured by Jas. Cunningham, Son & Co., may be described as an example. Each side has four delicately carved pillars, and the top and bottom frames of the windows, between the pillars, are likewise heavily carved. The "boot" or compartment under the coachman's seat has windows on either side, each one being framed between two pillars and top and bottom mouldings. Even the coachman's foot rest is carved. The lamps also are of superb design, about three feet high.

The cuts of the carriage, automobile and park drag accompanying this article were loaned by C. P. Kimball & Co. of Chicago and show a few of the high-class types of vehicles put out by this concern.

From the funeral car to the two-wheeled road cart the varieties of carriages now in use number forty or fifty, and it is not every one who can tell the difference between a cab and a coupe, or between a brougham and a landau.

CHARLES KLAUBER.

New Credit Rating Book.

W. F. Biederman, superintendent of the National Lumber Manufacturers' Credit Corporation, St. Louis, has just issued the ninth volume of its credit rating book containing a classified list, with capital and pay ratings, of all manufacturers, wholesale and retail dealers in lumber, as well as of factories which buy in carload lots. As usual, the utmost care has been taken to make the list as complete and accurate as possible. Reliability and conservatism are features of it which lumbermen will appreciate, and corrections, business changes, new concerns, failures, etc., are taken care of in the weekly correction sheet.

Accuracy and thoroughness have characterized all previous issues of the credit rating book, as they do the operations of all departments of the corporation. The names of officers at the head of it are a sufficient guarantee of merit for any publication issued from the home office. They are Wm. Irvine, Chippewa Falls, Wis., president; R. A. Long, Kansas City, Mo., vice president; J. A. Freeman, St. Louis, treasurer; Geo. K. Smith, St. Louis, secretary.

LIMOUSINE CLOSED BODY.

spokes to settle in the hub so that a close union is formed without the crushing of fibers. Black locust has these characteristics to a lesser degree, and persimmon, black birch and dogwood have been found to be fairly satisfactory substitutes. For the axle caps maple has been largely substituted for hickory because it is cheaper and more plentiful.

The rest of the vehicle, as stated, is almost always exclusively hickory, including poles, shafts and spokes. The merits of this wood are well known, and it seems to be indispensable to the making of the modern American carriage. The needs of this great industry furnish one important reason for the careful conservation of our hickory supply. Results of the government's recent tests of hickory buggy spokes and hickory and red oak buggy shafts showed that a large proportion of the red and mixed spokes undeniably belong to the highest grades and that the prejudice against red hickory is without foundation. Weight for weight, the red, white and mixed spokes were found to be of equal strength and toughness, at least in clear stock. The shaft tests showed that red oak may be substituted for hickory of the lower grades in shaft manufacture.

The felloes or individual sections of the wheel rim may be either bent or sawed, but the former are generally preferred where wooden wheels are used.

Hubs are either entirely of wood or fitted with a metal armor. Racing carts have cycle wheels, where wood is not used, except sometimes for the rim. Carriage axles are often of steel, and this is said to give complete satisfaction in certain forms.

The painting of a carriage is a matter of

thorough in this particular. The durability of the vehicle itself is prolonged by this extreme care, but the chief cause is the fact that the highest possible polish is demanded in most types of carriages, and if such a polish is to withstand time and exposure it must be durable indeed. The number of coats is simply a matter of experiment and tests.

Practically all funeral cars are more or less heavily carved, and no portion of the box itself escapes the machine or the artisan's tool. In the best vehicles of this type all carvings and mouldings that form part of the body are cut out of solid wood and hand-

BEAUTIFULLY CARVED FUNERAL CAR.

An Electrically Driven Woodworking Plant.

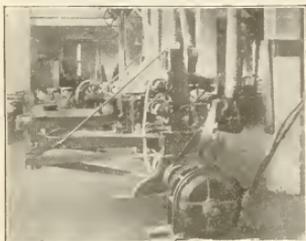

FIG. 1—15 H. P., 900 R. P. M. INDUCTION MOTOR DIRECT CONNECTED TO H. B. SMITH DOUBLE END TENONER, CUT-OFF AND ROUNDING MACHINE.

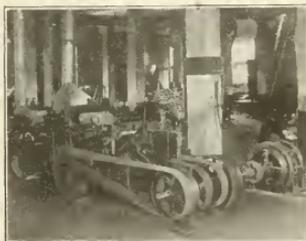

FIG. 2—20 H. P., 900 R. P. M. INDUCTION MOTOR DIRECT CONNECTED TO COUNTERSHAFT OF H. B. SMITH NO. 108 9" MOULDER.

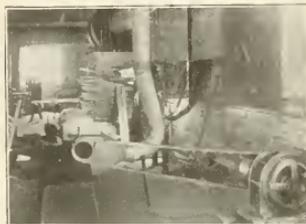

FIG. 3—20 H. P., 1,200 R. P. M. INDUCTION MOTOR BELTED TO MERRITT TABLE LEG MACHINE.

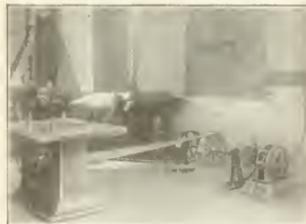

FIG. 4—4 H. P., 900 R. P. M. INDUCTION MOTOR DIRECT CONNECTED TO COUNTERSHAFT OF H. B. SMITH NO. 185-B DOUBLE SPINDLE SHAPER.

The new plant of the Virginia Table Works at Marion, Va., affords many opportunities for a study of modern woodworking methods. This factory is completely equipped with electrically-driven woodworking machines, and illustrates thoroughly the advantages of the electric drive for this class of machinery.

The Virginia Table Works manufactures both medium and high-grade hardwood tables exclusively, and has a well-founded and growing business in this class of furniture. Marion is in the center of the Virginia hardwood section, and being located on the main line of the Norfolk & Western Railway has excellent shipping facilities. This, together with an abundance of labor and raw material, was the determining factor in the location of the plant.

The main building is a two-story structure. On account of the fact that all the machinery is on the first floor it was thought advisable to make this part of the factory fireproof. Consequently reinforced concrete and brick were used exclusively in the construction of this part of the building. Should future conditions warrant the extension of the plant, the design will allow the fireproof construction to be extended to the other stories. The second floor, which is of ordinary frame construction, contains the carpenter and cabinet shops in which the tables are assembled before shipment.

Besides the main building there are two wings: one, a single-story structure, containing the boiler room and dry kilns; the other, a two-story building, containing on the second floor the varnishing and finishing rooms, and on the first floor the offices and shipping departments. The boiler room contains a sixty

horsepower boiler, which furnishes low pressure steam for the heating system and dry kilns. The fuel, consisting of waste material from the shops, is conveyed to the boiler room by an exhaust system, further details of which are mentioned in another part of this article. The Jas. D. Lalor Engineering Company, Washington, D. C., were the engineers in charge of the design and general layout.

In deciding upon the adoption of the electric drive for this plant many factors were taken into consideration. The company desired to obtain a maximum output from a minimum operating space. It was found that with the electric drive more space could be utilized and the machines located to better advantage as regards lighting and the proper sequence of manufacturing operations. The elimination of all heavy line shafting with high friction losses and attendant annoyances from broken belts and obstructed light, and the reduced fire risk were all taken into consideration.

The initial cost of both the electric drive and the mechanical drive was found to be approximately the same, but when the company learned that power could be purchased from the local lighting company at two cents per kilowatt-hour they figured that with the adoption of the electric drive there would result a large saving in the power cost. This point has been borne out, now that the plant has been in operation for several months.

In this connection it might be well to mention the fact that the president and general manager of the Virginia Table Works is also a large manufacturer of heavy wagons. In the wagon plant, where the mechanical drive is used, the cost of power, not including re-

newal of belts, amounts to \$200 per month and over. When it is considered that the monthly cost of power in the table works averages only about \$130, and that the number of machines in service in both plants is about the same, it will be seen that the electric drive accomplished that which is desired by every manufacturer—reduction of operating expenses.

The total capacity of motors installed throughout the plant is about 175 horsepower. They are of the induction type manufactured by the General Electric Company. These motors have long been looked on with favor in woodworking plants on account of their simplicity and ruggedness. The absence of all moving electrical contacts in this type of motor and the consequent reduction of the fire hazard is also an important point in their favor.

The fact that in this type of induction motor the starting resistance is contained within the revolving member, thus eliminating the separate starting compensator, contributes to a wiring arrangement that is remarkably free from complication. A main switch with the necessary fuses is all that is required. The wiring throughout the plant is done in a neat and substantial manner.

The electrical transmission throughout the mill is at 220 volts; three-phase, sixty-cycle alternating current being supplied by the local lighting plant. In this connection it is interesting to note that although the total generat-

ing capacity of this plant is only 100 kilowatts, or about 134 horsepower, power is supplied not only to the table works but also to several small factories in the town. While this, of course, can be accounted for by the fact that all of the machines in the different factories are rarely in operation at the same time, still it is an excellent illustration of the inherent reliability and that desirable characteristic of modern electrical machinery, viz., the capacity for temporary heavy overloads.

With one exception the individual drive is used throughout. In many cases the motor is direct connected by means of flexible couplings, either to an extension of the machine shaft or to countershaft contained within the machine. Where this method is impracticable the motor is either connected to a countershaft to which the machine is belt-connected, or it directly drives the machine by means of a short belt connection.

Figs. 1 and 2 are excellent examples of the direct drive. In Fig. 1, which shows a double-end tenoner, cut-off and rounding machine driven by a fifteen horsepower motor, the motor is connected direct to a countershaft contained within the machine. A short belt shown in the illustration drives the cut-off saw attachment. In Fig. 2 a twenty horsepower motor is shown driving an H. B. Smith Machine Company's No. 108 nine-inch molder. It will be noted that the bedplate of the machine is extended to carry the countershaft,

which is direct connected to the motor. The feed rolls and cutters are belt driven from the countershaft. This method of connection results in a compact and easily accessible unit with an abundance of belt ing contrivances also to a better lighting arrangement.

A typical illustration of the belt drive without countershafts may be seen by referring to Fig. 3. A twenty horsepower motor is here shown driving a Merritt table leg machine. A direct connected motor could not be used in this case on account of the high speed of the cutter head. This same method was applied in a similar case involving the operation of a double spindle shaper by a four horsepower 900 R. P. M. motor connected to short countershaft, as shown in Fig. 4.

The Fay & Egan triple drum sander shown in Fig. 5 is driven by a twenty-five horsepower motor. The method of connecting the motor directly to the countershaft, as shown in this illustration, is used throughout with the one exception of the group drive shown in Fig. 6. The ten horsepower motor, which is just visible in the right of the illustration, drives a countershaft from which the following machines are belt driven: Two hand lathes, one spindle carver, one dove-tail machine, one combination saw, two emery grinders, one post borer and a belt sander. These machines are all small and the arrangement compact.

All sawdust and shavings are effectually removed from the machines by an exhaust blower direct connected to a twenty horse-power motor. Exhaust pipes carried directly to the floor afford an easy and effective method of disposing of the sweepings. As stated before all refuse material is carried directly to the boiler room, where it serves as fuel.

Among the motor-driven machines not mentioned are a swing cut-off saw, glue jointer, cabinet surfacer, band saw, etc. The following list gives the types of machine in use driven by General Electric motors and the horsepower of motor required:

	H.P.
Swing cut-off saw.....	5
Self-feed rip saw.....	10
Jointer (16-inch).....	3
Glue jointer.....	10
(cabinet surfacer (36-inch)).....	15
Moulder (9-inch).....	20
Tenoning, rounding and cut-off machine.15	

Triple drum sander.....	25
Double spindle shaper.....	4
Table leg machine.....	20
Back knife lathe (40-inch).....	7 1/2
Band saw.....	3
Group drive.....	10

The operation of the plant has been satisfactory in every respect, and no trouble whatever has been experienced. The factory superintendent states that he finds the electric drive to be more satisfactory in every way than the mechanical drive, giving as his reasons that the machines are located to better advantage than would be possible with long line shafting, and that the flexibility of control is greater.

The president of the concern aptly expressed his views of the electric drive when he stated, "We are very much pleased with the motor drive and everything is going along successfully. I do not hesitate to say that I would not change to any other drive I knew of, even at much less cost."

nation say that railroad rates shall not be advanced, I doubt if it can be done; but it should be understood clearly, definitely and beyond all question of doubt that in saying this the railroads say just as clearly

The Fight Against the Railroads.

Pursuant to a call issued by the shippers of the Middle West for a mass meeting to protest against the proposed increased freight tariff, representatives of more than fifty commercial and industrial organizations throughout the country, covering a wide variety of trades, met at the Auditorium Annex on May 15 to commence an organized battle against the railroads.

Frederick W. Upham, one of Chicago's well known lumbermen and president of the Illinois Manufacturers' Association, which inaugurated the movement, occupied the chair, and even in the presence of prominent representatives of the railroads at fault, did not hesitate to attack them in no uncertain terms. Considerable excitement and bitter feeling was manifest in the addresses made and Mr. Upham himself, in introducing W. C. Brown, senior vice president of the New York Central lines, the chosen agent of the eastern railway interests, said:

"It did occur to the railroads to hear the shippers when they were arranging for an increase in freight rates, but we shall be glad to extend a courtesy to the railroads which was denied us by them."

Mr. Brown delivered a remarkable address, strong in its appeal for sympathy and lenient treatment, delivering his ultimatum in the following words, in which he places the railroads on a platform of their own, standing midway between capital and labor, and while virtually admitting that they cannot stem the tide of shippers' organized opposition, they can and will give shippers the only alternative of accepting the policy of the roads or bringing down upon themselves and the country far harder times than are being experienced and the frenzied opposition of organized labor:

"The issue is in the hands of the business men of the country. You are the masters. If the business interests of the

FREDERICK W. UPHAM, CHICAGO, ONE OF THE LEADERS IN THE MOVEMENT.

and definitely that the wages of the great army of 1,500,000 railroad employees shall be reduced and that they must accept their full measure of responsibility for the results which will follow."

Mr. Upham insisted that shippers had always cooperated with the railroads when there was any justice or open dealing on the part of the latter. He gave figures to show that they had not suffered the recent financial depression as much as they wished the people to believe.

Levy Mayer, attorney for the Illinois Manufacturers' Association, said that the

railroads "in secret chambers, for reasons real or fake," seek to increase the rates, and once the wrong becomes legalized the only redress will be tedious court proceedings, hanging fire perhaps for years. He characterized such a process as gross wrong, a mockery of justice amounting to legal anarchy. He commended the process of injunction as available for shippers when threatened with increased rates, but regarded the best remedy as a passage of the pending bill placing it within the power of the Interstate Commerce Commission to approve or prevent proposed advances.

Before adjournment the meeting unanimously passed resolutions calling upon the railroads to submit their proposition to the Interstate Commerce Commission for final decision, otherwise resolving to appeal to the courts to prevent the railroads from putting the proposed increases into effect.

The resolutions are as follows:

"The carriers east of the Mississippi river and north of the Ohio (which is known as the official classification territory) propose to make a horizontal increase in their freight rates expected to be from 10 to 15 per cent. This means an increase in freight charges in that territory of about \$100,000,000 annually. If the carriers in that territory make such increase, it is almost a certainty that the carriers in other parts of the United States will follow that example.

"For more than ten years past the carriers, with reference to nearly every class of freight, have been constantly increasing the freight rates, either by advancing the classification or by commodity increase.

"The shippers of this country have organized and conducted their business upon the basis of the prevailing rates and have continued to pay those rates, notwithstanding the existing serious business depression.

"The carriers now propose, in the teeth of the present universal business impairment, to put acute additional burden upon the business interests of this country, and this calls for immediate protest and opposition.

"The carriers, arbitrarily and without conference with or hearing the shippers, are attempting to do what will still further disorganize and injure commercial conditions.

"Whenever the railroad commissions of the various states have undertaken to lower freight rates the carriers have asserted their constitutional right to go into court and attack those reductions, if they deemed them unreasonable. The time has come when the shippers, for self-protection, are compelled to resort to the same remedy as the carriers have invoked for many years.

"Therefore, be it resolved as follows:

"1. That the carriers in official classification territory be notified that the shippers represented by this conference vigorously object to the carriers putting into effect the proposed increase in freight rates and then leaving to the shippers to thereafter complain and litigate, a course which will involve years of controversy and during which time the increased rates will continue operative.

"2. The shippers represented by this conference now propose to the carriers that the carriers submit to the Interstate Commerce Commission the propriety and reasonableness of the proposed increase, and that such increase be held in abeyance until that tribunal has heard the parties in interest and passed upon the question. But the shippers object to the carriers putting into effect the increased rates and then leaving to future determination as to whether such increase is reasonable.

"3. That unless the carriers, before the increase proposed, become effective, consent to the proposed increase, by adjusting the issue this conference, through a committee of action to be by it appointed, take prompt and decisive steps in the appropriate judicial tribunals in the territory to be affected by such increase to stop such action by injunction or otherwise.

"4. That this conference, through its chairman, appoint a committee of fifteen representative shippers, with full power and authority to carry out the result of the action, and with further power to add to their number and to reconvene and report to this conference from time to time, as the exigencies of the situation may require."

The lumber interests were represented on the committee on resolutions by E. W. McCullough, secretary of the National Wagon

Manufacturers' Association, Chicago, and J. C. Knox, secretary of the Michigan Hardwood Manufacturers' Association, Cadillac, Mich. The other members of the committee were: W. B. Conkey, Chicago, chairman; A. B. Brandier, Louisville; E. E. Williamson,

Cincinnati; B. H. O'Meara, Cedar Rapids, Iowa; L. B. Hall, Cleveland; Charles S. Jones, Peoria, Ill.; John T. Pirie, Jr., Chicago; W. H. Duncan, Terre Haute; Irving T. Bush, New York; E. W. Seed, Columbus, Ohio; Ira S. Bassett, Pittsburg; W. J.

Buchanan, Duluth; W. A. Vawter, Chicago; H. G. Wilson, Kansas City; E. L. Wagner, St. Louis; E. M. Wayne, Delavan, Ill.; E. M. Wassmutt, Roanoke, Ind.; F. W. Boltz, Cleveland; Albert Kuhlmeier, Chicago; George Dietrich, Rochester, N. Y.

The Roosevelt Conservation Conference.

"The assemblage was unique; it was a gathering of men of all political parties; its dominant note was vigorous, constructive, achieving Americanism—the spirit which rides over all party lines and disregards all petty prejudices; the spirit which shows how close together, shoulder to shoulder, stand all sections; the spirit which has small patience with a Congress which hangs back and refuses to keep step with the pace of progress which the country is setting; the spirit which recognizes there are difficulties in the way, such as property and state rights, but which is determined these shall be overcome to the end that forests and streams and soils and all other resources shall receive all the protection which the aroused scientific foresight and energy of the people can provide!"

In these potent words of an eyewitness to the inspiring event which took place at our nation's capital last week, are summed up all the harmony, all the progress, all the judgment, all the action, all the good, which characterized one of the most unique conferences ever assembled, and one which will mark an epoch in the industrial history of the United States.

Promptly at 11 a. m. on Wednesday, May 13, President Roosevelt, accompanied by Vice President Fairbanks, marched into the great East Room of the White House to greet the remarkable audience which had assembled there on his invitation—members of his cabinet, justices of the Supreme Court, members of both houses of Congress, the governors of forty states, representatives of all the great industries of the country, specially invited guests, including several presidential candidates and citizens prominent in those industries naturally dependent, directly or indirectly, upon the conservation of our national resources.

In welcoming his guests President Roosevelt made one of the most notable speeches of his career, on what he designates "the greatest material question now before the American people." He referred at length to the various phases of the problems which had brought them together, and perhaps his most characteristic remark came with his reference to the Inland Waterways Commission, for which Congress, with its late habitual delinquency, has made no appropriation.

"That commission ought to be perpetuated, and if Congress does not see fit to perpetuate it I will do it myself!" he shouted, clipping off the words with his customary emphasis where projects dear to his heart are involved. His rally took the gathering by storm, and was greeted with such a roar of cheers and applause as made the incident quite the feature of the day. The President showed no desire to monopolize all the glory and congratulations which were showered upon him for his brilliant move toward the policy of conservation, but paid tribute to Hon. Gifford Pinchot, whose work in the direction of forestry particularly is well known to lumbermen,

declaring that it was from his suggestion the conference actually originated.

The President, finding it impossible to spend his entire time at the meetings, called each session to order and designated one of the governors to preside. At the Wednesday afternoon session this honor fell to Governor Noel, of Mississippi.

Andrew Carnegie, the great ironmaster of the world, gave the convention his opinion regarding "The Conservation of Ores and Related Minerals." He spoke of the great waste of coal in furnace and fire boxes, which ought to be treated by some scientific method; likewise the waste in the mines. He advocated the substitution of other power, that coal might be less generally used. In conclusion he made three suggestions: "First, that the forests be conserved no forests, no longer navigable rivers; no rivers, no cheap transportation. Secondly, we should systematize our water transportation, putting it in the hands of the reclamation service, which has already proved itself highly capable by its valuable work; cheap water transportation for heavy freight brings many advantages and means great savings of our ore supplies; railroads require much steel, water does not. Third, conservation of the soil; more than a thousand million tons of our richest soil are swept into the sea every year, clogging the rivers on their way and filling our harbors. Less soil, less crops; less crops, less commerce and less wealth."

Dr. J. C. White, state geologist of West Virginia, spoke upon "The Waste of Our Fuel Resources," including by saying that "the story of our awful waste is one of such disgraceful character that its exposition to the world is necessarily mortifying to all patriotic Americans, but a sense of duty to our common country compels that the truth be told, however humiliating to our national pride."

John Mitchell, the prominent labor leader, also discussed the coal situation, and made the startling statement that competent investigators claim 50 per cent of the coal supply is destroyed or wasted because under present commercial conditions it is impractical to mine it. While he believed this a high estimate, he declared that at least 25 per cent is lost beyond hope or possibility of recovery.

These speakers were followed by Governor Johnson of Minnesota, Governor Dawson of West Virginia, Dr. Van Hise of the University of Michigan, and John Hays Hammond. However, the feature of the afternoon session was the address of Secretary Root, who dwelt at length on the function of the state sovereignties, announcing that he believed it high time the states should commence to perform their several duties with reference not only to individual local interests, but to the common good. "I regard this meeting as marking a new departure,"

said Mr. Root, "the beginning of an era in which the states of the Union will exercise their powers upon a higher plane of patriotism and love of country than has ever existed before."

Governor Burk of North Dakota was elected honorary secretary, while Prof. W. G. McGee and Thomas R. Shipp were designated recording and general secretaries respectively. The Resolutions Committee, appointed at the suggestion of President Roosevelt during the morning session, consisted of Governors Blanchard of Louisiana, Port of New Jersey, Cutler of Utah, Davidson of Wisconsin, and Ansell of South Carolina.

Thursday's session opened with Governor Johnson of Minnesota presiding. In the afternoon this honor fell to Governor Deneen of Illinois. No decisive action was taken, but the resolutions committee was in session all day. The speaker of the morning was James J. Hill, the railway magnate, who covered a wide range in discussing soil and mineral depletion. Mr. Hill accused the average farmer of deliberately robbing the soil of its richness and its fertility in order to make a temporary gain in dollars. He referred to the abandoned farms of the East and Southeast and deplored the fact that such conditions should exist, for he regards all our industries as dependent upon the country's agricultural wealth. "We shall have less and less to part with as population increases," he added, "and, as to enlarging greatly our sale of manufactured products in the world's markets, it is mostly a dream. We cannot finally compete there, except in a few selected lines, without a major revolution in the wage scale at home and a change in the national standard of living which our people are not willing to accept without a struggle."

"When capital cannot find a profit there will be no money for the pay rolls of an unprofitable business. Doubtless, as we grow we shall buy more and sell more; but our main dependence half a century ahead must be upon ourselves. The nation can no more escape the operation of that law than can the man. It is time to set our house in order." Mr. Hill believes the soil has been abused in two ways, by single cropping and by neglecting fertilization. "We might extend our resources and add billions of dollars to our natural wealth by conserving the soil, instead of exhausting it as we have the forests and the contents of the mines. There is good authority for the assertion that the farmers could take from the same area in four years as much as seven now produce, leaving the products of the other three years, when the land rested from grain as a clear profit, due to better methods," declared Mr. Hill. Secretary of Agriculture Wilson warmly supported Mr. Hill in his contention that the same crop year after year is ruinous to the soil.

An address pertinent to lumber affairs was that of President Hadley of Yale. As is well known, Yale has an excellent forest school in

which lumbermen are largely interested, and for which they are more or less responsible. Mr. Hadley predicted that with universities turning out carefully trained farmers and foresters at their present rate, within another twenty years the natural world would assume the task of conserving the natural resources as a matter of course, and without special state or national agitation.

Governor Folk of Missouri took a firm stand on the forest question and announced he intended to appoint a Missouri State Forestry Commission as soon as he returned. He took a terrific "swipe" at Speaker Cannon, which convened the conference, intimating that there was just one man who had been standing in the way of the White Mountain-Appalachian Forest Reserve measure, whose opposition to it is well known. "We have all of us heard of *vox populi*, which is supposed to be all powerful in this country, and sometimes mention is made of *vox Dei*, which is said to be much the same thing. Quite recent, and it is *vox Cannoni*. In recent times it seems to be more effective and more powerful than *vox populi* and there is sometimes an idea that the owner of it thinks it is greater than *vox Dei*," said Governor Folk. This sally met with a round of applause and laughter, especially from the forestry advocates, as a fact did every reference to the speaker, in a critical way, and these were several. The Missouri governor further declared that the quickest solution of the forestry question was to put lumber on the free list, thus doing more to preserve our forests than anything else, because every tree imported would mean a saved at home. Although he had adherents in this view, his introduction of it was deplored to some extent in that it savored too much of political subject which it had been tacitly understood would be utterly avoided. Mr. Folk said the time had come when the United States must either improve the Missouri river or allow the state to do so. He said Missouri was willing and even anxious to make a great public highway from Kansas City to St. Louis, assuming all expense of the work, asking only the revenue derived from the creation of water powers. He believed that if the state were allowed to proceed on this basis it would be a few years before the grandest waterway in the world, without expense to the federal government, and all in it such a way as to pay all expenses of the state government of Missouri.

James R. Garfield, secretary of the Interior, made one of the brilliant speeches of the conference. He declared that state lines had been largely eliminated, that the people as a whole owned the natural resources, and would no longer consent to their being exploited for private interests. He insisted that the rights of grazing in forest lands, the creation of water powers and similar public privileges would no longer be given to the first individual who happened along.

Another notable address was made by one of the most influential and best known lumbermen in the United States—R. A. Long of the Long-Bell Lumber Company, Kansas City, Mo., who spoke on "Forest Conservation." Perhaps no one was better qualified to represent the lumber interests of the county at this great gathering, and Mr. Long, always an interesting and popular speaker, was given an appreciative reception.

Mr. Long said in part as follows:

"Since I am honored with a place on this program, I am glad of the subject assigned me for it has to deal with a thrilling, throbbing and beautiful life, which is not true of any of the other subjects to be discussed. I want to lay down first the broad proposition that aside from the soil itself, no other resource compares with our forests. Can you think of one that comes so nearly supplying every want of man? However crude the workman, with only an axe for his tool, he may go into the

forest and build a comfortable home in which to live. The leaves and the bark of the tree may be converted into clothing for his body, and the nuts and fruit give him sustenance. Look within the house, be it shanty or mansion, and the furniture will remind you of this natural resource. The ties supporting the great railway systems of the country, and nearly all the buildings connected therewith are of this product. The mines, coal, copper, gold, silver, yea, all minerals from the cheapest to the dearest, require its use for their production. Data gathered tell us we are using not less than 165,000,000 cubic feet of lumber annually in this direction. What of the millions and millions of tons of paper on which is printed the news of our great daily newspapers, making it possible for even the poorest inhabitant of all nations of the earth to keep posted on the daily happenings of the world. It is claimed, and I believe truthfully, that at least ninety-five per cent of the products of our forests are used for practical and useful purposes.

They also have much to do with the utilization of our rainfall, for leaf mould is this—the compacting effect of the raindrops, and hence the soil is kept loose, allowing the water to readily percolate. This covering absorbs and holds back the precipitation, preventing its disappearing rapidly by surface drainage. On the other hand, when forest lands have been denuded, the rainfall passes rapidly away, and its resulting effect is not long felt or seen except by the filling of the channels of the stream by silt, sand and gravel washed from above, and the result of the waters having spread over the adjacent lands, destroying crops, improvements, live stock and sometimes even the lives of the inhabitants. It is not unusual in some sections for the fertile valleys, made so luxuriant by pebbles, stones and debris, carried and deposited by the waters.

Water power exerted through electrical energy, and so imperative in so many industries, is impossible without constant and uniform water supply, and this cannot be had except along streams whose headwaters have an adequate protection of forest covering, otherwise the erosion of the soil soon fills the reservoir, and waters running through the restricted channels converge in great torrents, carrying logs and debris of all kinds, surging irresistibly through the river valleys, taking with them dams, gates, power plants and destroying what they cannot carry away. Originally the rivers and even the rather small water courses of our country were to a greater or less extent navigable. Their channels were deep, their waters mostly clear and free from sediment and silt. At the present time, owing to the deforestation of the banks along their banks, and especially of their headwaters, the breaking up of the sod and the loosening of the soil subsequent upon settlement and cultivation of crops, these channels formerly deep, have been in some instances entirely filled, and everywhere rendered more shallow, until water transportation has ceased and river navigation has become almost obsolete on rivers which were once teeming with commerce. The possibility of vast irrigation schemes in the West depends largely upon the preservation of the forest cover of the mountains, which catch and hold the melting snow and thus form the great storage reservoirs of nature.

The effect and influence of forests on the climate, health and water conditions of a country is evidenced by the chronicles of the Mosiac, the Roman and the Greek writers, and many of their far-seeing priests prevented the destruction of the forests. The reverence of groves to religious uses, and to various mythological rites connected with them, are evidences of the reverence the ancients had for forests. Homer calls the mountain woodlands the "habitation of the gods, in which mortals never felled the trees, but where they fell from age when their time has come," and in his "Tree and Woodland

Nymphs" he suggests the intimate relation of forests and springs. Plato writes that the consequences of deforestation is the "sickening of the country." Cicero, in one of his philippics, designates those engaged in forest devastation as the enemies of the public interests. Greece shows the progress of a similar decadence. Sully, once the never-failing granary of the Roman empire while it was well wooded, is now entirely deforested, and crop failures are the rule. Caesar and other Roman writers describe the "vast forests" throughout the entire territory. China has paid absolutely no attention to the preservation of her forests; hardly a twig is left in what was her great forest fields. While Japan, close by, has fifty-nine per cent of her total area under forests, and the government has reserved under its control a very large part of the whole. Compare the conditions of these two countries side by side and draw your own conclusions. While practically all other countries are effectually practicing forestry, none of them I believe, save Sweden and Russia, foresaw the difficulties towards which they were drifting, at least made any effort to provide against them until they found themselves importing lumber in great quantities. As is usually true, those spending the most money in the development of an industry obtain the best net results. To illustrate: Germany and France are spending about \$11,000,000 a year and reaping \$30,000,000 net, while we last year spent only \$1,400,000, receiving \$130,000,000.

In value of annual production the lumber industry of the United States stands as the fourth greatest, being exceeded only by food products, textiles, and iron and steel products; lumber products showing an annual value of \$1,223,730,337, valued annually in wages \$100,000,000, providing a living for something like 2,000,000 people. Taking into account the white and Norway pine of the Lake states, the yellow pine of the South and the timber grown in Oregon, Washington and California, my estimate is that the life for all is forty-one years. Some calculate that substitutes such as cement will likely curtail the demand for lumber. Judging from the experience of other countries they will not; but why *speculate* on the timber supply, a question of the greatest importance to this nation, when definite information can be had? Should a nation as rich as ours hesitate to furnish the means to secure information of such great value?

The crop of the farmer is taxed when it is ready for the market, and no crop is taxed more than once. A crop of timber is taxed continuously and annually until it is disposed of. The farmer's crop matures yearly; the crop of the timber owner matures once in about a hundred years. The effect of such loss is shown in the State of Michigan, where over 6,000,000 acres have reverted to the state. A like condition to a lesser extent exists in other states.

In dealing with the subject as it now presents itself to us it becomes necessary to dwell on some features that directly and immediately affect the interests of timber owners.

I want to give special emphasis to the statement that conservation and perpetuation of our forests and unremunerative prices for lumber cannot trade the same road, for conservation means to handle, to treat, to take care of and save in such manner as to retain the use or benefit of a given product as long as possible. Perpetuation of forests means so to exploit the forests as to make them continuous and perpetual, which can be done only by spending money continuously in planning, seeding, protecting, etc., while low prices of any commodity mean neglect and waste. This cannot be more forcibly illustrated than by the conditions existing today as applied to lumber on account of the low prices now prevailing, the logs making low grade lumber, secured principally from that portion of the tree approaching the limbs and constituting at least 20 per cent of the forests, are left in the woods to rot or be burned, because the lumberman would

no more think of using the raw material out of which we could not obtain cost than the farmer who harvest a crop of faulty corn out of which he could not obtain the cost of gathering.

On account of the varying and unstable condition of supply and demand it will be found difficult, if not impossible, to get the timber owner to enter actively into the methods required for the perpetuation of the forests by spending even the minimum required, which I understand to be about 50 cents a thousand. While this does not seem a large amount, there are concerns making as much as 250,000,000 feet of lumber per annum, and hence to these the cost of this item would be \$125,000 per annum. If his, or its, competitor was pursuing the same practice all would be well; if not he would, for the immediate present, be out that much more money than his competitor, and during dull periods, such as now, when prices were close to the cost line, even for the better grades of lumber, he would hardly feel disposed to contract for such an output.

The government is owning only 12.5 per cent of all forest areas, cannot allow, to any great degree, effect what we are seeking in this conference so far as forests are concerned. It might, however, accomplish the purpose in one of the following ways:

First—The government could, by a contractual relation with the owners of the forests where lumbering operations are now being carried on (who constitute at least 80 per cent of the timber holders of the United States), provide that conservation and reforestation should be practiced under rules prescribed by the Forestry Department and assess the cost thereof against the timber lands proportionately.

These rules should provide that the lumbering operations, so far as conservation and reforestation were concerned, should be conducted under governmental control; that no more timber should be cut than was necessary to supply the current demands, thus insuring such uniformity of prices as would justify the operator to utilize every log the tree would produce; that only trees of a certain size should be cut; that seed trees, properly distributed, should be left; that the young growth should be protected from fires and other elements of destruction, and it would seem clear that the establishment of such a relationship would certainly accomplish this highly desired object.

Second—A plan might be worked out jointly between the owners of the timber lands and the government by which conservation and reforestation would be practiced along such lines as the government might lay down, as outlined above, and the timber owners be protected in the prices of all lands cut over and handled under the conditions prescribed.

Whatever plan is adopted must furnish incentive, a substantial inducement, to the timber owner to forego a present gain for the public good, and in this matter it can be accomplished only by governmental cooperation. And what is done should be done quickly, for the time is fast approaching when our forests will be so nearly gone, when the destruction will be so nearly completed, that it will be too late.

Disclaiming all partisan or political references and speaking only of economic conditions as we understand them, I do not think I should neglect to say that the present demoralizing conditions existing in our commercial and manufacturing life, and the consequent waste and loss incident thereto, are, in my judgment, due largely to the praiseworthy effects of that class of legislation which, by its application, has placed an absolute prohibition on every form of agreement looking to conservation; has placed a ban upon all meetings and discussions having for their object the adoption of the most sane and wise measures for the preservation of this natural resource, and the instant and unfair denunciation of every meeting of the so-called "lumber trust," which does not and never did exist; has produced such a condition of mind among lumbermen that they feel that they can no longer meet together for the gen-

eral discussion of matters so vitally affecting their interests and the welfare of this nation without subjecting themselves to the humiliation of a prosecution. This condition in the lumber business has led to the reduction of the wage scale of hundreds of thousands of men, affecting many millions of people; has left 20 per cent of the timber in the forest to waste, and we have had to have relief these evils will increase and others will follow in their wake.

And in this connection it may be well to say that a reduction of our tariff on lumber would at once bring us into direct and disastrous competition with lumber from Canada, where stumpage is cheaper and wages lower and where the consequent tendency toward wastefulness necessitates corresponding disregard on our part. Waste is lost and adds nothing to consumption. We want greater consumption, but we should conserve and reproduce, not waste.

Other addresses of the afternoon session were those of ex-Governor Pardee of California on "Irrigation," and President Jastro of the American Live Stock Association on "Grazing and Stock Raising," a topic which overlaps the forestry question to considerable extent.

In the evening Hon. Gifford Pinchot gave a reception to the governors and members of the Inland Waterways Commission.

The session of May 15, the last one of the conference, was marked by the adoption of a set of broader resolutions, but no permanent form of organization nor specific recommendations for legislation either by the federal or state governments were made. William Jennings Bryan delivered an able address, which was heartily received by the convention and inspired President Roosevelt to state his stand on several points most emphatically. Mr. Bryan declared that the government should appropriate sufficient money to carry on necessary investigations and the people should be urged to it that our resources are not monopolized by a few, and that future generations are not fettered with perpetual franchises. "There is no twilight zone between the nation and the state," continued Mr. Bryan, "in which exploiting interests can take refuge from both, and my observation is that most—not all, but most—of the contentions over the line between nation and state are traceable to predatory corporations which are trying to shield themselves from deserved punishment, or endeavoring to prevent needed restraining legislation."

President Roosevelt, before adjourning the conference, explained his attitude on the perpetual franchise question in a speech which met with perhaps the most hearty applause of any delivered at the convention; and on the question of state rights he said: "I want to say one word about the twilights that may exist between the federal and state governments. My aim in the legislation I have advocated for the regulation of the great corporations has been to provide sound, effective, popular control for each corporation. What I am trying to find out—not negatively, not by decisions that a state cannot act or federal decisions that the nation cannot act—is where one or the other can act so that there shall always be some sovereign power on behalf of the people that they may hold over the big corporations, over the big individuals, so that an accountability regarding their acts shall be had for the benefit of the people. In matters that relate only to the people within the state, of course, the state is to be sovereign, and it should have the power to act. If the matter is such that the state itself cannot act, then I wish on behalf of the state that the national government should act."

On the subject of monopoly it was carried out best by the state, let it be carried out by the state; where it can be carried out best by the nation, let it be carried out by the nation. My concern is not with the academic side of the question; I deal with the matter from the standpoint of true popular interest, and therefore my desire is to employ indifferently either the principle of states' rights or the principle of na-

tional sovereignty, whichever in a given case will best conserve the needs of the people."

A committee of five was appointed to arrange for another conference of governors next year, at which time it will be decided whether or not to effect a permanent organization.

The resolutions adopted by the conference commended the action of Mr. Roosevelt in calling it together, and recommended that future gatherings of like nature be called by the President whenever conditions warrant. Legislation by both Congress and the states was suggested to further the ends sought; also that the states put these matters in the hands of competent commissions. The resolutions were in part as follows:

"We agree that the nation's natural resources are threatened with exhaustion.

"We agree that the lands should be so used that erosion and soil wash should cease; and there should be reclamation of arid and semi-arid regions by means of irrigation, and of swamp and overflowed regions by means of drainage; that the waters should be so conserved and used as to promote navigation, to enable the arts and industries to be irrigated, and to develop power in the interests of the people; that the forests, which regulate our rivers, should be conserved to promote the fertility and productiveness of the soil, should be preserved and perpetuated; that the minerals found so abundantly beneath the surface should be used so as to retain the utility that the beauty, healthfulness and habitability of our country should be preserved and increased; that the sources of national wealth exist for the benefit of all the people, and that the monopoly thereof should not be tolerated.

"We declare the conviction that in the use of the natural resources our independent states are interdependent and bound together by ties of mutual interests, responsibilities and duties.

"We agree that further action is advisable to ascertain the present condition of our natural resources, to promote their conservation of the same; and to that end we recommend the appointment by each state of a commission on the conservation of natural resources, to operate with each other and with any similar commission on behalf of the federal government."

Cypress for Barrels.

During the summer of 1907 the National Irrigation Congress, in convention at Sacramento, Cal., appointed a committee to make an award, consisting of a handsome white oak cask artistically carved and decorated with silver, to any corporation or individual who should offer the most acceptable substitute for white oak in the manufacture of wine barrels. The Southern Cypress Manufacturers' Association entered the contest and captured the prize by its practical demonstration that cypress is the best substitute for the purpose. They proved conclusively that the wood is strong enough to withstand rough usage in shipment, that it imparts no taste nor color to the wine contained within the barrel, that it is of sufficient density to retain the fluid in storage, that it is as hard as white oak, and that it can be manufactured as cheaply as the oak barrel now in use.

Cypress has long been considered the best sort of timber for the manufacture of tanks for commercial purposes, from the huge water tank dug through the entire list of receptacles for brewers' products, to the small tanks for white oak. A large number of woods competed for the distinction of becoming a substitute for white oak, including redwood, several of the cedars, western spruce, and others; but it was discovered that all, with the exception of cypress, either had a decided odor to the wine, or an disagreeable taste, or both. After being exposed for several weeks in barrels made of these different products, the liquids were bottled and shipped to the committee, with samples of the wood employed, with the suggestion that cypress was the best.

The association is to be congratulated upon its success, for, although it would undoubtedly cost about as much to manufacture cypress as white oak barrels—and consequently they will not become a factor in the competition of the latter—producers have the satisfaction of knowing that they have broadened the use of cypress and the appreciation in which it is already held, and that they have made their investments in stumpage more solid by demonstrations which increase the value of the wood.

Semi-Annual Handle Manufacturers' Association.

Promptly at 10 a. m. on Wednesday, May 20, the Handle Manufacturers' Association of America convened at the Louisville hotel, Louisville, Ky., for its regular semi-annual meeting. The association was royally entertained by two of its prominent members, the I. F. Forec Handle Company, of New Albany, Ind., and the Turner Day & Woolworth Handle Company of Louisville, Ky., who spared no trouble or expense in making the stay of their guests a pleasant one. They not only provided accommodations for them at the hotel but tendered them a delightful luncheon and at the conclusion of the afternoon session entertained a number with a lengthy auto trip through the beautiful streets and parks of Louisville.

The morning session opened with a good attendance. President T. R. Clendinen, of Atchison, Kan., occupied the chair and called the meeting to order. The reading

The books of the association were duly balanced and ready for examination at the special Cincinnati meeting of hickory manufacturers (as they will show) but on account of illness of the secretary, who was unable to attend there. They were last audited and found correct, at Indianapolis, Jan. 11.

Statement.

At Indianapolis meeting, Jan. 11, balance on hand, \$154.88
 Receipts since Jan. 11, \$216.00—\$370.88
 Disbursements since Jan. 11, 245.37
 Balance on hand, \$125.51
 The disbursements include: expenses of the banquet and meeting at Indianapolis, printing, paper, clerical and circular, work by secretary's remuneration for the half year since Nov. 20, 1907, when permanent organization was effected—stamps, exchange, etc.
 The receipts include contributions to assist with general expenses, and membership fees. The following firms have become members of the association and paid the first annual dues, at or since the Indianapolis meeting in January:
 Star Ranch & Land Co., Neelyville, Mo.
 Standard Handle Co., Ltd., Knoxville, Ky.
 Rubber Grip Tool Handle Co., Paducah, Ky.
 Union Handle Mfg. Co., Ashland, Mo.
 Huntsville Handle Co., Huntsville, Mo.
 La. Pierre-Sawyer Handle Co., Jackson, Mo.
 Veederberg Handle Co., Veederberg, Mo.
 J. F. Jones Sons', Columbus Grove, O.
 Frankfort Handle Mfg. Co., Frankfort, Ind.
 Blackstone Handshaved Handle Co., Blackstone, Va.
 Eldon Handle Co., Meta, Mo.
 American Handle Co., Jonesboro, Ark.
 Kelly Axe Mfg. Co., Charleston, W. Va.
 Columbia Handle & Lbr. Co., London, Ont.
 Central Mfg. Co., Kansas City, Mo.

With regard to meetings, no special gathering of the ash handle manufacturers has been held, to the secretary's knowledge. Inasmuch as the finished ash handle manufacturers have an organization of their own, of a different nature from this one—this question has resolved itself into a proposition for the getting together of manufacturers of ash handles "in the rough" who were the first ones to take up the movement in this line, and this in a direction toward which little has been done. Thus the Ash Division is merely a tiny nucleus for an association, but with plenty of room to grow, and with great need of organization.

A meeting of broom and ash handle manufacturers was called for Cleveland, O., as members were notified, but on account of affairs at home, the vice-president was obliged to call it off, and has since resigned; therefore this association may also be said to be as yet "in the rough."

A meeting of hickory manufacturers was held at Cincinnati in April, in connection with the general hickory conference, which was a live one. However, the secretary received numerous complaints because it was shifted from St. Louis, as first announced, to Cincinnati; a number of manufacturers wrote that they had fully prepared to go to St. Louis, but felt Cincinnati was too far from the southwestern hickory belt, and that it would not be a place of association work to be done in the southeast and several inquiries have been had, as to whether it would not be possible to hold some special meeting of the Hickory Division at Atlanta, High Point, etc.

A gentleman who has been receiving from time to time stating that the writers would be at the Louisville meeting, and all those who are here in attendance, and are their members, will be welcomed into the association before we begin proceedings, if they will be so kind as to step forward and fill out these membership blanks.

In accordance with action taken at last meeting, the secretary sent out blanks relative to stock on hand, operating capacity, time now running, etc. The result was practically valueless as far as any reliable statistics were concerned. The place only thirty-seven concerns reported, and their replies were made in so many disconnected parts that it was impossible to deduce an average on any one subject. For instance in reply to the question "How many unfilled tons of stock on hand, operating capacity perhaps "7,000 handles," "Seven hundred dozen," "8,700 worth"—or "Enough to last some time."

I will, therefore, read the replies given under each question, and you will readily see how impossible it is to give a collective report of them.

The secretary then took up each question that was asked and read the various replies to each one, as taken from the original documents when sent in. Although valueless as statistics, the returns demonstrated that there

has been considerable curtailment of output, that the amount of unfilled orders on hand is very low, with little business in sight at present, and that prices quoted for the same grades of handles are widely at variance.

On motion the secretary's report was accepted and made part of the records.

He then read several telegrams and letters which had been received, including the following, which was accompanied by two specimen axe handles shipped in by express for examination by the members:

Winston Letter.

May 11, 1908.

Henry Gibson, Secretary, Chicago, Ill.
 Dear Sir: In acknowledgement of your several favors relative to the handle association, we have, after careful consideration, decided to air our views on the subject in general; but wholly without criticism either personal or otherwise. Environments are much to be considered in all sections, as well as in all phases and conditions of life. However, men are responsible to the end that they should strive to overcome conditions negative to their best good. This, however, is where the inequality of the great struggle in the business life comes in. Why? Simply because one man may settle where environments are against him; another, where everything (compara-

T. R. CLENDINEN, ATCHISON, KAN., PRESIDENT.

of minutes of the last meeting was dispensed with, after which the president spoke briefly as follows:

Mr. Clendinen: I don't know that there is anything I can say in particular which will not be brought out in the general discussion during the meeting. The representation here is a very good one. I will say in fact, that it is the best we have had at any time. But I am very sorry for one thing—and that is I don't see many maple and ash people. I was in hopes that these two divisions would be better represented, for I feel that they need the association as much as the hickory people do. For the benefit of some of the latter who did not attend the Cincinnati meeting, will say we had a very fair representation there, and lots of good came from it. It was a very interesting meeting, although it was a special one of only the Hickory Division. We will now listen to the secretary's report.

Secretary's Report.

Mr. Gibson: This report covers the time which has elapsed since the last meeting of the entire association, which took place in Indianapolis in January.

P. C. SCOTT, ST. LOUIS, MO., VICE-PRESIDENT HICKORY DIVISION.

tively speaking) is in his favor. Keeping this in mind, but with the greatest attention to the real—well, we believe course is the right word—existing in the handle business.

We have read, with much interest, such talks as have been given for publication by some of the leading makers, and who seem very active in the association. In nearly every instance, the "text" has been price-cutting, followed by dire threats and prophesying overwhelming calamity. While the real "things" is kept carefully covered.

In this democratic country of ours the majority rules, sometimes. Therefore, the output of the "majority" in the handle business becomes the standard. Of course, you will understand that we do not mean the output of the factory proper, but the output as arranged for and placed upon the market; i. e., grades.

What do the standard rules for grading amount to? As they read, they are mighty liberal. Why they require the "biggest ignis fatuus" that was ever wafted over this fair country by the gentle zephyrs of the "right" wind, that is, the "biggest" and its inception in the section where for years they have broken in the "tenderfoot" by having him hold the bow while the gang went out to drive in the snipe.

As we have said, these rules are very liberal; but the "right" wind, which may be put into the different grades, but the "majority" do not put them in—there's the rub. We are in position to know, from years of ex-

perience in buying and selling handles produced by the largest and smallest concerns in the country, what we are talking about. This talk about the jobber and others not talking red handles all over. Fact is, white handles are actually thrown at them; consequently, they don't know what to think when they see a red handle. The majority of the trade today never saw a hickory tree, and many of them do not believe that there is any such thing as

President Clendinen called for the report of the Committee on the Canadian Tariff Question. Charles D. Gates, chairman, responded as follows:

Committee on Canadian Tariff.

Mr. Gates: At the request of this association I addressed letters to the British consul at Toronto, submitting samples of finished, rough-turned, and sawn handles, and asked his ruling on same, stating as best I could my arguments and reasons for having the sawn handle put in the same class as the finished and the rough-turned. I received his ruling, which simply stated that the finished and rough-turned handles will be admitted only on the payment of twenty-five per cent duty, but the sawn or shaped handle not turned will be admitted into Canada the same as lumber, free of duty. These Canadian men come down here and buy our hickory, shipping it into Canada without paying duty, while if it is finished or rough-turned it is subject to a duty of twenty-five per cent. Of course this places us at quite a disadvantage, and there is only one way to overcome it, which is for some of the larger companies to put factories in Canada if that is desirable.

It was moved and seconded that the report be adopted.

The Canadian Viewpoint.

Mr. Stevely: As a Canadian handle man I would like to say that in regard to handles coming into Canada free of duty there must have been some collusion between the people in your country and buyers in ours, because if there were not, it would be an impossibility. We have known for some years that rough-turned handles are not permissible to enter Canada free of duty; but on account of a change in our laws there in regard to rough-turned spokes, some people over there took advantage of it, and probably some of those handles have been brought in. It has been detrimental to us, but we have never been able to reach the point of shipment and we have never taken up the matter, in fact; but I certainly know the goods have been brought in, and if the seller here had been honest

five per cent duty between the slabs from this country and the finished handles is greater than it should be, and there should be some way to get the matter before the government, and get some ruling. I think it best to accept the report of this committee and request that it take the matter up further to the end that we either get the duty taken

C. D. GATES, LOUISVILLE, KY., DIRECTOR.

C. W. SPERRY, FORT WAYNE, IND., VICE-PRESIDENT ASH AND OAK DIVISION.

red hickory. They believe it is all a myth. For instance, one time while making a sale in one of the northern cities, the buyer, in looking over his stock came across a red hickory handle. "Well, I declare," he remarked, "I cannot recall ever buying any oak handles; I wonder where it came from." And I did not dare to enlighten him.

Another time, we were asked by a buyer in New York if it was not a fact that we took small pieces of hickory waste and glued red wood to them in order to make a block large enough to produce the desired size of handle.

As much as we desire to refrain from anything of a personal nature, for we view this matter from a business standpoint, and do not blame anyone for doing just what we would do ourselves, we wish to refer to a certain axe-handle known as the ———. What are its qualifications? Just two, and only two; i. e., they are well shaped and finished, and they are white. While, however, we pass over any criticism, we will add that in a late edition of a popular paper, the manufacturer of this brand of handles, in an interview for publication put up a great "spiel" about the fast "disappearing hickory," elaborated with a plea for propagating its species. Now, as (and a few others) will cut their stock with a little less regard for the white, the hickory will not disappear so fast, and there will be less cause for price-cutting.

Out of curiosity, we are taking the trouble to express, prepaid, two handles. We have to put these handles into the No. 2 grade, and we appeal to you and your association—is it just, is it right? On the other hand, is it not almost a crime?

As we understand it, associations are formed for the purpose of eliminating so much "human nature" in the business to be protected. In other words, every fellow divides a little with the other, in so far as it is good for the whole. But, so far in the new association as in the old, "human nature" seems to be the slogan.

There is no woodworking business in the United States that returns so small a profit as does the handle business, and none that entails the worry and waste. The complexion of our output is its salesman, and the fellow little applies cosmetics is a faker. This proves the need of something for the good of the business; but, we assert, or rather we fail to see how, there is any possible good to come from an association founded upon as selfish a basis as this seems to us to be.

Nothing would give us more pleasure than to sit with you all at some of the meetings and go over this matter in detail, but such a luxury is not for us. While you are gathered around the festive board, we will partake of our hominy and fat-back.

With best wishes for anything that is for the good of business and humanity, we are very truly, The W. H. Co.

H. B. ALEXANDER, NEW PHILADELPHIA, PA., PROMINENT MEMBER.

with the purchaser and vice versa, it would have been an impossibility.

Mr. Clendinen: The matter has been discussed at several meetings and it was the desire of the association if possible to get ourselves on what we term an equitable basis with the Canadian manufacturer in that territory. Of course we feel that this twenty-

off those handles or put on the others. To the motion before the house, if the maker will consent, we will add that this committee be continued, and so instructed. This met with the approval of the association and was so ordered.

Market Conditions Committee.

Mr. Peters: In the absence of our chairman, Mr. McCullough, in Europe, I will say that as far as market conditions go, they are in bad shape, and I find that all sorts of prices prevail. Business is very light. The majority of factories have very few orders, the manufacturers seem to be selling all the way from 75, 75 and 5, 75 and 10 to 80 per cent off the 1908 list, and they certainly cannot be making any money. They might just as well not be doing business. We had an offer the other day for several car loads at 70, 10 and 5 from the 1904 list. That brings extra sledges way down around \$100. We find that conditions abroad are about as bad as in this country. There does not seem to be much trade in England, Germany, Africa or South America. They are all in about the same condition as here, and I don't think cutting prices is going to influence trade one particle. None will buy unless they need stock. With the few orders we have we are asked to ship on receipt of order. Taken all the way through, I don't see how market conditions can be improved any by cutting prices. If we were to sell our handles off list we would not get any more business. If buyers need stock they are willing to pay a just price because handles are a necessity.

Discussion of Market Conditions.

Mr. Clendinen: Do you care to discuss this report of the Committee on Market Conditions, gentlemen? This is a very good subject to talk about. First I would say in reference to this meeting that it was intended to be a general meeting of all handle makers. The hickory people have no desire to take up all the time, but inasmuch as Messrs. Sperry and Alexander find themselves practically alone in their lines, we will proceed with the business at hand.

Mr. Scott: I move that report be accepted and the committee discharged.

The motion was seconded and carried.

Mr. Gates: I want people to talk and not sit here and say nothing. If we can't have confidence in each other and stand together in these times we might as well not have any association. We ought to find out about these market conditions. Mr. Peters' report from his standpoint and as far as it goes, is very good, but how much are we going to carry away with us? We ought to find out something about general trade.

Mr. Scott: I move that we start at one end of this room and go clear around and get an expression from each one present, limiting them to three-minute talks or less.

This motion was seconded and carried, and much interesting discussion on prices and market conditions followed, which was participated in frankly and honestly by all called upon, and in which Messrs. Alexander, Maltby, Fellabaum, McCrillis, Arnett, Gates, Ward, Kelly, McCLaughlin, Stevely, Sperry, Gregory, Welch, Charlesworth, Sobies, Renkenberger, Jones, Scott and others participated. The discussion brought out strongly the fact that as conditions are demoralized, that many manufacturers are actually selling their goods below cost for the mere purpose of keeping busy; that grades are more or less "juggled"; and that business in the handle trade, as with every other industry in the country, is unusually light.

It was decided that blank cards should be passed to each manufacturer present, and that upon each card, assigned, he should write figures, one showing his average cost of a hickory handle f. o. b. factory—the other showing his average selling price f. o. b. factory—the secretary to collect these and read them, with averages.

On motion the meeting adjourned to convene for the second session at 2 p. m.

AFTERNOON SESSION.

At the opening of the meeting, the secretary read the cost and selling price averages, which he had compiled from the anonymous reports collected before luncheon. Out of the sixteen reports turned in, he found a minimum cost of 75 cents; a maximum of \$1.30; an average of \$1.00.

Mr. Clendinen: Of course costs under some conditions are much less than under others, but again one person is apt to figure too high—another too low. These reports distinctly show in their difference that these matters should be thoroughly thrashed out. Evidently these discrepancies are due to miscalculation, for all were apparently sincere in making their report.

Cost System.

Much discussion of cost and methods of arriving at correct figures followed. Mr. Scott reported that his Committee on Cost Systems, consisting of Messrs. McCullough, Peters and Hartwell, had sent in a report on account of the absence of the chairman.

Mr. Clendinen: This work ought to be attended to from the fact that suggestions would doubtless cover items many of us have overlooked.

Mr. Gates: Cost is governed by quality that is produced. A man can produce No. 1, No. 2 and No. 3 cheaper than Extra or Excelsior, and in some localities the cost of production varies. I think any one who can keep cost under a dollar a dozen is doing mighty well. I would like to know how many are taking into consideration shrinkage and loss of handles. The figures presented are certainly misleading. I don't believe that the average net profit last year was as much as ten cents a dozen. That has been the trouble with handle manufacturers all the time. That is the reason there have been so many failures. They don't count all the costs in their

production. The handle business is the most deceitful in the world. Any man can sit down and figure out a profit, but when you come at the end of several years to balance up your accounts and take out the loss from wormy handles, crooked handles, etc., you will nearly always figure out a loss.

Mr. Maltby: I never invoiced on average cost. I know what my stock was worth the day it was invoiced. I got into the handle business by being shown just some costs "average" costs and profits as this! [Laughter.] Certain carloads of stock at certain times may cost more than others, and I believe in invoicing each individual car for what that car is worth—not on any so-called averages. I for one, can't see how you can tell what you have on that basis.

Important Report of Grading Committee.

The Grading Committee, of which C. H. Jones was chairman, and F. W. Peters and C. H. Amos the other members—presented a report concerning a set of new grading rules which was made the subject of considerable discussion. It was finally decided that the secretary should supply each member of the association with a copy of the proposed rules for the careful consideration of members at next meeting. It was urged that if they give the proposed rules a thorough going-over, and that each jot down any and all points which they would like changed, any inquiries as to their interpretation, and any ideas which might occur to them, bringing their notes to the next meeting and submitting them for general consideration and action by the association.

Mr. Crawford: I might say that the question of grades was quite a difficult one for us to settle a few years ago. We realized we had too many and we decided to come down to three grades. We have now Second Growth, No. 1 and No. 2. We used to have a grade we called "Extra," but we found we had great difficulty to get enough to class as "Extra," so cut it out and made three grades four years ago in our Canadian association. It has worked out very satisfactorily. Our second growth admits of a little red at the top and also at the eye end. Our No. 1 is a part red and part white handle. No. 2 is all red. No. 3 we do not care to sell. We feel it is better perhaps to burn them than to force them on the market. I quite agree with Mr. Clendinen in regard to lowering grades. It is absolutely essential in the interests of the business. It is not necessary to point out that the quality of timber you can now secure is not equal to what you could a few years ago, so it is essential to cut down grades and keep up prices. We feel that handles have been sold on this market at really too low a price. We feel that the price at which you have been selling handles in Canada was not high enough—that you could get better prices in that market. I am quite sure that if you will agree to cut down your grading to three grades, two years from today you will say that it was the proper thing to do and decidedly in the interest of the business.

A Special Committee.

Mr. Leland: I move that a committee be appointed to report at the next meeting on the three-grade proposition—and I would like to be a member of that committee.

Mr. Maltby: I would amend that by saying that such a proposition also be submitted to the members before the next meeting. The motion was seconded and carried as amended, and Messrs. Leland, Arnett and Maltby were appointed.

Employment of Inspector.

G. Sherman, chairman of the Committee on Employment, reported that nothing has as yet been done toward engaging a practical handle man to travel among the factories for advertising purposes. He stated that he thought such action would be a little impra-

ture at this time, and on motion duly seconded it was decided to establish a new set of grading rules before employing a man for educational purposes.

The Grading and Employment Committees were therefore continued.

Resolutions.

Charles D. Gates presented the following resolution:

"On account of the growing scarcity of hickory timber, the probable advance in freight rates, and no diminution in the cost of handle production, therefore be it

"Resolved, That in the sense of this association that the present values are as low as handles can be produced at a living profit; and it is the further sense of this association that prices ought not be made below these quotations. Be it further

"Resolved, That the production of members of this association ought to be reduced to the actual necessities of the market, and that members should pursue this policy."

C. W. Sperry, chairman of the Committee on Resolutions, offered the following:

"Resolved, That the Manufacturers' Association of America tender its sincere thanks for the royal reception and entertainment given it by L. F. Force Handle Company and the Turner, Day & Woolworth Handle Company at its meeting at Louisville, May 20; and

"Resolved, That the association also tenders its thanks and appreciation of the honor shown us by our Canadian brothers in coming so far to attend our meeting; and that we extend to them a hearty invitation to be present at all future gatherings."

The above resolutions were unanimously adopted.

Address of Lewis Doster.

Mr. Crawford responded on behalf of the Canadian visitors, after which Lewis Doster, secretary of the Hardwood Manufacturers' Association, addressed the convention on "The Value of Association Work," substantially as follows:

Mr. Doster: Mr. President and Gentlemen, I appreciate the honor of appearing before you today, and inasmuch as I have already gone very fully into my line of work at one of the previous meetings, I shall merely touch upon a few points which have occurred to me in listening to your remarks today. I have been very much interested in your discussion and the problems which have developed here as they have organized in our own organization. We have been organized since 1902 and I have had the honor of working out the details of organization from the tiny nucleus of half a dozen members to our present membership of more than three hundred, extending from East to West and North to South. What we have found to be of most advantage is systematic interchange between members of accurate information.

You are working on the right track today if the matter proposed can be promulgated. In the first place I know something about hickory, and I know the condition you will be up against in future in your work with a wood for which there is no substitute. The vehicle manufacturers recognized this and have organized an association of their own. I represent our association on their advisory board. Furthermore in the discussion as to whether red tipped handles should be used, I must call your attention to the fact that the hickory organization has been working hand in hand with the United States government in making tests, etc. They have proved that a great deal of red is absolutely as strong and good as white and it is now being used in the vehicle trade, where heretofore rules were put down to use only white. The time was when a man would go into the forest and pick out a tree that he wanted, but gentlemen, you can't do that now. You are all taking out all the trees and not picking out a few here and there. Timber is getting scarcer and scarcer. Our organization is working with the government and using every effort to prolong the life of the forest and thereby to get more and more heretofore by all kinds of economy.

Another gentleman brought out the ques-

tion of a chief inspector. He is the most important man we have in our organization, we consider. Some people whose business shows a large amount of profit have found many instances through this man, where they have been losing money by not giving attention to some of the small details of their business. Our inspector sees where good work is being done. He sees where the weak points are. He is out in the big consuming markets from time to time and finds out what customers don't want, or what they are particularly anxious for. All his ideas are sought to such an extent that it is impossible for him to cover the entire territory fast enough, and we must put assistants on that work. He watches the material material is graded, he knows all the different classes of material; he knows about all kinds of wood; he shows people how to dry and grade their lumber, and load it for destination. You will find when you put such a man in office, after you get your grading rules established, that he is a very important person.

Stock sheets represent a very essential part of our work. We send semi-monthly to members a double sheet, one showing a blank form for words on which a manufacturer is overstocked, the other what he is short on. This gives the members of the association, who may need a certain wood, the first privilege of purchasing it. When compiled these reports show what is short and what the market is likely to be flooded with, and therefore what or what not to manufacture. I would be very glad to send you a copy of all the printed forms we use, which can be followed by you if you like. One line in which we have been doing some good work is in securing a reduction of output. We realized that there was likely to be over-production. Of course we did not agree to curtail production, but we issued statistics to show what was going on—and of course common-sense ruled our members after that. I must say I am proud of our organization on the question of interchange. I believe in sending out all the information you possibly can. We feel proud to say there have been no failures in our association in the past eight months, although we have been put to a severe test, and I lay our success largely to our method of interchanging information.

Address of Mr. Gates.

Charles D. Gates then addressed the meeting on "The History of the Handle Business," in which he reviewed this industry from pioneer times to the present day.

In the armory museum at Washington, D. C., stands the original Blanchard lathe, occupying a place of honor. On the placard attached to that lathe the statement is made that it was invented and built by Thomas Blanchard in 1794. It is a double-headed lathe is somewhat similar to the lathes which are now used for manufacturing axe handles. Thomas Blanchard, the inventor of the double lathe, conceived the idea by turning tapering gun barrels in an ordinary turning lathe by changing the tool.

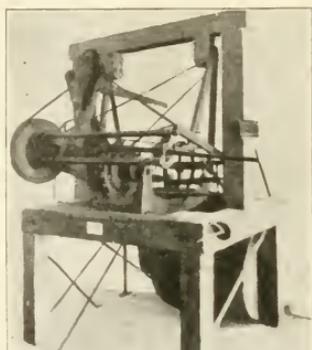

The story is told that the government works at Springfield, Mass., requested him to show them how to turn tapering gun barrels. After he had demonstrated his method to them in practical use the men from the gun stock department, who were there to see the experiment, said to him, "You've got it. You've got it. You've got it." "You've got it," that is turning gun stocks, and using the Yankee vernacular of that day he said, "about twenty-five miles distant, and as he was riding with his head down and his old horse joggling along the road, he began to think and from time to time he said, "Men that were passing overheard him and said, "That old man must be crazy, but he kept on thinking and from time to time he conceived from that ride he developed and made the axe handle lathe.

At the Annual Meeting of the Association commenced the manufacture of handles at Warren, Mass. That is the first record we have of the axe handle business. The lathes at that time were rude and expensive to run, a day's

work being twelve dozen. The handles were turned rough, same as they are at the present time, and it was very slow process to finish and smooth them by hand. The first experiment in belting or grinding handles that is recorded was done on a grindstone. You can well imagine the shape of the handles that were finished in this manner.

In 1848 J. J. Force commenced the manufacture of axe handles at Pittsford, N. Y. We are not sure that the lathe which he used was quite similar to the one which we use at present, as we are told the pattern instead of running horizontal worked upright, had a screw on the end of the rod which turned the length of the rod that moved the carriage, and a pair of vice clamps shaped like a blacksmith tongs with a threaded rod, so that it clamped on the rod and worked perfectly. After this was clinched and the pattern adjusted a small lathe was slipped over the end and held it together. After the handle was turned the pattern was pulled down and held by a catch until the next handle was put in. The records show that Mr. Force after making handles with this lathe at Pittsford, N. Y., erected a six-lathe factory at Rochester. That factory, however, was burned soon after it was erected. This crude lathe was moved to Flat Rock, Mich., in 1848.

James Woolworth, now in his 84th year, is living at Sandusky, Ohio. He commenced to manufacture handles at Sandusky in 1855. His business was well managed and he was very successful. In a few years the name of James Woolworth was known in all the handle markets of the world. He managed his business

ORIGINAL BLANCHARD LATHE.

with great ability and he undoubtedly was the most active and progressive and largest manufacturer in connection with the business. He organized the three-lathe country mill system, which was located at Sandusky, Ky., and commenced operation on Wednesday, Feb. 14, 1857. He systematized and economized the manufacture of handles, and the second day of the year, sawing and blocking by piece work. Having accumulated a handsome fortune he closed out his business in 1884, consulting with Turner & Day of Louisville, in which company he still retains a small interest.

Sidney Turner and Norman Day formed a partnership in 1859. Soon after that date they built a factory at Norwich, Conn., where they commenced to manufacture handles. The merits of the Blanchard lathe having become generally known to all axe manufacturers, they began to purchase machinery and made their own handles. Turner & Day, however, convinced them that they could furnish better handles at a cheaper price than those which they were then making, which resulted in Turner & Day securing contracts to supply all the axe manufacturers with their handles. They were then making and selling machinery owned by the axe makers, some of which after constant service for forty-five years were destroyed by fire at the Louisville factory in 1901.

Turner & Day secured the services of Albert Day just before moving to Baltimore in 1868. The business was enlarged at that time, and in 1877 Turner & Day moved to Louisville and

increased their capacity. In 1884 they consolidated with James Woolworth, changing the name to the James Woolworth Manufacturing Company, with a capital stock of \$400,000. Soon after the consolidation Sidney Turner and Norman Day were very active participants in the business. Mr. Albert Day becoming president and general manager and the increasing business of the Turner, Day & Woolworth Manufacturing Company purchased the Nashville Spoke & Handle Company, which was then the largest competitor in the edge tool business. In 1891 they consolidated with the Hartzell Handle Company, Huntington, W. Va., and the Hartzell Handle Company, Knoxville, Tenn., and increased their capital stock to \$500,000. In 1896 they purchased the Hartzell Handle Company, Memphis, Tenn., and increased their capital stock to \$1,000,000.

Turner & Day, and their successors, have always made a specialty of manufacturing gage and hatchet handles. The policy of the above mentioned companies has always been to make the best handles possible and obtain the highest prices. For the last fifty years they have enjoyed the reputation of manufacturing the best gage handles made. Sidney Turner and Norman Day would scorn the idea of turning an axe handle and then selling it at a low price. They would rather now known as the gaging machine. They trained their superintendents and foremen to turn the handles of the best quality, and they would fit the axe without any belt work at all.

The history of the Keller & Tamm Manufacturing Company, very interesting, we find that on May 7, 1870, the company was organized and incorporated at Mount City, Ill. Company of James Woolworth, Chester Woolworth, Lloyd G. Harris and Edwin S. Chester. On Nov. 20, 1874, it was incorporated in the state of Missouri under the name of Keller & Harris with \$100,000 capital. On June 10, 1889, the name was changed to Keller & Harris and the capital increased to \$150,000, and on July 1, 1894, capital increased to \$200,000.

This gives the history of the four largest companies engaged in the handle business prior to 1875. In looking over the records of these different companies I find they had a very pleasant and consistent habit of declaring semi-annual dividends ranging from eight per cent to one hundred per cent a year, notwithstanding that the prices which we are now receiving for handles were about the same as the prices received in 1880, 1885, 1890, and 1894. All the old manufacturers retired with large fortunes.

And the prominent names among the old manufacturers to be as follows: Sidney Turner, Norman Day, Albert Day, James Woolworth, Lloyd G. Harris, L. G. Harris, M. J. Keller and L. E. Force. The first five named were "Nutmer Yankees" and raised in the same locality.

The men connected with the early manufacture of handles were men of great ability, force, dignity and power, and if they were to enter one of our association meetings every member present would readily understand why they received dividends of eighty to one hundred per cent on their business, while most of us following in their footsteps are satisfied with a five per cent dividend.

It was my pleasure to attend a number of the meetings of the old Handle Manufacturers' Association, and I am sure that you have adopted at their meetings, the confidence which they had in each other's sincerity and the fact that they were all honest men. I pledge is in striking contrast with the methods pursued by the present association. I often think when I see the members of every member of the present Handle Association if we could have these old "war horses" appearing at our meetings, and by relating the business was as follows: They acquired a thorough knowledge of all the practical details of their manufacturing department, they ascertained the wants and requirements of their customers, the exact cost of manufacturing their handles, and the amount of profit they could derive from manufacturing a certain line of handles, and by carrying this out they needed it, not expanding their business any more than they had capital, or the actual necessities of their business, and they were very careful that the business was carefully watched, and resulted in a handsome profit at the end of the year.

In striking contrast with their method is the policy now adopted by a good many of our members. They do not know the first practical detail of the business they listen to some agent representing axe handle manufacturers, and they are told, "I'm a success, telling them of the great fortunes to be made in a few weeks in the handle business, they are told to get in, and they are told, "They do not know anything about the cost of material, the cost of labor, freight or any

of the cost of the details in manufacturing handles. They borrow some price lists, copy them and send them to the buyers in the country with beautiful typewritten letters, neither knowing nor seeming to care whether the buyers will or will not order. They try to fill the orders after they are received, quoting prices in most instances not according to the actual market prices. Some experienced the idea of some smart purchasing agent or buyer of some jobbing house, and as a result they have placed orders with some experienced manufacturer that has some knowledge of his business ultimately purchases from the banker at a small cost. All the orders go to the Hickey company. The whole course of the handle business since 1886 is like one of those trails the migrants take to make a cake. The hickory comes strewn with wreckage in every side.

An Interesting Letter.

The following letter from M. R. Grace, president of the newly organized Rex Handle Company of Memphis, was read:

Memphis, Tenn., Jan. 19, 1908.
 President Hickey, Manufacturers' Assn.: Owing to unavoidable conditions, it will be impossible for me to attend your meeting at the public building on the 17th. I am very anticipated with much pleasure, because I knew that I would meet a great many of my old and new friends and business acquaintances, and being the guests of the I. F. Force and the Turner-Day Handle Company, I am sure that my knowledge and course of trade will be well looked after and will be my great loss.

However, it is out of my power to be there and before, which I think would bring my regrets through you to the association.

Mr. Gibson in a recent letter requested me to over-see something on the hickory trade. Well, I am not much of a letter writer and owing to the condition of my former company's business affairs, I have not been permitted myself to get rusty in the handle trade. Therefore, there is not much that I could say that would add anything to what the gentlemen already know from years of experience.

However, I do not think that the timber prices are as much to be alarmed at as the present condition of the market. While of course the hickory is being used up very rapidly in the territory where it is being cut to be gone over and the land that has been opened out two years ago, in a great many instances, is being cut back into use again. This has been my experience.

I remember thirty years ago while I was working for the Waverly mill in Bowling Green, Ky., we had to shut down several summers on account of not having timber, as my knowledge and course of trade at that factory has been running at a greater capacity in the last twenty years than it ever has before, which is an evidence that it makes an effort to get the timber. The great danger that I see in the handle business today is over-production.

There are too many people making handles for the present demand and consumption. While the consumption has increased in the last ten years, very materially, it has not increased equal to the capacity for manufacturing and the great overproduction has gone into the manufacture of handles that do not understand the manufacturing business or the trade in the country. As a result, the hickory way our timber has been destroyed and our market as well; while this is a free country and every body is free to go into any line of business that they see proper and fit still it generally proves fatal to themselves as well as to the general business from the fact that they make handles and owing to financial conditions they are forced out on the market and sell them at the customers' prices.

If there could be some arrangement made whereby the timber producers would guarantee only a certain per cent of their business each week or each month until the demand for handles was met, it would be a very important step; also if there could be formed some kind of a pool or syndicate to control the production of handles that are now in the hands of the manufacturers that will be turned loose on the trade at a very low price, it would be a very important step to form a syndicate of this kind to purchase all those handles and dispose of them from this syndicate for the account of the timber producers. By doing this and reducing the output of each manufacturer I think we could force the condition of the handle business into better shape.

The question of grading handles is a very important one and in connection with the advance in the security of the hickory timber it would operate very successful, that is I would suggest to cut out the Excelsior grade

entirely. Have Extras, No. 1's, 2's and A's, and the present Excelsior handles would go into the Extras. There is no doubt that can dispute the fact that a handle with a little tip of red on it on the eye or the hand is worth more than a handle that is all white. In many instances they are far better.

Now, then, all the handles that would be better than the present Excelsior handles would go into a No. 1 and all defective handles of the present Excelsior grade would go into a No. 2, and all handles from 8 inches of white wood down to all red would go into a No. 3. Thus having a standard or streaked handle, small knots or the quality, in other words, any serviceable handle, I believe that this would assist us very materially in filling the market and stop the accumulation of low grade handles, and it would certainly increase the price of our Extras by the Excelsior not being permitted. Of course, to do that every manufacturer must be strictly honest and honorable as to his agreement and to carry out the rules for grading in not "cutting his customer's throat" by putting in a higher grade than he should, consider that to give a customer a higher grade than he is entitled to is one of the biggest price-cutting methods that any handle man can use today (or ever has been).

I merely give you these items as my personal opinion. I have not had time to read secretary read this letter to the association, and wishing you gentlemen much success and good luck, I can not say more than that I am ready to act with you now since I have just started my new company. As yet we have not had a single customer, but to anyone, but we are running every day, making some handles for stock.

Very respectfully,
 M. R. Grace, General Manager.

The Grading Question.

F. W. Peters then presented the following very instructive paper:

Mr. President and Manufacturers of Hickory Handles: The subject which I have before me is one of the most vital in connection with the hickory handle trade, and that is, the grading of handles. If you grade your timber, blanks and turned handles in the proper way, you can get a reputation for making your goods standard and create a demand for same. Every manufacturer should have a definite plan in business on a small scale and by close attention to it and see that his goods were made in the proper way, and that from time to time, until he has become a factor in the handle markets of the country. In order to accomplish this, the first thing to do is to grade his goods in the proper shapes for the markets in which he sells them, they must be well manufactured, well finished and of all well grades. If you go to a jobber to sell and he asks you, "Are your goods standard and graded equal to those of the large and established manufacturers?" if you say "yes" and they do not prove that way then you have trouble on your hands, and you are compelled to set on whatever terms this jobber may make, and our experience is that they will not treat you very gently. On the other hand, if you grade your goods as high as some of the larger manufacturers, they will say, "I am afraid they will not be so generous to you, but I will make me a satisfactory discount I will give you a trial order. You can see very plainly that it is a very large advantage to him who is not grading his goods up to standard or who is not manufacturing first-class goods, and that he is selling his goods at a price being placed on the market, the most dangerous of all is the demoralization of the market caused by low grade handles being placed thereon. First, it places you in an unpopular position with buyers, second it puts goods on the market that will not stand up to a grading standard and the curse of all, the manufacturers distrust their competitors, causes a general meeting of prices and no one can get a profit on his goods. If I were going to start in the handle business again on a small scale, the first thing I would do would be to grade my goods up to standard as being of standard grade, then the most important part of the battle would be won. Buyers are getting to be very hard on us to sell their products, so much so that in many instances the buyers use them as tools to try to get their competitors to time as they express it.

Were we to grade our handles as we did in the past year and a half, it would be necessary for us to advance prices twenty-five per cent at once, or all of us would be obliged to advance prices twenty-five per cent. We would close it for us. Thirty-five years ago we did not know the value of hickory, neither did we know how to grade our handles, at

that time we were just beginning to learn the handle business. Now we have this thirty-five years experience, and we know how to grade and should we not take advantage of it by not going on the markets as we did in the sixties and seventies and have to learn it all over again?

In conclusion let each and every one of us take the time to read the list of prices that will all try and have uniform grading. The jobber cannot say, "Smith's handles are standard," Jones says, "I can buy Smith's handles for the same price as Jones." On the other hand let them say, "Smith's and Jones' handles are graded the same and I see no difference in the price," and the handle business will be the same as other wood commodities, while at the present time there is no uniformity so far as grading is concerned and organization. Some months ago the handle association issued a standard list for 1908, how many manufacturers are selling from this list, how many are selling f. o. b. factory? Some are selling at seventy-five and ten, while others are making eighty per cent this same list, others are selling from the 1906 list. In some instances we find some selling from the 1904 list. How can handle men be recognized by the trade while in such an unorganized condition? Gentlemen, if you do not get up your grades, or our condition or not, if every manufacturer of hickory handles would stand firm and put his shoulders to the wheel, and make a success, otherwise we will all go to pieces.

The Nicties of Handle Manufacture.

R. F. Arnett of Hartwell Bros., then read a very interesting paper, which is herewith reproduced:

The Nicties of Handle Manufacture are intermingled with the many infinite details of production, and the more the producer produces but extend also to the marketing of the product, but I am not sure that the term can be applied with much propriety to the business unless you make it synonymous to hard work, unceasing efforts and continual worry.

My first introduction to handle making was watching my father hew down a hickory billet to a handle shape, then draw it down with the knife and then draw it down with the draw. This was the only way of making handles in olden times, and I am quite sure that the quality of grades in the past was equal to that used for handles today, but the advance made in workmanship and ease of production are truly worthy of our wonderful era.

A few years ago, when I was offered a position in the hickory handle trade, I was surprised and marveled at the extent of the handle industry, but when you consider the world-wide demand for handles, it is not surprising annually, you are not surprised at the extensive production.

In all stages of manufacture, I have noted the keen competition. It begins in the woods—the fight for timber; it continues in the production—the endeavor to secure the most efficient employees; and finally into the marketing of handles—the efforts to control the trade. I dislike to say that competition goes further than that, but I have known instances of one manufacturer trying to discredit another in the eyes of the buyer. There are those who believe that the handle market does not now exist, and they could be acquired in harmonious, fair and honest competition in the hickory handle trade. I believe that one manufacturer to have a tract of timber land bargained for, and then to have some one else step in and bargain for it. This is not fair. Neither is it a nicety to bargain with the employees of another to ascertain the insights of their business, and then to go on and just about close a big contract with some large buyer, and then have a competitor step in and bid prices that are lower than the others in the rank of handle manufacturers today. An intact organization of this association should remedy this.

THE SYSTEM OF CONSUMERS BUSINESS.

System of the term is becoming very popular with the American business world. Every concern of known up to date business methods has adopted a system of carrying on their business that is more efficient than the more efficient results. A few days ago, I looked into the workings of a large mail-order house. How many articles are packed in one or two separate shipments in a single day, and each package being handled but once? Each of these questions are answered by the mail-order articles. These articles may have come from various parts of the world, distributed by various means, and they are collected by means of conveyers, and just so much time is allowed each clerk to handle the articles in their packing department. They are collected in the packing room, wrapped and put into a conveyer and instantly loaded in a car of the railroad company over

which they are to be transported. The results that this firm obtains can be acquired in no other way than by a perfected system. The details of their business plan are so carefully planned that it moves with the greatest dispatch and uniformity.

As to business, a system more necessary or more easily adopted than in the manufacture of handles. The manufacturer must have his employees organized as a free from all impulsive work. The various departments must do their work completely and certify it to the supervising department, which in turn must be informed as to how much timber to cut. He must know how to get out only that quantity of timber which is free from all imperfections—to cut out the knots, birdpecks, etc. The foreman of the mill must know the quality required, and be able to select the wood and how to get them out. The turning of the handles must be strictly in accordance with specifications. Here, as with experience counts, for good handles are necessary to obtain the best results. The manufacturer must arrange to thoroughly season the handles. He who has his handles thoroughly seasoned of necessity makes superior ones for his kiln drying process kills their resiliency. A record of the stock must be kept, and a cost system is necessary to determine the value of the stock, to determine how much labor is necessary to get it out, to determine a uniform profit on all sales and to put a selling price in the goods. The manufacturer must anticipate the volume of business and certify this to the operating department, to have a stock ready for prompt deliveries, etc. In doing this the manufacturer must know from whence this business is to come, and must know their customers and the possibility of their orders.

FINE HANDLES.

It is a pleasure to sell good handles. Handle making may well be said to be a fine art. It is demonstrated thoroughly. Take our foremost manufacturers who have a reputation for high-class goods, compare that with the products of the inexperienced concern shown in the woods who do not know perhaps the first principles of the business. The manufacturer whose handles are patterned on the most scientific lines to secure the greatest results in usage, whose workmanship is of the highest quality, whose handles are finished in the most careful manner, and who give the greatest uniformity, I say that manufacturer is in an enviable position. Mr. R. W. Shapleigh in speaking at a business convention in St. Louis said that the value of an article is not determined so much by the discount the manufacturer makes as by the quality of the work, the appearance of them and the attractiveness of the labels; the carefulness with which they are packed; the facilities of the house for prompt deliveries; the character of the house for prompt adjustment of claims, the reputation of the house for honest dealing and clean up-to-date merchandise. I say to you, gentlemen, that the manufacturer who has fulfilled these qualifications has mastered the niceties of handle manufacture.

These addresses closed the session, but before adjourning it was decided to hold the regular annual meeting at Memphis on November 18. The following were present:

Attendants.

F. W. Peters, I. F. Force Handle Company, New Albany, Ind.
 Clarence E. Greener, Turner, Day & Woolworth Handle Company, Louisville, Ky.
 James Henry Still, St. Thomas, Ontario.
 John Stevely, Columbia Handle & Lumber Company, London, Ontario.
 W. C. Crawford, Tilbury, Canada.
 F. J. McLaughlin, J. L. McLaughlin & Sons, Bedford, Pa.
 F. J. McLaughlin, J. L. McLaughlin & Sons, Bedford, Pa.
 Henry H. Gibson, Hardwood Record, Chicago.
 M. P. Walsh, American Handle Company, Jonesboro, Ark.
 Wm. Charlesworth, Wm. Charlesworth Handle Company, Fayetteville, Ark.
 Glenn C. Hays, Wm. Charlesworth Handle Company, Fayetteville, Ark.
 H. D. Sebree, National Handle Company, Albany, Ark.
 T. A. Renkenberger, Columbianna Handle Works, Columbianna, Ohio.
 E. J. Lutz, Standard Handle Company, Ltd., Knoxville, Tenn.
 H. H. Jones, J. F. Jones Sons, Columbus Grove, Ohio.
 J. F. Jones, J. F. Jones Sons, Columbus Grove, Ohio.
 W. C. Kelly, Kelly Axe Manufacturing Company, Charleston, W. Va.
 R. L. Reuther, Nashville Spoke & Handle Manufacturing Company, Nashville, Tenn.
 H. E. Alexander, Columbia Manufacturing Company, New Philadelphia, Ohio.
 G. W. Ward, Federsburg Handle Company, Federsburg, Ind.

J. Crow Taylor, American Lumberman, Louisville, Ky.
 T. R. Clendinen, Jackson Woodenware Company, Atchison, Kan.
 A. N. Malby, Central Manufacturing Company, Kansas City, Mo.
 Abner Fellbaum, Frankfort Handle Manufacturing Company, Frankfort, Ind.
 G. Sherman, Sequatchie Handle Works, Sequatchie, Tenn.
 M. McCrillis, McCrillis Handle Company, Norwalk, O.
 Wm. Crillon, Nashville Spoke & Handle Manufacturing Company, Nashville, Tenn.
 R. F. Arnett, Hartwell Brothers, Chicago Heights, Ill.
 Chas. D. Gates, Turner, Day & Woolworth Handle Company, Louisville, Ky.
 T. J. Gregory, T. J. Gregory Handle Works, Cookeville, Tenn.
 C. W. Sperry, Fort Wayne Handle Company, Fort Wayne, Ind.
 E. C. Scott, Keller & Tamm Manufacturing Company, St. Louis, Mo.
 A. E. Gordon, Hardwood Record, Chicago.

Handle Notes.

The Rex Handle Company has been incorporated at Memphis, Tenn., with \$75,000 capital stock, \$50,000 of which is preferred. M. R. Grace, who has been prominent in the handle world for a number of years, will be president and general manager, which will insure the company's success. The home office and principal factory will be located at Memphis.

The Kelly Axe Manufacturing Company has about completed its factory at Charleston, W. Va., and expects to have a production of 1,000 dozen handles per day. Most of these will be used for handling their axes; the surplus, if any, will be placed on the market. The company is also building a large factory

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as cannot be noted generally in our warrant publication. Every patron of the paper is invited to use this department freely, and all inquiries will be handled with courtesy pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.]

Differs on Birch Botany.

NEW YORK, May 15.—Editor HARDWOOD RECORD: Thank you for the reference made to our transformed woods in connection with that article in your last issue, on "Yellow Birch." However, some of the references are incorrect, referring particularly to the commercial handling of the subject. The statement, for instance, that it is almost exclusively used for spools and shoe-pegs, is far from right. I have been engaged in the manufacture of spools for cotton and silk on a very extensive scale for some time, and have never yet been able to get one of my customers to take one made of yellow birch. They absolutely insist on paper birch, as do the shoe-peg factories in the New England states. You also state that the heart portion of the wood is inferior and of little commercial value. That also refers to paper birch, for the heartwood of yellow birch is really of most value—it is the lumber that is largely sold under the name of red birch, at an average of ten or twelve dollars a thousand higher than the sap portion. I note also you say it is a "comparatively small tree," while it is one of the largest hardwoods of our northern forest.—W. A. HALL, president Publishers' Paper Company.

With regard to above criticism, the Record would not presume to dispute Mr. Hall's opinion, as it is one based on long experience; the only explanation is that botanists evidently differ upon the classification of this tree, and while, as is well known, the paper birch is the popular tree for spools and pegs, the other variety, or *Betula lutea*, is said to

at Rector, Ark., which they expect to complete about July 1.

The Turner, Day & Woolworth Handle Company of Louisville has leased the Rector Handle Company's plant at Rector, Ark., which they intend to put in full operation about the first of August.

A new plant at Little Rock, Ark., is the Harrisburg Hardwood & Handle Company. It has recently completed a new factory and will manufacture all grades of rough and finished handles.

The Fort Wayne Handle Company of Fort Wayne, Ind., has about completed its plant. It has a capacity of 30,000 handles a day. The factory is located at New Haven, Ind., with main office at Fort Wayne. It is equipped with Defiance lathes and other modern machinery. C. W. Sperry is president.

The Withee Manufacturing Company, Withee, Wis., is a new institution for the manufacture of cant-hook and broom handles. The stock is manufactured from select maple. The owner and manager is Helge Westergaard.

Terre Haute Handle Company, Terre Haute, Ind., has taken over the "D" handle plant belonging to the Baldwin Forging & Tool Company of Columbus, O. The capacity of the plant is 175 dozen per day. The new company is incorporated at \$15,000. E. C. Davis is president and John E. Waldron secretary and treasurer.

J. T. Brown, who represents the large handle interests of Hartwell Brothers of Chicago Heights, Ill., at Sidon, a suburb, recently visited the home office, and while in Chicago favored the Record with a call.

be employed extensively as a substitute. In reference to the heartwood, several authors have been consulted, as they were before the article was prepared, and they furnish authority for the statements.—EDITOR.

A Correction.

JOHNSON CITY, TENN., May 18.—Editor HARDWOOD RECORD: Referring to the widespread publication regarding the insolvency of the Gartner-Hancock Lumber Company of Johnson City, Tenn., you are herewith given the facts in the case. The action against the Gartner-Hancock Lumber Company was brought by the Vestal Lumber & Manufacturing Company of Knoxville, Tenn., and a receiver appointed in the absence of the partners and the manager of the firm, without giving any notice and without giving any bond. The indebtedness toward the Vestal Lumber & Manufacturing Company is fully met and has been fully paid. There are no other creditors pressing the Gartner-Hancock Lumber Company. The company is perfectly solvent, having filed with the court a statement and affidavit showing the company's and personal assets of \$50,525, while the liabilities are only \$14,820.84, leaving net assets of \$35,704.16, as shown by the record now on file; and receivership has been dissolved.

The partners, W. T. Hancock and Walter Gartner, are greatly harassed at their reputation and integrity being thus attacked, resulting from the action brought against them, which they consider was wholly unwarranted and without the least foundation. The facts which prompted it are being investigated, and will be made known to the public if circumstances warrant it.

—GARTNER-HANCOCK LUMBER COMPANY.

That Hickory Controversy.

An English correspondent writes: "As a further proof of the low prices obtainable for hickory on this side, I may say that one of my buyers actually paid 14d and 18d for two parcels of hickory logs landed on the

quay. They inform me that the quality was not strictly prime, but the logs were of such a grade that they would have paid at least 22d in normal times. I have read your article, "Can It Be Possible?" under the heading "Hardwood Record Mail Bag," and can assure you that the first letter referred to is nearer

the mark than your correspondent's second letter. I don't know who your Liverpool correspondent is, but he certainly was in error regarding the demand and prices obtainable for the wood in question—but mistakes do happen, and even lumber correspondents are not infallible."

Kindly let me hear from you at your earliest convenience, giving an expression as to what the members of your association think on this subject, and what sort of action they will take regarding same. Yours truly, INSPECTION COMMITTEE, George Littleford, Chairman.

On motion of Theodore Fatbauer, the secretary was instructed to advise the Lumbermen's Club of Cincinnati that its communication had been received and that the Chicago Hardwood Exchange would abide by the decision of the forthcoming annual meeting of the National Hardwood Lumber Association at Milwaukee on inspection matters.

The resignation of W. O. King & Co. as members of the exchange was presented and on motion was laid on the table.

The following communications from E. E. Hooper, secretary of the Lumbermen's Association of Chicago were read:

Chicago, May 7, 1908.—J. L. Lane, Treasurer Chicago Hardwood Exchange—Dear Sir: Understanding that you will have a meeting of your association in the near future, I enclose a copy of a circular letter which I have just issued to the members of this association, referring to the Wide Tire and Wheel Tax Laws, believing you might desire to read it for the benefit and information of your members.—E. E. HOOPER, Secretary.

Of Interest to the Veneer Trade.

Semi-Annual Meeting.

On Tuesday and Wednesday, June 9 and 10, the National Veneer & Panel Manufacturers' Association, of which Burdis Anderson of the Great Lakes Veneer Company, Munising, Mich., is president, will hold its semi-annual meeting at the Ponchartraine Hotel, Detroit, Mich.

The first day's session will be devoted to meetings of the various divisions composing the association, when measures of special interest to each will be taken up. On the second day the association will hold what is known as its "Harmony Session," when all divisions will meet together for the consideration of matters of common interest. This and all others of the association will be executive.

All these various meetings are important ones and business of vital interest to the trade will be brought before them. It is urged not only that every member should attend meetings of his association on general principles, but it is especially desirable to do so in times like the present. Trade is none too good in the veneer industry, which has suffered in common with all others in the country of late, and various measures will be proposed toward "easing up" conditions a little. For instance, no factory can keep running on a profitable basis with short hours or operating with only half the usual crew, so that manufacturers will talk over plans with competitors in whom they have confidence, for arranging their various operations so that some can run a certain proportion of the time and others the remainder. Some such arrangement as this, if it could be made to the satisfaction of all concerned, would help take care of overhead cost and perhaps be a matter of mutual benefit.

The proposed program for the regular session of the association is about as follows:

- Roll call.
- Minutes of last meeting.
- President's address.
- Secretary's suggestions.
- Assistant secretary's report.
- Reports of standing committees.
- Addresses on pertinent topics.

A number of interesting papers or addresses will be delivered by people prominent in association work and with long experience in the trade. Z. Clark Thwing of the Grand Rapids Veneer Works, Grand Rapids, Mich., will talk on "Drying Veneer"—a subject which he is particularly fitted to handle.

D. E. Kline of Louisville, Ky., ex-president of the association, will speak on "How to Run the Factory on Half Time and Prevent Loss."

D. W. Williamson of the Williamson Veneer Company, Baltimore, Md., will talk on "Is the Price of Veneer High Enough, as Compared with Lumber Values?"

B. W. Lord of the Chicago Veneer Company, Burnside, Ky., will handle the subject, "Classifications," and try to predict the future of the veneer and panel industry if the railroads advance freight rates, as they threaten to do.

By way of entertainment the committee in charge suggest a fish dinner at one of Detroit's famous St. Clair river resorts, on the evening of June 9. On the whole, the meeting promises to be a live one, and it behooves members to get busy and make it one from which they may carry away much good.

Veneer Trade Notes.

W. H. Roddis of the Roddis Lumber and Veneer Company, Marshfield, Wis., was in the city on May 13.

The Frome Veneer Plant at Rice Lake, Wis., recently turned out the first carload of veneer for the season. The company has stock enough on hand to continue for the next six months. R. L. Frome of Sheboygan Falls, manager, plans to install heading machinery very shortly, which will add three or four months to the annual run of the plant.

The Mumment Veneer Factory at Millsburg, Ind., owned by E. E. Mumment of Goshen, will soon resume operation after several months of idleness.

The Burt Township Board of Alger county, Michigan, has purchased the Schneider veneer plant at Grand Marais, and leased the property to G. E. Le Veque. However, the factory will not run on veneers, but will be converted into a stove plant.

J. S. TRAINER, CHICAGO, PRESIDENT.

Chicago, May 6, 1908.—Gentlemen: Your attention is called to laws concerning wide tire and wheel tax, for the purpose of again urging your compliance with the most important one, which, in accordance with the views of the assistant corporate counsel, is the wide tire law now in effect. You have been favored with a copy of this law, which advises you of the widths of tires required, also that every wagon or wheeled vehicle should have fixed in some conspicuous place thereon in plain letters and figures the correct weight and the correct legal capacity of same. Regarding the Wheel Tax Law, you are advised not to take out any license until such time as the Supreme Court has handed down decisions of two cases that have been argued and are now in their hands. I am assured that no arrests will be made for not taking out the license until these decisions have been disposed of and you have been duly advised. This information and advice is communicated by instructions of the chairman of the trade committee.—E. E. HOOPER, Secretary.

On motion, the secretary was instructed to acknowledge their receipt.

This closed the regular business before the exchange, and President Trainer then introduced W. H. Russe of Memphis, president of the National Hardwood Lumber Association. Mr. Russe thanked the organization for the courtesy of the invitation to be present at its conference, and said that the National association was making remarkable progress, especially considering the unfavorable business conditions prevailing

News Miscellany.

Meeting Chicago Hardwood Exchange.

On Friday, May 15, the regular monthly meeting of the Chicago Hardwood Exchange was held in a club room of the Great Northern hotel at 1 p. m. The meeting was preceded by an attractive luncheon, and was one of the largest gatherings ever held by the organization. There were present a score of distinguished guests. Presiding at the meeting was President J. S. Trainer, with Secretary A. H. Ruth recording.

The first business was the reading of the following communication from the Lumbermen's Club of Cincinnati.

Cincinnati, O., April 17.—Chicago Hardwood

Lumber Exchange—Gentlemen: At a special meeting of our club held on Tuesday, April 14, the following resolutions were unanimously adopted:

"Resolved, That it is the sense of the Lumbermen's Club of Cincinnati that we return to the use of the 1905 rules of inspection on rough hardwoods, and be it further

"Resolved, That a copy of these resolutions be sent to the National Hardwood Lumber Association."

We believe that it is for the good of the National association that the Buffalo rules be reinstated, as all of the inquiries we are receiving at the present time call for inspection as per those rules. Furthermore, we are of the opinion that if we make a united effort we will succeed in having same reinstated at the Milwaukee meeting.

throughout the country. He stated that he had not been able to keep in very close touch with the parent organization for some months, owing to his absence in Europe, but that the work of the organization had devolved upon O. O. Agler, first vice president. He further stated that even against the protest of Mr. Agler, he desired to place that gentleman's name before the Chicago Hardwood Exchange with an earnest recommendation that it make him a candidate for the next president of the association.

Mr. Agler next spoke briefly, stating that he

O. O. AGLER, THE EXCHANGE'S CHOICE FOR PRESIDENT OF THE NATIONAL HARDWOOD LUMBER ASSOCIATION.

depressed his nomination to that important office, and that his business alliances were such it should not be forced upon him, and requested the association not to insist upon his acceptance of the high compliment which such action would mean. He stated he had served as first vice president to the best of his ability and did not seek first place in the organization.

Mr. Agler was followed by Earl Palmer, who made a humorous address, remarking that he had made a specific promise to a certain distinguished member of the Chicago Hardwood Exchange that he would not urge his nomination and election as president of the National association. He said he proposed to keep his word, and then delivered a eulogy on the ability, uprightness and character of said member, in so pointed a manner that his identity was unmistakable. However, he wound up by saying that he had mentioned no names and therefore had kept his word to the member in question, for which he was really proud of himself.

Mr. Palmer's remarks were greeted with much laughter and applause.

D. F. Clark of Minneapolis then spoke, endorsing most heartily the nomination of Mr. Agler as president of the National association, and assured him of the unanimous vote of the Minnesota Hardwood Lumber Dealers' Association. Mr. Clark also called the attention of the exchange to the unfairness of the railroads of the Northwest in not accepting the recognized standard of hardwood weights in the settlement of claims for overcharges, and urged that the Chicago exchange assist in having this matter presented at the next annual meeting of the National Hardwood Lumber Association.

Clarence Boyle then presented a motion that O. O. Agler be selected as the Chicago Hardwood Lumber Exchange candidate for the office of president of the National Hardwood Lumber Association at its forthcoming annual meeting in Milwaukee, and that the exchange pledge itself

as a unit to earnestly support the nomination; furthermore, that the president be instructed to appoint a committee of three to present Mr. Agler's name to the Milwaukee meeting.

F. A. Diggins of Cadillac, president of the Michigan Hardwood Manufacturers' Association, then delivered a very forceful and diplomatic address on the subject of the necessity of maintaining a system of uniformity in inspection of hardwoods. He stated that in his connection with the National Hardwood Lumber Association he had received nothing but absolutely fair treatment from every member of the Inspection Bureau Committee. He averred that it was impossible to formulate a set of inspection rules that in all particulars would be pleasing to all interests involved, but the committee had made up these rules by dint of mutual concession and he believed that the present rules were thoroughly adapted to current needs and fair to all parties in interest.

Charles H. Barnaby of Greenacres, Ind., president of the Indiana Hardwood Lumbermen's Association, made a short address in which he endorsed on behalf of this organization the nomination of Mr. Agler, and assured him of the united support of Indiana.

Mr. Russe again spoke and assured Mr. Agler that Memphis would reciprocate the honor done him in electing him president two years ago by now giving Mr. Agler its undivided support.

J. W. Thompson of Memphis then addressed the meeting and urged mutual concession on inspection matters from all sections of the country. He said that every man who had put himself in the hands of the National association had received fair treatment, and while at the time he was opposed to the Atlantic City rule, he had come around to the opinion that it was the best that could have been done under the circumstances, and while he was now a firm advocate of the new inspection system, he believed in making such concessions to disgruntled localities as would insure their continuation with and hearty support of the national body. He especially referred to the necessity of giving any complaint that the Cincinnati contingent might have proper consideration, and making such concessions as would meet their views on inspection matters. He stated that he was always for mutual concessions and doing business as brother with brother, concluding by saying that the nomination of Mr. Agler for president met his approval and he could think of no better way to round out a block that would win at Milwaukee than to add the name of Gardner T. Jones of Boston as first vice president.

Hugh McLean, president of the Hugh McLean Lumber Company of Buffalo and Memphis, made a brief address in which he stated that the Buffalo contingent was in full sympathy and would stay with the national organization to a man.

The meeting then adjourned.

The following gentlemen were in attendance:

Attendance.

Agler, Oliver O., Upham & Agler, Chicago.
Altman, H. P., the American Lumber Company, Chicago.
Barnaby, C. H., Greenacres, Ind.
Bate, Sam E., New York.
Black, Fred W., F. W. Black Lumber Company, Chicago.
Boyle, Clarence, Heath-Witbeck Company, Chicago.
Brown, F. L., Crandall & Brown, Chicago.
Byar, J. J.
Clark, D. F., Osborne & Clark, Minneapolis, Minn.
Curtis, Ernest A., The Valley Wood & Lumber Company, Chicago.
Dickson, W. J., W. J. Dickson Company, Memphis, Tenn.
Diggins, F. A., Murphy & Diggins, Cadillac, Mich.
Dun, J. H., Halsey & Dion, Chicago.
Edwards, E. L., Boston.
Fink, Jacob J., Fink-Heldler Company, Chicago.
Fathauer, Theodore, Theodore Fathauer Company, Chicago.
Fish, Frank F., secretary National Hardwood Lumber Association, Chicago.
Fitzhugh, Ed., McLean Lumber Company, Chattanooga, Tenn.
Fowler, L. E., Lumber World, Chicago.
Gibson, H. H., Hardware & Broom, Chicago.

Jones, Gardner I., Jones Hardwood Company, Boston, Mass.
Kellogg, C. M., Barksdale-Kellogg Lumber Company, Memphis, Tenn.
Klann, E. H. F., S. Hendrickson Lumber Company, Chicago.
Knox, G., secretary Michigan Hardwood Manufacturers' Association, Cadillac, Mich.
Krebs, O. M., McLean Hardwood Lumber Company, Memphis, Tenn.
Landeck, G. J., Landeck Lumber Company, Milwaukee.
Lane, J. L., J. L. Lane & Co., Chicago.
Lesh, G. B., Lesh & Matthews Lumber Company, Chicago.
McLean, Hugh, Hugh McLean Lumber Company, Buffalo, N. Y.
McMullen, F. B., Fullerton-Powell Hardwood Lumber Company, South Bend, Ind.
Miller, Milton, Miller Brothers, Chicago.
Nelson, E. S., Chicago.
Palmer, Earl, Ferguson & Palmer Company, Paducah, Ky.
Pritchard, J. M., Long-Knight Lumber Company, Indianapolis, Ind.
Richardson, E. J., American Lumber Company, Chicago.
Richmond, Park, Park Richmond & Co., Chicago.
Russe, W. H., Russe & Burgess, Memphis, Tenn.
Ruth, A. H., G. W. Jones Lumber Company, Chicago.
Sontaghe, F. P., surveyor general, National Hardwood Lumber Association, Chicago.
Strack, J. A., New Albany, Ind.
Trainer, J. S., Trainer Brothers Lumber Company, Chicago.
Trainer, W. E., Trainer Brothers Lumber Company, Chicago.
Thompson, J. W., J. W. Thompson Lumber Company, Memphis, Tenn.
Van Norstrand, F. C., Cotton Belt Lumber Company, Chicago.
West, James H., Estabrook-Skeele Lumber Company, Chicago.
Young, Edward J., Brittingham & Young Company, Madison, Wis.

Special Meeting Michigan Association.

A special meeting of the Michigan Hardwood Manufacturers' Association was held at the Cushman House, Petoskey, Mich., the afternoon and evening of May 5. About thirty-five firms were represented, and the meeting was one of the most harmonious and pleasant gatherings ever held by this association.

President F. A. Diggins occupied the chair, with Secretary J. C. Knox at the desk. A synopsis of the minutes of the Saginaw meeting held on Feb. 5 were read and approved.

The afternoon session convened at 4 p. m.

F. A. DIGGINS, CADILLAC, PRESIDENT.

and concerned itself chiefly with a discussion of important and timely matters connected with the northern lumber industry. The questions of present market conditions and inspection rules were thoroughly thrashed out, and after the close of the session the Market Conditions Committee and the Grading Committee went into session.

At 8 p. m. the meeting reconvened, and Chairman Bruce Odell reported that the Market Conditions Committee believed it was to the interest of manufacturers generally to curtail output as much as possible, and that from information they had at hand this was being done by all members of the association. They found that many mills were running only part of the time, or on short hauls, while others had found it good policy to close down altogether. The committee recommended that this course be continued rather than dispose of valuable stock at a sacrifice.

Chairman D. H. Day reported for the Grading Committee that it recommended strict adherence to the rules of the National Hardwood Lumber Association as they now stand.

The following were present:

- G. E. Stone, Crowl Lumber Company, Harbor Springs, Mich.
- M. E. Thomas, Mitchell Brothers Company, Cadillac and Jennings.
- W. W. Smith, Louis Sands Salt and Lumber Company, Marquette.
- A. B. Klise, A. B. Klise Lumber Company, Sargents Bay.
- C. R. Duggan, Tindle & Jackson, Pellston.
- E. C. Groesbeck, Stearns Salt and Lumber Company, Ludington.

R. B. Gillette, Bogardus Land and Lumber Company, Pellston and Lakewood.

W. N. Kelley, Kelley Lumber & Shingle Company, Traverse City.

John F. Ott, John F. Ott Lumber Company, Traverse City.

W. C. Hull, Oval Wood Dish Company, Traverse City.

O. J. Smith, The R. G. Peters Salt and Lumber Company, East Lake.

O. L. Larsen, Buckley & Douglas Lumber Company, Manistee.

James Danaher, Jr., Danaher Hardwood Lumber Company, Pullarville.

William L. Curtis, Cook, Curtis & Miller, Grand Marais.

D. H. Day, D. H. Day, Glen Haven.

F. A. Diggins, Murphy & Diggins, Cadillac.

F. L. Michelson, Johannesburg Manufacturing Company, Johannesburg; Salling-Hansen Company, Grayling; Michelson & Hansen Lumber Company, Lewiston.

L. Jensen, Salling.

J. C. Knox, secretary, Cadillac.

The Importance of Ample Power.

How to burn sawdust satisfactorily is a problem with many mills—a problem upon the solution of which much depends. If it is wet or green, and especially if it is the product of a band saw, it lies so compactly on the grate

gross profit on only 20,000 feet, and is, therefore, only half of what it should be.

Or, looking at it another way, when a mill having a capacity of 100,000 feet cuts only 80,000 feet under the conditions cited, it is losing an opportunity to make 20,000 feet of lumber without any expense except the actual cost of the logs themselves.

It is these facts that lead users to say that the Gordon Hollow Blast Grate, which adds from 25 to 50 per cent to the steaming capacity of boilers, and makes the user absolutely independent of weather conditions, pays for itself every thirty days! The blast keeps the sawdust loose, and gives the air a chance to thoroughly permeate it, drying it out rapidly and causing it to burn freely. Indeed, the grate is found to give as good results with wet, green or frozen sawdust as a draft grate gives with dry wood. This grate is sold on approval, thirty days being given in which to thoroughly test it, the manufacturers paying the freight both ways in the event of rejection. This speaks volumes, as they would scarcely be likely to make this liberal offer unless they knew the grate to be all right. They are not novices, having made the

Charles T. Mitchell, Mitchell Brothers Company, Cadillac.

M. D. Reeder, Boyne City Lumber Company, Boyne City.

that the air cannot force its way through. As a result the fire is poor, the boilers generate but little steam, the engine lags, the shafting does not run full speed and the output of every machine in the mill suffers; while it is not infrequently necessary to shut down to give the boilers a chance to accumulate sufficient reserve. The consequence is that while a full corps of men are employed and all expenses are normal, the cut of the mill is considerably less than it should be often as much as 20 per cent.

What does this mean? A decrease of 20 per cent in the output may mean a reduction of 50 per cent in the profits. Suppose, for instance, you have a mill that should turn out 100,000 feet per day. Your expenses of every kind are such, let us say, that you must make 60,000 feet per day in order to "break even." Your net profit for the day is therefore represented by your gross profit—selling price less cost of logs only—on the remaining 40,000 feet. Now, if your output falls off 20 per cent, and you cut only 80,000 feet, your net profit is your

grate for sixteen years, during which more than 5,000 sets have been tried and found even better than represented.

For full particulars address the Gordon Hollow Blast Grate Company, Greenville, Mich.

Louisiana Longleaf Lumber Company to Manufacture Hardwoods.

The Louisiana Longleaf Lumber Company has recently installed at Fisher, La., a new hardwood sawmill, which will be run in connection with its pine operations. The hardwood logs will be felled along with the pine timber and hauled out by means of the company's logging road, spur tracks, etc., using the same facilities which are employed in the pine operations, thus effecting considerable economy. The company has purchased the very best modern machinery and devices in building its new mill, with the result that no more up-to-date and economical operation can be found in the South. The hardwood mill is about a quarter of a mile from the yellow pine plant and both are near the Kausas City Southern main line. The com-

pany's chief output is oak and gum, and it makes a specialty of bridge and car material. Being a large manufacturer of yellow pine, the new operation enables it to supply mixed cars of hardwoods and pine. The model character of the hardwood mill of the company is evidenced by the illustration on the previous page.

Timber Owners Organize to Fight Fire.

One of the most important economic movements of the day, about which the general public has yet learned little, is the concerted action of owners of timber in different parts of the country in organizing to protect their holdings from fire. In the Pacific Northwest the Washington Forest Fire Association has just elected officers at Seattle and begun work for the year with 3,000,000 acres under its care. The plans include a system of patrol by rangers, resembling the work done by the United States Forest Service in guarding against and extinguishing fires.

Organizations of similar kind and for a like purpose are at work in Oregon and Idaho. In the latter state a portion of the expense is borne by taxation and paid from the state treasury. A western railroad company which holds large tracts of timber has taken steps to guard its property from fire, and during the short

seventeenth annual, which will be held in Chicago September 5 to 11, are busily engaged doing all in their power to make the meeting a decided success.

The arrangements for the June 5 concatenation are now well under way, and a large number of applications from eligible "kittens" are being considered, so that the success of the gathering is a foregone conclusion. All members of the order who are in Chicago on that date will be given a rousing welcome at the concatenation, and it is hoped that as many as possible will arrange their affairs so as to permit their attendance. E. H. Dalbey, Heyworth building, is chairman of the Concatenation Committee.

A Trim Little Craft.

James D. Lacey of James D. Lacey & Co., the well-known timber brokers, who maintain winter quarters at New Orleans besides their general offices in the First National Bank building, Chicago, has been cruising southern waters during the past winter and spring in his new craft, the *Falma*, a photograph of which we reproduce herewith.

Mr. Lacey, accompanied by his wife, left New Orleans the latter part of April for Chicago, by way of the Mississippi river, and while the first part of the trip was ideal, they encountered some

Before the summer is over Mr. Lacey is looking forward to cruising the Great Lakes and the St. Lawrence river in the *Falma*.

Conference of Association Officials.

On Thursday and Friday of last week a conference of the Executive and Inspection Rules Committee and Special Committee on the Eastern Situation of the National Hardwood Lumber Association was held at its general offices in Chicago. While the several sessions of the meeting were executive, it is understood that the inspection rules have been somewhat rearranged for presentation at the annual meeting at Milwaukee next month, with the expectation that they will meet with the approval of the convention and be adopted to succeed the present rules. However, it is fully understood that the general system of inspection is in no wise to be altered or amended, and that the changes referred to are simply in minor details.

The meeting was a very full one, as the entire Executive Board were present, with all but two members of the Inspection Rules Committee and the Special Committee.

Meeting of St. Louis Lumbermen's Club.

A most entertaining monthly meeting of the Lumbermen's Club of St. Louis was held

JAMES D. LACEY'S STURDY CRAFT, THE FALMA.

time that its plans have been in operation it has met with most encouraging success.

Similar work is being done on the other side of the continent. Forest owners in Maine have gone to work in the same systematic way to control the forests' great enemy, fire. Like organizations are found in other parts of the country, showing how fully it is now realized that protection against fire is of the greatest importance.

It is safe to say that fires in this country have destroyed more timber than lumbermen have cut. When timber was abundant the waste passed almost unnoticed, but now that a scarcity is at hand and an actual wood famine threatens in the near future, the owners of forest lands are waking up and taking action to save what is left.

Hoo-Hoo at Chicago.

A big concatenation will be held at the Great Northern Hotel, Chicago, on the evening of Friday, June 5, when from 75 to 150 candidates will be initiated. The main dining room of the hotel has been secured for the concatenation, and the exclusive use of the large grill room for the luncheon which will follow.

There seems to be more enthusiasm among the Hoo-Hoo of Chicago than has ever been known before, and all the committees appointed for the

severe storms when nearing Memphis and Cairo, occasioned by the cyclones and hurricanes which were raging throughout the middle West and Mississippi valley at that time, and were frequently compelled to tie up their sturdy craft at river ports and seek shelter from the rattling winds and numerous logs and trees floating swiftly down the river, which made traveling by night impossible. They reached St. Louis, however, on May 3 and continued their journey up the Illinois river on May 5, being joined at Peoria by friends, who accompanied them to Chicago.

The *Falma* is sixty feet in length and is patterned on a smaller scale after the United States torpedo boats, which have proved to the world their seaworthiness during their recent cruise in the Pacific, and Mr. Lacey is expecting to derive a great deal of enjoyment throughout the coming summer from his miniature man-of-war.

The *Falma* was built in Cincinnati, and though launched only recently, has already traveled over three thousand miles. She is equipped with 90-horsepower Emerson engine, and has a guaranteed speed of twenty-two miles an hour. She is substantially and beautifully built, her entire cabin being of mahogany, and her appointments and equipment throughout being of the most improved modern types.

Tuesday evening, May 12, at the Mercantile Club, Walter J. Hill, president of the Mechanics-American National Bank of St. Louis, gave a talk on financial matters in general, and explained to the members of the club the good and bad points of the several currency bills before Congress.

The club began the evening's program with a beefsteak dinner at 6:30, after which Mr. Hill gave his talk. At the conclusion of Mr. Hill's remarks, Lloyd G. Harris suggested a rising vote of thanks and they were given most willingly.

The regular business part of the program was then carried out.

The chairman of the Entertainment Committee, C. M. Jennings, when he was called on for his report, said that the committee had in mind giving some kind of outdoor entertainment at the next meeting and inviting the ladies. This met the approval of all the members except Henry W. Ballman, who objected to the ladies being included. Everyone present wanted to talk at once in reply to Mr. Ballman, but Thos. C. Whitmarsh got the floor and he championed the cause of the ladies in his characteristic way and the result was that Mr. Ballman had to reconsider his objection, so the ladies will probably attend the next meeting in June.

The Membership Committee presented the name of B. S. Van Cleave, president of the Van Cleave Lumber Company, for membership and he was admitted by unanimous vote.

Julius Seidel, chairman of the Arbitration Committee, submitted the report of that committee on the resolution offered a couple of months ago by Thos. C. Whitmarsh, general manager of the W. T. Ferguson Lumber Company. The report had been delayed on account of the absence of one of the committee.

It was as follows:

Lumbermen's files of St. Louis: Your Committee on Arbitration suggests that to avoid differences between the wholesalers and the retail yards the following precautions should be considered:

UNIFORM ACCEPTANCE OF ORDERS.

Orders given and accepted between two parties should clearly specify the maximum amount of items wanted, or if preferred, an exact number of pieces or feet can be designated. This being done would overcome the complaints made that quick selling items are undersold and slow selling items are oversold. This being done would overcome the complaint made that quick selling items are undersold and slow selling items are oversold. If no definite amount is stated under the term "one car load," the mill should have the right to load to the full capacity of or in such quantities as their stock warrants. Their orders should be properly drawn and if possible the signature of both parties obtained.

UNIFORM ORDER BOOKS.

The adoption and use of uniform order blanks is recommended, the same to be bound in triplicate, the original and one copy to be convenient for use of seller and buyer. Every order to be signed in triplicate by the parties thereto.

DEFINITE TIME FOR SHIPMENT.

All orders for lumber should contain a specific time limit for shipment.

Orders should not be cancelled after the same is loaded on cars and delivered to the transportation company, provided, however, that it is cancelled in accordance with the contract between buyer and seller.

RESPONSIBILITY FOR SHIPMENTS.

It should be the duty of the manufacturers and wholesalers to take an active interest in the marketing of their products through legitimate channels only, and such shippers desiring to sell their output to the trade should be held responsible for the quality or quantity of recognized trade ethics by any middleman through whom sales may be made.

SETTLEMENT OF DISPUTES ON GRADES OF LUMBER.

The custom adopted by the pine manufacturers and saw mill operators is recognized by the trade is considered fair to both sides, and it is recommended that this or any equally fair and effective method be adopted.

We believe that the adoption of these rules will lead to better understanding in advance, and on the theory that "The preventive is better than the cure," should be heartily supported.

JULIUS SEIDEL, Chairman.

CAPT. L. G. HARRIS.

C. D. JOHNSON.

The chairman of the Statistical Committee, James Fremdergast, reported that their committee was not ready to make a report, but would do so at the June meeting.

The matter of inviting the National Hardwood Lumber Association to meet in St. Louis in 1909 was brought up. The invitation to meet in St. Louis will be extended by a committee composed of W. A. Barnes, Henry Rolfes and Thos. C. Whitmarsh and two hardwood lumbermen to be appointed later.

The club decided to guarantee the raising of a fund for the entertainment of the members of the National Hardwood Lumber Association if they come to St. Louis next year. The meeting then adjourned.

Head of Reliance Oil and Grease Co. Punished.

J. M. Bachert of the notorious Reliance Oil & Grease Company, with whom a number of lumbermen have had deals that were unsatisfactory, to say the least, has been sentenced by Federal Judge Taylor, of Cleveland, O., where the company operated, to sixty days imprisonment and a fine of \$500 for receiving fraudulent mail exchange business. Bachert pleaded guilty, but it has asked that he be

let off with the fine only. The judge ruled, however, that it was apparent he obtained property without intending to pay for it. He was accordingly committed and the fine paid.

To the American Lumber & Manufacturing Company of Pittsburg and Messrs. McGraw and Messick, their attorneys, of Cleveland, is due credit for hunting down this leech on the lumber and other trades, and, by bringing the attention of his affairs to the postoffice authorities, landing him in jail. The only remarkable feature in the case is that with such glaring dishonesty as Bachert was guilty of his sentence should have been so light. The American Lumber & Manufacturing Company had some dealings with the oil company at one time, but succeeded in getting reimbursement through their attorneys.

Annual Southern Cypress Manufacturers' Association.

The annual meeting of the Southern Cypress Manufacturers' Association took place at the New Grunewald Hotel, New Orleans, May 29 and 31. President Frederick Wilbert of Plaquemine, La., occupied the chair, and of the fifty-six members more than thirty were present.

President Wilbert reviewed the work of the association during the little more than three years of its existence, showing the advantages which have resulted from competitors working in harmony with each other along the lines of manufacturing, grading, shipping, etc. He spoke enthusiastically of the merits of cypress and pointed out that manufacturers of this wood had not felt the effect of the recent financial depression as much as some others. He commended the work of the various committees and the loyalty of the association members.

Secretary George E. Watson's report showed that a great deal of conscientious work had been done by his office, and was eminently satisfactory.

Treasurer George W. Dodge presented his annual report which showed that the finances of the association are in excellent shape.

R. H. Downman, chairman of the Transportation Committee, gave the status of the car-stake litigation and urged members to make full use of the Claims Bureau, that their difficulties might obtain prompt settlement. The

secretary was instructed to consult with the association counsel relative to taking action toward collecting the interest on freight claims, upon which the railroads had unduly postponed settlement. Mr. Downman also spoke of the growth of mutual lumber insurance companies, pointing out their advantage and advocating their encouragement. He announced the organization at New Orleans last week of the Lumbermen's Inter-Insurance Association and explained its purposes.

The Committee on Legislation was requested to draft and secure the introduction of a bill into the Louisiana legislature to protect lumbermen from the depredations of timber thieves. The Committee on Grades submitted a detailed report of the year's work, made a number of recommendations, and was empowered to make such decisions as it deems best in re-inspection matters, which shall be considered final. After considerable discussion a number of minor changes in the rules were adopted. The Board of Conditions, Terms of Sale, and other committees all offered satisfactory and valuable reports.

On Wednesday evening the annual banquet was held and proved most enjoyable. Among the interesting speakers were R. H. Downman of New Orleans, R. M. Carrier of Sardis, Miss., and Dr. Herman Von Schrenck of St. Louis. At the following day's session a committee was appointed to attend the National Lumber Manufacturers' Association meeting in June; also a nominating committee to select officers for the coming year. The report of the latter was adopted unanimously, and the officers elected were as follows:

President—Frederick Wilbert, Plaquemine, La.

First vice president—S. M. Bloss, Garyville, La.

Second vice president—R. H. Knox, Savannah, Ga.

Treasurer—George W. Dodge, Napoleonville, La.

Directors—R. H. Downman, New Orleans; F. B. Williams, Portmore, E. G. Swartz, Burton, La.; L. H. Price, Ramos, La.; J. F. Wigginton, Bowie, La.; John Dibert, New Orleans; P. L. Ruff, Portmore, La.; H. M. Cotton, Morgan City, La.; J. M. Jackson, Parkersburg, W. Va.; J. A. Bruce, Strader, La.; R. M. Carrier, Sardis, Miss.

After a lengthy discussion of business conditions, the meeting adjourned, and was followed by a short session of the Board of Directors, who re-elected George E. Watson secretary for the coming year.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

CHICAGO

Geo. E. Foster of the Foster-Latimer Company, McLees, Wis., was a Chicago visitor on May 10. Mr. Foster was accompanied by Mr. Latimer of Ashland, Wis., his business associate in operations at that point.

Warren Ross of the newly organized Warren Ross Lumber Company, Jamestown, N. Y., called on friends in this city May 9 to 11.

J. S. Stearns of Ludington, Mich., was at the Annex over Sunday, May 10.

The Belle Point Lumber Company has moved its offices from Frankfort to Lexington, Ky., according to recent advices received by the Record.

The annual report of the last meeting of the National Wholesale Lumber Dealers' Association, held at Washington, has been issued, giving the proceeds of the meeting in full, with handsome illustrations of the officers, list of committee members, and all information pertaining to the association.

J. W. Dickson of the J. W. Dickson Lumber Company, Memphis, Tenn., was in town several days ago.

The National Wagon Manufacturers' Association has moved its offices from the Home

insurance building, this city, to new quarters in rooms 625-7 American Trust building.

Wm. P. Powell of W. B. Mershon & Co., Saginaw, was in Chicago May 15 en route home from a trip to the South and Southwest. He reports an excellent business while away.

E. L. Edwards of Dayton, Ohio, called on friends in this market last week.

O. M. Krebs of the McLean Hardwood Lumber Company and J. M. Kellogg of the Barksdale-Kellogg Lumber Company were among the Memphis visitors of the past fortnight.

Gardner I. Jones of the Jones Hardwood Company, Boston, was in Chicago on business May 15.

Hugh McLean of the Hugh McLean Lumber Company, Buffalo, visited this market week before last.

The Excelsior Cypress Company has been incorporated at Chicago with a capital of \$350,000, to deal in lumber and lumber products. The incorporators are F. P. Leffingwell, J. H. Krebs and W. A. Barnes.

O. B. Law, the Chicago timber man, has removed his offices to 1910 Hartford building. His new place of business is in Central

The A. R. Vinnebeck Lumber Company announces the removal of its offices from the

First National Bank building to its yards at Division and North Branch streets. The company's telephone number is North 2256.

C. L. Willey, the mahogany and veneer magnate of Chicago, has just returned from a month's trip to Great Britain, in company with Mrs. Willey. He reports that the general situation is far from reassuring there, and trade generally is extremely dull. While in Liverpool, Mr. Willey purchased upwards of a million feet of fine quality mahogany logs, which will be shipped to Chicago for reduction into veneers and lumber. He says he is still running his big Memphis sawmill and veneer plants full force, and has a stock of logs on hand to last for sixty days. However, he has suspended his woods operations and probably will not resume them until autumn. C. S. Whitmore, the pioneer lumberman of Cadillac, Mich., and Chicago, died at his residence in Pasadena, Cal., May 6, after a brief illness. He is survived by a widow and eight children, six of whom live in Chicago, and a son and daughter in Pasadena. Mr. Whitmore's death was due to bronchial trouble, which necessitated his leaving the Chicago climate for California ten years ago. During the time he was engaged in the lumber business in Chicago he was associated with George W. Hotchkiss, secretary of the Illinois Retail Lumber Dealers' Association, at Evanston. He had charge of the Michigan forestry exhibit at the Chicago World's Fair. During his residence in California he wrote considerable matter for early issues of the Record, especially on technical topics.

John E. Kelly, manager of sales of the Simonds Manufacturing Company of Fitchburg, Mass., was in town a few days last week in consultation with Charles F. Braffett, vice-president of the company, who has charge of the Chicago branch.

W. C. Fenn, of Fenn Brothers Company, prominent hardwood interior finish manufacturing house of Memphis, Tenn., was in Chicago on May 22, and called at the Record office.

A fire which occurred in the heart of the lumber district in May has caused considerable damage, but was fought down by strenuous effort on the part of employees of a number of factories. However, the T. Wilce Company suffered the loss of \$15,000 worth of valuable hardwoods before the flames were checked. No other lumber companies were affected. The loss was fully covered by insurance. The company's business will not be in the least interfered with because of the blaze, but will be conducted with its usual dispatch.

Henry Maley of Edinburgh, Ind., the colon of the Indiana hardwood trade, spent a few days with Chicago friends last week. Although Mr. Maley is interested in nine hardwood sawmills and has a good deal of hardwood lumber in pile, he is not at all worried over the business outlook. He has not had recourse to cutting prices in order to secure a fair volume of trade, and insists that hardwood lumber at the prices at which it is being sold by some of the small operators at the present time, is a much better asset than money in the bank. He believes that the development and necessities of business will clean up all the surplus stock at good prices.

BOSTON

Gardner I. Jones of the Jones Hardwood Company, Boston, has been making a trip west.

William E. Litchfield, a prominent Boston hardwood dealer, has been on a trip to Pennsylvania and Virginia.

Holt & Hughes, large dealers in hardwoods, Boston, report new business of small volume.

E. J. Philney of Jacksonville, Fla., has returned home from a trip north.

William H. Rollins of Beverly, Mass., has been appointed trustee in bankruptcy of James Fairfield of Salem, Mass., who recently assigned.

John McDonald of Savannah, Ga., has been a recent visitor in this market.

The creditors of the O. D. Brett Company, Lynn, Mass., woodworkers, will shortly receive a dividend of forty cents cash. This company had a finely equipped plant but was obliged to assign, due to the failure of those who had promised money for a working capital to put it up when it was necessary. A new company is to be formed to take over this plant. The affairs of the Brett company have been settled up in a quick and satisfactory manner by the assignee, William Bacon, of theavenport-Peters Company.

One of the recent prominent visitors in this market was R. J. Menz of the R. J. Menz Lumber Company, Seattle, Wash.

L. H. Randall of Randall & Orcutt, hardwood dealers, returned recently from a New York trip.

Robert W. Leatherbee, who has been associated with his father's business, the Chas. W. Leatherbee Lumber Company, will shortly enter the firm business, with his wife's father is interested. He will be located at Bridgeport, Conn.

The George D. Emery Company received a large and valuable cargo of mahogany and cedar logs this month. The steamer Chelston arrived with 2,830 logs of mahogany from Nicaragua. In addition to this the cargo consisted of 520 cedar logs and 134 San Juan logs. Some of the mahogany logs weighed over five tons.

NEW YORK

R. J. Darnell, prominent Memphis hardwood man, spent several days in town the middle of the month preparatory to sailing for Europe on a business and pleasure trip.

Charles F. Fischer of the C. F. Fischer Lumber Company, 1916 Park avenue, is spending ten days with Nelson H. Waleoff of the L. H. H. Waleoff & Company, Providence, R. I., on the latter's summer home.

Much interest is being manifested locally in the approaching tournament of the Lumbermen's Golf Association, which occurs at Newton, Mass., June 23 and 24. The local trade will be well represented in the contest, and the prizes this year will be as handsome as ever.

W. F. Martz of the Goodland Cypress Company, New Orleans, La., is spending a few weeks in town at his local office, 115 Broadway, in the interest of business. The interests with which he is associated are just completing the erection of a new cypress mill for the Vacherie Cypress Company, which is its latest organization and will be operated in connection with the Goodland Cypress Company and the Hoyt & Woodin Manufacturing Company.

Oliver O. Agler of Upham & Agler, prominent Chicago hardwood house, and first vice-president of the National Hardwood Lumber Association, spent several days in town during the fortnight in the interest of business.

Schedules in bankruptcy of J. L. English, trading as English & Co., hardwood wholesalers, 1 Madison avenue, Manhattan, who was recently petitioned in bankruptcy, show liabilities of \$121,631, of which \$27,243 are secured; and nominal assets \$32,251.

Claude S. Day, of 611 West 112th street, Manhattan, who was formerly engaged in the manufacture of plumbers' woodwork in Jersey City, has filed a petition in bankruptcy with liabilities of \$20,875 and no assets. The largest creditor is his father-in-law, C. H. Turner, a lumberman of Malone, N. Y., for \$12,522 for money advanced in 1905-6 to carry on business.

The old established carriage and wagon stock manufacturing firm of J. B. Brewster & Co., has been petitioned into bankruptcy by three creditors. It has of late years been a joint stock association, of which C. C. Downey, H. N. Duncan and G. M. White are the principals. H. A. Robinson has been appointed receiver with bond at \$15,000. The liabilities are estimated at \$50,000, and assets \$25,000. The failure is attributed to the general financial condition, and the inability to dispose of high-class manufactured stock. In a fair market the assets would be worth at least \$60,000, but at present prices the stock will bring only about \$25,000, and good accounts \$10,000.

Ernest M. Kenna, headquarters 66 Broadway, who for several years past has been prominently identified with the California redwood trade, has incorporated his business as the E. M. Kenna Lumber Company with a paid-in capital of \$25,000. The incorporators are E. D. Kenna, a prominent railroad man of Chicago; Geraldine Kenna of New York; H. O. Shunder and E. M. Kenna. The new corporation will continue the California redwood specialty, with some of the best and most complete facilities at sources of supply in the California redwood belt.

H. Billeter, manager of the Lumber Underwriters, the well-known lumber trade fire insurance organization of 66 Broadway, city, is recuperating at Atlantic City after a serious attack of typhoid fever, from which he has been suffering for the past four months, and is expected to soon be sufficiently recovered to assume his active duties.

C. D. Chase, manager of the Lumbermen's Credit Association, 115 Nassau street, has just returned from business and pleasure trip in the West.

Roll Stephens, who was formerly on the selling staff of the wholesale house of Wm. Whitmer & Sons, Inc., of Philadelphia and Newark, has joined forces with Stone & Hershey, wholesalers of Newark, N. J., and branch office at 18 Broadway, city, and will represent them in the Metropolitan District and Long Island trade.

C. E. Emery, who was formerly associated with S. E. Hart in the wholesale hardwood business, Flatiron building, has secured the eastern representation for the Bryan Lumber Company, large hardwood manufacturers of Bristol, Tenn., and will open an office in the uptown wholesale district at once. J. H. Bryan of the company, is in the city completing final plans for the office. The Bryan Lumber Company operates seven mills and has a choice stock of hardwood lumber suitable for the eastern markets.

The Export Lumber Company announces the removal of its office from 42 Broadway to the Corn Exchange Bank building.

H. M. Bickford of the H. M. Bickford Company, Boston, has been spending several days in town visiting Manager A. Shoaf of the New York office of the company.

Charles E. Page & Co. have leased new and larger quarters at 1176 Broadway, in line with increasing business.

E. E. Taenzler of the Darnell-Taenzler Lumber Company, Memphis, spent several days in town during the fortnight in the interest of business.

R. P. Salmon, manager of the local office of the Iroquois Door Company, 18 Broadway, has just returned from a pleasure trip to Virginia points.

The Widdicombs Lumber Company is the name of a new wholesale house which has just opened quarters at 317 Fifth avenue, Manhattan, at E. W. Widdicombs of Detroit, Mich., at the head. Mr. Widdicombs was identified with the wholesale hardwood trade in the latter city for a good many years.

W. L. Burton of the Burton-Stewart

Cypress Company, Burton, La., accompanied by Mrs. Burton, sailed for Europe May 13 for an extended trip.

C. W. Manning, 66 Broad street, returned the past week from a visit up the state where he found business slightly improved. Mr. Manning is making a specialty of gum, veneers and high-class hardwood stocks.

Robert W. Higbie of the R. W. Higbie Company, hardwood manufacturers, 45 Broadway, has just returned from a visit to his large hardwood operations at New Bridge, St. Lawrence county, N. Y. The plant is running in fine shape, producing a choice line of maple, birch and beech. A new dimension mill is in course of erection and will be a valuable addition to the general plant.

W. M. Ritter, the distinguished Columbus, O., hardwood lumberman and president of the W. M. Ritter Lumber Company, sailed from here during the fortnight for England and the continent, during which he will visit the branch office at London and Liverpool, as well as all the leading continental lumber markets.

The local office of Bemis & Vosburgh of Pittsburg, located at 12 Broadway, has been closed out and in future the local trade will be solicited through a sales representative directed from the Pittsburg office.

Sam E. Barr, after an absence of two or three months on the Pacific Coast, has returned to the city and is busily engaged re-adjusting his affairs.

PHILADELPHIA

The Lumbermen's Exchange held its monthly meeting, preceded by a luncheon, on May 7, President Frederick S. Underhill in the chair. This was the first meeting under the recently elected officers for 1908, and there was a goodly attendance, and a flattering reception was extended to Mr. Underhill. The permanent tube service committee reported progress made in their postal project, and stated that they were much encouraged over their interview with the heads of the post-office department at Washington, from which they anticipate favorable action in the near future. In reply to a communication from the Pennsylvania arbitration and peace conference, a committee, composed of Wm. T. Betts and Howard B. Reeves, was appointed to represent the exchange at a conference to be held in this city on May 16, 17, 18 and 19. It was resolved at this meeting, that the Lumbermen's Exchange accept the challenge from the Master Builders' Exchange, to meet them in the annual baseball combat to be played at Columbia ball park on June 16, the proceeds of which, as heretofore, to be contributed to the Philadelphia Modified Milk Society, the Red Bank Sanitarium and the Children's Country Week. A proxy, however, accompanies the acceptance of this challenge, viz.: that none but actual members of the two exchanges be allowed to compete in the game. A battle royal is anticipated.

W. H. Lear reports business running fairly well, and the outlook a shade brighter; he has his East third avenue yard now in good working shape and with both yards has a capacity to meet all comers.

Watson Malone & Sons kept their men on the hustle, and feel as a reward for unrelaxed efforts that they are receiving a fair share of trading. Edwin B. Malone of this firm is in Bucksford, S. C., looking after their mill interests.

Thos. B. Vrooman Company, Limited, admits April trading to have been somewhat below what was anticipated, but is optimistically inclined towards the outlook, regarding the advance reports on the crop situation as an indication of an early revival of prosperity. John J. Rumbarger has just returned from

a trip to New York and states that he found an improvement in trading all along the line.

William A. Reed is not pushing sales at this time as he feels confident that a reaction for the better may be looked for in the near future, that prices will again rise and a fair profit be realized on sales. As it is, he has no reason to quarrel with average sales so far.

John W. Coles reports business spasmodic, but on averaging up his sales has no complaint to make, considering present conditions. The sign which Mr. Coles has placed near the entrance to his private office, all will admit who read, is extremely characteristic of his unflinching optimism, no matter what obstacles hedge his pathway.

Frank T. Rumbarger is not given to vain boasting, but he claims, and all will be glad to hear, that by virtue of constant hustling, he is daily gaining ground; his totality of sales is encouraging, and he is hopeful that the present outlook for future trading will continue.

The Kirby & Hawkins Company is unquestionably thoroughly optimistic and wastes no time in lamentation over conditions. It keeps hustling, consequently gets good results.

George Lewis West, manager Jesse Lukens & Co., died on May 9. Mr. West was associated with this firm for quite a number of years, and was one of the most popular young men in the lumber business.

Among the recent visitors to the Philadelphia trade were: R. H. Farrier, general manager of the St. Clair Lumber Company, Inc., Interior, Va.; E. N. Eakle, Cripmer, Va.; A. Bowman Weaver of the Flynn Lumber Company, Swiss, W. Va.; R. L. Waukley, Crosby & Beckley Company, New Haven, Conn., and F. F. Hepler, of the Atlantic City Lumber Company, Atlantic City, N. J.

Charles G. Blake, Philadelphia representative of E. V. Babcock & Co., of Pittsburg, has met with a sad bereavement in the loss of his mother, who died at Norway, Md., on May 7. Mr. Blake has the heartfelt sympathy of his many friends in lumber circles.

Jerome H. Shelp of Shelp & Vandegriff, Inc., is inspecting a tract of timber land near Charleston, W. Va., in view of a probable purchase.

The Westmoreland Lumber Company, Moresen, Pa., was chartered under Pennsylvania laws on May 6; capitalization \$20,000; treasurer, S. K. Long, Charleroi.

The Hanover Plow Handle Company, Hanover, Pa., was incorporated under Pennsylvania laws, on May 6; capital \$10,000. C. F. Maul, treasurer.

The Tellico Lumber Company obtained a charter under New Jersey laws on May 16; capitalization \$125,000.

On May 8 fire destroyed the establishment of Meyer Cossy, manufacturer of store and office fixtures, 626 and 628 Filbert street. Loss not given.

Page & Rainey, cabinet manufacturers, had a fire in their factory at 116 to 129 Bainbridge street, on May 11. The loss is estimated at about \$10,000.

Announcement comes from Williamsport that about 30,000,000 feet of logs reached the Susquehanna boom at this place this season, and that they are all in now, except several hundred thousand feet belonging to S. N. Williams. The logs are now being rafted out to the mills as fast as needed.

A bunch of jolly lumbermen, all members of the Lumbermen's Exchange, and all lovers of the gentle, frolic Wollton's amusement, organized themselves under the formidable flag of "The Barnegat Pirates," and started early in the afternoon of May 15 for Tom's River, N. J., for a three days' yachting and fishing trip. At the start the weather promised to be propitious, but before the journey's end Jupiter Pluvius gleefully emptied his rain-

bags without warning upon their unsuspecting heads. Fred S. Underhill, the newly elected president of the exchange, Wm. L. Rice, Robert Swenk, R. R. Ramey and Wm. C. McBride made the trip in Mr. McBride's Lozier car. The party arrived at their destination at 5 p. m. with spirits at high water mark. After partaking of a sumptuous collation at the Ocean House, these most contented, pseudo, skippers set sail on Commodore Maule's yacht at 7 o'clock and after a delightfully stormy passage anchored at Eno's dock, Forked river. After scraping off the ship's tar and soil, these jolly boys assembled at the Casino, where they proclaimed to the startled inhabitants of the borough that somebody had arrived, and the town must wake up. Towards the drowsy hours the brave crew, the watch included, condescend to abate their revels. The trip was voted one of the most enjoyable ever gotten up by the indefatigable entertainment committee of this exchange. Those who comprised the officers and crew of this memorable voyage were: Frederick S. Underhill, chaplain; Charles P. Maule, commodore; George A. Howes, captain; Herbert P. Robinson, first mate; William L. Rice, boatswain; Owen M. Bruner, sailmaker; Victor E. Kugler, ship's carpenter; Charles S. Jack, ship's doctor; night watch, F. A. Dudley, Horace G. Hazard, Jas. P. Dunwoody, C. J. Coppock and F. W. Ukel; A. E. S. Wilson, H. Lear, Robert G. Kay, William C. McBride, R. R. Ramey, Chas. M. Chestnut, Howard Ketchum, James J. Arbole, E. C. Neven, Robert Swenk, Killam E. Bennett, Wm. F. Collins, George B. Drezler, Harold M. Martin, Jos. H. Brinton, Frank M. Gillingham and John H. Glover.

SAGINAW VALLEY

All of the mills engaged in cutting hardwood lumber in this district are busy. The mills of W. D. Young & Co. and Kneeland-Bigelow Company are being operated day and night. The former plant is also putting out a fine lot of maple flooring. The company has always had a large foreign trade, at times shipping 75 per cent of the flooring output abroad. When the mill burned last September it had large foreign orders and the interruption caused by the time required to erect a new mill caused considerable loss, but the new mill is making up for lost time and is more than meeting the expectations of its owners. It is one of the most complete plants in the country, everything being up-to-date, and is turning out the lumber.

Biller & Van Auken have kept their machinery in motion, though all along the line business is about 25 per cent less in volume than last year. However, all of the flooring mills have had something to do. The Strable Manufacturing Company's plant at Saginaw is doing fairly well and the S. L. Eastman Flooring Company plant is in the ring. Mr. Eastman has not bought quite as heavily this spring as usual, but he recently purchased seven or eight million feet of maple. He generally carries a number of million feet at Bay City in pile in addition to the stock carried at the plant.

The sawmill plant of T. E. Douglas & Co., at Lovells, near Grayling, was destroyed by fire Wednesday, involving a loss of \$20,000. The company put in about 3,000,000 feet of logs during the winter.

So far as learned the stamens market for hardwood is flat at the present time. Silling & Hanson Company of Grayling have been negotiating with the Ward estate for a tract of timber near some of their own timber. The scarcity of money last fall and winter checked investments of this character, but it is understood that business is looking better and there is some inquiry.

Bay City people are much interested in having a 10000-acre portion of the Ward timber come to Bay City to be manufactured, that city being very favorably located for handling both logs and lumber.

The Michigan Central is operating from eight to fourteen trains of logs every day.

The Walsh Manufacturing plant at Frederic is working forty bands and is cutting 4,000,000 feet of birch, maple and beech timber into staves and heading.

The Standard Hoop Company at Bay City has been converting a portion of its stock into hardwood lumber, the hoop business being quiet for the time being.

Several men of means of Port Huron and W. Houseknecht of Jonesville will put up a mill at Epfoequet, north of St. Ignace, the machinery being already on the way. The mill will cut 20,000 feet a day. The firm has 1,500 acres of timber, largely running to hardwood, and has also options on a large body of neighboring timber.

Trade in hardwood products is as good as could be expected in connection with general conditions, and both manufacturers and dealers, as a rule, express the opinion that there has been some improvement. There are more inquiries, sales are being made and conditions seem to be on the mend. Of course people are not looking for such activity as was experienced last year, but the tone is healthy. Once in a while a dealer can't see any silver lining to the cloud and apprehends no substantial improvement until another year, but these are the exceptions. The idea entertained here is that after the Chicago convention there will be a decided change for the better. After that will come the crops, and a revival of the railway business.

Ash, basawood and oak sell well, but the output is limited. Maple is reported to be declining well, log run being quoted at \$17 and \$19. Birch is moving in at 17 and 18, and Elm is being rather slow. It is held at \$22 and \$24. Beech is doing quite well at \$18 and \$20, and basawood at \$23 and \$25.

GRAND RAPIDS

Walter C. Winchester of Winchester & Daniels returned May 23 from a business trip to Wisconsin.

N. J. G. Van Keulen of the Van Keulen & Wilkinson Lumber Company returned May 23 from a short business trip to Indiana and other southern points. George S. Wilkinson of the company says regarding business conditions: "While there is no marked improvement as yet, business matters seem to be mending all the time. We are doing something right along and hear of some sales that would indicate a revival of trade. I understand that some of the local furniture manufacturers have been getting some nice orders of late."

The Thayer Lumber Company of Muskegon has finished its cut in Kalkaska county and its mill and outfit at Stratford have been removed.

The Indiana Box Company, operating plants at Cairo, Ill., and Elwood, Ind., will soon have its branch plant in Muskegon in operation. The company has had a branch in Muskegon for two years, using leased space in the Thayer Lumber Company's planing mill on Nims street, but is now remodeling for its use the former Crescent Manufacturing Company's factory in that city.

G. E. Le Veque of Marquette has leased the Schneider veneer plant at Grand Marais, which has been idle for some years, and will convert the same into a stay mill, employing twenty-five men, exclusive of those engaged in the woods operations.

F. Bauermeister, manager of the new basket factory at Gladwin, has removed to that city from Toledo with his family and will reside there permanently.

The Carp Lake Lumber Company of the Grand Traverse region has closed up its mill at Bingham, having completed its cut there, and with the dismantling of the mill the once prosperous village will be practically deserted. Grand Rapids will hold its third annual Merchants' week June 10-12 and special entertainment has been provided for the outside merchants by the local board of trade. Harry C. Angell of H. C. Angell & Co. is chosen to represent the local lumbermen on the committee on arrangements.

Z. Clark Thwing, manager of the Grand Rapids Veneer Works, is enthusiastic over the success of the new kiln for drying lumber that his concern is putting out, and in a recent talk with the HARDWOOD RECORD correspondent he said: "We began exploiting the kiln in February, 1906, and since January 1 this year, we have sold more kilns than during 1906. Our kiln will dry gum green from the saw in seven days. We can dry one-inch quartered oak in seven days where formerly twenty-one days were required, saving \$5 per thousand in waste and the lumber is cut up with half the labor formerly required. W. D. Young & Co. of Bay City have put in three kilns, with capacity for drying 50,000 feet of maple flooring daily. The Pullman Company of Chicago has recently installed eight of our kilns. In a mill at Norfolk, Va., we are drying pine in thirty-six hours, while at another point we are putting through quarter-inch poplar veneers in ten hours. Five of the leading wood workers consist of Muskegon as using our dryers, also a number of the large concerns here, one of the latest to close a contract with us being the Grand Rapids Refrigerator Company."

INDIANAPOLIS

The Capitol Lumber Company is making a test of smoke consumers at its plant on West New York street.

A contract for an addition to its plant to cost \$3,500 has been let by the Shelbyville Warlike Company, Shelbyville.

F. A. Riehl has established an office at 309 Upper Eighth street, Evansville, and will devote his attention to buying lumber for furniture factories of that city.

John J. Valdeira is serving as juror in one of the county courts in one of the first city contracts to be brought to trial. Prospects are he will be so employed for some time.

The Mass-Neimeyer Lumber Company has purchased ground and will establish a branch yard at Forty second street and the Monon Railroad, because of its growing business in that part of the city.

Philo & Porter, wholesale and retail lumber dealers at Greensburg, have been awarded the contract for completing the building of the Southeastern Indiana Hospital for the Insane at Madison.

Louis Buddenbaum of the Buddenbaum Lumber Company was married in this city a few days ago to Miss Helen Cross, one of the prominent young society women of the city. They will reside in Irvington.

The C. F. Schmeier Furniture Company has been organized at Shelbyville with \$10,000 capital and will manufacture furniture. M. M. C. F. and E. H. Schmeier are the directors.

The Lake Michigan Company is having a nice trade with prospects of good business throughout the season. Their big plant has been working steadily for some time.

The heading factory of W. T. Bryant at Huntington was burned on May 12 with a loss of about \$50,000 on which there was only \$5,000 insurance. He will not rebuild, owing

to the scarcity of timber in that vicinity.

Henry Maley of Edinburg, president of the Henry Maley Lumber Company at Evansville, spent several days in the latter city recently.

It is reported that building operations to cost upwards of \$1,000,000 are under way or are contemplated at Port Wayne. Lumber dealers are expecting a big business throughout the summer.

The Federal Court here has enjoined the Indiana Railroad Commission from adjusting its recent order fixing lower express rates in the state. The order called for a general reduction of from 10 to 12 per cent.

Just a few days after the plant had been sold, but with the purchase money unpaid, the sawmill plant of McGee & Son at Jassonville was turned by a incendiary on May 13. The loss was \$7,000 and there was no insurance.

With a comparatively steady demand for stock, the local hardwood market is probably in better condition than it has been for some time. The demand for all grades of oak is especially good.

Trade, however, is not as good as it was a year ago, nor do dealers expect any great increase in business until after election. The activity of furniture and vehicle factories and the extensive building operations are creating the present demand.

Wholesalers and commission men are fairly well pleased with present conditions and report that they are receiving some very substantial orders.

BRISTOL

The Damascus Lumber Company, which recently completed a band mill at Damascus, Va., with a daily capacity of 65,000, have also just completed one of the largest and best dry kilns in this section. The company owns a large boundary of timber and is well equipped.

"For the first time in a great while we are actually short of labor," said J. A. Wilkinson, a prominent Bristol lumber manufacturer and exporter. "We were this week compelled to send out advertising for more men. Conditions are unquestionably improving in business generally and I think a brighter day for the lumbermen is dawning."

Valentine H. Luppert, a veteran Pennsylvania lumberman, and president of the Luppert Lumber Company, operating extensively in this section, died at his home at Butler, Tenn., last week. He was about 65 years old and leaves a large estate. The body was taken to the old home at Allentown, Pa., for burial.

Franklin I. Fishion, who is now connected with T. T. Adams, an extensive hardwood dealer of Richmond, was in Bristol this week.

"Shipments are a little heavier than they have been," said C. H. Smith, Jr., local manager for R. A. and J. J. Williams, of Philadelphia. "The country mills are doing a slightly better business and conditions are looking up a little now."

William T. Uptegrove of New York, head of the firm of William T. Uptegrove & Bro. and largely interested in lumber manufacturing in this section, was a visitor in Bristol and Johnson City this week, looking over local properties.

Charles Paxton of the Paxton Lumber Company went to North Carolina on business last week.

Nathan Bradley of the Bradley Lumber Company of Bay City, Mich., and others are interested in the organization of a large manufacturing plant at Elizabethton, Carter county, Tenn. The Bradley Lumber Company is already largely interested in that section.

The Carolina, Clinchfield and Ohio railroad, which is now three-fourths completed, will be put in operation between St. Paul, Va., and

Marion, N. C., about August 1, and will open up a large timber territory, heretofore inaccessible by railroad facilities, in western North Carolina, as well as southwestern Virginia. A number of mills are now being built along the line in western North Carolina and will begin shipment as soon as the road is completed and in operation to Marion.

There is a slightly better tone to the lumber business in this section. Shipments are a bit heavier, according to local lumbermen, and the process of gradual but slow recovery continues. Manufacturers declare that stock can be produced at a profitable margin, on the basis of the existing prices, though the demand is not as strong as many have hoped it would be by this time. The situation is regarded, however, as eminently hopeful and the consensus of opinion is that permanent recovery will soon be effected. Many will be satisfied if things do not grow worse, though few anticipate a setback.

MEMPHIS

The last meeting of the Lumbermen's Club was given over largely to a discussion of hardwood conditions and the outlook for the future. A number of the more prominent members were called upon for talks along this line. It was admitted by most of them that conditions are far from satisfactory, although measurably better than they were a short time ago. It was also the consensus of opinion that the outlook is brightening and that there are prospects for material betterment in the near future. A number of remedies were suggested to help bring about better conditions. The most prominent was the curtailment of production. W. H. Russe declared that the salvation of the hardwood interests of the country lay in sawing up the logs on hand and shutting down the mills until the situation had righted itself, and until normal conditions prevailed between supply and demand. S. B. Anderson and others thoroughly agreed with him on this point, and Mr. Anderson said that, while it was necessary for those who had gotten out of the woods to saw these up in order to save them, he saw no reason for those who had their timber standing in the woods to cut it down in order to compete with those who were forced to run. He believed in cleaning up the market and thought that when this was done there would be a decided change for the better. James E. Stark favored selling the lower grades at concessions than those who had to be made, and called for the higher grades, as these are relatively scarcer than the lower. E. E. Goodlander called particular attention to the scarcity of logs and the small amount of lumber produced in this country during the past six or seven months, and expressed the belief that those who were selling their lumber at a sacrifice were now making a serious mistake. W. R. Barksdale thought that it was better to raise the price on lumber and miss a sale if necessary than to cut the price in order to dispose of lumber, attaching considerable importance to the attitude of the seller towards his own product.

As a result of the views expressed at this meeting it is probable that there will be material curtailment of output within the next few weeks. Some of the most prominent manufacturers in this market have declared their intention of shutting down their mills just as soon as they have cut up the timber they got out before the financial depression. It is doubtful if there was ever a year when the amount of logging was so small a scale as now, and, even if conditions should show material improvement, it would be some time before any great quantity of logs could be gotten ready for the saw. In addition to the decision to curtail voluntarily, there is consid-

erable shortage of production on account of the unsatisfactory weather conditions prevailing throughout the hardwood territory. Rains have been on an exceptionally heavy scale, and even where mills were anxious to log and to run they have found it impossible to do so.

A communication was read from the secretary of the Lumbermen's Club at Cincinnati asking the Memphis Lumbermen's Club to adopt resolutions favoring a return to the inspection rules of 1945 by the National Hardwood Lumber Association. After much discussion it was voted to oppose the resolution and to advise the Cincinnati organization accordingly. It was specifically stated, however, that the action of the club did not bind any individual member on this point.

The question of making the National Hardwood Lumber Association instead of individual inspectors responsible for grades turned out by the latter was introduced and came in for considerable discussion. It was decided, however, that it was a matter of too great importance for hasty action, and it was postponed until the next regular meeting, which will occur May 1.

A committee was appointed by the club to co-operate with other commercial organizations in this city to the end that they might all be represented at the forthcoming meeting of commercial organizations in Chicago to protest against the general advance in rates by the railroads. It is supposed that this meeting will be held in Chicago. A. L. Foster was appointed chairman of the committee for the Lumbermen's Club and it is expected that other commercial organizations here will appoint similar committees and that Memphis will be well represented at this meeting, which is scheduled for the near future.

The Ozan Lumber Company has closed down its sawmill at Prescott, Ark., and is using both its day and night forces to build a railroad to fallen timber. It has about 5,000,000 feet of hardwood blown down during the recent storm, and as soon as the road is built it will be carried to the mill and prepared for the market. The company will resume operations on a large scale as soon as the timber has been taken care of.

The railroads entering Memphis have made a proposition to the lumbermen of this city to reduce rates 1 cent per hundred pounds on north and eastbound freight to compensate for the withdrawal of reconsigning privileges which became effective February 29. The special committee, of which A. L. Foster is chairman, having in charge the readjustment of rates, states positively that this proposition of the railroads will not be accepted and that, if no other basis for negotiations can be reached, the matter will probably be carried before the Interstate Commerce Commission. The railroads claim that they cannot make a reduction of more than 1 cent without affecting rates at other important centers, while the lumbermen believe that they can make a further reduction. The committee holds that this reduction does not place Memphis on a competitive basis with other points and that it is a very poor compensation for the old reconsigning privilege which represented a saving of from 1 to 4 cents per hundred pounds from the combination of the two locals. The committee is expecting to hold a meeting within the next day or two to decide upon its course, but one thing is quite certain: The committee has no idea of accepting the proposition of the railroads. It is now going to the rate sheet in order to show the railroads that a larger reduction can be made without interfering with rates from other points and, if it is impossible to bring the railroads to terms, recourse may be had to the Interstate Commerce Commission.

The Crescent Hardwood Lumber Company has been formed here as successor to the J. P.

Sullivan Lumber Company, J. P. Sullivan, J. J. Ryan and others are the incorporators.

The Memphis Industrial League has announced through its president that it has no intention of abandoning its efforts looking to the location of new industries in Memphis until its work has been taken over by one of the stronger organizations. It was expected that the Business Men's Club would take over this work and carry it on as a separate department, but officials of that organization state that the expense is entirely too heavy and that it is therefore impracticable. The league has been exceptionally valuable in locating new industries in Memphis, having attracted large numbers of woodworking plants from other portions of the country by its excellent work in advertising Memphis and the resources of the territory of which it is the logical and geographical center.

H. G. Fleming, former president of the Union Railway Company of this city, died a few days ago in St. Louis from a stroke of apoplexy. A Fleming came to Memphis to superintend the construction of the belt line of the Missouri Pacific system, and was engaged in this work until 1906, when he suffered his first stroke. He never entirely recovered from this. After leaving Memphis he became connected in a confidential capacity with George Gould of the Missouri Pacific system. Mr. Fleming was one of the best known railroad men in this section.

The Frisco system, as a part of its plan for retrenchment, has given notice that the shops at Memphis, Birmingham, Ala.; Amory, Miss.; Jonesboro, Ark.; Thayer and Willow Springs, Mo., will be closed down, where this action has not already been taken. The management states that curtailment is absolutely necessary and that none of the plants in the territory indicated will be operated until they are needed. When running full time the Memphis shops employ several hundred persons, but a large part of the force has already been laid off.

John Griffin has filed suit in chancery against N. B. Haynes and the Buffalo Hardwood Lumber Company through which he seeks to collect \$15,000 which he alleges to be due him under a contract to cut timber in Mississippi. He claims that the defendant has breached its contract. The instrument, according to the declaration, was made in 1906 and breached in June, 1907.

Sparks from a passing train are said to be responsible for the fire which destroyed the sawmill of the J. W. Dickson Company in East Memphis several nights ago. The blaze started shortly after 9 o'clock and the plant burned rapidly. Response on the part of the fire authorities was prompt, but they arrived too late to save the mill. They were instrumental, however, in preventing a spread of the fire to the lumber on the yards and other industries in that section. The estimated loss is \$10,000, covered by insurance. The management has not announced plans for the future.

The plant of the American Car & Foundry Company is now being operated with a force of about 450 persons, all of whom are employed in the wooden car department. The management proposes to increase the number gradually. No orders have yet been received for steel cars, but more inquiries are had, and this is taken as an indication that there is a much better future ahead. In fact, the management takes a very cheerful view of the outlook.

Russe & Buessens, among the leading manufacturers and exporters of hardwood lumber in this section, are in receipt of a letter from one of their correspondents in Great Britain dealing with conditions on the other side. It notes that during the past month business has been exceptionally quiet and that there

is nothing in the outlook suggestive of a material change. Reference is made to the prospect of a general lockout in the shipyards and the probability that this will develop into a general cessation of work. It notes that merchants display great caution and are loth to take stock beyond immediate requirements. The communication indicates that lower values will prevail in practically all lines, and in conclusion the following statement is given of the disastrous effects of the consignment of lumber by hardwood interests in the United States:

"Imports from the United States during this month have been on an unusual and ridiculously heavy scale, and, coming to a dull market as they did, have met with a very poor reception, the bulk finding its way into stock unsold. The net result is that prices are considerably easier and prices are far too heavy. Shippers in many instances have displayed little foresight in the manner they have rushed forward consignments, and it cannot be too forcibly impressed upon them that a total cessation of shipments is necessary if an utter collapse in value is to be avoided."

The Yazoo & Mississippi Valley railroad has under way plans for constructing several new lines in the delta this season. One of the most ambitious projects is a north and south line through Sunflower county, passing through Indianola. Survey for this has already been made, and it is estimated that the line will be about forty miles in length.

Active construction is now under way on the Aberdeen & Tombigbee Valley road. One of the Memphis contractors has gone to the scene of operation with a large force of men and mules and with full camp equipage. He is to construct fourteen miles of the road. The remainder of the line is under contract and it is intended to have the line in operation over at least fifty miles before the end of the present year.

The Rox Handle Company has filed application for a charter. The capital stock is placed at \$75,000. Among the principal incorporators is M. R. Grace. This gentleman has been prominently identified with the handle manufacturing business in the South for a number of years, operating a plant at Huntsville for a long while, and coming from that point to Memphis. Some time ago he came into prominence by the perfection of the details of the merger of the principal handle manufacturing companies in the West, South and East under the name of the Consolidated Handle Company. The company has its plant in new South Memphis and will engage in the manufacture of ax, pick, sledge, hatchet and hammer handles.

E. E. Taenzer, first vice-president of the Darnell-Taenzer Lumber Company, sailed for Europe some days ago.

R. J. Darnell, of R. J. Darnell, Inc., has left Memphis for New York and will sail for Europe in a few days, if he has not already done so.

Among the recent visitors at Memphis has been John H. Murrell of J. H. Murrell & Co. of Liverpool and vice-president of the Liverpool Timber Trade Association.

BALTIMORE

The committee appointed by the Baltimore Lumber Exchange, to take under consideration the agitation over the inspection rules of the National Hardwood Lumber Association, held a meeting last week to discuss a communication from the Cincinnati Lumbermen's Club, wherein the Baltimore Exchange was asked to join in a demand for the restoration of the 1905 Buffalo rules at the annual meeting of the National association in Milwaukee. No decision was reached by the committee, but an agreement will be arrived at between now

and the next quarterly meeting of the Exchange, the first Monday in June, at which time a representative of the Exchange to attend the Milwaukee meeting will also likely be named. The sentiment of the committee is that the Cincinnati movement should be supported.

Richard Price of the Baltimore hardwood firm of Price & Heald was alleged, according to a report from Bristol, Tenn., to have visited that city May 1 for the purpose of closing up the details for the sale of 7,000 acres of timber land in Carter county, Tennessee, by the Cumberland Land & Lumber Company to some eastern capitalists, who were to undertake the development of the tract. Inquiry at the office of the firm here elicited the information that Mr. Price, who was the president of the Cumberland company, did go to Bristol, but it was to correct a defect in the title to the land, the sale of which took place about two years ago. It was found afterward that one of the heirs to the land had disappeared when a girl about 15 years old, and that nothing had been heard of her since. This was not known at the time of the purchase, but made a correction necessary. Hence Mr. Price went to Bristol with his attorney to adjust the matter. The tract was about the last asset of the Cumberland company to be disposed of, the corporation having practically ceased to do business five years ago.

A report published in the New York Herald and other papers, to the effect that the United States government was about to commence action for the recovery of land embracing practically the whole of about eight counties in North Carolina, chiefly overgrown with timber, which had been illegally taken possession of, created some stir among lumbermen, who were eager to know the details. A few days later, however, the authorities at Washington gave out a statement denying that any such suits were contemplated, the action which gave rise to the report being about a very insignificant matter.

R. P. Baer of R. P. Baer & Co., the well-known Baltimore hardwood firm, with offices in the Keyser building, sailed last Saturday from New York on the steamship Minnetonka for London. He will spend the next 30 days in the United Kingdom, combining business with pleasure, and will cross the channel for the Continent, to continue his travels. Altogether he will be away about two months.

M. Trester, a well-known lumberman of Hamburg, Germany, was in Baltimore last week and called on several of the exporting firms here. He was on his way back to New York, after an extended trip through the States which took him as far south as New Orleans. The main purpose of the journey was to call on the various correspondents of his firm and discuss with them the prevailing business conditions.

R. E. Wood of the R. E. Wood Lumber Company has just returned from a trip to New York, where he was in conference with various persons regarding the development of the company's timber holdings in Swain county, North Carolina. The mill there is now in operation, turning out nearly 100,000 feet of hardwoods per day. The mill in West Virginia is likely to be shut down.

E. E. Price, the hardwood exporter, who failed some time ago and whose affairs went into the hands of a receiver, has secured desk room in the American building, and efforts are under way to straighten out his affairs.

J. A. Brening & Son of Williamsport, Pa., have purchased a strip of land alongside the Western Maryland railroad there and intend to establish on it a lumber yard and planing mill.

For the past two weeks or more attaches of the Bureau of Corporation at Washington

have been in Baltimore gathering data about the lumber trade in all its phases, the purpose being to obtain at first hand information as to the cost of manufacture, rates of wages paid, freight charges, selling price and profits, commissary stores, and every feature of the business. This information is to be collated and published in the shape of a brochure for the benefit of the lumber trade as a whole. Similar publications have been sent out before from time to time, but their authenticity and the correctness of data were seriously questioned by many lumbermen.

PITTSBURG

The C. P. Caughey Lumber Company is working hard on its operations in Washington county, Pennsylvania, and is also buying considerable oak in Armstrong and Butler counties. This will be used on its contracts for Ohio river work which were secured recently. Manager S. A. Seaman reports things in general no worse, and, if anything, better than two weeks ago.

The Miller Bros. Lumber Company has taken large offices in the House building and is gradually strengthening its connections. The spring business has been quite satisfactory to this concern in some ways, and it has booked some good orders.

W. R. Cornelius is pushing his way into the West Virginia territory and is securing some hardwood connections which will make him a strong factor in the Pittsburg market. Mr. Cornelius is one of those wholesalers who has abundant nerve to go ahead and buy lumber whenever he finds prices right, and the stocks he secured lately are proving a great advantage to him in landing first-class trade.

Pittsburg lost one of its most esteemed lumber dealers in the death of Henry Ahlers, who passed away May 6. He was senior member of the Ahlers Lumber Company on the North Side and had been closely identified with the business interests of Pittsburg for more than fifty years. Mr. Ahlers was born in Germany July 13, 1832.

The W. E. McMillan Company, Inc., is marketing considerable chestnut in Baltimore and the East. Its trade in poplar and oak has also been fully up to standard the last two weeks, and with its new stocks in West Virginia it is pushing ahead for a good share of the Pittsburg business.

Secretary O. H. Rectanus of the A. M. Turner Lumber Company is enthusiastic over the big Hoo-Hoo gathering here May 29. He reports little difference in the lumber situation from last month, except that a larger proportion of the inquiry is for yellow pine.

The Pennsylvania Railroad Company has announced that it will begin work at once on a new tunnel at Greensburg, Pa., forty miles east of Pittsburg, on the main line, which will cost about \$1,000,000. This is one of the projects which is bound to help the Pittsburg market, as it will require a large amount of oak and other hardwoods.

One of the big jobs of the year is the water works plant being built by the Dravo Construction Company at Aliquippa, Pa., for the Jones & Laughlin Steel Company. About 7,000 pieces of timber will be used in the in-take crib alone. The Jones & Laughlin plant on the southern bank of the Ohio river at this point will cost, when completed, fully \$10,000,000, and, although work is suspended temporarily, it is expected that a large force of men will be put to work in July or August, to push the immense project.

The Pennsylvania State Department of Forestry will set out about 400,000 trees at Mont Alto, Asplah and Greenwood Furnace, Pa. This will be white pine, Norway spruce, ash, walnut and Scotch pine. The department will also raise about 6,000,000 seedling trees this

year, to be planted later on its reservations, which now include 850,000 acres in Bedford, Adams and Franklin counties.

The L. L. Satler Lumber Company has secured an order for nearly 3,000,000 feet of lumber, which will keep its plant at Blackstone, Va., running practically all summer.

D. B. Curll of Philadelphia and H. B. and H. M. Curll of Pittsburg have secured from the Commonwealth Lumber Company 64,000 acres of hardwood lumber for about \$150,000. It is estimated the tract will cut 140,000,000 feet of oak, poplar, hickory, chestnut and basswood. There is on the tract a three-story mill with a capacity of 50,000 feet per day, and also a number of good houses and standard gauge railroad and other equipment. The lumber is located on the Chesapeake & Ohio railroad at Glen Ray, W. Va., and the lumber will be sold through the H. V. Curll Lumber Company. The company now has about 500,000 feet of sticks.

Kimberland & Co. is the name of a new firm which is opening offices in Pittsburg to do a general wholesale lumber business. They will handle the product of the Glendon Boom & Lumber Company of Glendon, W. Va., which is a big manufacturer of hardwood lumber.

I. F. Balsley, hardwood manager for the Willson Bros. Lumber Company, notes a slight improvement in general hardwood conditions. Trade is by no means what it should be, he says, but collections are much better than they were in April, and a larger proportion of the inquiries received should develop into business.

The Whitmer lumber salesmen report a better tone to the market this month and say that spruce and hardwood are doing fairly well. Shipments are very much better with this company than in April. They do not find stocks of hardwood large, but note a better inquiry for good dry lumber.

J. R. Edgett, president of the Interior Lumber Company, is devoting most of his time to the trade of southern Ohio and Kentucky. The Interior is on the lookout for anything good in a new timber proposition and may be expected to get busy along this line again before fall.

The Acorn Lumber Company has little fault to find with the general situation when it compares notes with other firms. President H. M. Domhoff has secured a charter for his company and is making all preparations for a very active campaign in the fall.

The Linehan Lumber Company is inclined to think things are getting better. Prices are maintained at the present list, they say; but for good oak and chestnut lumber for manufacturing purposes there is a good demand.

The Pittsburg Wholesale Lumber Dealers' Association will apply for a state charter on May 29. The association has twenty-nine members at present and with its new charter will be better equipped to conserve and promote the best interests of Pittsburg wholesalers.

The country hardwood mills throughout eastern Pennsylvania, Ohio and West Virginia are showing less activity than for several years. Many of these plants have not started up at all this spring, as their owners prefer to wait until conditions are improved before they invest more money in labor or timber. The bad weather, heavy rains and impassable roads have also helped to make the country mill situation decidedly bad; as a result, stocks at these mills are much smaller than usual.

The American Lumber & Manufacturing Company is running its plant at Hartsville, Tenn., and has closed down its hardwood operation at Baxton, Tenn. The American is plodding right to the front in the cottonwood business and now has more than 2,000,000 feet of cottonwood on sticks at Joliet, Ill. It will

bring up long barges this month which will give it 700,000 feet more. J. N. Woollett, vice-president of the American, has returned from a two weeks' trip in the middle West, where he picked up some nice business.

BUFFALO

A. Miller is looking to the eastern trade for an outlet, in spite of his always good trade in hardwoods at home, and has spent quite a little time in New York recently.

When Manager Wright of the Memphis business of Scatterd & Son went home from his business and social sojourn here he set the mills going and has been turning out lumber pretty rapidly ever since, with oak always leading.

T. H. Wall of the Buffalo Hardwood Lumber Company has been in New York lately in the interest of business, the home yard always showing a more than average activity, with good stock always coming in from the Mississippi valley.

F. W. Vetter finds trade average fairly well, but not always up to the promise of a month ago. He is usually well supplied with ash, of which he has sometimes made a specialty, though always aiming to carry a full hardwood assortment.

The Pascola Lumber Company is always in line for business in oak and does not stop with that by any means. When the Buffalo yard is established the company will fall into line with the older concerns for anything in hardwood.

The Bathurst Lumber Company has broken ground for the rebuilding of the burned mill on the Bay of Chaleurs.

The yard of O. E. Yeager is never allowed to run down in any variety, and when he finds a spare moment he picks up a stock of hickory, a wood in these days that requires an expert to handle.

T. Sullivan & Co. have bought a lot of lake hardwoods for spring shipment, the old specialty of black ash and elm leading, and will add it to the stock of Pacific coast lumber for the eastern trade, which has always been good.

Hugh McLean is on the selling end of the business again, finding it again worth his while to spend his time in that way. The numerous mills of the McLean interests are always busy, for the selling activity is large.

Cherry is still the big seller with I. N. Stewart & Bro., who have just bought about 200,000 feet of it to meet the requirements of the trade, for cherry is one of the woods that did not stand still as long as most others did.

A. J. Elias is as active as ever in city matters, being chairman of the Civic Conference, which is made up of delegates from leading business bodies. The yard is busy taking in lake cargoes of hemlock and pine, and all trade is fair.

Since A. W. Kreinheder came back from the Kentucky mills of the Standard company, the receipts of oak and other hardwoods have been large, which means large sales also, as the yard is always full of lumber of that class.

DETROIT

The consensus of opinion here is that while at present the hardwood trade is dull, it is bound to show improvement before long.

"Business now is about 75 per cent of what it was last year at this time," reports the Thomas Forman Company. "We have no special complaint. The only trouble with business now is that we are not getting as many future orders as formerly. The orders now are mostly from day to day. We expect trade to pick up, however."

A more hopeful view of the situation is taken

by E. W. Leech. "While business is only normal now," said he, "there has been a progressive tendency since the first of the year and sales now are fairly good."

The hardwood trade is very quiet, is the report of the Browlee & Kelly Company. The volume of business, they say, is much less than a year ago. The W. H. White Company makes a similar report.

William Brownlee of the Brownlee & Kelly Company is out of the city on business this week.

Many of the local dealers are planning to take in the convention at Milwaukee, and from indications it will be a profitable outing, both for pleasure and business.

A new mill is to be built at Meuninee that will be a novel one in the way of furnishing of its running power. The mill will have no fire holes, boiler or engines, but will be run by a powerful electric motor. The mill will be equipped to cut about 30,000 to 40,000 feet of lumber a day. It is understood that the owner of the mill has enough lumber in sight to keep the mill running for a number of years.

CLEVELAND

Cleveland lumbermen were considerably interested during the past week in the conviction of John M. Bachert of this city on a charge of fraud. Bachert pulled off several alleged swindles by which he secured quantities of lumber without paying for it. His scheme was to write to a concern and suggest that a deal be made whereby a quantity of lumber would be shipped to him in return for lubricating oil, in which Bachert claimed to deal. The victim would reply that he would be glad to send the stuff but wanted cash. Bachert would then write back to send on the lumber according to his first letter. The unsuspecting lumberman, seeing a good contract, would send on the material. A month later his bill would be returned by Bachert, who would claim that the dealer agreed to take oil in return. Litigation would follow, but Bachert invariably won on a technicality. At last the federal authorities decided to take a hand in the matter and Bachert was arrested for using the mails to defraud. A good case was made against him and he was fined \$500 and sentenced to six months in the workhouse. Pending his trial Bachert tried to commit suicide, but failed. After three months in a hospital his trial was pressed and his conviction followed.

Cleveland has been the center of a financial flurry during the past two or three weeks, three banks having gone under. All were savings and trust concerns and no lumbermen were affected by their suspension. It is said that all three institutions have been in bad shape, owing to speculation, since the panic of last fall, and that the other banks stood calmly by and let them go to pieces, hoping that the financial atmosphere would clear somewhat by that operation.

James Miller, for five years with William Whitmer & Son of Pittsburg, has accepted a position as salesman for W. A. Cool & Son of Cleveland. Mr. Miller will continue to reside in Pittsburg and will cover Ohio, Pennsylvania and Michigan territory.

E. C. Groesbeck of the Stearns Lumber Company of Cincinnati called upon the trade during the past week. He reported business in hardwoods good.

Fred Kimball of the Churchill Lumber Company of Alpena, Mich., visited the city a few days ago. He is a prominent hardwood manufacturer in Michigan.

George Meier, manager of the Interstate Lumber Company of Cleveland, is at Oconee, Ga., for a week or two, where he is interested in the development of a large tract of hardwood land recently acquired.

M. D. Olds of Cheboygan, Mich., a well-known Michigan hardwood man, called upon the local trade this week.

One of the most important purchases made by a Cleveland company in the past year or two was consummated a few days ago by the officers of the Advance Lumber Company who, in partnership with a large coal concern purchased 28,600 acres in Boone and Logan counties, West Virginia. The territory is densely wooded, with large oak and poplar trees for the most part. A large double band mill is to be installed and the property developed at once. After the lumber is removed the coal company will develop the mines. The Coal River & Western railroad affords shipping facilities for the new tract. It is expected that a large quantity of timber will be removed from the land within the next year. The oak trees on the property are said to be of excellent quality and size and will be fine for quartered oak.

COLUMBUS

The offices of the East Side Lumber Company have been moved from the former location, Lilley and McAllister avenues, to the new site, at the intersection of Main street and the N. & W. tracks. The office building, which is a modern structure, has been completed and a large part of the stock is at the new site. All the purchases which have been made in the past few months have been shipped to the new location. The mill and machinery will be moved in about two months. N. J. Fountain is president of the company and Edwin A. Prentiss, treasurer and manager. The company reports good business in the new location.

W. M. Ritter, head of the W. M. Ritter Lumber Company, is expected home soon from a short trip to the London and Liverpool branches of the company. Mr. Ritter has been much improved in health by the trip. He may make another European trip later in the year. The Ritter company is operating practically all its mills in the southern states. The policy of the officers of the company is to manufacture only what lumber is needed to fill the demand and for that reason the operations have been limited to part force and short hours. Preparations are being made to gradually increase the output. Stocks on hand are low. J. Mortimer, superintendent of the company's plant at Bluefields, W. Va., was a caller at the Columbus office of the company recently.

Charles W. Seaman of the Domestic Lumber Company reports improvement in the hardwood business. The offices of the company, which are located in the Schultz building, have been open only a short time. Mr. Seaman believes that the lowest point in the trade has been reached and that from this time on the demand will improve.

Kenneth McLeod, president of the American Hardwood Company, is spending some time in St. Louis and Sedgewick, Ark. The last named town is where the property of the company is located. Preparations are being made to begin the work of development.

H. C. Creith of H. C. Creith & Co. reports a slightly better demand for hardwoods in this section. Mr. Creith only recently returned from an extensive trip among the mills of the South.

John R. Gobej of John R. Gobej & Co. is more optimistic of the future. "The lumber trade in this section is improving and I believe that conditions will become better as the season advances," is the statement of Mr. Gobej.

F. Everson Powell of the Powell Lumber Company, discussing the lumber outlook said: "The fine weather is having a good effect on the lumber business in central Ohio. If the

weather continues to improve buying will be stimulated. The hardwood trade shows a greater disposition to buy."

MILWAUKEE

Former Attorney-General Myrlea of Wausau, who has given up the practice of law and is now engaged in the lumber business in his home city, was a recent Milwaukee visitor. Mr. Myrlea was of the opinion that prices would be advanced by fall and that at present lumber has reached bed-rock prices.

Former Governor W. H. Upham of Wisconsin, one of the well-known lumbermen of the state, with Mrs. Upham was a recent Milwaukee visitor. Mr. and Mrs. Upham have lately returned from a trip abroad. Cairo, Egypt, was the farthest point visited, and places of interest on the Continent were also included in the itinerary. Lieut. Gov. W. D. Connor of Wisconsin, the millionaire lumberman of Marshfield, was in Milwaukee not long ago on a business trip. Mr. Connor believed that the prevailing prices of lumber should encourage prospective builders.

Former State Senator W. H. Hatton of New London, one of Wisconsin's leading lumbermen and the legislator to whom is due the setting aside of the forest reserve in the state, was among Milwaukee visitors the last week.

Charles Stolper, Sr., president of the Charles Stolper Co. and one of the pioneer cooperers of Wisconsin, recently died at his home in Milwaukee at the age of 76 years from a stroke of paralysis. From a small beginning, Mr. Stolper developed one of the largest and best known tight coopeage plants in the country.

Fire recently caused damage to the amount of \$10,000 in the Milwaukee coopeage plant of Kenneth W. Jacobs. Warehouse and dry kiln and much stock were destroyed, all partly covered by insurance. Sparks from a passing locomotive are believed to have started the conflagration.

That the Koeh & Loebber Manufacturing Company of Milwaukee, manufacturers of wood and willow ware, which has recently been forced into involuntary bankruptcy, has been operated for four years at a loss, has lately developed.

D. G. Arpin, of the Arpin Lumber Company of Grand Rapids, Wis., was a recent Milwaukee visitor.

A Ho-o-Hoo concentration will be held in Milwaukee on June 11. W. R. Anderson, Vice-gerent Shark of Wisconsin, is conducting an active campaign for new members, and it is expected that the Wisconsin roll will be greatly increased.

Robert Blackburn, Milwaukee wholesaler lumberman, made a recent business trip to northern Wisconsin.

Milwaukee parties are interested in the construction of the palatial residence of Edgar P. Sawyer, millionaire lumberman of Oshkosh, Wis. The building will be finished in oak and mahogany and will include all modern features, exceeding any home in western Wisconsin. It will cost \$25,000.

C. W. Heaford, formerly connected with the land department of the Wisconsin Central railway, has opened a Milwaukee office for the Gulf Coast Land Company, which is largely interested in railroads and timber lands.

The novelty of rough woodsmen acting the part of teachers was recently witnessed at Wausau when outdoor classes in natural history were held in Pine park by the teachers of the city schools. Lumbermen just back from the northern woods talked to the children on trees, explaining the nature and characteristics of all the big trees in the park.

Bearing the largest sawmill that has ever

been shipped from the Northwest, a special train recently passed through Milwaukee from Menominee, Mich., on its way to Fort Barre, La. The mill and equipment will be employed by a southern lumber company who will pay the manufacturing company a bonus of \$500 if the mill arrives on time.

Forest fires were again raging in northern Wisconsin the past week, but were quenched by heavy rains. Heaviest losses were experienced at Eber west Wis., where the lumber yards of Assemblyman E. F. Nelson were entirely destroyed and a large number of logs belonging to the Brooks & Ross Lumber Company of Wausau and Joseph Duchac & Co. of Antigo. Damage in this vicinity is estimated to be \$25,000. Fires along the Pike river in the vicinity of Dunbar, Amberg and Pembine destroyed much standing timber and young growth.

The Wisconsin Woodworking Machinery Company is a new manufacturing plant that will soon be located at Oshkosh. The company, which is now in the course of formation, will manufacture a sander which will do the work of the sander ordinarily sold at \$1,000, but which will be sold at considerably less than that figure. Several other styles of woodworking machines will also be turned out.

Brush fires in the vicinity of Superior, Wis., destroyed the portable sawmill of Murphy Bros., together with 250,000 feet of lumber and 1,000,000 stingles.

Judgment for more than one-third of a million dollars was recently awarded at Oshkosh, Wis., by Judge Burnell in the circuit court in favor of the Oak Lumber Company of that city against R. E. Blanks, E. T. Lamkins and W. A. Brown of Monroe, La., former officers and directors of the Monroe Lumber Company. Judgment amounting to \$350,000 was rendered by default for breach of contract, and was one of the largest ever awarded in Winnebago county.

The George M. Rleton Manufacturing Company of Sheboygan, Wis., is erecting a three-story building to be used as a factory for the manufacture of furniture specialties, among them piano stools and barroom fixtures.

The total drive of logs of the Marinette Boom Company for the present season is estimated to be 54,000,000 feet, some 5,000,000 of which were held over from last year. Crews at the sorting gangs are now busy, and water conditions in the stream are the best. Log driving in general in the northern Wisconsin lumber country is well under way and it is said that the total drive will almost equal that of last year.

The Edgar Stave & Veneer Company at Edgar, Wis., is soon to erect a new stave factory.

Moore Bros. of Marinette, Wis., have gone into bankruptcy, with liabilities of \$10,000 and assets of \$3,500. The firm controlled a large lumber mill which recently burned, entailing a loss of \$12,000 not covered by insurance.

Some 6,000,000 feet of logs held up at Cameron Dam, Wis., for three or four years by John Dietz, recently passed through Lady Smith. The drive was under the charge of W. E. Moses, of Northfield, Minn., who has the contract for moving the logs so long held up.

The woodworking plant of George Price at Crandon, Wis., has been enlarged and twelve additional men are to be employed.

The sawmill of the A. H. Stange Company at Merrill has been opened and is now running full blast. The company's saw and door plant, one of the largest in the country, which has been operating on an eight-hour schedule, is now being operated ten hours daily.

The H. W. Wright Lumber Company at Merrill, Wis., has closed its sawmill for a time owing to a surplus of lumber in the yards.

CINCINNATI

L. W. Radina of L. W. Radina & Co. says that business with his concern has been good during the past two weeks, and the demand for poplar and quartered oak is more urgent now than for any other week for the past six months. During the month of April his concern did more business than for some time, and now that the weather had offered relief he looks for a continued improvement in all grades of hardwoods.

J. W. Clifford of the Clifford Lumber Company of Detroit, Mich., was a visitor in town during the past fortnight looking after trade. He stated that conditions in Detroit were more favorable than for some time and that he thinks a gradual improvement will be noticed each week.

William Duhmeier of the Duhmeier Brothers reports business with them during the past fortnight as rather slow, but says that inquiries are being received with more regularity.

"We have been busy for the past three weeks, and especially so in poplar, quartered oak and plain white oak," said E. O. Robinson of Mobraj & Robinson. "In fact all hardwoods are doing better now than for some weeks, and I am of the opinion that each week will bring on a better tone in the hardwood situation."

I. M. Asher of the I. M. Asher Lumber Company has gone to his mill in the South. He reported trade with his company fairly good.

E. S. Miller of the Stevens-Baton Lumber Company of New York, was a visitor in town during the past week on business for his concern. He stated that trade in Gotham was showing a fairly good tone.

E. L. Edwards of Dayton was in town recently calling on his local manager, J. E. Tutthill, and looking after business affairs. Mr. Tutthill says that trade with his concern was only fair during the early part of the month, but change has been manifested in the last two weeks.

Harry Saxton, vice-president of the Knoxville Saw Mill Company at Knoxville, Tenn., met with fair success during the past two weeks in selling lumber to retail dealers here.

W. P. Roberts of the Kentucky River Poplar Company of Lexington, Ky., was a visitor in town during the past week selling poplar, of which they have a fair supply on hand. He did not have much trouble in disposing of this wood as the local trade here are not too well fixed in poplar.

H. H. Fields of the Spatswood Lumber Company of Lexington, Ky., called on the local trade during the past week trying to secure trade for his company.

J. H. P. Smith of the Hardwood Lumber Company of Ashland, Ky., was a visitor in town during the past week looking up business.

The Cincinnati Business Men's club will hold a field day at the Laughery, June 11. This was decided upon at a meeting of the club officials last week. There will be a baseball game of all kinds of athletic contests, such as running, jumping, etc. A steambot will probably be chartered. Prizes will be awarded to the champions in the various departments of athletics.

William Goodwin Sr., pioneer contractor and lumber dealer of this city, died last week after a brief illness. A number of local lumbermen attended the funeral.

B. F. Dulweger, the newly elected president of the Lumbermen's Club, entertained at dinner at the Business Men's Club last week a number of his friends, who so successfully helped him to gain the presidency of the club. Short speeches and amusing stories of how votes were secured were related.

The next monthly meeting of the Cincinnati

Lumbermen's Club will be held June 1 at the Business Men's Club at which B. F. Dulweger, the newly elected president, will preside.

Schedules of assets and liabilities were filed last week in the involuntary bankruptcy proceedings instituted against the John Stengel Furniture Company of Dayton. Stengel, the president of the company, has admitted all of the charges of bankruptcy made against his concern. The total indebtedness is placed at \$106,000, and the assets at \$60,556.75, the value of the real estate being placed at \$40,000.

The fifth flood of the year visited Cincinnati during the month. No serious damage was done to property. The Maley, Thompson & Moffett Company and C. Crane & Co. received a great many logs on the rise. The Crane people lost quite a number of logs, but these were returned after the usual salvage charge was paid.

The Andrew Jergens Soap Company of Spring Grove avenue have added another small building to their plant which will be devoted to the manufacture of boxes used by the company.

The Grafton Lumber Company of Grafton, Ohio, was incorporated last week with a capital of \$100,000 by J. A. Knechtges, J. L. Beesing, John Crilly, George Heaver and F. Hancock.

The Ferd Brenner Lumber Company of Norfolk, Va., has now located in the First National Bank building, this city, where it is ready to take care of business in its usual prompt manner.

The Kentucky Lumber Company will move from its present quarters on the fifth floor of the First National Bank building to the tenth floor about July 10. The present quarters are not large enough for the prospering concern. They will have a suite of five rooms in the new location.

The rough lumber of the E. M. Schantz Lumber Company has been purchased by the P. R. Mitchell Furniture Company in grade. It is stated upon good authority that the creditor of the bankrupt concern will not receive more than 10 cents on the dollar.

The Peter Kuntz-Hilton Lumber Company of Dayton, Ohio, with a capital stock of \$5,000, was incorporated last week by Peter Kuntz, J. J. Kuntz, P. Kuntz, Jr., J. A. Layne and W. P. Hilton.

S. Sndbeck of the Acme Veneer & Lumber Company has returned from a short trip through Ohio. Harry Hartke of the concern states that business is very good for high-class veneers, such as walnut and mahogany. The lower grades are not in as good demand, but still are doing fairly well.

John Frederick Strong, a well known lumber dealer of this city, died the middle of the month after a brief illness. Strong was well known among the lumber trade here and elsewhere, and the news of his death came as a shock to his many friends.

W. E. Johns of the William H. Perry Lumber Company returned recently from a business trip to Chicago. He said that the trade here is about the same as it has been for the past three weeks, but is hopeful of a change in the situation during the month of June.

W. B. Wolfe of the William H. Perry Lumber Company took a quiet little trip a few days ago apparently on business through Kentucky, but was interfered on route by one Dan Cupid, who made a sudden dart down upon the lovers, drilled them before a minister and did not release them until his highness pronounced them man and wife. His speech at a Kentucky ball from Danville.

John Frohmiller, formerly of the J. H. Burton Lumber Company, has severed his connection with that concern and accepted a position as salesman for the Acme Veneer & Lumber Company.

A waterway between Cincinnati, Toledo and

Chicago, is the latest movement of the Cincinnati business men. The movement was brought before the members of the Chamber of Commerce and not a dissenting vote was uttered. Several of the local business men are heartily in favor of the new project, but it will require some time before it is completed.

"We have done a fairly good business during the past few weeks, but it was not as heavy as I would like to see it," said Ralph McCracken of the Kentucky Lumber Company, recently. "Both of our mills in Kentucky are running, but the two in Tennessee and Mississippi will not be started for some time. I think that the situation will show some improvement during the coming month."

EVANSVILLE

William Threlkeld of the Indiana Quartered Oak Company of New York city spent several days last week visiting the trade in this market.

Henry Maley of Edinburg, Ind., was in the city last week on business.

The H. Herrmann Manufacturing Company will shortly start up its dimension factory after a shutdown of several months. It will employ about fifty men and will run ten hours a day. The company is not operating its sawmill and has not been doing so for some time past.

The first installment of machinery for the Milwaukee Falls-Evanville Chair Company arrived a few days ago and will be installed at once, as the firm expects to get its factory in operation by July 1.

The big plant of the Hohenstein-Hartzmetz Furniture Company of this city was recently almost totally destroyed by fire. Over \$35,000 worth of property, including machinery, stock and material, was consumed. The loss is only partially covered by insurance. The origin of the fire is supposed to have been the faulty electric wiring in the building. It is not known whether the firm will rebuild or not.

Daniel Wertz of Maley & Wertz spent several days last week at the Grammer (Ind.) mill of the firm looking after affairs there.

C. C. Hale, representing F. W. Vetter of Buffalo, N. Y., was in the city a few days ago calling upon various hardwood firms.

In suits filed recently by the Henry Maley Lumber Company against the Schultze-Waltman Planing Mill Company the Maley company claims it owned the entire plant, which was totally destroyed by fire and that they are entitled to the insurance. The fire referred to occurred about a year and a half ago, the mill then being operated by the Henry Maley Lumber Company on West Ohio street, together with several other buildings, were destroyed.

S. P. Coppock of S. P. Coppock & Sons Lumber Company is in the city.

Harry Callicott, representing Young & Cutsinger, has just returned from a trip to Chicago. Mr. Callicott says business is rather quiet in the Windy City.

ST. LOUIS

The National Prosperity Association, started in St. Louis recently, is beginning to bear fruit. Lumbermen are falling in line and endorsing the "give us a rest and sunshine" movement. Several clubs and exchanges all over the country are passing resolutions advocating its principles. The Lumbermen's Exchange of St. Louis was one of the first to take interest in this matter, and at a recent meeting of the board of directors passed a resolution endorsing the plan of the association, proclaiming its readiness to act promptly in keeping up the reputation of the city, and stating that with the general movement which

now prevails and with a united effort of all lines of business, prosperity must beam upon us. The Implement, Vehicle & Hardware Association of St. Louis, also at their regular monthly meeting, passed resolutions, stating that they believed there is no reason why the present business stagnation should continue, and that the healthy financial condition of the country justifies the resumption of business in all lines, and heartily indorsed the plan and offered cooperation in every way possible. Owing to the fact that a great many of the members of the Lumbermen's Exchange of St. Louis will be out of the city in attendance at the National Hardwood Association convention in Milwaukee, June 11 to 14, their regular monthly meeting on June 12 has been set back one week and will be held on June 5.

A recent visitor in St. Louis was Ed Paine of the Paine Sash & Door Company, Oshkosh, Wis. Birch veneered doors are a specialty of the company. Mr. Paine has been on a business trip through the East and was on his way home when he stopped off here. He says business in the East is just about the same as here.

The representative of King Edward of England evidently knew where the best market for furniture is located. He came to St. Louis in St. Louis. That was substantiated a few days ago when the Furniture Exposition sold to J. C. Plumplif of Liverpool, England, the representative of the King, \$35,000 worth of furniture. The furniture will be manufactured in Louisville, Ky., and Evansville, Ind., and will be shipped down the river to New Orleans and thence to England. The order includes both expensive and cheap furniture. This is the first time a "real live" King ever bought furniture in St. Louis.

The Sendeback Wheel Company, an East St. Louis wheel factory, was totally destroyed by fire May 15. The contents of the factory were valued at \$75,000 and were insured for \$59,000. The plant will be rebuilt immediately.

V. Mistrretta, president and traffic manager of the Southern Steamship & Improvement Company of Galveston, and S. S. Fife, commercial agent of the Missouri Pacific, were in St. Louis recently trying to insist that St. Louisians in Tobacco buying. They say it can be laid down in St. Louis very cheaply.

The vice-president of the Charles F. Luehrmann Hardwood Lumber Company, E. H. Luehrmann, reports business in fairly good shape. The company is getting orders right along and is not complaining. Its plants at Black River were shut down for a while, owing to the Black River overflowing its banks. The plant at Mexiana did not shut down, for it is so constructed that high water does not interfere with its operations.

Conditions are reported as satisfactory with the Mosberger Lumber Company, although prices are not as good as might be.

E. W. Blumer, general sales manager of the Lothman Cypress Company, is out on a month's trip. Before he left he said that business seemed better with them. Prices on cypress are strengthening and business looks good for the future.

Miss Mable Black and Theodore M. Plummer of Mercedes, Texas, were married Tuesday evening, May 19, at the home of the bride's sister. The wedding was originally set for fall, but as Mr. Plummer, who is the son of Theodore Plummer, president of the Plummer Lumber Company of this city, was coming to St. Louis from Texas, where he is now living, persuaded his bride to be married this spring. Mr. Plummer and his bride departed immediately after the ceremony for a tour of California and Colorado, and on their return will reside in Mercedes, where Mr. Plummer has a ranch.

Fire Wednesday morning, May 20, destroyed

the plant of the Jacob Loesch Coopers Company, St. Louis, entailing a loss of \$10,000.

NASHVILLE

Nashville is to have a new industry in the hardwood line in the shape of a table factory to be erected in the near future by the Standard Furniture Company. The concern will employ 100 men and will manufacture all grades of tables. This will be the only factory of the kind in Nashville—the only one, in fact, in this section of the country, the nearest ones being at Chattanooga and Evansville, neither plant being within 150 miles. The factory will be three stories high and of brick. The latest and most improved machinery will be installed and the building and its fixtures will cost about \$25,000. T. F. Bonner of the Standard Furniture Company will be at the head of this new concern.

A new lumber concern that will open in Nashville May 24 is the Crescent Lumber Company. At its head are two of the best known and most successful young lumbermen of the city—J. Milton Wells and E. R. Winkler. Mr. Wells has for a number of years been with Love, Boyd & Co. and also with the W. J. Cude Lumber & Lumber Company. Although still quite a young man, he is said to be equipped with experience that would do credit to a lumberman of much maturer years. Mr. Winkler is president of The Lumber Employers' Corporation.

A special from Lynnville, Tenn., announces that the Patterson & Major saw and planing mill at that place has closed down. The controlling interest in this mill was owned by W. B. Eberhart, the Murfreesboro lumberman who recently made an assignment, and this mill was included in the list. The business of the mill is being wound up by G. V. Patterson. Its closing is generally regretted, as the mill had been quite an important industry in Lynnville's list.

Quite a number of the Nashville lumbermen will go on the booster trip of the Nashville Board of Trade. Each spring or early summer the local Board of Trade, representing all of Nashville's commercial and industrial features, makes a tour of some section of the country. The trip is made in a special and good speakers are taken along. Short stops and short speeches are made at all the points along the route and advertising matter, boosted Nashville and her industries, etc., is distributed. It is from this method of boosting that the club got its name of "booster." The trip this season will be made through the state of Mississippi and a special will leave on the morning of June 15 and return in one week.

Local politics still continue to interfere materially with business in Nashville. In fact, there is so much politics stirring that the average man here would rather talk politics than business. The county for some weeks has been in the midst of the hottest kind of campaign over who shall be sheriff of Davidson county, in which Nashville is located. Quite a number of the local lumbermen have taken a hand in the local sheriff's race, being for the reform candidate who is running for reelection. Arthur B. Ransom of the firm of John B. Ransom & Co., H. Kai Howse of the Montgomery Furniture Company and other local dealers have backed the reform candidate.

CHARLOTTE

The Kanawha Hardwood Company now has about twenty miles of its railroad completed, from Andrews, N. C., to its timber holdings in the Snowbird mountains. Lumber, logs and acid wood are thus transported to the company's headquarters at Andrews. Andrews is situated in the mountains of western North Carolina, not far from Asheville, and is rapidly becoming

a lumber center of importance. An eastern company recently made extensive purchases of timber lands in that vicinity, and contemplates the construction of a railway from Andrews to its timber lands nearby. The company, it is said, will put in a large band mill and other factories, and will work up the output of its mills, thus giving employment, when the factories and mill are completed, to about 700 men. No one thing is facilitating the lumber business in western and eastern Carolina than the building of new railroads into timbered sections.

The Carolina Hardwood Lumber Company of Asheville, N. C., has been organized with \$15,000 capital stock to buy and sell timber lands, operate sawmills and manufacture all kinds of hardwoods. R. P. and M. S. Baer of Baltimore and Louis M. Pounce of Asheville are the incorporators.

The large sawmill plant of W. T. Sears & Co. at Wannabis, N. C., a large quantity of machinery, logs and a considerable amount of timber lands, were sold at public auction a few days ago at Wilmington, N. C., by Receiver J. D. Bellamy. Henry C. Riley of Philadelphia, Pa., bought the property, paying \$15,000 therefor. The sale is subject to confirmation by court. It will be recalled that President W. T. Sears, who was one of the most prominent lumbermen of the state, died since the company went into the hands of a receiver.

Thomas S. Beall of Greensboro, N. C., has been appointed receiver for the Southern Match Company of Ronda, N. C., and he is now in Ronda winding up the company's affairs. This is a New York corporation with plant at Ronda, which manufactured matches on a large scale. The offices of the company are at 235 Broadway, New York, and George Munro of New York is president of the company, and David C. Myers of New York is treasurer. Mr. Myers says the nominal assets of the company amount to \$40,000; good assets, \$20,000. He states the liabilities amount to \$50,000. Messrs. Myers and Munro are the principal stockholders, also the principal creditors, having advanced \$45,000 to the company.

Furniture dealers of this state are experiencing decidedly improved conditions now, most of the factories running full time. It will be recalled the association decided to cut hours some time ago to strengthen the market by curtailment of production. Now, however, most of the factories are running as of old and report a good business.

The fine new mill of the Deonis-Simmons Lumber Company at Middlesex, N. C., is now in full operation. It has a daily capacity of 60,000 feet.

The General Fire Extinguisher Company of Charlotte, through its representative, J. W. Conway, who has just returned from a trip to Minneapolis and Chicago, has recently closed a contract with the Bahama Timber Company, Limited, for the complete fire protection and piping systems of the immense lumber plants which that company is holding at Wilson City, Island of Avaco, one of the Bahama group. The execution of the work will be taken care of by the Atlanta, Ga., and Charlotte plants of the fire extinguisher company. The Bahama Timber Company will operate its own line of steamers, which will transport timber both to the United States and foreign countries.

ASHLAND

W. H. Dawkins, president of the W. H. Hawkins Lumber Company of this city, has returned from West Baden Springs where he has been for the past ten days. W. E. Berglund of this company has returned from a business trip to Chicago and reports receipt of a nice lot of orders, mostly for poplar. The company is operating its large band mill at Ironton ten hours a day, and manufacturing a nice lot of poplar.

The Ashland Lumber Company has again

resumed operations in its band mill, having on hand a good supply of logs. In addition to its own logs it is sawing for other firms of this vicinity.

J. H. P. Smith, president of the Hardwood Lumber Company, has returned from a business trip to Detroit and other northern cities. This company is receiving a nice lot of orders, mostly for common and better oak. J. H. Koester, buyer and inspector, is at present out of the city loading and inspecting several cars of lumber to be shipped direct to customers.

E. W. Strack, a well-known lumberman of this city, has just returned from a ten days' trip through the North. He visited Toledo, Detroit, Grand Rapids, and several other cities, calling on the lumber trade. Mr. Strack advises that he found conditions quiet compared to a year ago. He secured some orders and found stocks generally in consuming territory far below normal.

F. G. Eberhart, Jr., of Mishawaka, Ind., president of the Licking River Lumber Company of this city, with his daughter, spent several days here last week. He visited the company's large plant at Farmers, Ky., and several of its timber tracts in eastern Kentucky. One of the principal features of this survey was the possibility of putting in about ten miles of railroad in Johnson county, connecting one of the tracts of timber owned by the company with the C. & O. at Paintsville, Ky. It has not yet been definitely decided whether or not it will erect a new band mill at Paintsville, or if the timber would be shipped to this place. G. J. Parre, secretary and treasurer of the company, reports the receipt of a nice lot of orders the past few weeks, for poplar and oak timbers, as well as export oak, and states that the concern has sufficient orders ahead to run the mill for several months.

President Putnam of the General Lumber Company of Columbus, O., was a business visitor in this city, going from here up the Big Sandy with the expectation of going over some of the timber properties owned by his company near Paintsville. This company owns and operates a large band mill in this city, and expects to operate again in a short time. It has a large supply of logs on hand and expects to do considerable sawing for other companies.

McGlone Brothers of Morehead, Ky., were business callers in the city this week. They make a specialty of hickory dimension, mostly rim strips and high-grade stock. In connection with their mill they own a tract of about 17,000 acres from which there has been no hickory cut. Owing to the conditions of the market and prices, they are not operating very heavily at this time.

M. S. Satterfield, a lumberman of Alderson, W. Va., was a business visitor in this city, calling on the various lumber dealers. Mr. Satterfield is also interested in the Marshes Lumber Company, Marshes, W. Va. He advises that this company is equipped to get out most anything in the lumber line, rough or dressed. He also states that they find business better than it was sixty days ago, and better prospects for the lumber business.

Fred Stone of Detroit, was a business visitor here and at Farmers, Ky., several days this week. Mr. Stone purchased a large amount of lumber from this section, which he ships mostly to the North.

The Clearfield Lumber Company of Morehead, Ky., continues to operate its mill every day, shipping out considerable stock, and while prices are not as satisfactory as they might be, still the company is encouraged to look forward for something better in the near future. This company owns and operates an up-to-date band mill, recently built. Just at this time it is very busy getting out the bark

which is gathered from its timber. It advises the possibility of getting out about 1,200 cords of tan bark this season, all of which is shipped to the Ashland Leather Company of this city. In addition to the band mill, the Clearfield Lumber Company owns and operates a railroad known as Morehead & North Fork R. R. It already has thirteen miles of railroad completed, which it is operating, and is building thirteen miles in extension, which will be completed this year. The company owns timber along the entire length of this road.

S. B. Reese of the S. E. Reese Lumber Company of Farmers, Ky., has returned from a several weeks' vacation at his old home in Washington, Pa., and has again placed the mill in operation, and expects to operate for several months. They have a fine supply of logs, both oak and poplar.

The R. G. Page Lumber Company is receiving in its yards here several cars of lumber which it is shipping from its mill near Harold, Ky. This stock is shipped here for assorting and drying. The lumber is mostly poplar, walnut and basswood. The company reports receipt of orders for oak and hickory dimension, also a very desirable order for 6x8 ties. William Eckman of the company, has just returned from a business trip through the North and West. He advises some improvement in the lumber business, and found that the planing mills and retail yards in the smaller cities were doing well, running more steadily than the furniture and implement factories of larger cities.

C. G. McLaughlin, manager of the McLaughlin-Hoffman Lumber Company, of Columbus, O., was a recent visitor in this city, wanting to purchase several cars of lumber. Mr. McLaughlin expected to visit Huntington and Charleston, and several other lumber centers in West Virginia before returning to Columbus.

The Yellow Poplar Lumber Company at Coalgrove, O., is operating its large plant, running both departments thirteen hours a day. This company has leased part of the Meyer's property to extend its lumber yard. This adds to its already extensive yards considerable more space for piling lumber. The company has at this time a large supply, and enough logs to operate for the next three or four months.

MINNEAPOLIS

H. J. Strand, who was formerly in the employ of Osborne & Clark of this city as traveling representative, was in Minneapolis this week. He is now in the employ of the Leavitt Lumber Company of Chicago and has returned from a buying trip in Mississippi and Tennessee. He says there is a great deal of high-grade timber that territory and that only such mills are running as are under contract to saw.

E. Payson Smith of the Payson Smith Lumber Company is going south next week to look after some of their hardwood mills and also into the conditions of the yellow pine trade. He says that conditions in this market are not quite as active as last month, but they have no complaints to make.

James B. Andrews has joined the forces of the Payson Smith Lumber Company and will act as sales representative in the Twin Cities and the upper Mississippi valley. He will also represent the company to some extent as buyer. Mr. Andrews has had considerable experience in the hardwood trade, having formerly been connected with the Quinlan Lumber Company of Milwaukee in a similar way. He fills the place made vacant by George S. Agnew, who left the Payson Smith Lumber Company some weeks ago to enter the wholesale business for himself.

George S. Agnew has been going through a

serious experience in the critical illness of his little daughter, who has been very low with pneumonia and not expected to live. His friends are all greatly pleased to learn that the little one is improving and is now considered out of danger.

D. C. Phelps of the Advance Lumber Company, Cleveland, Ohio, was a business visitor in the Twin Cities last week.

The building record for Minneapolis does not make a bad showing. April permits numbered 650, with a total cost of \$989,030, compared with 651 permits last year and an estimated cost of \$1,147,960. St. Paul's April total was \$539,292, compared with \$623,119 last year.

Andrew McGowan, the wholesale dealer of Madison, Wis., was a visitor here a few days ago on his way to Winnipeg. C. F. Osborne of Osborne & Clark, the local wholesalers, says that their trade in the country districts of the Northwest is very dull at this time, and Twin City business is light also. It runs mainly to oak, birch and basswood for sash and door factories, and to flooring material, oak, birch and maple. The wagon stock trade is quiet now.

TOLEDO

Charles B. Schnaitler, for many years a prominent furniture manufacturer of this city, died last week, after an illness of nearly a year.

The S. N. Ford Lumber Company suffered a heavy loss this week by fire which completely wiped out their plant at Mansfield, O., causing damage to the extent of \$100,000, but partly covered by insurance. Much valuable machinery and a large stock of lumber were destroyed.

An interesting suit has been commenced at Mansfield, O., by Eli and M. E. Berry against Marion and Warner Charles. Plaintiff has asked for an injunction restraining defendants from removing timber from a valuable tract prior to 1902 they entered into a contract whereby they were to remove the timber at such times as they saw fit, subject to the provision that they were to haul along a certain field and at such times as the ground was not so soft as to cut it up. They say they cut and hauled away timber without disturbance until February 16, 1908, when they were notified to remove the remainder before March 15. Weather conditions preventing, they failed to comply with the notice, and since then they have not been prevented by injunction. Defendants claim that from 1902 to 1907 plaintiff cultivated their roadway so they could not haul; that in 1905 the field was so soft the timber could not be removed, and that by reason of plaintiff's conduct they have lost a market for the timber. The most interesting feature is the fact that no time was fixed for the removal of the timber, and the court will be called upon to say what would be reasonable under the circumstances.

Articles of incorporation have been filed by the Dicus Cooperaage Company, of Defiance, O. Among those interested are W. E. Mack, James E. Tischer, W. W. Tackaberry, H. M. Wilhelm and D. C. Dann of Lima, O., and George H. Dicus of Defiance. The new concern will take over the business of the Dicus Cooperaage Works, which has been successfully conducted for more than twenty years. In Canada, died here a few days ago.

NORFOLK

Although most wholesalers and manufacturers at present are outwardly optimistic, existing conditions hardly warrant this feeling. In talking with Harry W. Dickson of the H. M. Dickson

Lumber Company on conditions recently, Mr. Dickson exhibited a letter he had just received from an English connection, mainly devoted to the effects of the consignment evil upon the foreign market. This epistle stated that the quay, which is seven miles long, is completely filled up with this consignment material. It would also be judged from the tenor of the communication that the author does not believe there will be anything like normal buying for a number of weeks to come, and then only in dribble lots. It is the opinion of Mr. Dickson that the remedy for the situation lies in the fact that brokers have now refused to honor any more drafts for consigned material, which will of course eliminate any further trouble on that score. Consignees of much of this material must have suffered losses by having their shipments refused after arrival, leaving them with only that compensation for their product which was represented in the drafts made. Mr. Dickson does not see any upward trend in the domestic market, and states that prices on an average are much lower than they were at the same time last year or at any period since. It seems probable, however, that a noticeable improvement in demand and prices will occur within the next sixty to eighty days.

The Ferd Brenner Lumber Company have completed the work of transferring their office from Norfolk to Cincinnati, and now operate in a surging shed in this city.

J. L. Durham of the North Carolina Lumber Company, Tillery, N. C.; Ralph Souder of E. H. Hallowell & Co., Philadelphia, and J. A. Berryman of the Canton Lumber Company, Baltimore, were recent Norfolk visitors.

The recapitulations for the month of April at the Export Bureau shows the following totals: 3,975,000 feet saw timber.....\$272,723
Logs and other timber.....44,237
396,600 staves.....27,200

\$294,160

Recent visitors to this city were: Mr. Warburton of D. L. Gillespie & Co., Pittsburg, Pa.; D. H. Ellington of Ellington & Guy, Richmond, Va.; Lindsey H. Shepperd of William Whitmer & Sons, Boston, and Henry Whelpton of the Owen M. Bremer Company, Philadelphia.

R. P. Baer of H. P. Baer & Co., Baltimore, who has been covering the territory in the vicinity of Asheville, N. C., has returned to his home city. Mr. Baer stated that he found business generally dull.

L. J. Beites of White, Frost & White, North Tonawanda, N. Y., was a Norfolk visitor last week. He went from here to New York City, where he will take an office at No. 1 Madison avenue, which will put him in more direct touch with Mr. Frost.

A number of the lumbermen of this city are taking an active interest in a whirlwind campaign being conducted to raise \$150,000 within fifteen days for a new Young Men's Christian Association building. W. B. Roper, treasurer of the John L. Roper Lumber Company, is capturing one of the soliciting teams, and is working energetically for the project. Committees of lumbermen have visited their brothers in the trade, and the net amount subscribed by the fraternity will form a respectable portion of the whole.

WAUSAU

Carl Marlonski of Buffalo, N. Y., expects to begin the manufacture of pianos in Tomahawk within a few weeks. He will start in a small scale, but expects to employ about twenty-five hands before long. He has been employed for thirty years in leading piano factories as foreman. He is not asking for bonus, site or other assistance from Tomahawk citizens.

The Ashland Stave Company, Ashland, is enjoying the greatest prosperity since its organization. Heretofore most of the output

has been sold to Minneapolis flour mills, but since A. Pihl assumed the management the concern has been sending its product in other directions as well. One order for 500,000 staves had been sold to Detroit parties, and another of 800,000 to a Chicago concern. About 60,000 are being manufactured daily. Except when elm is cut, when the daily output is increased 10,000, the company employs sixty hands and has a year's supply of logs on hand.

The Keil Woodenware Company has commenced operations in its new plant in Mellem. The concern cut a million feet of lumber during the winter.

The Automatic Sprinkling Company of Milwaukee will soon have completed a \$4,000 automatic sprinkling system in the plant of the Nehrboss Casket Company of Fond du Lac. It will be supplied from a tank holding 26,000 gallons. As soon as the temperature in any room rises to a certain height a device known as a Rockwood head drops off each pipe and the building is flooded. At the same time an alarm is sounded.

The A. H. Stange Company, Merrill, after an idleness of several months, has started its mill and other plants in operation and will run all summer. Logs are being brought to the mill by rail. The company's mammoth sash, door and blind factory has resumed a 10-hour schedule, after running eight hours and short-handed, for several months. The concern cut a million feet of lumber during the winter and the building is flooded. At the same time an alarm is sounded.

The Roddis Lumber & Veneer Company of Marshfield has just signed a three-year contract with a Chicago firm for making flush veneered doors and panels. The company expects to soon enlarge its plant to meet the demands of its growing business.

The Merrill Woodenware Company, Merrill, is enjoying a prosperous season at present. The company employs 125 hands, and, besides turning out other wood products, is cutting up a large supply of stave stock.

It was announced by the Forest Service, Washington, D. C., recently, that bids opened April 28 for the sale of the pine, hemlock and hardwood cut the past winter on the Menominee Indian reservation had been rejected because they were too low. The bureau is considering whether to re-advertise for bids or to set up a portable mill and cut the logs, under the provisions of the La Follette bill, which passed Congress late in March.

H. R. Swanke has purchased the interests of John and Herman Ruppenthal in the hardwood mill of the Badger Lumber Company, Tigerton.

The Gateway Lumber Company of La Crosse has been organized; capital stock, \$35,000; incorporators, A. S. Frink, J. J. Feiber and C. J. Feiber.

The Vaughan Manufacturing Company, Jefferson, manufacturers of wagons and agricultural implements, has adopted a plan whereby it expects to give all its employees a Saturday half-holiday throughout the summer months. Other factories in the same city are contemplating following suit.

The new plant of the Stange-Ellis Company of Grand Rapids has commenced operations. The company was delayed several weeks by a manufacturer's mistake in shipping a belt

to Grand Rapids, Mich., instead of Grand Rapids, Wis.

Over 1,000,000 feet of hardwood lumber and logs were recently destroyed by fire at Elmhurst. The stock belonged to E. H. Nelson of that village, the Tigerton Lumber Company of Tigerton and the Brooks & Ross Lumber Company of Wausau. The fire started from a locomotive spark. Fire departments from Wausau, Clintonville and Antigo assisted in saving the mill of Mr. Nelson.

Judgment for \$360,000, with costs aggregating \$115,24, has been ordered by Judge G. W. Burchell of Winnebago county in favor of the Oak Lumber Company against R. B. Blanks, E. T. Lamkins and W. A. Brown of Monroe, La. The Oak Lumber Company is a Wisconsin corporation composed of W. K. Rideout and R. H. Edwards of Oshkosh and J. F. Conant of Milwaukee. The defendants were former officers and directors of the Monroe Lumber Company, Ltd., and the judgment was rendered by default as damages for breach of contract. A considerable amount of the property belonging to the defendant is to be partial security for payment of the judgment. This property includes thirty shares of the capital stock of the Bank of Monroe, 200 shares of stock in the Planters' oil mill, and nearly 10,000 acres of land in Onachita and Caldwell parishes. The property is now in the custody of the Union National Bank of Oshkosh, Wis. The complaint upon which the action was based set forth that the Oak Lumber Company was organized September 20, 1907, and took over the interests of Messrs. Rideout, Edwards and Conant, including the contract in question. This contract, it is alleged, was made between the above named on one side and the Monroe Lumber Company on the other, some time in 1906. Under the contract the Oshkosh parties were to build or secure a mill at West Monroe and the Monroe Lumber Company was to furnish it with timber. This timber, it was estimated, consisted of 100,000,000 feet of oak, 25,000,000 feet of pine and other woods, and to give a mill site free. The contract was made for thirty years, about 4,000,000 feet to be furnished every year. The Oshkosh parties were to pay \$10 per thousand for logs, 1 log the first four years and \$1 additional per thousand for each successive group of four years until a maximum of \$13 per thousand had been reached. The complaint alleged that a mill was purchased by the plaintiffs at a cost of \$36,000, and was in readiness for business September 15, 1906. The railroad track was built and the fulfillment of the contract entered into. The operations continued for two months, when the Monroe Lumber Company went into the hands of a receiver. Since then it has refused to deliver any logs on its contract. The complaint sets forth that on January 15, 1907, the three defendants named agreed to assume the fulfillment of the contract upon consideration of the release of liability of the Monroe Lumber Company, but they failed in their promise, it is alleged. It was set forth that the delivery of the logs would cost the plaintiffs about \$2.50 per thousand and would sell for about \$20.50 when manufactured. The loss to the plaintiffs was figured to be in the neighborhood of \$500,000.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

CHICAGO

With the renaissance of better weather conditions there are some encouraging signs in the local hardwood trade. On the whole, however, the trade is still of the hand-to-

month variety, and few large stocks of lumber are being moved.

The trade has fallen off from forty to fifty percent of that of a year ago, and transportation returns fail to disclose any increased receipts of hardwood over those of a fortnight ago. There is comparatively little to be ex-

pected from the furniture makers, whose demands constitute a large proportion of the sales in the Chicago market, because it is not believed that the July exposition sales will be very active. As a matter of fact, there is little hope of any particular activity in hardwood or a return to normal conditions until autumn. Jobbers have already made their plans to carry small stocks during the spring and summer season, and are philosophically taking what business they can get and letting it go at that.

BOSTON

The market for hardwood lumber is quiet and lending dealers say there is no use trying to conceal the fact. Few consumers are buyers at present, even though prices in many instances are attractive. For several months past stocks in the hands of the largest users have been large enough to take care of the bulk of their wants. At the time the general depression in business first made itself felt consumers of hardwood lumber had many thousand feet due them. This has been coming forward and has filled in many of the wants that have developed. One dealer said this week that he had made only two small sales this month, but that he had charged up a fair month's business, due to the fact that he has been able to deliver lumber sold nearly a year ago. A large buyer is quoted as telling a salesman that his present stock was large enough to carry him along for about nine months at the present rate new business is coming forward.

Manufacturers of interior finish are doing about one-half the amount of business usual to this season of the year. A good volume of building permits have been issued, but the work of starting them is being delayed in many instances. Furniture manufacturers are doing a small business.

Prices are unsettled. Many manufacturers are obliged to sell their product at any price they could get, as they have need of money to meet notes falling due. At present the best lumber is held with a fair degree of firmness, and in a few cases higher prices are asked than two months ago. One-inch quartered oak, 1s and 2s, has been sold in Boston at \$4, but few buyers will bid this figure. Offerings are not large. Plain oak is not very firm and sales at low prices have been recorded. Brown ash is fairly well held. Whitewood is selling in a slow way. The market for cypress and North Carolina pine is still unsettled and demand is limited.

NEW YORK

Local conditions in the hardwood trade show a slow but gradual improvement. The hardwood trade is, generally speaking, in much better shape than the general building lumber market, and in view of the constant decrease in hardwood supplies it is the consensus of opinion that so far as the effects of the recent panic are concerned, hardwoods have some time to pass the low point of readjustment in values and that output and future changes will be all for the better. This is not to say that there are not some sales being made at prices which show considerable deviation from true market values, for such sales continue to be made, but with less frequency by small manufacturers and wholesalers who are forced through circumstances to make sacrifices. In the better grades, however, the general tendency of the high-class sellers is in line with firmer market prices and on good, well manufactured stock there has been a considerable firming up of there is less tendency than there has been in some months past to place the market, prices on quartered oak, plain oak, ash, pop-

lar and others of the more popular woods, and good stock is being held for fair prices. While the volume of trade might be larger the general tendency seems to be to hold prices commensurate with the value of hardwood lumber.

PHILADELPHIA

There has been no change in the hardwood situation during the last fortnight, and it is clearly evident from present indications, that trading during the summer months will be, as for sometime back, on a much restricted basis. There are some, however, who predict an early change for the better; they reason that the banks and trust companies which have been reluctant to make adequate loans for building work will now seek to make investments, as it is admitted in financial circles, that money in these institutions has been accumulating to such an extent, as to make such action desirable and to their interest. As the estimates up to present time seem to be favorable in respect to the coming crops, merchants are beginning to prophesy that improved trading must follow. Others do not look for a decisive change in present conditions until after the fall election shall have brought a greater repose and confidence to the country.

A careful canvas of the hardwood field shows business to have been running only in spurts, and that buying has been compulsory, in order to fill up reduced stock in one line or another. A little more activity is noted in building. Although the large railway companies have created extensive loans for improvements, there seems to be a hitch somewhere in making a start, for there is nothing on the boards indicative of early activity in this line. Trolley car builders are fortunate in being able to keep their plants running right along, and especially on foreign orders. Sash and door mills are living up, and the outlook is for steady work from now on. Furniture factories are naturally affected by the general stagnation in business. Boxmakers report business slow, low prices are made in order to get orders, and contracts are made a year ahead regardless of a possible advance in material. Veneer and cigar-box lumber registers about fair and the outlook for improvement is a little more encouraging. Values continue about the same, with quartered oak scarce and high, and better grades of hardwoods maintaining fair prices. Stocks are held well in hand at mill districts, and it is an undeniable fact, that it is only a matter of time that the small manufacturer, who, in order to obtain money, has been compelled to sacrifice his stock, will run out of material, and the conservative mill man will receive what is his right, a decent profit on his hardwoods.

BALTIMORE

There is as yet no decided change in the hardwood situation, although a more hopeful feeling seems to prevail. Inquiries are more numerous and an increased total of orders are being placed. Manufacturers have not found it necessary so far to run plants at anything like their capacity; in fact, not a few of the mills are still either shut down or running only part of the time. But it is also to be said that no heavy stocks are reported from any direction, so that a marked revival of activity should be able to exhaust the available supplies and send up values.

With the export movement normal, the lumber on hand now would not suffice for current needs; but it so happens that the foreign centers of distribution are greatly congested—a condition blamed largely on the practice of shipping on consignment—and as a result the

quotations were depressed to a point where further shipments could not be made without loss to shippers. The forwardings now are very small, which leaves much more lumber to be taken care of by the domestic business and enables manufacturers and dealers to get along with the limited stocks they hold. In this connection it is also to be said that the foreign market would be in better shape but for the fact that high prices of the boom period set all the plants going to the limit of their capacity, and when the lot-up came at home, the excess in the production over the domestic requirements was gotten out of the way for a time, but eventually the accumulations became troublesome, and now the situation is all the worse, the foreign movement being checked almost entirely. This applies especially to oak plans and poplar, both of which woods are to be had in such volume abroad that the quotations have fallen considerably below contract prices, and the foreign buyers seek to recoup themselves by making exceptions to grades and setting up other claims which in effect reduce the returns to the shippers. No very marked improvement is, in the opinion of experienced exporters, to be looked for until stocks are reduced to a normal level.

PITTSBURG

In some ways the industrial situation has improved since May 1. The big steel companies are beginning to show signs of life. This is evident in some large orders which they have recently taken for steel rails and other railroad equipment. It is also evident in the fact that they are requesting their officials and heads of departments to take their vacations early in order to be home and at work during August, when a rush of business is expected. Bridge work comprises quite a large proportion of the estimates now. There is also a large amount of trolley construction work on hand, much of which will go ahead by July 1. Although this increase in prospective business is evident, the effect of it upon general business is hardly manifest yet. Where mills have started up they are only running day forces, perhaps with less than one-third their usual capacity. The laboring population, which originally spends a large sum of money at this season for building, is entirely out of the market and will be until fall from present indications. Very little change is to be noted in the building situation. In the Pittsburgh district there is so little building on hand as to leave no reason for wonder why the yards are not buying more lumber. The railroad companies are still holding off from making large purchases, although they are buying some more lumber than the two months ago for general repair work and small extensions. Their loss is too heavy to permit the management to go ahead with any record breaking purchases of lumber. The Baltimore & Ohio railroad suffered its heaviest loss in freight traffic in April, that month having shown a decrease of more than \$2,000,000 as compared with the gross receipts of April, 1907. The cut in the dividends of the Pennsylvania Railroad Company also shows which way the wind is blowing.

New firms which are starting up are diverting their energies largely to the country towns outside of the Pittsburgh district and report encouraging results. Prices on hardwood lumber remain practically stationary. If wholesalers can hold them at the present level during August they will be abundantly satisfied. Demand is increasing very slowly. General stocks are not large and in some lines of hardwood there is a marked scarcity of good dry lumber. Pittsburgh dealers on the whole pronounce the market very quiet and are simply waiting for business developments to create a stronger buying movement among lumber users.

BUFFALO

The lumber trade still drags more or less, so that there is little chance of its doing much in the line of recovery before the midsummer stood that lumber is doing nothing. The movement is slow when compared with the last few years. People are selling from one-third to two-thirds of what they did then, and this market is doing its share; in fact, it appears to be doing more than most markets are. The local demand is good, for building is active and the woodworking mills are for the most part running, though it is said that the car shops do not seem to be used to nor as dealers think they should. But Buffalo has kept her dish right side up so far, and promises to go on in the same way. A hardware dealer who was lately in Detroit remarks that the lumber trade there has had to clear away the wreckage of eleven failures, which is a pretty bad state of things. Nobody looks for anything of the sort hereafter, so all that must be done is to wait. Unless there is a change for the worst it will come out all right in a fair amount of time.

Hardwood lumber led the rest for a while, but it does not look now as if it was doing it. Some dealers say that consumers often bought more of it than they really needed, in the expectation that trade would be back again by this time. When it does not come the stock accumulates. There has not been much complaint of this sort, but enough to have some bearing on the situation.

The active hardwoods are still plain oak and poplar, with black ash, elm and basswood a good second, the other woods, plain oak, chestnut and birch, being weak and unsatisfactory. Maple is a side wood, but it sells pretty well. The really good sellers in all the trade are southern pine and hemlock for house building, with cypress doing best in account. Prices being firm, if southern pine prices were not so awfully low the trade would be satisfied with it, but the profits all along the line are small.

EVANSVILLE

The hardwood market has not improved much in this territory during the last two weeks, having just about held its own, considering prevailing prices and amount of lumber shipped. With one exception the mills are all running; however, in most cases not a very large stock of logs is kept on hand. Good logs still remain scarce and hard to find, although one firm has just closed a deal for a big shipment of logs that are said to be very fine. There has been less logging done this spring than usual, partly owing to the excessive rains, but mostly on account of the unsettled condition of the market. Factories are running from forty to sixty hours a week and buying just enough to fill their immediate requirements. Quartered red oak is about the strongest wood in this market at present; however, quartered white oak is a close second. Poplar is having a little better demand, as is ash.

NORFOLK

Conditions in the hardwood market are practically without change since last reported. It would seem that the foreign demand has diminished during the last three weeks, and while there has been no great slump, the effect of recent large consignments can easily be discerned. With the state of the home market below normal, the inability to dispose of an average amount of hardwoods on foreign

markets has lowered prices for domestic consumption. It is, however, felt that this is but temporary. Stocks at the mills are not large, and only production is being generally curtailed. Of course, this condition predicates trouble for buyers should any decided increase in the demand occur.

Poplar and oak in the better grades seem to be holding their own well as regards price, but the lower grades of these woods are receiving the most attention, and the operators are possibly receiving more inquiries for these stocks than for any others. The market for gum shows little life, although what orders have been entered were booked at steady prices. Orders entered by wholesalers here indicate that trade conditions in New York and Pittsburg are exceedingly quiet, which is accounted for in large part by the fact that comparatively little building is going on in those cities, New York being woefully deficient, with prospects for future trading poor. The weather here has been excellent for both logging and manufacturing.

NASHVILLE

Something of a stiffening in prices on hardwoods was noted during the last few days. Quartered oak and poplar continue to be the leaders in the local market, and they are in good demand. The buying from this point, however, continues to be rather of a desultory nature; nothing big in the way of sales is being made; on the contrary, buyers seem to still be looking for bargains and pick-ups, and are not generally laying up any stocks. Some little improvement is noted here and there in the local market, however. This section has experienced quite a lot of bad weather during the last two weeks, and this has, of necessity, retarded building operations to a large extent. It is believed building will pick up quite a good deal in the near future, with the return of settled conditions. Quite a lot of lumber has been brought down the Cumberland to the river mills on the recent heavy tides. The millmen have to cut this, but they are not selling a great deal of it, preferring to stack it and hold it for a while rather than sell it at a sacrifice. Many of the river mills, most of them in fact, are financially able to do this, and they are not deviating from this well-defined intention.

TOLEDO

A fair return in hardwood has marked the past week, and there have been few fluctuations in price. Poplar has been noticeably weaker and some shipments have been placed with more than ordinary difficulty. The demand for hardwood building materials has been limited, most of the building this summer so far being confined to repair work, remodeling and the cheaper class of residences. There are some bright spots, however, for a number of important structures will be put up a little later and their construction calls for considerable hardwood as finish. The factories are running about as usual, but have not for several months and show little improvement. A revival of trade is generally expected a little later in the season. Local dealers' stocks are in good shape. Large orders are scarce, but there are many small sales consummated, the policy being merely to keep stocks about where they now are.

COLUMBUS

Improvement in the hardwood market in this section during the past fortnight has been more pronounced, and manufacturers, jobbers and dealers are more optimistic of the future. While the improvement has not been as pronounced as was expected by the

trade generally, still there is a noticeable increase in the number of inquiries and orders are somewhat larger. Brighter weather and gradual resumption of operation by manufacturing concerns have produced a better feeling among the trade.

Prices have not advanced, but there is a firmness noted which has been lacking for some time. Poplar is still the leader of the market and prices are fairly firm for firsts and seconds at \$53 f. o. b. Ohio river. Oak is in better demand and the current quotations for firsts and seconds at the Ohio river are \$45, and the lower grades accordingly. There is a slight demand for elm, hickory, ash and other varieties of hardwoods.

MILWAUKEE

Hardwood stocks are beginning to move and Milwaukee hardware dealers feel more optimistic than they have in months. Not only has the building season brightened matters, but there seems to be general activity in the hardwood field, with better demand from all quarters and with rapidly increasing sales. Buyers who have been holding off for several weeks are now placing orders, and inquiries are beginning to materialize into something more tangible. Dry stocks are low and several of the leading hardwood firms have received cargoes of lumber, especially maple, from Michigan the past week. Trade with the mills is a little dull, and the ash and door people seem to be somewhat reticent about placing large orders.

Maple in all lines is firm and there is a general demand for flooring. Interior finishing is now being placed and it is believed that this trade will be maintained for some time. Cypress has declined somewhat in price, as stocks are large and dealers are all anxious to sell. Basswood is holding its own, and there is little change to be noted either in quarter sawed or plain oak. Poplar is strong and prices are unchanged. Considerable movement is taking place in hickory, ash and in all furniture materials.

Orders for the interior finish for the mammoth new city auditorium have not yet been placed and several local and out-of-town firms are watching this big contract.

CINCINNATI

The volume of business transacted during May will compare very favorably with that of April, and but for the two weeks of inclement weather, it would have exceeded that month. The hardwood market in general showed a much better tone, as the inquiries were more numerous and the actual amount of business transacted was also on a larger scale.

Poplar of all grades continues to be the best selling item on the list, and the demand for the lower grades on the part of box manufacturers was more urgent than that of the month previous. They are also buying some of the lower grades of yellow pine and cottonwood and gum, of the latter the red variety has the principal sale. The furniture manufacturers of this city have resumed operations on a larger scale and this has increased the inquiry for such items as hickory, mahogany, walnut, chestnut and oak. Towards the latter part of the month the weather was far more favorable for building operations, and that resulted in a better demand for building lumber. As a rule the general lumber dealer is of the opinion that a much better tone will be noted in the market next month; that is, with favorable weather conditions. Prices on all grades have been well sustained, and there is not much chance for any concessions being made.

CLEVELAND

It is the opinion of Cleveland lumbermen that the strong demand for quartered oak and the comparatively weak state of plain oak will drive many mills to cutting quartered oak again, thus knocking the bottom out of the one staple wood in the hardwood market. Reports from various mills indicate that more quartered stuff is being gotten out than for some time. The demand for plain oak is only fair in this market at present, but the call for quartered oak is quite active, according to most dealers.

There is a better demand for chestnut than three days ago. There is a good call for beech, birch and maple flooring. The latter will become stronger, it is believed, as the season advances.

Bad weather, street-car strikes, bank failures and other things are retarding building operations in Cleveland to an appreciable extent, but these have no effect on the larger concerns which do a general business.

CHATTANOOGA

The Chattanooga hardwood market has, during the past two weeks, shown signs of improvement, and prices are good. The volume of business, however, continues small. The demand for quartered oak is good and no offerings of this kind lack a buyer, but the market in plain oak is somewhat dull.

There has been very little if any cutting of prices, especially in the hardwood line, in Chattanooga. Everything considered, the hardwood market, as good as can be expected and an early improvement is looked for by dealers.

Possibly the most encouraging feature of the market at present is the increased number of inquiries which are being received by local dealers and which strengthens them in their position of holding stock until the market quickens.

ST. LOUIS

The hardwood business has fallen off slightly during the past week, although even with the drop it is better than it was two or three weeks ago. Buying still continues to be done on a hand-to-mouth basis. Retailers seem inclined to keep their stocks as low as possible. Factory yards have been pretty well stocked up, and as they have only been working about half their capacity, they are buying only when they are in need. Planing mills are buying more freely than any other industry and are taking bargains in all items when they can get them. The best informed wholesalers are of the opinion that business will be good when factories begin to see their stocks need replenishing.

The best items in demand are plain and quartered oak. The latter has shown a decided betterment on account of its scarcity. Plain oak, however, is coming to the front rapidly. Ash is in fair demand, and it shows every indication of stiffening in price as the season advances. Poplar has a satisfactory movement, and most of the first, second and common grades have been sold out. Gum and cottonwood are a drag on the market, and in order to compete with yellow pine, sales have to be made at very low figures so low that it is almost beyond cost of production. Cypress is in fair demand and quite a few sales have been made, but prices are low. Reports from local wholesalers who operate mills of their own say that nearly all of them located in the hardwood districts have been compelled to close down because of high water. This will act favorably on prices and those having good stocks on hand will be benefited.

CHARLOTTE

The hardwood situation in the Carolinas has not changed to any great degree during the past fortnight. It seems to be the general opinion that conditions are gradually becoming normal and many dealers look for improvement during the next few weeks. With the improvement in weather conditions wood's work has been greatly facilitated and inquiries are coming in more freely and confidence in the situation is witnessed on all sides.

ASHLAND

A large number of the inland and river mills, which have been idle for the past several months, have begun operating about half time, and a few full time. The mills which have not begun operating will not be likely to do so for some time, unless they have logs in the river and are obliged to work them up in order to save them.

The mills now operating can very easily supply the demand. All manufacturers are doing as little as possible, for present prices are not incentive. There would probably be less activity among the mills if they were not obliged to cut the logs they have on hand, and practically all operations in the woods have been stopped. A large percentage of the manufacturers are sawing lumber and placing it on sticks, making no efforts to sell it, and have leased more yard room and are arranging to hold their lumber for better prices.

Present conditions among the consuming trade, which has very low stocks, augur well for the market when business picks up. With money conditions growing better each day, it can only be expected that we will soon see normal conditions, and as a general rule the supply and demand increases largely the price, we can safely say, with the much curtailed supply and the sure increasing demand from now on, prices must again be right.

Quartered oak, basswood and high grades in poplar seem to be in the best demand. It is a fact that at this time only a matter of a short time now until prices will get better and the demand increase.

SAN FRANCISCO

The local hardwood yards report a continuance of good demand. All kinds of lumber are moving steadily, and if there is any complaint to be made, as a dealer is concerned, it is that some of the largest buyers are lately getting a good many of their supplies direct from eastern dealers, leaving only the purchase of incidentals or hurry-up orders from local yards.

The outside trade continues quite brisk and considerable building has again started in the inland cities, most of which gets their supplies from San Francisco.

Building seems to continue without any particular reduction as compared with the last few months, but the volume of values do not naturally come up to the figures of last year. It is expected, however, that before fall building operations on large office structures will be much reduced, as the property owners are beginning to think that too much office space is already being provided in the different districts, and the tenants who generally occupy this kind of property have not yet settled in any particular neighborhood.

The visit of the fleet has again restored San Francisco to its position as the metropolis of the Pacific coast. Most of the visitors who were interested in these ships seem to have waited until the arrival of the fleet in this city to come here. The result has been that for several weeks many thousands of visitors have

been here, and it is needless to add that all were much surprised at the tremendous progress the city has made since its partial destruction two years ago.

MINNEAPOLIS

There is some call right along for factory stocks, and it is chiefly coming now from the Twin City sash and door factories. They are having a fair amount of special work calling for hardwood doors, sash and finish, and while it is not as heavy as last year, it is not bad compared with the average of several years past. They have been allowing stocks to run very low and now are compelled to replenish, but are buying on a small scale, and seem to figure on getting enough stock to carry them through to July, when they expect the new stocks of hardwood to be somewhat lower in price. A very large share of the trade is calling for birch, and oak runs next. Northern oak stocks are scarce and are held stiff in price. Birch is running about the same, and is not a drag on the market, as the new cut of birch that is in sight seems to be less than half that of recent seasons.

Birch and maple lead in flooring, which is also a fairly active feature of the market. There is some oak demanded for flooring also. Wagon stock is dull now, and the country trade is about dead for the present. Other large consumers are only buying an occasional carload. Trade in the Northwest is about a third lighter than it was in April, according to the general report. Stocks of Wisconsin hardwood are reported much lighter than last year in nearly every case.

LIVERPOOL

The market is still in a demoralized condition and a few are able to say that there is any improvement ahead. Pessimism exists everywhere, and with increasing imports and decreasing sales the outlook is for still lower prices in the future.

Some few parcels of inferior quality hickory logs were sold at low prices, but this is no real guide to the true position of the market, and good prime wood is badly wanted and should bring good prices. Round ash logs of large size are in quiet demand and fair prices can be realized, but the small second-growth logs are quite unsalable at anything like their last year's values. Poplar boards are distinctly weak, some consignments parcels having recently been sold below the contract prices that they can be bought at. Shippers are strongly advised to readjust their prices for shipments on contract; it is the opinion here that it would pay them to take lower prices rather than to continue shipments on consignment. Oak boards and planks of every description are weak and are hard to place at any price. Mahogany was firmer at last sales, mainly under the influence of some quiet British country buying, but American buyers were conspicuous by their absence. Good bargains can without doubt be picked up at the present time, as values are extremely low and it seems probably that this is the heaviest buying for this kind of material. Higher prices are predicted for the immediate future and buyers cannot go wrong by buying well ahead of their requirements.

BUSINESS OPPORTUNITIES

BOX AND VENEER FACTORY AT AUCTION.

By order of United States Court, I will offer for sale at public auction, on June 6, 1908, the plant of the Mistal Bound Package Company, bankrupt, at Mound City, Ill., consisting of about six acres of ground, mill and factory buildings, office, etc. Band saw mill, with steam feed, log trip, nigger, gang edger, etc. Two large Coe rotary veneer machines with clips, power, drag saw, patent metal binding machinery, etc. Large, first-class and completely equipped box and patent trunk slat factory, power and machine shop. Located on the Ohio river, Ill. Cent. and the Big Four railroads; good log harbor, at the best milling point in the United States. For further particulars, address

A. W. WILLIAMSON, Trustee,
Mound City, Illinois.

AN OPPORTUNITY WORTH INVESTIGATING.

Either to purchase all or a part interest in a new, up-to-date planing mill with dry kilns, etc., adaptable to any kind of woodworking, in heart of the Southern hardwood field. City location. Address

"BOX 500," care HARDWOOD RECORD.

WANT TO CONTRACT

The cut of our new band mill, sawing principally Oak and Poplar—2 million ft. of choice hardwood logs now at mill. Address

THE KENTUCKY SAW MILL CO.,
Hays, Breathitt County, Ky.

MISCELLANEOUS

SPECIAL NOTICE.

The undersigned receivers of the Bodley Wagon Co. at Memphis, Tenn., beg to notify the patrons of the company and the public in general that there will be no interruption in the business of the company, which will be continued as heretofore, and that any orders they may be favored with will be executed with dispatch and receive the same care and attention as in the past.

BODLEY WAGON CO.,

E. A. Nix and Yandell Haam, Receivers.

FUEL WOOD WANTED.

We are in the market at all times for fuel hardwood in lengths of 24", 30" and 36". Must be dry. ALWALT BROS. COAL CO.,
165 W. Webster Ave., Chicago, Ill.

FACTS FROM PRACTICAL MEN.

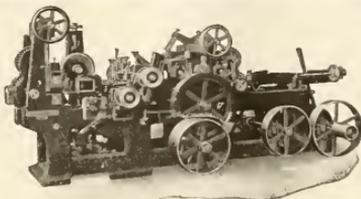

The HARDWOOD RECORD is always in the market for articles on any and every feature of the hardwood industry. It wants practical statements of fact from practical men who know how certain things can be done in the best way. Literary quality not essential. Liberal pay for acceptable articles. Address
Editor HARDWOOD RECORD.

IT BRINGS RESULTS

A NEW HARDWOOD FLOORER

NO. 197 SPECIAL HARDWOOD FLOORER.
(Made in two sizes 5' & 10' wide.)

HAS double geared feed works.
HAS simultaneous lift to upper-in-feeding rolls, insuring perfect alignment.
HAS our new patent Roller Hold-Down, located between the matcher heads, which insures a perfectly matched tongue and groove.

HAS Spring Pressure to the feed rolls, instead of the complicated and clumsy system of weights and levers.

HAS all gears keyed to shafts — stud gears eliminated.
HAS everything up-to-date.

FOR THE MANUFACTURE OF CEILING, CAR SIDING AND HIGH GRADE FLOORING
OUR No. 197 SPECIAL HARWOOD FLOORER IS SUPERIOR TO ALL

116 Nassau Street NEW YORK CITY
MENTION THIS PAPER

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine. It has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock 17½ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

No. 133-A. SEVEN INCH, FOUR SIDE HARDWOOD MOULDER

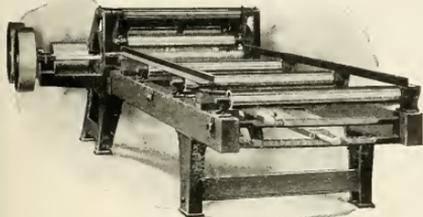

HARDWOOD manufacturers are constantly demanding machine tools of a more sturdy character. Many attempts have been made by machine builders to meet this need, resulting in added complications, with very slight improvements. We have, however, developed a moulding sticker of the 7-inch type that is both sturdy and simple, a machine that contains all of the elements of a very heavy large size moulder, yet it is only a seven-inch machine. Write us today for a special circular

If You Need an Edger Buy the "Tower"

Front view of TOWER EXTRA #6 and #3 inch Edger, New Model. Rear table not shown.

There are a DOZEN EXCELLENT REASONS why you should do so. The limited space at our disposal prevents our stating them all. Some of them are as follows:

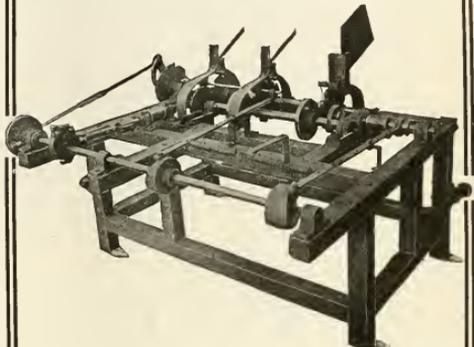

1. **BECAUSE** it is the product of those who for sixteen years have made a specialty of manufacturing edgers and trimmers.
2. **BECAUSE** it is kept thoroughly up to date by one of the most severely practical designers in the country.
3. **BECAUSE** there are thirty different sizes and styles, enabling the purchaser to select a machine perfectly adapted to his requirements.
4. **BECAUSE** the vital parts are all contained in a substantial iron husk resting firmly on the floor.
5. **BECAUSE** the saws may be taken off without disturbing the arbor. The whole operation is the acme of simplicity.

MANUFACTURED ONLY BY

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unexcelled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

General Market Conditions.

For months past the trade has hoped, apparently against hope, that market conditions would show an improvement, but within the last two weeks, for the first time there has been a manifestation of some activity in the hardwood field. Manufacturers and dealers from all parts of the country report that they have realized on a good many inquiries, and have made actual sales to a considerable extent.

Considerable hardwood is arriving at lower Lake ports from northern sawmill regions, and the movement of lumber by rail both in and out of Chicago is very much stronger than it has been since last autumn. Apparently the wholesale consuming trade has awakened to the fact that values have reached a minimum level, and are placing orders with considerable freedom. Again, many astute jobbers are figuring the same thing, and supplementing depleted stocks with lumber from milling points.

Quartersawn oak and the good end of poplar are still the strongest items on the list, although plain oak is doing much better than it has for some time. There is a good deal of call for thick ash and hickory and comparatively little of this class of stock in the hands of manufacturers. Another encouraging feature of the situation lies in the fact that the railroad trade, which has been nil for months, is now showing considerable activity. In Chicago some very good orders for car material were placed last week. On the whole there is every indication that trade from this time forward will improve very rapidly, and that a normal stage of demand will be reached early in autumn.

Beyond question there are a good many varieties and grades of hardwood lumber that can be bought at a very low range of values at the present time, and the man who expects to need any quantity between now and even next spring, shows wisdom in making his purchases on this low scale of prices. There are a good many kinds of lumber that are being sold at prices ridiculously low in

comparison with present schedule on other commodities, and there surely will be an advance in the price of numerous items of stock immediately following a moderate demand. In spite of the restricted consumption of the last four or five months there are comparatively light stocks of hardwoods of any description in first hands, in jobbers' yards, or in the possession of consumers.

If there was ever a time in the history of the hardwood trade when lumber was a purchase, it is today!

National Hardwood Meeting.

As the RECORD goes to press the National Hardwood Lumber Association is holding its annual session in Milwaukee. It is to be hoped that this association of hardwood lumbermen will take advantage of the opportunity presented to formulate and positively inaugurate a logical and just system for the inspection and measurement of hardwood lumber.

It is not to be expected that a set of rules can ever be formulated and put into effect that will be pleasing to everyone in the trade, but if the large majority can be satisfied with the proposed new rulings of this association, the rest will needs fall in line. As a matter of fact, had it not been for the financial depression and slackening of trade during the last few months, there would have been little or no time for restless minds to work up antagonism to the set of rules adopted a year ago; moreover, the prejudice against the Atlantic City rules today is based very largely on a misunderstanding of their character, and the belief that they are not only too radical, but tend to lower specific grades to an undesirable point.

Mahogany.

It was but a few years ago that mahogany was regarded as a precious wood, and was employed only in the interior of the very finest private houses, and for the making of the most expensive furniture. During the last few years there has been a wonderful development in mahogany importation and use, and it has become one of the foremost departments of the lumber industry.

The statistics of hardwood consumption collated by the HARDWOOD RECORD indicates that today the number of buyers of mahogany in this country is exceeded only by those of oak, maple, poplar, basswood, ash, birch, chestnut and cypress. This is a wonderful standing for the "aristocrat of woods," with its higher prices, in competition with native forest products. Of course there is good reason for the popularity of mahogany. The importers of the logs and the manufacturers of the lumber have never advanced its price beyond a very modest profit, and it is relatively so low that it now makes little difference in price whether an office building is finished in mahogany or quartersawn white oak.

Another reason for the popularity of the wood is the fact that it is one of the few lumber materials that improve in tone with age. After much experimentation leading car builders of the country finish practically all their cars in mahogany as being the one wood that will stand the severe usage and hold its finish better than any other material. The chief centers of mahogany importation and manufacture are Boston, New York, Louisville, New Orleans, Chicago and Indianapolis.

The Outlook.

Even the great interest that is being taken in presidential nominations pales into insignificance compared with the concern the public feels over the future of the business situation. In the opinion of the RECORD, the worst of the period of depression is over, and from this time on we may look for a fast-growing renaissance to normal situations in the business world. It must needs be known that it has not been only the United States which has been in a state of financial disquietude and restricted business progress for the last few months, but the world at large as well. The Dominion of Canada has been having "hard times." Great Britain has been having slow business. But Germany has suffered worse than this country; the business situation in the Fatherland has been extremely bad for months, and on top of that money has been very scarce and high; interest rates in Germany are 25 per cent higher than in this country. France probably has suffered the least of the great nations in the general diminution of trade.

There are still some features in the situation that are not rosetate. For example the monthly expenditures of the government have exceeded the receipts since last fall, and May presented no exception to the rule. There was a deficit for the month of nearly \$12,000,000. For the eleven months of the fiscal year the deficit amounted to \$63,600,000. This is a decidedly unusual and abnormal condition. The June circular of the National City Bank of New York calls attention to the fact that in only nine of the forty-two years from 1865 to 1907 have receipts been inadequate, and it says that the current fiscal year, with the single exception of 1899, bids fair to produce the largest deficiency since the Civil War. Receipts have declined both from customs and from internal revenue, and expenditures have increased. In view of the appropriations that Congress has made, retrenchments are not among the probabilities.

It is only by an increase in business that increased receipts can be obtained, and it is reasonable to suppose that there will be a speedy and marked improvement. Not only is the expectation of better times prophesied by men of large affairs, but we are having no such industrial crisis as has occurred in former panics. Therefore, considering the energy and resources of the nation, it would indeed be strange if there was not a marked reaction.

Domestic commerce movement for the month of April, as reported to the Bureau of Statistics of the Department of Commerce and Labor, indicates an improvement in the lumber and anthracite coal trades, though the live stock, meat, grain, soft coal and iron trades show but little sign of a return to normal conditions. Locally the movement of lumber is showing improvement. The local commercial freight agent of the Baltimore & Ohio advises the RECORD that the movement of lumber over the lines of that road in the vicinity of Chicago, has been greater during the last two weeks than for the previous two months. Other railroad men advise similar conditions.

In view of the foregoing facts, the RECORD wishes to reiterate its belief that the backbone of trade depression is broken, and that the country is on the eve of renewed business activity and consequent prosperity.

Hardwood Situation in Germany.

The business depression, which has been almost universal, doubtless reached its climax in Germany last month. For a time the outlook appeared to improve, and the Hamburg auctions held on May 13 and 14 were well attended. Owing to vacation time coming on the next auction will not be held before the end of August.

A goodly amount of cedar for lead pencils has arrived from Florida; from Haiti a smaller amount came; there is a good assortment of cigar-box lumber on hand. For ebony from Africa there is good call, so that importations may be encouraged. The call for American oak is confined principally to small logs for fancy veneer. There is a strong call for American ash, so that large stocks have not accumulated. The arrivals of American hickory have been so numer-

ous of late that consumption cannot keep pace with supply, and more consignments would merely pile up without market.

The shortage of good dimension and veneer stock in walnut has been so pronounced that there has been no trouble in disposing of what could be had, and prices have in consequence been steadily advancing. The large importations of poplar the first of the year have ceased; however, the call has been such that even with new arrivals the last two months stocks have not piled up to any extent. At sales newly imported satin walnut has been satisfactorily disposed of, but it was literally impossible to dispose of old stocks, which still remain on hand.

The Past Financial Tension.

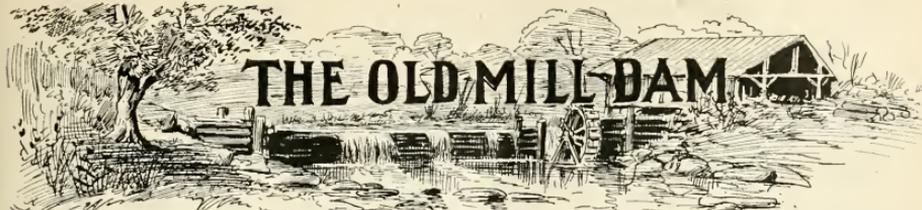

Under this heading the *Timber Trades Journal* of London prints an editorial which reflects in a marked degree the fact that Great Britain has had "troubles of its own" and that the United States has not encountered exceptional business conditions during the past six months. The *Journal* says:

The timber trade may now be said to have emerged from an undesirable location, and a sigh of relief is perhaps excusable. By now practically the whole of last year's purchases will have been paid for, and the only problem remaining in connection with them is the manner in which balances remaining on hand are to be marketed with a minimum of loss. If, however, the history of the financial tension in the timber trade which denoted the winter of 1907-8 ever comes to be written, we think it would prove to be—if all is true that is whispered—a narration of a somewhat interesting character. It is, at any rate, well known that the banking fraternity seem to have devoted quite an undesirable kind of attention to timber trade accounts, even those belonging to firms of high standing not altogether escaping in the general scrutiny. That the timber trade indeed should have gone through so severe an ordeal, if not scathless, at least with colors still flying, is a remarkable testimony to the inherent soundness of the industry. Profits have, of course, in many instances had to be ruthlessly sacrificed in order to turn stock into currency, but this is a matter relatively unimportant compared with the maintenance of the financial prestige of such an important branch of commerce. At this period it is not now perhaps of much importance to rake up what is, after all, ancient history. The timber trade on this side has, however, had a severe lesson in the laws of supply and demand. Evidences of a falling off in the consumption that was to be were not, it is true, lacking even in the early part of last year, but not even the confirmed croakers of the trade ever seem to have foreseen the depression which, intensified by the American financial crisis, was to mar the winter months. With bills maturing on the one hand and general stagnation in the demand on the other, it was not surprising that as stocks accumulated in docks and yards there should be tension of another kind elsewhere. The episode is not, of course, without its lessons. In the first place, it seems that in making his purchases the timber trader does not pay sufficient attention to current and prospective demand; and, in the second place, even though the sore be fresh, it nevertheless needs to be rubbed into the trade that it is folly to attempt to pile up import figures with capital insufficient to meet the buffeting of hard times.

A Point Scored.

The first direct result which may be attributed to developments following the conference of governors held at Washington recently, and one which may be classed as another distinct "Roosevelt victory," is the fact that on May 15, before the conference had adjourned, the House Committee on Interstate and Foreign Commerce authorized a favorable report on the Burton bill, continuing the President's Inland Waterways Commission until July 1, 1909. The sentiment of the Senate expressed in the so-called Newlands bill denotes practically the same intention. At the last session Congress refused to authorize the commission and the President appointed it without special authority, declaring in the conference of governors his intention to continue it himself if necessary. Congress has now weakened in the contest, due directly to the influence of the conference, and all signs point to a complete surrender to the policy of the President.

THE OLD MILL DAM

DON'T you remember the old mill dam
Where you played long years ago?
Can't you see it now—this pond immense,
Where you polled your raft so slow?
Do you remember now your swimming,
And on a rail, how hard you tried—
Your elation and pride that first time
When you swam to the other side?

Don't you remember the cat tails,
And in the rushes a big bull-frog—
That green, yellow-throated old fellow
Who sat on a half sunken log?
How hard you tried to catch him
Hook baited with flannel of red,
But with croak and leap he'd elude you
As he plunged to his watery bed.

Do you remember the old time saw mill
Which ran with a wheel for its power,
Propelled by the dammed up waters,
And sawed up a log in an hour?
How they'd roll a log on the carriage
And with crow-bar straighten it out,
Then hammer in dogs at both ends
To keep it from shifting about?

You surely remember those whistles
From the branch of a willow tree,
How you pounded hard with a jack knife
To loosen the bark good and free,
Have you ever since heard music,
Chord responsive—tuned to joy—
That could compare in melody
With the whistles made when a boy?

Recall when you went out fishing
On your head an old straw hat,
With a two pronged stick for a stringer
Filled with sun-fish, perch and cat;
Then perchance you had an eel,
If allowed to stay out at night;
The old mill dam had most everything
That would give a boy delight.

But don't go back to see it again,
You should rather to memory trust
And live over again your boyhood days,
In soliloquy, if you must.
Things that seemed big to you years ago
Will have shrunken, seem small to-day—
The frogs, the fish, the old mill dam,
Where a boy you loved to play.

The green, yellow-throated old bull-frog
You tried your best to hook,
Will now sit under a sapling
At the edge of a narrow brook.
The dam you managed to swim
With the help of a rail to ride,
Will have shrunken so that nowadays
You could leap to the other side.

Instead of a stick for a stringer
That held your fish when a boy,
It's a nickled thing at the end of a string
That nowadays you'll employ;
And the willow tree of your whistles
Long fallen from age and decay,
As well as the old-time sawmill
Have both been taken away.

AMERICAN FOREST TREES.

SEVENTY-SIXTH PAPER.

Box Elder.

Acer negundo—Linn.

The range of growth of box elder is from northern Vermont and New York down through Pennsylvania, and as far south as Hernando county, Florida; in the Northwest it is found near Winnipeg and along the southern reaches of the Sashatchewan river;

TYPE OF BOX ELDER GROWTH.

it extends down into the Rocky Mountains of Montana, through the Wasatch range of Utah into western Texas, New Mexico and Arizona.

It is known as box elder in Vermont, Massachusetts, Rhode Island, Delaware, New York, New Jersey, Pennsylvania, Virginia, West Virginia, North and South Carolina, Alabama, Florida, Mississippi, Louisiana, Texas, Arkansas, Missouri, Arizona, New Mexico, Montana, Illinois, Indiana, Wisconsin,

Ohio, Michigan, Iowa, Kansas, Nebraska, North and South Dakota and Minnesota; as ash-leaved maple in Rhode Island, Massachusetts, New Jersey, Pennsylvania, Delaware, Virginia, South Carolina, Louisiana, Texas, Illinois, Wisconsin, Iowa, Ontario, Kansas, Nebraska, Montana, North Dakota, Michigan and Minnesota; in Colorado it is called the cut-leaved maple; in Illinois the *negundo* maple; in North Dakota the Red river maple; in Pennsylvania, three-leaved maple; in the states of Tennessee, South Carolina, Florida and the Dakotas it is known as the black ash, stinking ash, sugar ash and water ash, respectively.

Another variety of this tree is the *Acer negundo Californicum*, so named by Sargent, or the California box elder, which is found through the Sacramento valley and on the western slopes of the San Bernardino mountains. In this state it is known as box elder, maple and false maple. Several varieties of the tree are distinguished in cultivation.

The box elder has been a bone of contention among tree lovers and botanists. From its manner of growth it has been considered by many an elder, while others have thought it distinctly connected with ashes—hence the name ash-leaved maple is often used. Its fruit, however, distinguishes it as properly belonging to the maple family, although it differs from all other species of the genus *Acer* in that it has compound instead of simple leaves, and that it bears its pistillate and staminate flowers on separate trees. These tendencies were once thought sufficient to warrant placing the tree in a genus by itself and it was classified as *Negundo aceroides*. At the present time it is botanized with the maple family, as above.

Box elder has a wide spreading top and reaches a height of from forty to seventy feet. It is a sturdy, rapidly growing tree, and its favorite habitat is the banks of streams or low bottom-lands. Throughout its range it is very abundant and hardy and is a favorite tree for planting on account of its hardiness and adaptability to different sections of the country.

The flowers of the box elder are greenish-yellow and small, appearing before the leaves, and growing from the sides of the branches in drooping clusters. The fertile flowers form in racemes, sometimes eight inches long. The fruit is a winged seed of a bright green color, the wings delicately veined.

The leaves of the box elder are compound, with three, five or seven leaflets, tapering to the apex, and with rounded bases. They are coarsely toothed, and in color are deep green above, pale underneath, slightly pubescent along the ribs.

Its handsome foliage, hardiness, ability to withstand drought, and adaptability to any soil have made the box elder a very popular

tree for the ornamentation of streets and parks, and for shade in doorways. However, it is rather short-lived, and frequently gives place to slower-growing species.

In "The Tree Book" Rogers says: "It is the nature of mankind to love box elders for growing where most trees refuse. In the treeless regions people had no time to experiment with uncertain trees. Their land, taken up under the homestead laws, had to show so many acres of woodland at the end of a certain time. So box elders and cottonwoods and soft maples went in, because they could best be depended upon to grow. The windbreak behind the settler's house and the shade trees in front were of these same trees. They grew, but they didn't do well. In the Middle West the quick growth and youthful prettiness of the box elder have led people to keep on planting it, though the early day of planting for shelter-belts and windbreaks is past. The result is that in many a village the ma-

FOLIAGE AND FRUIT OF BOX ELDER.

jority of its trees are unsightly, broken-down box elders and willow, with a few fine elms, hard maples and ashes to redeem it. It is high time the habit of planting the inferior, temporary kinds of trees was overcome."

The wood of box elder is close grained and of compact structure; both the thin heartwood and the sapwood are a creamy white color. A cubic foot of seasoned wood weighs approximately twenty-six pounds. It is light, soft and not strong, so that it is chiefly employed in making paper pulp, woodenware and cooperage stock, although occasionally for interior finish and in the manufacture of the inferior grades of furniture.

The illustrations accompanying this article are reproduced from "Hough's Handbook of the Trees."

Holman Day in his new book "King Spruce," published by Harper & Bros., New York, takes us into the wild woods of Maine. It has the breath of the woods in it, not nature-faking woods, but the real thing, and is moreover an excellent tale, with love that suits the wild setting, rough humor and a philosophy that has the merit of vitality. There is a sense of bigness about it, whether of muscle or environment; a deep breath taken into lusty lungs, the full sound of a man's voice.

FREDERICK W. UPHAM

CHICAGO, ILL.

Builders of Lumber History.

NUMBER LXXVIII.

Frederic W. Upham.

(See Portrait Supplement.)

The HARDWOOD RECORD presents to its readers with this issue the portrait of Frederic W. Upham, of Chicago, a lumberman who has shouldered and carried to successful termination gigantic tasks in both the commercial and political worlds. But a portion of his life-story can be told, for he is still a young man, and one whose future will show even greater and more brilliant achievements if he is spared the buoyant health and mental vigor which have characterized him up to the present time.

The Upham family is a distinguished one. The first of the line to leave England was John, who came in 1630 as a member of the Hull Colony, and settled at Malden, Mass. His son Phineas was an officer during King Phillip's War, and died a hero in the Great Swamp fight. Jonathan Upham, of a later generation, was a soldier in the Revolutionary army, and an eye-witness of the ceremonious surrender of Lord Cornwallis. Calvin H., father of Frederic, was born at Westminster, Mass., but removed to Wisconsin and engaged in the general merchandising business before and after the Civil War, when he served in the Department of the Gulf as captain, with honor and distinction. His brother, Major. William H. Upham, was governor of Wisconsin from 1895 to 1897. Calvin H. married Amanda E. Gibbs, and at Racine, on Jan. 29, 1861, Frederic William Upham was born to them.

Mr. Upham received a public school education and was then sent to college at Ripon, Wis., where he pursued an advanced course of study. In 1880 he left and entered immediately upon his business career, in the employ of the Upham Manufacturing Company at Marshfield, an important lumber concern of which Governor Upham was president. For fourteen years the young man remained with the company, acquiring gradually an accurate knowledge of every phase of the lumber business by filling various places from inspector to general manager; so that with all the commercial and other enterprises which have engaged the attention of Frederic W. Upham he is, first and foremost, a thorough lumberman.

In 1893 he decided to utilize this knowledge and experience by establishing himself in business on his own account, and accordingly removed to Chicago, where he later organized the Fred W. Upham Lumber Company, assuming active charge of its affairs. Of this corporation Oliver O. Agler, who had also been associated with the Marshfield company, became secretary and treasurer; in 1904 the company was reorganized into the partnership of Upham & Agler, which has grown to be one of the most important northern and southern hardwood lumber jobbing houses in the country, handling annually from 50,000,000 to 75,000,000 feet. The firm

maintains distributing yards for southern woods at Cairo, Ill., and Alfreys and Clarksdale, Miss., and ships its Wisconsin stock direct from the mills. Owing to the many outside interests of the senior partner of the house, the prosperity and responsibility of this large business rest mainly upon the very capable shoulders of Mr. Agler.

Aside from these extensive enterprises Mr. Upham is identified closely with other large commercial propositions. The City Fuel Company of Chicago, of which he is president, is capitalized at \$2,750,000 and conducts by far the largest retail coal business in Chicago. He is vice president of the Peabody Coal Company and of the Chicago & Illinois Midland Railway; also a director in the Western Trust & Savings Bank, Calumet Insurance Company and Knickerbocker Ice Company.

Mr. Upham has always taken an important part in municipal affairs—not for the purpose of attracting attention to himself, but with the sole object of securing for his community measures which will redound to its careful management and improvement; he is ever for a "Greater Chicago."

Likewise in commercial affairs, he has considered personal aggrandizement much less than the good of the industries with which he is allied. In brief, he stands for bettering conditions in every line of endeavor. As president of the Illinois Manufacturers' Association Mr. Upham recently presided at the great gathering of shippers in all lines held at Chicago, and is waging bitter war against the railroads' proposed advance in freight rates. His work as chairman of the Finance Committee of the Bureau of Charities, and as chairman of the Executive Committee of the National Business Men's League of America, is also notable.

Frederic W. Upham is as well known in the political world as in the commercial, and is a recognized leader in Chicago's municipal affairs. In 1898 he was elected alderman of the Twenty-first Ward, representing the business men's and citizens' interests, as opposed to professional politicians, and particularly the granting of long franchises to street railroad corporations; he resigned in '99 because of his election as a member of the Cook County Board of Review—an exceedingly important office, inasmuch as it endows the incumbent with power to render final decision upon all questions relating to the

assessment of property. He has occupied this position for ten years, with four more to serve.

As the RECORD goes to press Mr. Upham may perhaps be called "the busiest man in Chicago," for he is chairman of the Republican National Convention Committee, which has in charge the countless arrangements for handling the great gathering now in session in that city. With his characteristic public spirit he was instrumental in having the convention held at Chicago, and personally attended to raising all funds—nearly \$100,000—to pay the expenses of the undertaking, for he believes that the benefit which the city will derive from the convention will be far-reaching in more than a political way, and that the great crowds which attend will leave behind them a rich reward for merchants and citizens in other lines of business.

Mr. Upham is married, and is of course prominent in the social life of Chicago, belonging to clubs and societies almost too numerous to mention, among them the Sons of the American Revolution, Society of Colonial Wars, Loyal Legion, Chicago Club, Union League, Chicago Athletic, Chicago Yacht, South Shore and Exmoor Country, Glen View Golf, Merchants' Commercial, Press, Hamilton, Lincoln, Marquette, Mannercher, Mid-Day and Forty Clubs. Although fond of the automobile, Mr. Upham has not by any means abandoned riding, and every fine morning takes an early "constitutional" on horseback.

Frederic W. Upham is a man who realizes that "tomorrow never comes." He believes in doing things today—nor can he tolerate procrastination or inactivity in those around him. In every line of business or political life into which he has entered he has forged rapidly to the front—his lumber firm occupies a place in the very front rank of houses of its kind; the coal concern of which he is president is the largest retailer in Chicago; his political position is one of the highest within the gift of Cook county.

He is one of those strong individuals who would never have remained an underling, no matter into what niche in the world's activities either choice or chance had placed him. He was not born to fulfill the details of a humdrum existence, but to direct them. It needs but a glance at his portrait or a brief review of the accompanying text to recognize an unusual personality—one which in obedience to the psychic law is as bound to assert itself as is the sun to rise tomorrow in fulfillment of Nature's plan.

Utilization of Hardwoods.

ARTICLE VI.

Electrical Appliances.

The kinds of wood used in the making of cabinets in which telephones, switchboards, physicians' appliances and other electrical apparatus are placed have nothing to do with the workings of the electrical current. But fortunately for the cabinet makers, these

devices must be encased in some sort of non-conductor, and for most purposes wood is by far the most serviceable material. One kind of wood is considered as good as another for electrical fixtures, but the use of wood is not universal, marble and slate being em-

played for the large "power switchboards" which are a feature of certain plants.

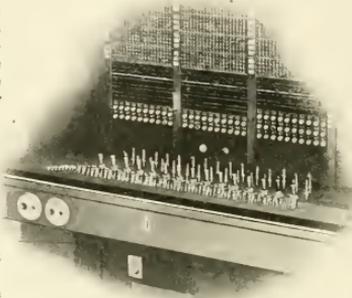

"When in doubt use oak" appears to be the rule of cabinet-makers who turn out electrical casings, as it is of cabinet-makers in general. Oak is always a favored material, and it is used solid in practically all cases. For instance, telephones in birch or mahogany are much less common. In switchboards the use of these woods is more frequent, though here also oak is predominant, and the finish of telephones and switchboards is like that on the better grades of furniture.

It is extremely seldom that special woods are called for in telephone work, though an occasional order comes for the mission oak finish. The Kellogg Switchboard & Supply Company recently supplied the Gadsden hotel, newly erected at Bisbee, Ariz., with switchboard and complete set of room telephones in a special pattern to harmonize with the general architectural scheme of the building. There are occasional calls for black walnut, and for ebonized and white enamel finishes, the body-wood for the two last-named generally being maple. The qualities demanded in electrical cabinet materials are appearance, toughness and freedom from liability to warp. The thickness of the wood in both telephones and switchboards is generally about $\frac{3}{4}$ of an inch, except in cornices, where in switchboards it is sometimes 2 or $2\frac{1}{2}$ inches.

Built-up construction is not employed in the manufacture of these modern necessities, I am informed, excepting in the portion of a switchboard that is called the key shelf. This is the part roughly corresponding to the keyboard in a piano—the horizontal ledge containing the keys, and extending out toward the operator at about the height of a table. The plugs are just behind the keys, on what a layman would call the self-same table, but a hinged partition divides them, and it is the front part that the adept in switchboard construction calls the "key shelf" proper. This is built up from five layers of wood cross-banded so as to give extra strength and prevent warping. The built-up construction is necessary here on account of the great weight of the electrical apparatus that is attached to the top and

the bottom of the shelf, which is hinged and provided with a spring lock so that the mechanism and wiring beneath can be readily examined if desired.

The rear part, containing the plugs, is made of one solid piece of wood covered with sole leather to protect the cabinet work from the impact of the plugs. The front panel below the key shelf and the back panel are made removable and are held in place by spring catches. The bottom of the panel is secured by a tongue fitted to a groove in the cabinet, which method is believed to be better than the use of dowel pins or other devices.

KEY SHELF OF MODERN SWITCHBOARD.

Above the key shelf is the iron "jack frame," fastened into the face of the cabinet and containing various devices which are known as "drops," "jacks," etc. Hard rubber is the chief surface material employed here when the jack frame is full, but the possibility of great expansion is required in most switchboards, so that a large space is usually left blank, and this is filled in with ebonized wood blanks. Fronts and backs of switchboards are generally of the same wood and finish; there is some slight use of wood in the circuit mechanism, such as maple bases for induction coils, etc.

In telephones the prevailing types are the wall and desk, the long telephones being considered out of date. In the last-named the part extending downwards to the floor from the box containing the mechanism is usually empty, and has no value except as an alleged ornament.

Telegraph poles, which form a tremendous item in the increased demand for forest products which electricity has created, are of various woods, depending upon the flora of the locality. The commonest choice for pole stock is cedar, of several varieties. Another much-used wood is cypress. Pine, treated with a powerful preservative, is also employed. The qualities demanded are straightness, height and durability, all of which are intensely characteristic of certain American varieties of cedar and cypress. Pine is lacking in durability, but it is claimed that when carefully treated with preservatives it will answer the purpose.

Cross-arms are usually of yellow pine, sometimes of Norway pine or Washington fir. The red paint with which they are generally covered is a preservative. Cedar and cypress are best for poles because they are not liable to rot in the ground. In cross-arms, however, no such quality is necessary, and therefore the question of cheapness prevails. Security demands considerable height in the telegraph pole. The measurement from base to summit ranges from twenty-five to forty feet, of which about five feet is in the ground. Railway tracks must be cleared by twenty-five feet.

From telephones and switchboards to electro-medical apparatus is not a far cry, and here again the cabinet-maker plays an important part in their manufacture. One would perhaps think that physicians would be likely to make good customers for made-to-order, hand-carved stock, but such is not the case. The designs for large electro-medical cabinets are usually handsome and exhibit some high-grade machine carving, but they are of conventional design, just as is the case with the telephone and the switchboard. Oak is again the favorite. In the factory of the McIntosh Battery & Optical Company, the greater number of table and wall plates, and vibrators of the type seen

PANEL CONSTRUCTION.

CROSS SECTION OF KEY SHELF.

board apparatus were supplied by the Kellogg Switchboard & Supply Company of Chicago, and the half-tones of physicians' electrical apparatus by the McIntosh Battery & Optical Company of Chicago.

CHARLES KLAUBER.

L'Anguille Lumber Company.

On the night of February 5 last the sawmill plant of the L'Anguille Lumber Company of Marianna, Ark., built in 1880, was burned to the ground. The old mill had a capacity of 40,000 feet of hardwood per day of ten hours' run. Two days after the fire the work of clearing away the debris was begun, the management of the company having decided to begin at once the erection of a much larger and more modern mill, with foundation of the most substantial kind, entire new machinery of the Filer & Stowel make, and all up-to-date appliances.

On May 18, just eighty-five working days from the time the old mill burned, the new mill began operations, sawing 10,000 feet of logs without a stop in four and one-half hours. The new mill has an easy capacity of 50,000 feet per day. It is almost fireproof, having concrete ground floors, all the timber being of red gum, thoroughly saturated with a fireproof roofing preparation. The engine and boiler rooms are models of cleanliness and safety.

The company, under the management of the original organizer, Ben Miller, Sr., and his sons

HANDSOMELY FINISHED VIBRATOR.

and others who were brought up in the business, is one of the most successful hardwood and box shock manufacturers in the country, not merely from a financial standpoint, but in many other ways, setting an example in economical and close production. In this plant the log is run down to the smallest pieces and manufactured into something useful.

This plant has furnished employment to many people in Marianna, and during the twenty years of its operation has contributed largely to the healthy and steady growth of the town, which is now classed among the very best business cities in the state of Arkansas. The L'Anguille Lumber Company deserves abundant prosperity.

Will Make Timber Reports.

An important step in the general movement to bring many of the rich stands of timber in the South under a scientific plan of forest management is the offer made by the school of forestry of the University of Georgia at Athens, Ga., to furnish timber owners with experts who will examine and report upon any of the forests in the state.

The object of the offer is to collect information in regard to the forest resources of the State, to spread a knowledge of forestry, and to improve forest conditions. The forest school will furnish the experts free, and the only expense to be borne by the forest owner will be paid for traveling and subsistence of the expert while making the examination. In cases where several owners of the same locality apply, the expenses will be prorated.

When applications for examination of timber are made, the owners have been asked to give their names and postoffice addresses, location of tract, area of tract, character of forest as shown by the kinds of trees growing on the land, the condition of the forest, whether mature, original or second growth, whether the land has been burned or cut over, and the wishes of the owner regarding the use of the land.

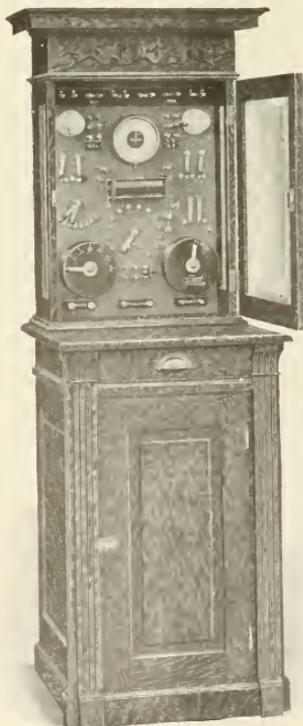

SWITCHBOARD FULLY EQUIPPED.

in barber shops and massage parlors—were of quartered oak in the familiar golden finish, though there is some call for birch and mahogany as well. Built-up stock is unusual. In small batteries oak, quarter-sawn or plain, and in weathered, golden, or other finishes, shares the field with black walnut and mahogany. Leather is also much used on the cases of small batteries.

X-ray apparatus, for which the demand is said to be perceptibly diminishing, often involves about as much cabinet work as goes into the making of a large family bookcase or wardrobe. In the establishment of Anderson, Norden & Co. were noted several big cabinets six or seven feet high and five or six feet wide, quite elaborately constructed. Lion's-foot uprights kept the cabinet several inches off the floor. Above these were two tiers of drawers with curved fronts. The big glass case showing the chief apparatus was ornamented by heavy side pillars with Corinthian capitals and surmounted by a heavily carved moulding. This cabinet was of fine quarter-sawn oak, highly polished. The handsome receptacles of which this was an example are of built-up veneer construction on a base of poplar. Cheaper cabinets were made out of solid oak of inferior quality.

An account of the use of wood in connection with electrical apparatus would not be complete without some mention of rubber, which is a product of certain hardwood trees and shrubs. Hard rubber is used for all telephone receivers and transmitters, in the jack-frames of switchboards, and in a thousand and one accessories of electro-medical apparatus, because of its remarkable properties as a non-conductor.

The accompanying cuts of modern switch-

PHYSICIANS' WALL PLATE.

Mammoth New Woodworking Machinery Plant.

During the past three years the American Woodworking Machinery Company has been engaged in the erection of a mammoth and up-to-date plant for the production of wood-working tools at Rochester, N. Y., which is the headquarters of the company, and will hereafter be counted its principal point of manufacture.

As will be remembered, the American Woodworking Machinery Company, which was incorporated in 1901, took over by purchase the following plants located in the East and Middle West: F. H. Clement Company, Glen Cove Machine Company, Ltd., Hoyt & Brother Company, Levi Houston Company,

with this new institution is the work of F. H. Clement, chief of construction. For the past thirty-five years Mr. Clement has been actively engaged in the manufacture of wood-working machinery and the burden of building the new shops fell upon his shoulders. A few words outlining his active career will be of interest.

Frank H. Clement was born at Parma, N. Y., June 26, 1843, and is of English lineage, the ancestry of the family being traced back to Robert Clement, who in 1638 left his native England and in his own vessel sailed for Haverhill, Mass., becoming the progenitor of the family in the new world.

What grew to be an extensive business had its beginning in 1871 in the establishment of a small jobbing machine shop by Mr. Clement and a partner, Thomas L. Turner, under the style of Turner & Clement. They continued business together until 1877, when Mr. Clement purchased his partner's interest and became sole owner of the business. From time to time he was forced to increase his facilities in order to meet the growing demands of the trade. The manufactured product included saws, planers, boring machines, lathes, etc., such as were necessary in the manufacture of furniture, chairs, carriages, wood patterns, cars and agricultural

NO. NEW ROCHESTER WORKS AMERICAN WOODWORKING MACHINERY COMPANY.

Globe Machine Company, Lehman Machine Company, Milwaukee Sander Manufacturing Company, C. B. Rogers & Co., Rowley & Herman Company, Williamsport Machine Company and Young Brothers Company.

Undoubtedly this company is now the largest producer of wood-working tools in the world, and under the able management of President J. E. McKeelvey has made a most enviable reputation for turning out high-class machinery, which has greatly expedited the development of one of the foremost industries of the country. Lumbermen as well as remanufacturers of lumber, will surely be interested in a brief description of the mammoth and model new institution at Rochester, which is to be devoted exclusively to the production of tools for their use, and it is therefore with pleasure that the Record presents a series of views of this plant, together with a short description of its various departments.

Especially to be commended in connection

In his boyhood days Mr. Clement remained upon his father's farm and when he had mastered the studies taught in the public schools, attended Parma Academy and Rochester Collegiate Institute. For two years he engaged in teaching, but his natural predilections led him into the field of mechanics and he displayed particular interest in drawing and engineering. Becoming a resident of Rochester in 1863 he entered the employ of D. A. Woodbury & Co., builders of steam engines, with whom he remained for five years, working his way upward until he became foreman and draughtsman. In 1868 he was appointed to the position of inspector of steam boilers for the Twenty-eighth Congressional District and served in that capacity for a year. At the expiration of that period he joined W. S. Loughborough in forming a partnership as solicitors of patents at Rochester, but failing health caused him to direct his energies into other channels.

implements. Still greater facilities were demanded in 1890 and in that year the brick buildings now occupied by Henry Likly & Co. were erected on Lyell avenue, adjoining the Erie Canal. The Frank H. Clement Company was incorporated in 1891 and for many years Mr. Clement was its president and manager. In the meantime the products manufactured had increased both in variety and in volume until in 1892-93 seventy different machines were listed, and the trade not only covered the United States, but extended to foreign lands. Mr. Clement was the mechanical and business head from the start, having made all the original designs, supervised the construction of all work and until 1891 attended personally to the details and correspondence of the office.

In 1897 the business of the Frank H. Clement Company was merged into the American Wood Working Machinery Company, together with eleven other important wood-

working machinery conditions for the United States, this extensive consolidation forming the largest manufacturing establishment of its kind in the world, of which Mr. Clement is one of the largest stockholders, as well as director and chief of construction.

The following pictures and descriptive text will testify to the completeness and economy of the model new plant of the American Woodworking Machinery Company:

Figure 1 gives a general view of the works, the buildings being of brick. Looking from left to right, facing the street, the first building is the pattern storage, in which the various patterns used in the construction of the machines are located. In the next building, on the second floor, is the pattern shop, where the patterns are made, the first floor being devoted to a carpentry or general woodworking department. The first floor of the third building is devoted to the office of the works, as well as an office for the purchasing agent, chief of construction, superintendent and general engineering department; the second floor is used exclusively for the executive offices of the company. The long building to the extreme right is the general machine shop.

Beginning at the left again, the first rear building is the flask shed for the storing of the wood and iron flasks. Next comes the foundry proper, and the third building is the supply house in which are contained all the iron, coke, sand, coal, wood, etc. that is used in the foundry; then, immediately in the rear of the office building are the power house and blacksmith shop. The foundry, power house and blacksmith shop are fireproof buildings and the others are provided with an automatic sprinkling system. The machine shop, power house, foundry and supply house are of steel frame construction reinforced by concrete and brick. The entire plant covers ten acres of ground, with ample room allowed for expansion in any direction.

The power installation consists of two units. The larger is a Hamilton Corliss engine, 20" diameter cylinder, 42" stroke, making 100 revolutions per minute, which is directly connected to a 200-kilowatt Crocker-Wheeler compound generator, both set on a concrete foundation. The second unit is a Skinner high speed 16" x 15" engine, making 250 revolutions per minute, which is directly connected to a 100-kilowatt Crocker Wheeler compound generator. They can be run in series or as separate units, as desired. When running in series the aggregate horsepower is 50 to 600. Ample space is left for another installation equal to the larger unit. Both engines are fitted with the White Star gravity system giving a steady flow of oil at all times, and after the oil is returned to the filter it is sent back to the supply tank by a small duplex pump.

The Underwood fire pump, Worthington model, has a capacity of 1,000 gallons per minute, with 100 pounds pressure. It draws the water from the city water supply, having a capacity of 17,000 gallons, forcing water through the nozzles and supplying 2,100 sprinkler heads with 100 regular hydrants. The automatic fire sprinkler system is of the automatic type and is enclosed and has an automatic cut-off to regulate fire hose supply to the fire engine.

The building is heated throughout by exhaust steam from the boiler room, which is returned to the boiler house, having been at an average temperature of 55 degrees, while the return steam and hot flue gas have been kept at about 75 degrees. The final exhaust system is used for heating to an average of 12" of vacuum on the condenser coils.

The utility room has three 400-hp. fly belts, which will have a capacity of 150 horsepower

each and are fitted with the Diamond tube blocks. They are fed from a Cochran heater by two Worthington duplex steam pumps at a temperature of 208 degrees. Two boilers carry the load and one is kept in reserve.

The power and heat are transmitted to the seven different buildings through 5-foot square concrete conduits, that lead from the boiler room to all parts of the plant. There are two reducing plants to furnish steam for the radiators and coils when the engines are not running. The coal bin is on a level with the boiler room floor and has a capacity of 350 tons. The coal can be dumped from the cars direct into the openings at the top of the coal bin. The building is of pressed brick, steel frame, with concrete floors and roof. It is practically fireproof. The power plant and electrical outfit is in charge of Samuel F. Ridgway, formerly with the Thousand Island Steamboat Company and other lake fleets.

Figure 2 gives a general view of the machine shop proper.

On entering the main building, one of the first things to call attention is its immensity, also its finely diffused light; there is not a dark corner or any shadows in the whole building, which is appreciated in a machine shop, as so few are able to be without artificial light. There is a wide passage leading from one end of the building to the other. On the left of this pas-

C. H. CLEMENT, CHIEF OF CONSTRUCTION.

age the first machines are the turret lathes, forming the department of themselves, driven by an independent motor. In connection with the turret machines are specially designed racks to carry bar stock, being very convenient at the ends and sides for getting at the many sizes and quantities of steel and iron. The turret machines are all up-to-date and furnished with many appliances of special design to further the speed and quality of the work. All are fitted with oil pumps, so as to use oil only, which is of great value, especially when drilling steel shaft leads, of which large numbers are made.

Following the turrets are the thread millers. Several of them are kept constantly running on large numbers of special screws used on the different machines. In connection with these appliances are cold water baths and oil fill tanks, so that everything can be thoroughly cleaned before being sent to the department to which it belongs.

Next come the lathe department. These machines are placed in groups of about eight or ten, each group driven by an independent motor. They are classified according to the different kinds of machines being built. One group makes slippers, another re-saws, still another makes

and so on down the line; the work on lathes is kept on one line of work because very expert. Among the lathe lines are several special machines, built expressly for certain lines of work, like a double end lathe with a very powerful drive, is for roughing out cylinders, of which large numbers are used. Another is for grinding re-saw wheels; it is a large, massive machine with fine adjustments and is automatic in its action, capable of producing most excellent work.

After the lathe department comes the pulley and gear department, where every known device is used to accelerate the work. Here are all the well-known makes of turret machines and pulley lathes, all of the latest construction; all pulleys and gears are finished in this department and then sent to large racks built near the shipping department.

Several large sections are devoted entirely to drill presses. Running the entire length of large bays are shelves, six inches in height, filled with jigs, entirely for drilling. Here the various parts of the different machines are drilled and tapped in large quantities and are then sent to their several departments and made ready for use.

On the opposite side of the main passageway are the table planers and milling machines. The larger planers are covered by two large electric traveling cranes, while the small ones have overhead trolleys and hoists. These machines are all of the very latest construction and accurately set on a deep concrete foundation. Following the planers are the milling machines, of which there are a large number, both single and double head; nearby are the large boring mills, also a new hydraulic press lately designed for this class of work. Here, also, may be seen a specially designed machine for very accurate balancing. All these machines are run by motors, either singly or in groups. Three large grinders are kept constantly employed, doing very accurate work.

Another department is devoted entirely to shapers and gear cutters and several special machines. Shapers have proven very essential for light castings which must be very accurate, and a large number are used.

After leaving the machine department we come to the erecting floors. Here are large bays entirely taken up by one class of machines, these being on the floor at one time from twenty-four to forty-eight machines of one kind. Several employees are at work on these machines, each doing his own particular part, one following the other. In this way each one becomes very expert and speedy. Each bay is lined with shelves, five high, entirely filled with the finished smaller parts for the machines being constructed. All of the larger machines, such as shapers, planers, mounted in the main bay, which is 575 feet long and 60 feet wide. This is served by two electric cranes, one of 12,500 pounds capacity and the other of 25,000 pounds, capable of carrying the heaviest machines from one end of the bay to the other. There are also a number of hand cranes, traveling on sub girders under the main crane, for handling the smaller parts of the different machines.

At one end of the building is the testing floor and packing department. Here are several motors for testing machines and a number of special counters for same. The packing department covers a large space and many machines can be packed at the same time. The railroad switch runs into the building at this end and cars can be loaded by the traveling cranes.

The incinerators are high class and are very large, being attached to the main building. In this building are also several hundred steel lockers for use of the workmen.

The tool room is of thoroughly up-to-date construction, having a full line of machines of all kinds for special tool manufacture. It is large and roomy. Attached to the tool room is a large stock room, with separate supervision, where are kept all supplies for this

NO. 13. NOS 2½ AND 3 SHAPERS

innumerable in fact, everything has been arranged to handle easily all products, both raw and finished.

Figure 3 shows section "C" of the erecting floor, where are built from fifty to one hundred varied saw benches at a time. This floor is in charge of a foreman and assistants.

Figure 4 shows a general view of the main bay, taken from the top of a box car at the end of the factory. In the foreground is shown the shipping department, and following this the testing floor, the erecting floors for the timber sizers, planers and matchers, inside moulders, hand re-saws, surfacers and other heavy machines.

Attention is called to the system of heating, which is shown in this view; radiators are placed on both sides of the steel girders, as well as pipes that run along the walls between the upper and lower line of windows.

Figure 5 shows the back knife lathe and bending press department.

Figure 6 shows the sizer floor, on which it will be noted there are six of the American "Box" timber sizers in various stages of construction.

Figure 7 shows the hand re-saw erecting floor. Figure 8 shows the small surfacer floor, as well as the dowel machines.

Figure 9 shows two rows of planers and matchers under construction.

Figure 10 shows the inside moulder erecting floor.

Figure 11 shows the No. 4 $\frac{1}{2}$ and No. 6 $\frac{1}{2}$

surfacer erecting floors.

Figure 12 shows the hand jointer erecting floor.

Figure 13 shows the No. 2 $\frac{1}{2}$ and No. 3 shapers erecting floor.

We have shown only a few of the many erecting floors in this shop, which will, however, give a fair idea of its vastness.

One of the important features of the plant and one that impresses the visitor, besides its immensity, is its lighting arrangement, as there is not a dark corner or shadow in the building.

For the proper handling of incoming and outgoing freight there are three spur railroad tracks, branches of the New York Central, going to different parts of the plant. All of the buildings are also connected by industrial railroad tracks, which facilitate handling the many parts that enter into the manufacture of the machines.

As it is impossible in this limited space to give a comprehensive and just description of the works, the company issues a general invitation to all friends and patrons to come and see the great plant in operation. In addition to the Rochester works the company also has five other plants, two at Williamsport, Pa., one at Montgomery, Pa., one at Aurora, Ill., and one at Iron Bay, Wis. It has sales offices in New York, Rochester, Chicago, New Orleans and Portland, Ore., from which points catalogues, circulars and any information regarding its product may be had.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries from **HARDWOOD RECORD** readers as will be of enough general interest to warrant publication. Every portion of the paper is invited to use this department freely, and an attempt will be made to answer queries per mailing to all matters of interest to the hardwood trade in a concise and intelligent manner.]

Preventing Stain in Red Gum.

BALTIMORE, Md., June 2.—Editor **HARDWOOD RECORD**: We are manufacturing red gum lumber in South Carolina and find it very difficult to prevent the sap from staining. We are using up-to-date methods in piling our stock, giving the lumber plenty of pitch and plenty of air space on all sides. We are also keeping the boards much further apart than in piling other classes of lumber. However, we find it very difficult indeed to prevent the stock from staining. Do you know of any method of handling gum to prevent the sap from staining, or can you put us into communication with anyone who can give us this information? We understand there is a steaming process which will eliminate the stain and also a method of chemically treating it, but do not know the particulars. If you can give us any information on this point or help us in any way to secure the information we will greatly appreciate it.—LUMBER COMPANY.

The extreme difficulty you encounter in seasoning red gum in the open during the warm months in the South I well understand. It is possible to accomplish this in the colder months, however, if you will separate your stock very largely by width, thickness and length when possible, piling the lumber far apart in four-foot piles, with plenty of air space on all sides, and with at least seven stickers to a sixteen-foot pile, and fully twenty-two inch pitch to a pile of that length. I believe that the only logical way to handle red gum is to give it about seventy pounds pressure of live steam for thirty minutes to every inch of thickness in a prototype of a steaming boiler. This process breaks up

the structure and kills all the possibilities of fungous growth, which causes stain. Of course, this means considerable cost and very few people are willing to attempt it.—EDITOR.

Wants Maple Sawdust.

THE HARDWOOD RECORD is in receipt of a communication from a manufacturing concern in Springfield, Mass., which wishes to purchase maple sawdust. Anyone interested in supplying its wants will be furnished the address on application.—EDITOR.

The Source of Depression in English Trade.

NEW ORLEANS, May 21.—Editor **HARDWOOD RECORD**: As a further illustration of the still lively consignment business, I herewith give you an extract from a letter received from my Liver pool agents, for publication in your paper if you see fit:

"Talking of wagon oak, the 'Allegheny' has arrived with sixty-six cars, and all big ones, for

The other brokers also have consignments. In talking this over with —'s salesman, we hear that he would be very pleased if he could sell these for \$32, and states they are of good specifications and that the shippers will not stop sending it over. From the above selling price you will have to deduct commission and landing charges, and you can see for yourself what remains and how this market is continually being depressed by consignments."

Of course this man will not get \$32 for his stock. He will not even get \$27; and after the commission and charges have been deducted from the above there will be nothing left for the shipper after he has paid freight, and he has to figure on a through rate of at least 30 cents per hundred pounds, and this stock, which is mostly shipped green, weighs at least six pounds per foot. This same stock used to sell for \$40 to \$42, and even then there was very little margin for the exporter. The above consignments have, of course, ruined the market for the next six months at least. It is a very easy matter to get prices down, but it is very hard to get them up

again to a normal level after they have once been pulled down. —OSCAR GARTNER.

About Board Measure.

GARWOOD, N. J., May 27.—Editor **HARDWOOD RECORD**: I am interested in a few points regarding the figuring of lumber, and take the liberty of asking you the following questions:

1. What is meant by "board measure"?
2. What is the difference between "board measure" and "square surface measure"?
3. Is it the custom of lumber merchants in rendering invoices to indicate the number of feet of lumber in "board measure" or "square surface measure"?
4. Referring to the attached invoice, which has been copied from a regular lumber invoice:
 - (a) How many "board feet" are there and how many "square surface" feet?
 - (b) What is the cost of this lumber per thousand feet after it has been re-sawed to 5 $\frac{1}{2}$ "?

—N. B. SLATER.

INVOICE.

20,595 feet 1 $\frac{1}{2}$ " WHITE MAPLE, re-sawed	
To 5 $\frac{1}{2}$ ", at \$55.....	\$1,132.72
Re-sawing, at \$3.....	61.78
	\$1,194.50

1. Board measure represents the number of square feet 1 inch in thickness contained in a quantity of lumber. However, all lumber 1 inch and less in thickness is measured by "board measure," and to all lumber thicker than 1 inch is added the fractional or multiple thickness above that.

2. Board measure and square surface measure are identical terms.

3. It is the custom of lumber merchants to render invoices for lumber 1 inch and thinner on the basis of board or surface measure. On lumber thicker than 1 inch the surface measure is multiplied by the thickness in inches and fraction thereof.

4. In 20,595 feet of 1-inch lumber there are 13,730 feet of surface feet or measure. Multiplying 13,730 feet of surface measure by 1 $\frac{1}{2}$ inches, the thickness of the stock, you get the result of 20,595 feet of board measure. The cost of 5 $\frac{1}{2}$ -inch lumber based on a price of \$55 for 1 $\frac{1}{2}$ -inch stock and \$3 for re-sawing, a total of \$58, is \$38.662 $\frac{1}{2}$ that is, \$58 pays for 1,500 feet of 5 $\frac{1}{2}$ -inch stock.—EDITOR.

Retires After Long Service.

Henry Diston & Sons, Inc., of Philadelphia, announces that Samuel Diston, who has been secretary and general manager of the company's great business for many years, has resigned the above offices, and been appointed chairman of the board of directors. The duties which he has performed hitherto will be assumed by others, but he will still serve the company's interests in an advisory capacity. As a testimonial of the cordial relation existing between Mr. Diston and the other officials and employees, a dinner was rendered him at the Bellevue-Stratford the night of May 28, when a handsome silver loving-cup was presented to him. The office force, heads of departments, officials, and many retired employees were present.

In 1850 Samuel Diston entered the service of Henry Diston, who at that time employed only about thirty-five men; today the company's force consists of about 3,500 people. After serving an apprenticeship as sawmaker and gaining a general knowledge of the business, Mr. Diston became traveling representative. In this capacity he has become known to the hardware trade the country over. In 1894 he was made secretary and general manager, but advancing years and ill health have made it impossible for Mr. Diston to continue his active work. William Miller has succeeded him as secretary of the company.

Eleventh Annual National Hardwood Lumber Assn.

The eleventh annual convention of the National Hardwood Lumber Association with a large attendance opened with a reception of members and guests in Stephenson Hall, Milwaukee, at 9:30 A. M. on Thursday, June 11.

The opening session of the regular meeting took place at 10:30 A. M., when an address of welcome was delivered by Mayor Rose, of Milwaukee.

President W. H. Russe presided, and F. F. Fish, secretary, recorded.

The morning session was largely occupied by the reports of officers as follows:

President's Address.

Gentlemen and Members of the National Hardwood Lumber Association: It is not necessary for me to state how greatly I feel honored in calling to order this, the greatest hardwood lumber organization of the trade. I am also proud to be able to state that in point of membership we are stronger than we were a year ago, that we have no debts, and money in the treasury. When we stop and consider the trials and tribulations the business world has had to contend with during the last eight or ten months, and the fact that our revenues depend very largely upon the fees derived from the inspection of lumber, and that the large corps of inspectors we have employed upon a stated salary must be kept busy and the service kept up to the standard established during the fat years, and now demanded by our membership, I believe you will all agree with me, after hearing the reports of your officers, that this association has the past year not only extended its influence but has become a vital factor in the trade. There has been some dissatisfaction in regard to the inspection rules adopted at Atlantic City, but I can say, without fear of contradiction, there was more dissatisfaction over the rules adopted in Buffalo, taking effect in 1905. As you all know and realize, in making national rules it is necessary to consider every section of the country and do away with all sectional feeling, to accomplish the best results for the trade. Your inspection committee, composed of members from East and West, North and South, realizes more than any one else how hard it is to get their ideas together in their endeavor to satisfy Michigan, Indiana, Buffalo, New York, Cincinnati, Memphis, Boston, New Orleans, Chattanooga and a score of other places that want some change to suit their particular product. I stated a moment ago that there was more dissatisfaction over the 1905 or Buffalo rules than ever before the 1907 or Atlantic City rules. Our eastern friends probably have not realized this, for while the Buffalo rules did not meet with the approval of the entire East, and the prominent New York markets would not adopt them, the West and South, particularly Michigan, Wisconsin and Indiana were clamoring for changes, and it was feared at that time national inspection would never be realized, but be nothing more than some had predicted—a beautiful dream, too impracticable to satisfy the entire producing and distributing trade. At first it looked like an impossibility to get all these sections to come to an understanding with each other, as their views were so at variance. However, meeting after meeting was held, and finally realized that they must eliminate their own interests and for the good of the trade must take a broad view of the entire situation, they sent committees to Chicago to meet with your inspection committee, and the result was the rules adopted at Atlantic City. These rules went into effect December 1, 1907, as provided by the report of the Inspection Rules Committee, which was adopted at that meeting.

Prior to the date when the changes in rules became effective, the board of managers received requests from two or more markets to hold in abeyance the enacting clause of the report until this meeting, but after a careful consideration of the matter by the entire board it was unanimously decided that there was no warrant, under the constitution, for such action. Owing partly to prejudice and partly to the unfavorable condition of the lumber market prevailing since the rules became effective, the new rules have not been received in all markets with that degree of popularity with which they should have been.

It is only fair to state, however, that the greatest objections have come from those markets where the new rules have been practically untried, while, on the other hand, in those markets where they have been adopted as the existing standard of inspection, little or no objection has been urged against them. It therefore becomes apparent that the objection to them is founded more in misunderstanding and in prejudice than upon any actual hardship resulting either to buyer or seller from their application.

The forefront of opposition to the new rules was largely located among the dealers in the East, particularly in New York city. Early in November a movement was set on foot by the New York Lumber Trade Association for the promulgation and adoption of a set of inspection rules which were styled the Northeastern rules and which were practically verbatim copies of the 1905 rules of this association.

As it has been the established policy of this association to promote harmony in the ranks of the hardwood trade, and to establish and maintain a system of universal inspection of hardwood lumber, it was the belief of the board of managers that little good could come of the trade by injecting another set of rules into the market. Therefore the committee was appointed to confer with representatives of the New York Trade Association and of other eastern associations. The conference was held in New York in January and was largely attended by delegates from eastern associations. After considering the subject for three days, and agreeing upon many material points, the conference struck a snag and it was impossible to make further progress, so it adjourned. A subsequent meeting of the eastern delegates was held in Philadelphia in March and a synopsis of the result of that meeting has been published in the trade journals, and with which, no doubt, many of this membership are familiar.

At the New York conference a sub-committee, consisting of delegates from the eastern associations and from the National Hardwood Lumber Association, was appointed to continue the negotiations, but this sub-committee has never had a meeting.

Early last month the Inspection Rules Committee, the Executive Committee and the New York Conference Committee met in Chicago and considered the question of inspection rules from all points of view, and as a result of that meeting a report will be submitted to this meeting by the proper committee, suggesting such changes and modifications in the existing rules as will, in the judgment of those who have been engaged in the work, be entirely satisfactory to the entire membership, and which, I trust, will eliminate any further discussion of inspection rules of this association for some time to come.

I further wish to assure our eastern members that the rules committee has taken up their suggestions and complaints, has given them every consideration, and that if they will look at the question as a national one and not a sectional one, they will go home one and not a sectional one, and with a feeling that national inspection is not only going to be national in name, but will be an accomplished fact. The financial panic coming prior to the new rules going into

effect established a buyer's market, and brought about a situation that will not continue. Business depressions do not last forever, and should not be a reason why the inspection of lumber should be changed. Prices naturally depend on supply and demand, and all of you no doubt have been obliged to take less for your product than you anticipated. The conditions that existed, making it necessary to change the rules at Atlantic City, have not been affected by the panic, and I sincerely hope that with the exception of a local change and changes as recommended by your inspection committee the rules will remain as adopted last year.

When this report is submitted I trust that it will receive the earnest consideration of this membership, and I unhesitatingly recommend its unanimous adoption.

Some of our members have seen fit to criticize the action of the Board of Managers in instructing the inspectors not to apply the 1905 rules except on contracts made prior to December 1, 1907. You must bear in mind that the Board of Managers' duties are executive, and that they cannot take any action contrary to the decision taken at an annual meeting. At Atlantic City you adopted the present rules to take effect December 1, 1907. You heard of Managers who could not have taken any action that would have conflicted with your decision, and if they had, criticism would have been justified. Again, you must admit that it is a very difficult matter to trail a large force of inspectors to the uniform inspection of one set of rules, and that all sorts of complications would result were we to permit inspectors to work under two sets of rules and endeavor to carry both the 1905 and 1907 rules in their heads. Uniform inspection rules, without uniform application, are valueless. It would be altogether inconsistent and place any organization whose primary object is uniform inspection in a ridiculous light were they to recognize more than one set of rules.

Authority to apply the 1905 rules on unfinished contracts was altogether within the lines of correct business and we could have done nothing else as a lumber party in December, 1907, must of necessity be taken up on rules in effect at the time the contract was made unless otherwise stated in the contract.

Criticizing the Board of Managers for doing as they were instructed by the association is so uncalled for that further comment is unnecessary.

Last year when we had our annual meeting at Atlantic City business was in a very prosperous condition, everybody was happy and all felt that our assets were increasing daily. Since then we have passed through a financial panic that we will all remember. The changed conditions added additional responsibility to your officers and directors, and in this connection I wish to call your attention to the treasurer's report at Atlantic City. This showed that the association had paid out on a refunding plan the sum of \$1,277,729 during the year which ended May 23, 1907, and notwithstanding the rather critical attitude of many buyers, owing to financial conditions, the total amount paid out this year is less than \$100 more than the year previous, and the net cost to the association for the year ending June 11, 1908, is less than \$1,200, the exact amount being \$1,195,24. These figures furnish conclusive proof that substantial progress has been made toward getting more uniform application of the rules by the inspectors and the fact that National inspection is finally established in all the leading wholesale and producing markets is further evidenced by the fact that the salaried inspectors' reports for the year closing with this meeting show an increase of feet inspected by nearly 25 per cent. I consider these figures furnish proof, if indeed any is lacking, that our present system has the

endorsement and approval of the representative firms in both branches of the trade.

A very large per cent of the delay in taking replies to applications from our membership since January 1 has been due directly to weather conditions, causing the accumulation of orders. The complaints, however, on inspection work have been reduced nearly 50 per cent over the previous year.

I wish to congratulate the association on the loyal service of the inspectors in our employ. We certainly have a force that is equal with their thorough knowledge of hardwood lumber—excellent judgment, absolute fairness and the necessary backbone. They are compelled to work long hours, as their day's work by no means ends when the whistle blows, but their evenings must be spent in figuring up tallies, making out certificates and attending to a certain amount of correspondence from members. Notwithstanding the fact that a great many private firms and individuals engaged in the lumber business have reduced the wages of their inspectors, we have made no reduction, feeling that competent and high grade men are worthy of their hire and that it would be misplaced economy to see how cheap we could have the work done, instead of seeing how well.

We lost 122 members during the year, 95 per cent of this loss are out of business by failures or withdrawals from business, and it is reasonable to suppose that the general policy of retrenchment in expenses is responsible for a considerable percentage of the remainder. We have taken in 162 new members, making a net gain of 40, bringing our total membership up to 634. In looking over the list of new members you will admit that the support of so many prominent firms materially strengthens the association.

There is no association that for the small sum of \$25 per year gives to its membership such service and benefits that we do. It has often been said that it was "too cheap to be good," but our records do not show this to be a fact. If it were "too cheap to be good" our services would not be called for, but on the contrary our inspection department kept busy, and we are now looking for more good inspectors to take care of orders not provided for.

On May 18 a convention of shippers met in Chicago under the auspices of the Illinois Manufacturers' Association, to protest against the contemplated advance of 10 per cent in the freight rates. It is reliably stated that this 10 per cent advance means practically \$100,000,000 increase in revenue for the railroads. A large part of this sum will come out of the pockets of the lumbermen. I have no doubt you have all read the full reports of that meeting, in which you are all so greatly interested, and I hope the resolutions adopted by that convention will be heartily endorsed by you, and as the subject is a vital one, that we also assist them financially if necessary.

In conclusion I wish to take the present opportunity to thank you for the great honor conferred in electing me to the high office of president two years ago, and in your unanimous action at Atlantic City in selecting me and thus showing your approval of my administration during the previous year. The fact that the association is so much stronger is not due to your president, but due to your Executive Committee, your Board of Managers and your Inspection Committee, who have so loyally given up their time to the association.

During the past year I spent over six months in Europe, and this necessarily placed the responsibilities of the office on Vice-President.

On account of the financial stringency, which brought about a change of lines of business, objection to the Atlantic City rules, etc., your acting president was compelled to give a great deal of his valuable time to association matters. I feel that mention should be made of the able manner in which he conducted the

office during that trying period. Your ship has been steered efficiently during the storm, has shown the financial world, and has landed in Milwaukee without disaster—all bills paid.

My thanks are especially due to our faithful secretary, Mr. Fish. At the beginning of my administration the Board of Managers saw fit to give him more authority over the affairs of the association, increasing his duties and responsibilities. A large share of the work that formerly devolved upon the office of the surveyor-general were transferred to Mr. Fish, leaving only the general supervision of reinspection and the practical application of the rules in the hands of the surveyor-general. That they made no mistake is evidenced by the fact that the National Hardwood Lumber Association today is stronger than ever. Taking into consideration that we now have uniform inspection and uniform application of same, too much credit can hardly be given Secretary Fish, who has been the instrumental in bringing this result about. You have a faithful, efficient and courteous gentleman as your secretary.

On retiring to the ranks I wish to assure my successor that he will have my loyal and hearty support.

Secretary's Report.

Mr. President and Gentlemen: In the preparation of this, my third annual report, I have endeavored to eliminate many details of the work performed during the last year, and to confine my report to facts and figures showing the results obtained. I trust it will be gratifying to the membership to review a report showing an increase in membership and amounts earned by our salaried inspectors, notwithstanding the unfavorable conditions hardwood manufacturers and dealers have been called upon to meet during the last seven months.

Although these rather trying conditions have increased the responsibilities of your officers and directors in the conduct of their own interests, they have at all times extended to your secretary cordial support, and to their loyalty and unselfish sacrifice of time to the association affairs, much of the progress of the year is due. Our financial condition, as will be noted from the treasurer's report, is stronger than ever, in spite of the fact that we have been called upon to meet some extraordinary expenses which did not come under the regular current expenditures.

As stated in the report presented at the Atlantic City meeting one year ago, the Board of Managers, in June, 1906, recognizing the fact that the chief inspector was compelled to be absent from the association office much of the time, decided to place the secretary in charge of the Inspection Department so far as the correspondence and assignment of work to the inspection force were concerned. It is my belief that improved service has resulted, for the chief inspector, in addition to giving prompt attention to the requests of our membership for official reinspection, has been placed in many places throughout the year to the important markets in which salaried inspectors are maintained, and has also rendered valuable service to many of our members by visiting their plants and instructing their employes in the correct application of the National rules. It would appear reasonable to credit this system with the reduction in number of complaints from members on the work of the Inspection Department.

The report submitted at our last annual meeting, the association had seventeen salaried inspectors in its employ, stationed in the leading producing and wholesale markets, where the conditions warranted permanent employment. This number has been increased to twenty-three, located as follows:

Chicago	2	Calco	1
Chicago	2	New Orleans	2
Chicoutimi	2	Buffalo	1
Minneapolis	1	New York	1
St. Louis	1	Philadelphia	1
St. Louis	2	Boston	1

Milwaukee	1	Baltimore	1
Beaumont, Texas	1	Norfolk	1

Since our tenth annual, held May 23 and 24, 1907, the reports from salaried inspectors show a total of 50,729,944 feet, and adding to this 56,181,069 feet covered by certificates of the fee inspectors, results in a grand total of 106,908,013 feet. Last year the salaried inspectors' report was 42,436,215 feet, indicating a net gain for the year of more than 20 per cent. This gain is not confined to one or two markets, but is distributed evenly over the entire field covered by the inspection of this association. These totals cover only the amount inspected on which the bonded certificate has been issued. The reduced volume of shipments since November, 1907, has resulted in considerable shrinkage, and unfavorable weather conditions during many weeks have further reduced the showing, but applications for the appointment of salaried inspectors from the sawmill districts, which are now being considered, furnish abundant proof that we are working along correct lines, and that both branches of the trade recognize the value and fairness of our present system.

I desire to again urge upon the membership the importance of familiarizing themselves with the rules governing the Inspection Bureau. This information is fully given in the handbook issued from the general office in December, 1907, copies of which were sent every member, and has also been included in the Inspection Rules Book. During the last year lack of this information on the part of several of our members has resulted in unnecessary delay and expense, as their failure to make application direct to the secretary for official reinspection has necessitated the cancellation of several certificates under the rules in force.

During the year, applications for the service of National inspectors at mill points have increased materially, and the attention of this membership is respectfully called to the paragraph on page 4 of the Inspection Rules Book, to the effect that members enclose check with application to the inspector called upon, to cover railroad fare and other necessary expenses. Attention to this request will insure against delay, as it is by no means certain that our inspectors can at all times advance the necessary amounts without serious inconvenience. My attention was recently directed to the fact that one inspector had advanced from his personal funds over \$200 to members, in railroad fare and other expense, and had been waiting more than sixty days for a return of the money thus advanced.

In conformity with the by-laws, eight meetings of the Executive Committee and Board of Directors have been held, as follows:

Board of Directors,	May 25, 1907.
Board of Directors,	May 24, 1907.
Executive Committee,	July 25, 1907.
Executive Committee,	October 24, 1907.
Board of Directors,	December 3, 1907.
Executive Committee,	January 27, 1908.
Executive Committee,	May 9, 1908.
Executive Committee,	May 14, 1908.

All meetings have been well attended and suggestions from the membership carefully considered, but to review in detail the voluminous records of these meetings would unnecessarily lengthen this report. I have, therefore, as for the facts and figures of the year's progress.

At the Board of Directors meeting held on May 23, 1907, it was suggested that a savings of considerable expense and much time to members might be effected in many cases through deputizing the salaried inspectors on official re-inspections, instead of sending the chief inspector a long distance, involving heavy expense. This plan has been followed in numerous instances and has been commended by the members securing such service. It was also suggested that the Inspection Department could further advance the interests of uniform inspection by furnishing inspectors, when so requested, to visit mills and instruct the inspectors in the employ of members

as to the correct application of the National rules. This has been done on all applications received at the secretary's office, and excellent results have been obtained.

In May, 1907, the National Lumber Exporters' Association solicited the cooperation of this association in correcting certain unsatisfactory methods then prevailing in the measurement of lumber in the Liverpool market. Letters were sent from the executive office to every member of the National Hardwood Lumber Association, calling attention to the importance of exerting their influence in the correction of these methods, and in due course a letter was received from the National Lumber Exporters' Association stating that Liverpool buyers had agreed to discontinue the practice formerly prevailing, and further stating that the action of the National Hardwood Lumber Association had been a prominent factor and of great assistance in correcting the former system.

From a comparison of the secretary's reports of recent years the fact will be noted that the demand from the trade for copies of the National rules shows marked increase, and the fact that 21,000 copies of the present rules have been sent out since November, 1907, perhaps indicates howling success in our work. The printing in the new rules of instructions on "how to obtain national inspection" was a new departure, but, from opinions received, has, beyond doubt, proven of assistance to the membership. Frequent changes in yellow pine and cypress rules prompted the Executive Committee to discontinue including those rules in the National Association book, as we have formally adopted the rules of the Yellow Pine Manufacturers' Association and the Southern Cypress Manufacturers' Association.

Numerous requests from manufacturers in all sections covered by our membership for branding hammers to assist in the identification of their shipments, particularly to eastern markets, resulted in the purchase of branding hammers bearing the National Association emblem and special numbers for each inspector. These have been placed in the hands of all salaried inspectors, with instructions to use them on all shipments as so requested by the member ordering the inspection.

During the year several complaints were registered by large buyers and consumers of hardwood lumber, to the effect that after making positive agreement with the shipper to accept the report of our bonded inspectors, the shipper had declined to deliver the duplicate certificate of the National Inspector. Your secretary was accordingly authorized to deliver any such inspection to the buyer if the fact was determined, upon investigation, that National inspection had been agreed upon as a final basis for settlement.

Your attention is also directed to the fact that a special committee of three has been appointed and has been at work in an effort to secure the adoption of the National Hardwood Lumber Association rules by the United States Navy Department. A report of the progress of this committee will be heard during the meeting.

During the year which closes with this annual meeting financial conditions have demanded more of my attention than in former years, but I have been greatly inspired in my efforts by the cordial support of the membership, and the absolute confidence in ultimate results entered into by all of the officers and directors with whom I have been associated in the discharge of my duties. Since May 24, 1907, 162 new firms have been added to the membership roll. During the same period a number of members have been taken from the list. A statement in detail of membership gain and loss since our tenth annual meeting is as follows:

Membership May 21, 1907.....	594
Applications received since.....	169
Applications rejected.....	7
Total accepted.....	162

MEMBERS LOST.

Failures and withdrawals from business.....	72
Dropped as delinquent.....	24
Resignations.....	20
resulting in a net gain of 40 members for the year.....	122

Notwithstanding the substantial reduction in shipments and slow collections to contend with, the first of each month has, without exception, seen all bills of every nature paid in full. The association has not at any period been in debt, nor have we borrowed any funds. Detail of receipts and disbursements from my office are as follows:

RECEIPTS.

From membership dues.....	\$19,725.00
From inspection fees.....	35,704.83
From inspection rules.....	759.27
From cash deposits.....	625.20
Total.....	\$54,814.10

DISBURSEMENTS.

Remitted treasurer.....	\$53,802.47
Cash and checks paid.....	1,011.63
Total.....	\$54,814.10

In addition to the balance now subject to check of the treasurer in the general fund, \$1,716.72, should be added \$1,000, carried by the secretary, making total cash balance in general fund June 1, 1908, \$2,716.72. Checks and cash on hand received since June 1 amount to \$1,011.63, which brings the total cash on hand as of June 1, 1908, to \$3,728.35.

In addition we have outstanding accounts for inspection service, \$2,052.05; for membership dues prior to May, 1908, \$275; due May, 1908, \$1,900, giving the association accounts and cash on hand at this time \$7,955.40.

Since my appointment as secretary, three years ago, the subject of adding a Bureau of Information on firms who are known as "skickers for revenue" and buyers who habitually cancel orders and contracts, has been advocated by several of our members. It is not my understanding that those members favor the establishment of a complete system of credit investigations or financial ratings, but a confidential bureau for the interchange of experience on customers who are inclined to be arbitrary and unfair. Systematic in the line of such experience has come to be an accepted fact in many lines, and our membership of 634 firms it is my belief that cooperation along these lines would prove of great value to the membership, and doubtless result in the correction of some of the present abuses which the hardwood lumbermen have to contend with. I should be pleased to have this suggestion considered during the meeting, and if it meets with the approval of the members present, I shall take pleasure in submitting plans in detail for the establishment of such a department.

It is freely conceded that all branches of the lumber industry recognize more fully each year the necessity and value of organized effort. Present trade conditions under such effort of more value than ever, and it is my belief that the National Hardwood Lumber Association, with its prestige of eleven years of successful work, can and will in the near future maintain a list of 1,000 members. We shall work for an important increase during the coming year, and with your cooperation there is absolutely no question about successful results.

With an earnest request for a continuation of your loyal support and with thanks for the many courtesies extended during the past year, this report is respectfully submitted.

F. F. FISB, Secretary.

Treasurer's Report.

GENERAL FUND.

Balance on hand as reported by J. Watt Graham at the CHY convention, May 23, 1907.....	\$ 2,753.71
Membership dues.....	33,350.00
Inspection fees.....	39,076.58
Inspection rules.....	750.99
Total.....	\$55,931.18

DISBURSEMENTS.

Salaries (secretary, chief inspector, and inspectors).....	\$39,143.89
Inspectors' expense.....	6,346.09
Stationery and printing.....	826.59
Postage.....	1,236.44

Convention, New York conference, Executive and Standing Committee expense.....	1,233.74
Printing and office supplies, Telephone, telegraph, light, express and exchange.....	1,953.69
Inspection settlements.....	436.40
Rent of 1012 Rectory building.....	1,906.14
Premiums on bonds for secretary and treasurer.....	960.00
Refunds to members.....	28.65
Total.....	\$52,85 54,214.46

Balance on hand June 1, 1908..... \$ 1,716.72

CASH DEPOSIT FUND.

From J. Watt Graham, former treasurer.....	\$ 1,363.30
Deposits from twenty-five inspectors.....	625.00
Interest to June 1, 1908.....	51.49
Total.....	\$ 2,038.79

DISBURSEMENTS.

Refunds of fourteen inspectors (resigned).....	\$ 350.00
--	-----------

Balance on hand June 1, 1908..... \$ 1,688.79

LAURENCE MALLEY, Treasurer.

ATTENTION.

At the opening of the afternoon session the committee on forestry of which M. M. Wall of Buffalo is chairman, made its report as follows:

Report of Committee on Forestry.

To the president and members of the National Hardwood Lumber Association: Your committee on forestry begs to report considerable work done during the past year. Has been in correspondence with the National Forestry Service at Washington and with the forestry commissions of the states of New York, Michigan, Pennsylvania, Connecticut and other states and with legislators and individuals, and has endeavored to keep as much possible in touch with what is actually being done in regard to forestry and also what legislation is being enacted, and to advise and assist in such legislation as much as possible. Perhaps the most important legislation is the bill which was recently passed appropriating \$5,000,000 for the purchase and control of approximately 7,000,000 acres of land in the Appalachian and White mountains.

The future hardwood supply hinges largely on the control of the Appalachian mountain forests. To briefly summarize the reasons the hardwood lumber cut of the country has fallen off over 15 per cent in the last seven years, and this decrease took place at a time when the industries made unprecedented demands upon every kind of structural material. The output of pig iron increased 86 per cent, that of cement 23 per cent and that of softwood lumber nearly 16 per cent. During the same period the wholesale prices of all classes of hardwood lumber advanced from 25 to 65 per cent. Almost every kind of hardwood has been put on the market and hardwood is now being put in every state and in almost every locality where it is found. All possible substitutes are being put into requisition. The demand is stronger than ever, but the supply is falling off. A notable shrinkage has occurred in some of the most popular woods, as shown by the following table:

1899, feet, 1906, feet, In. Dec.	
Oak.....	69,928,000 39,136,000
Maple.....	682,466,000 882,878,000
Poplar.....	1,115,242,000 693,076,000
Red gum.....	452,578,000 530,000
Chestnut.....	206,883,000 197,478,000
Basswood.....	308,069,000 376,838,000
Birch.....	132,601,000 170,132,000
Cottonwood.....	412,100,000 285,996,000
Beech.....	(A) 255,661,000
Elm.....	456,731,000 234,795,000
Ash.....	293,129,000 282,000
Hickory.....	96,836,000 148,152,000
Tupelo.....	(A) 47,882,000
Walnut.....	385,000,000 222,000
Sycamore.....	29,715,000 22,000
All others.....	298,504,000 87,637,000

8,634,021,000 7,315,191,000

Oak, which in 1899 furnished more than one-half the entire output of hardwood lumber, has

fallen off 25.5 per cent. Yellow poplar, which in 1899 ranked second among the hardwoods of the country, fell off 37.9 per cent. Elm, the great standard in slack cooerage, went down 50 per cent.

Cottonwood and ash, used largely in many industries, lost respectively 56.4 and 20.3 per cent. Of the woods which show increases, hickory and walnut are cut scattering over a very large territory.

The increases shown are probably in large part, if not entirely, due to more complete fires in 1906 than in 1899. Other woods which show increases are those which up to a few years ago were considered inferior and had no market value. Only within the past seven years have maple, red gum, birch, beech and tupelo begun to replace the better woods, such as oak, poplar, elm and ash. When the inferior substitutes are gone there will be nothing with which to replace them.

While we know the hardwood supply is rapidly running down, it is unfortunate that we cannot tell how long the supply will last. The hardwood which annually goes into the manufacture of lumber is approximately 7 1/2 billion feet. Other uses, such as railroad ties, poles, piles, fence posts, fuel and the vast amount of waste bring the figure to at least 25 billion feet. By the largest estimate our supply of standing hardwoods does not exceed 400 billion feet. This means a sixteen years' supply.

How intensely the whole country would feel the loss of a great resource like hardwood timber was merely indicated by the injurious effects of the anthracite coal strike a few years ago. Many of our great industries depend absolutely upon hardwood. These industries will suffer when the hardwood supply is exhausted. Not only will they suffer, the whole country will suffer for want of their products. Our present national forests furnish no hardwood timber because hardwoods grow only in the east.

There have been in the United States four great hardwood centers, the Ohio valley, the lake states, the lower Mississippi valley and the Appalachian states. The Ohio valley in the past has been the main center of production.

Even as late as 1899 the states of Ohio, Illinois and Indiana produced 25 per cent of the hardwood. In 1906 they produced only 14 per cent; both the states of Ohio and Indiana fell off over 50 per cent. They have reached a sudden end as great hardwood producers.

Their many hardwood-using establishments which are now pressed for supplies will largely exhaust their remaining remnants within a few years. The lands from which the timber was cut have been cleared and turned into farming, for which in large part they are well adapted.

The three lake states furnished less hardwood lumber in 1906 than they did in 1899. Unquestionably their maximum production has been reached and their decline is likely to be almost as rapid as that of Ohio and Indiana because of the nearness of many wood-using industries, which will make heavy demands upon their supplies. The hardwood lands of the lake states are for the most part agricultural lands, and they are rapidly being cleared for the production of grain, grasses and potatoes.

The same is true of the lower Mississippi valley. The hardwoods occupy the richest agricultural land, which almost as fast as the timber is cut is being turned into farms. Present indications are that the swamp land, valuable for the production of hardwoods, will within a few years be drained and cleared for agriculture.

There is but one other hardwood region, the Appalachian mountains. The Appalachians differ fundamentally from the other regions

because they are not of agricultural value; their main usefulness is for timber production. In 1906 they produced 48 per cent of the hardwoods of the country.

It is clear that they must be counted upon for even a much larger proportion in the future. Although they bear hemlock, pine and spruce in quantity, it is in the production of hardwoods that the Appalachians have their chief value. It is to them that the hardwood-using industries must look for future supplies, and even with the Appalachians the country has only a sixteen years' supply now available for their use.

The southern Appalachian region contains a timbered area of over 58 million acres. Including the mountains of Pennsylvania, New York and New England, it is safe to estimate the Appalachian area as covering 75 million acres, primarily adapted to hardwood timber.

Only a small part of this 12 per cent to 15 per cent is covered by virgin growth. The remainder has been cut over and some of it has been cleared.

The Appalachian region the forest has suffered incalculable damage by fire, which over most of the region still burns without hindrance. Every year millions of young trees, the hope of the future crop, are killed and the humus, the great storehouse of fertility and moisture is consumed over thousands of acres.

Through mismanagement a great part of the young timber has been destroyed. Much that remains is damaged by fire, insects or fungi. Over the whole area the average growth is very little, probably not more than ten cubic feet per acre annually.

The inevitable conclusion is that there are lean years close ahead in the use of hardwood timber. There is sure to be a gap between the supply which exists and the supply which will have to be provided. How large that gap will be depends upon how soon and how effectively we begin to make provision for the future supply.

The present indications are that, in spite of the best we can do, there will be a shortage of hardwoods running through at least fifteen years. How acute that shortage may become and how serious a check it will put upon the industries concerned cannot now be foretold. That it will strike at the very foundation of some of the country's most important industries is unquestionable. This much is true beyond doubt—that the hardwood timber famine is upon us and we have made no provision against it.

Studies of the forest conditions in the southern Appalachians show that these lands, where they have been under protection for some time, are capable of producing an average of fifty cubic feet of wood per acre annually. Even taking the production of forty cubic feet, this means for the area of 75 million acres a possible annual production of about 3,000,000,000 cubic feet, which is about equal to the present consumption of hardwood timber for all purposes. Since the Appalachians at present supply only 48 per cent of our hardwoods and since other regions will continue to furnish some, it is likely that the proportion from the Appalachians will never exceed 75 per cent.

This allows a margin of safely 55 per cent if we assume that there will be no increase over the present rate of consumption.

If the Appalachian forests are taken good enough, and rightly handled, they will eventually produce continually three-fourths of the hardwood supply of the country, and do it without exhausting the forests. In fact, it can be done in such a way as to improve the forest.

Our experience will doubtless be the same in this respect as that of Germany. In Saxony, the cut, which represents only the growth, increased 55 per cent during the period from 1820

to 1904, bringing the annual yield to 92 cubic feet per acre. Prussia shows a still more pronounced increase. In 1850 the cut was only 20 cubic feet per acre, and in 1895 had only increased to 24 cubic feet. But in 1890, owing to proper management, it had risen to 52, and in 1904 to 65 cubic feet. These results came largely from non-agricultural and sandy lands, swamps and non-mountain slopes, and from forests which had been mismanaged much the same as ours. Under right management an equal increase may be expected from Appalachian forests.

To this increase of yield we must look to meet the increase which is certain to come in demand.

Pennsylvania has increased its state forest reserves during the years 1907, and thus far in 1908, from 170,000 to 775,000 acres.

It maintains an academy at Mont Alto, where young men are educated to become foresters, and as soon as they are educated they are assigned to stations on the reserves. During the last year ten graduates have been put in charge of definite areas. The Forest Reserve holdings of Pennsylvania are being gradually enlarged. There is probably under contract at the present time for purchase nearly 100,000 acres of forest land from the state of Michigan legislature. It maintains an academy at Mont Alto, where young men are educated to become foresters, and as soon as they are educated they are assigned to stations on the reserves. During the last year ten graduates have been put in charge of definite areas. The Forest Reserve holdings of Pennsylvania are being gradually enlarged. There is probably under contract at the present time for purchase nearly 100,000 acres of forest land from the state of Michigan legislature.

The Forest Commission of New York state has since 1901 been planting seedling trees for the purpose of reforesting waste lands in the forest reserve. Since then plantations have been made each year in the Adirondacks. Over 500,000 seedling trees were planted in 1902, and about 450,000 in 1904. These plantations were made at various places, the largest one in Franklin county on burned-over and denuded lands. Coniferous species only were used on these plantations.

The Scotch pine and white pine planted on these plantations are in a very satisfactory condition, having reached an average height of from five to eight feet.

The only plantation of hardwoods undertaken as yet was made in 1904. The land selected for this purpose was a grassy field containing seventy acres, situated on a "hance pole" near the lower end of Grindstone Island, St. Lawrence county. The species planted consisted of red oak, pin oak, chestnut, black locust, black walnut, white ash and hickory, about 80,000 seedlings in all being planted, mostly oak. Fully one-third of these plants were destroyed during the next winter by field mice, which, burrowing under the snow, gnawed the bark away or cut off the stem completely. When the damage was discovered measures were taken to poison the mice, and large quantities of corn meal mixed with strychnine were distributed over the field. The plants which escaped injury are now alive and doing well.

The state of Connecticut appropriates \$1,000 a year for buying and improving land. These forests are small, the chief object being to furnish examples of good forest methods to private owners in that region. They have three tracts—one of 1,100 acres in Portland, 300 acres in Shelton, and one in Saubury. Besides these tracts, the Connecticut experiment station has carried on extensive forest planting experiments on an area of sand plain land in Windsor.

An effort will be made to secure from the next legislature an appropriation of \$10,000 for the purpose of acquiring at least one tract in each county of the state. They have an efficient forest fire warden system, consisting of about 400 men as town and district wardens all over

the state. The fires which these wardens put out vary in size from an acre to two or three thousand acres.

The average cost of extinguishing fifty-six fires was \$8.75 each. The expense of the fire warden system is borne one-half by the town, one-fourth by the state, and one-fourth by the county.

Owing to the increased feeling of safety from forest fires, many private owners have now become interested in forestry, especially the planting up of waste land, of which there are some 200,000 or 300,000 acres in the state.

In 1906 the first attempt to secure seedlings for private owners at reasonable rates from the nurseries was made, and 100,000 trees were planted in the state.

In 1907 the number was increased to 350,000, and this spring over 500,000 trees were set out. The state gives talks or lectures before any organization interested in forestry, and the state forester also gives a course of instruction of six weeks in the Agricultural College. Connecticut is doing splendid work in an educational way.

It is encouraging to see on all sides evidence of a new interest in the preservation of our forests, and the whole country seems to have awakened to the fact that the end is in sight unless something be done, and that quickly.

The government service seems aggressive, and it is likely that in a few years practical results of great value to the country will be manifest. By specializing forest management, the great variety of woods will be maintained and the restoration of an adequate supply for the needs of the people will be accomplished of a measurable value.

We again repeat the recommendations made in our previous reports—that state legislative bodies and the American Congress be petitioned for the enactment of the following laws:

1. To relieve, for a long period of years, lands owned by individuals that shall be devoted to forest growth under practical supervision.
2. To provide legislation that shall insure individual lumber owners protection from fire and depredation.
3. That the several states shall take up in a comprehensive and practical way the replenishing of lands undesirable for agriculture for timber.
4. That the national legislature be invoked to prohibit the exportation of logs.
5. That the federal government make a census of the stumpage of the United States.

Respectfully submitted,
MATTHEW M. WALL, Chairman.

The report of the Transportation Committee, of which Emil Guenther is chairman, was presented, as follows:

Report of Transportation Committee.

Your Committee on Transportation begs to report that during the last twelve months the following matters were taken up, viz.:

A letter dated November 3, 1907, from the Lumbermen's Club of Cincinnati, in reference to an increase of the minimum weights, from 30,000 to 34,000 pounds. Your chairman referred that letter to our Philadelphia Exchange, who passed the following resolution:

"No. 1. Resolved, That it is the sentiment of the Exchange that it would be desirable to have the railroad companies who have fixed the minimum required weight of shipment of lumber at 34,000 pounds insert a clause in their notices to the effect that where a car is apparently loaded to its full capacity, and it is evident that it is a physical impossibility to load sufficient lumber to make 34,000 pounds, such shipment shall be billed out at the actual weight of the lading."

A copy was forwarded to the Lumbermen's Club of Cincinnati. Since that time Mr. C. E. Gill, chairman of the Official Classification Committee, reported unfavorably in reference to the above.

A letter dated November 10, 1907, from the Oregon & Washington Lumber Manufacturers' Association, in reference to an amendment to the interstate commerce law in changing rates, a resolution, upon the suggestion of your chair-

man, was adopted by the Lumbermen's Exchange of Philadelphia, as follows:

"No. 2. Whereas, The interstate commerce law now in effect does not contain any provision whereby a hearing is required before a change in any interstate freight rate may become effective; and

"WHEREAS, Experience has fully demonstrated the urgent necessity for an amendment to remedy this serious defect; therefore be it

Resolved by the Lumbermen's Exchange of Philadelphia, That a proposal be offered providing substantially that when any railroad company seeks to advance or lower any published freight rate, or to use in interstate commerce, or change classification of any commodity, it must, if objection be made thereto, request the approval of the Interstate Commerce Commission before such rates or changes in classification shall become effective. That a copy of these resolutions be mailed to each of the senators and representatives in Congress from the state of Pennsylvania, and to the Oregon, Washington Lumber Manufacturers' Association."

Similar resolutions were adopted February 10, 1908, by the Hardwood Manufacturers' Association, upon your request, as follows:

"No. 3. The Interstate Commerce Commission law in its present form does not contain any provision requiring a hearing before a change in any interstate freight rates become effective. Therefore, be it

Resolved by the Hardwood Manufacturers' Association of the United States, That we recommend that the Interstate Commerce Commission an amendment be offered providing that when a railroad company endeavors to change, by advancing or lowering its rates, or by changing its classification, it shall give notice of the same to the Interstate Commerce Commission, which notice, if approved by said commission, shall not go into effect until at least sixty days after such change has been made, and in the event that any objection is made to such change, interests affected by such change shall have an opportunity to appear before said commission to file such objections as may be made thereon.

Your committee greatly appreciates the cooperation of this association.

Several additional letters were received by your committee from our members and several kindred associations in reference to weights, rates, etc., but all such matters should be referred to the Interstate Commerce Commission for consideration, as outlined in a letter received by the chairman from the Interstate Commerce Commission, as follows:

"The duties of this commission relate to rates and all regulation and practices concerning rates. We have authority, upon complaint, to reduce a rate or to make an order with respect to matters like stopper privileges, reconsignments, etc. We have no power over claims against railroads for loss and damage of the property in transit, and the commission has no authority over the physical operation of railroads.

You may refer you, as an example of what we can do, to the case of Burgess et al. vs. Transcontinental Freight Company. In this case, your committee asserts that an advance of 10 cents per hundred from Pacific coast upon hardwood lumber was unreasonable. If the commission should sustain the contention it would have a right to order a reduction to the old basis, or even to put in a lower rate and it could also, should it wish, order the railroad to return to shippers the amounts collected above the rate established.

It will perhaps give you some idea of the authority which this body exercises."

You are aware the past few years have developed considerable agitation of one kind or another, more or less conflicting with the policies of the railroads, but your committee has endeavored to take a very conservative course, and therefore only those matters which appeared practical and reasonable have had our indorsement and action.

Respectfully,
 EMIL GUENTHER, Chairman.

LATER ADVICES FROM MILWAUKEE

Special Wire to HARDWOOD RECORD, Thursday, June 11: "The eleventh annual convention of the National Hardwood Lumber Association is now in full swing here in Milwaukee. The interesting and important papers to be presented are based on the official program as set out by the association, which late developments necessitated varying to some extent. More complete details

and a report of the second day's sessions will appear in the Record of June 25.

G. J. Landeck, of Milwaukee, opened proceedings at Stephenson's hall by introducing Mayor David S. Rose, who, as scheduled, made a very scholarly and pleasing address, welcoming the delegates and guests and extending to them the freedom of the city.

President W. H. Russe, of Memphis, humorously announced that F. A. Diggins, of Cadillac, Mich., was scheduled to respond to the Mayor's address of welcome, but inasmuch as Mr. Rose was obliged to leave at once in order to catch a train, and therefore could not hear the response, Mr. Diggins preferred not to inflict it upon the audience. Mr. Russe further detailed the recent accident sustained by Secretary Frank F. Fish and stated that, although he had made strenuous efforts to get to the meeting in spite of his illness, it had been decided that such a course would be absolutely impracticable, and that he had instructed Mr. Fish not to attempt it.

A. R. Vinjedne took the place of the secretary at the desk, after which President Russe delivered his opening address as above given. Mr. Vinjedne then read the report of Secretary Fish, which was duly approved by the association, and was followed by Claude Maley, treasurer, with his financial report, both presented above.

On motion, the chair was instructed to appoint a Committee on Officers' Reports which should present his findings on Friday. President Russe appointed as this committee Edward Buckley, of Manistee, Mich.; J. W. Thompson, of Memphis, and Henry Maley, of Edinburgh, Ind.

On motion of Geo. D. Burgess, of Memphis, a message of condolence was sent to Secretary Fish on behalf of the association.

Adjournment was then taken until afternoon, Thursday Afternoon Session.

The first thing taken up by the association on resuming at 2 p. m. was the report of M. M. Wall, of Buffalo, as chairman of the Forestry Committee.

D. F. Clark, of Minneapolis, made a motion that the report be accepted and copies of it sent to Hon. Gifford Pinchot, Chief Forester of the United States, and to President Roosevelt.

Emil Guenther followed Mr. Wall with the report of the Committee on Transportation, also covered herewith.

C. F. Sweet, of Grand Rapids, made a motion that further proceedings of the convention be considered executive, and that the trade press be given their reports for publication by the secretary of the association.

The motion was seconded and carried. The chair announced that Capt. C. F. Liebke, of St. Louis, chairman of the Waterways Committee, was unable to be present and A. R. Vinjedne read his report, which will be given complete in the next issue.

On motion of R. F. McMillan, of McMillan, Wis., the president was instructed to appoint a committee to attend the Deep Waterways Convention at Chicago to be held in October.

John Fritchard, of Indianapolis, chairman of the Inspection Rules Committee, read his report in which the committee suggested certain changes in the rules. A reprint of these changes was distributed among the members and while considerable consideration of inspection matters prevailed, final consideration of the report was made a special order of business for 10 a. m. Friday.

The meeting then adjourned.

Entertainment.

Over three hundred delegates are in attendance at the sessions in Milwaukee, of whom but a small percentage seemed to be from the East. The attendance at the sessions is noticeably large. The Milwaukee contingent is providing ample and diversified amusement both for the delegates and visiting ladies, the weather is ideal, and everybody is having a glorious good time. Friday's sessions promise to be interesting ones.

Semi-Annual Veneer and Panel Association.

The semi-annual meeting of the National Veneer and Panel Manufacturers' Association was held at the Hotel Pontchartrain, Detroit, Mich., on Tuesday and Wednesday, June 9 and 10. The first day was devoted to meetings of the several sub-organizations which compose the general association—the Veneer Manufacturers' Club, the American Panel Club, and the Quartered Oak Club. The sessions of these organizations were well attended and very beneficial to members engaged in these respective lines of work. On Tuesday evening a delightful Italian dinner was served the members of the association at one of Detroit's famous restaurants. The semi-annual convention met at 10 A. M. Wednesday, June 10, with President Burdis Anderson of Munising, Mich., in the chair, and Secretary E. H. Detebaugh of Chicago recording.

The first thing in order of business was the roll call, which showed a good representation of members present. It was followed by a reading of minutes of the last meeting, which stood approved.

in a free, frank and unreserved interchange of ideas and experiences.

This year will unquestionably prove to be a critical year in the vital and efficient work of the National Veneer & Panel Manufacturers' Association, and success can be attained and security secured only through the hearty cooperation of each and every individual member.

Each member of the association might consider himself a member ex-officio of all the committees, take a personal interest in their work, and be fully informed and advised on any and all matters which might be advantageously considered by the association.

Our three auxiliary organizations—the American Panel Club, the Quartered Oak Club and the Veneer Manufacturers' Club—are all doing excellent work. The members get together and discuss methods, costs, prices and trade conditions more intimately than would be practicable in the general association meetings.

You will hear more fully in regard to the work of the different clubs later in the day, when you will be addressed by the presiding officers of the clubs.

In addition to the club work, however, there is a great work to be done by the Veneer & Panel Association along lines of common interest to all manufacturers engaged in these kindred enterprises.

I would be glad to see each member of the association as a member one of more of the clubs, and every club member a member of the association. Then, if each member will feel that the association is his association, that its work is his work, and its successful issue depends in a measure upon his personal effort, we will have an association that will prove an incalculable power for the good of all its members and a big influence to promote the welfare of our enterprises.

During the past half year we have started some work along lines hitherto untried. The executive committee has held two meetings and engaged the services of Howard S. Young as assistant secretary to act in cooperation with Mr. Detebaugh for the development of the association work.

At its March meeting the executive committee adopted a resolution to the effect that the policy of the National Veneer & Panel Manufacturers' Association shall be to adopt no specific price list, and to make no effort to fix selling prices; but that the association shall, through its cost and valuation committee, disseminate information concerning the cost of production of our different products. It is safe to conclude that no manufacturer will sell any part of his product without a customer who knows it. We should make a strenuous effort, therefore, to get every manufacturer in our lines to figure costs intelligently, including all fixed charges and overhead expenses.

The executive committee has also authorized the assistant secretary to organize a Credit and Inspection Experience Bureau for the benefit of all members of the association, who contribute to its support by furnishing information to the assistant secretary. You have all been fully advised concerning the methods and advantages of this service, and I wish to urge all who have not already done so to send to Mr. Young a classified list of customers, so that all may secure the service. Customers whose Credit and Inspection Experience Bureau information may cover as broad a field as possible.

This service can be made much more valuable than any commercial agency, because it is not only concerned with the customer's ability to pay, but will also advise you in regard to what is many times more desirable to know—the credit standing of the customer. It will make a practice of taking unreasonable extra time, unjust discounts and deductions and who will not pay. It will also advise you of the credit standing of your customers. Customers who are known to all of us, and we can all have this information by cooperation through our Credit and Inspection Experience Bureau. It has been suggested that some members might object to listing their credit and inspection information, but I think you will find that it might get a line on their customers. Such objection would seem ridiculous for two reasons: first, because the information is classified on a list of all the manufacturers and purchasers in our lines from Loyd's Dispatch, the *HARDWOOD RECORD*, and the *WOODWORKER*; second, because the credit and inspection lists are sent by no one except our assistant secretary, who can be fully and absolutely relied upon.

In connection with the Credit and Inspection Experience Bureau we propose to organize a Collection Department, to which the members can send all past due accounts for collection. We intend to make every effort to have fully discussed during this session of the association, as I feel confident that this work is along

progressive lines that cannot fail to benefit all of our members.

While we have not accomplished during the past six months quite as much as might have been wished, I feel that we are to be congratulated upon the work done by the cost and valuation committee, the arbitration and grievance committee and the railroad classification and claims committee. The bulletin service is especially valuable, and the bulletin sent out by the cost and valuation committee will undoubtedly have a tendency to maintain prices. While it is to be regretted that there has been some price cutting, still the situation in that respect is much better than it doubtless would have been without the beneficial influence of the association.

Mr. Kline will address you in regard to the work of the classification and grievance committee, and I can only urge that all members of the association will cooperate with this committee in an effort to have any and all disputed claims adjusted amicably and satisfactorily on the merits of the case, without partially either to the shipper or the customer.

Mr. Raymond will address you later and tell you of our pilgrimage to New York City and our ineffectual effort to secure more just and satisfactory classification for our product.

It is hardly necessary for me to mention the entertainment and programme committee, as you have all shown your hearty appreciation of Mr. Detebaugh's excellent selection of a place of entertainment and for our banquet last night. The programme you have in hand indicate the good things that have been prepared for today's session.

The membership committee needs the active support of every member of the association. Let each member interest one outside manu-

BURDIS ANDERSON, MUNISING, MICH.,
PRESIDENT.

President's Address.

President Anderson then spoke as follows:

It gives me pleasure to address you, and I am indeed pleased to see you all looking so pleasant and prosperous, notwithstanding the persistent rumors of hard times.

At the annual meeting in Chicago six months ago our beloved secretary, Mr. Detebaugh, was pleased to refer facetiously to the financial and business conditions which then existed as a Christian Science panic. Later developments, however, would seem to indicate that our highly esteemed secretary failed for once to diagnose the case altogether correctly. A Christian Science paper which I read some years ago claimed to prove that there is no sin, sickness, poverty or death. For the past six months trade has been sinfully sick, we have many of us gone begging for orders, and business has been practically dead; so that the trouble has seemed a real material thing and no mere malady of mortal mind, but, gentlemen, these harrowing times of financial depression should have a tendency to bring us closer together. They should result in cementing more firmly the bonds of our friendships and should demonstrate the practical value of our association.

The greatest good to all in any association can only be obtained by getting close together

D. E. KLINE, LOUISVILLE, KY.,
EX-PRESIDENT.

facturer and give his name and address to the secretary, so that we can have a good campaign, and we can doubtless increase our membership to the mutual advantage of all concerned.

I hear of some criticism and opposition to our association among buyers of and dealers in veneer and panel, and I think it is caused entirely by a misunderstanding of our policy and efforts.

With your assistance we can and will continue and complete the work already started and make every effort to build up the association to a point where we can give you a real history on the right side of his bank balance.

Then, the association work will be easy and its momentum will keep it moving without much effort on the part of anyone.

Secretary's Remarks.

President Anderson was followed by Secretary Debaugh, who said:

The few suggestions I have to make came to me from various directions through correspondence. My own work has not been of a very active nature during the last few months, but I want to call attention to a few things. I have always thought that the matter of trade ethics has not been general enough. Some branches of the lumber trade have almost perfect ethics and they live up to them. This is as it ought to be, and therefore when I received letters from the lumber secretaries who have advocated a trade ethics organization, I wrote them that we would certainly be a party to it, and the work will be taken up at the meeting in Minneapolis on the 18th of this month, when the following matters will be considered, which are of much interest to every man in the lumber trade. The idea is for the secretaries of all the associations to get together and work out a system of trade ethics covering these points which I will read as presented by them:

TRADE ETHICS.

1. ORDERS.

1. All orders should be in writing, and for any amount more than \$25 should be signed by both the buyer and the seller.

2. SPECIFICATIONS.

2. All orders should be complete, explicit, and should specify the grades, terms and conditions of sale.

3. LEGAL CONTRACTS.

3. No order or contract is to be considered binding until the same has been duly signed by both seller and buyer, or legally authorized agents of either party. All regular salaried salesmen have authority to make contracts for sale of regular stock on regular terms, only. Any irregular stock, or irregular terms, are subject to the approval of the general office of the seller.

4. COMMISSION.

4. No commission man has authority to bind any seller on orders taken by him, and all such orders are not binding upon the seller until the same have been acknowledged by them as duly accepted orders.

5. GRADE TERMS.

5. The latest grade adopted by the different lumber associations should always be used in writing up each and every order or contract. When the latest terms are not used, or improper abbreviations are used, or any misstatements cause a misunderstanding, resulting in loss, it is held that the party first writing up the order shall be responsible, and shall sustain any loss incurred by reason of such errors or omissions.

6. TERMS OF SALE.

6. In cases where the terms or conditions of sale are not specified on the face of the order, the following regular terms shall govern: Consignee to pay the freight; 2 per cent discount of total amount, less freight, to be taken if paid within fifteen days from date of invoice; 1 per cent if remittance is made within thirty days.

Nonarrival of goods within the first fifteen or thirty days is no excuse for failure to remit. If buyer fails to take discount, freight can be estimated and reasonable deduction made for probable shortage or improper grade.

When the same amount of cash has been advanced or discount has been taken, on arrival at destination, not to be acceptable to the buyer or satisfactory adjustment cannot be made as to the acceptance of the stock, buyer has a right to demand return of such money as he has paid, or to allowing the shipment to be moved or disposed of elsewhere.

The terms of sale should be considered as much as possible as the price at which the stock is purchased.

7. SPECIAL TERMS.

7. In cases where the buyer is unwilling to buy the stock on regular terms, all special understandings should be noted on each order.

8. F. O. B. DESTINATION DELIVERY.

8. When the same is made at delivered price, f. o. b. cars, any destination, the seller is responsible for the safe delivery of all goods in connection with the order or invoice. Any damage or loss in transit or loss sustained on arrival upon the proper information being furnished in writing or on receipt of goods, or any loss, is held that any damage or loss sustained on account of delay in transit is a matter to be disposed of between the buyer and the transportation companies, the seller has no liability for the actions of the transportation companies, and it is not fair that he should assume such risk.

9. COMPLETE DELIVERY.

9. Delivery of goods by the seller is considered

complete when the car has reached the "yard" limits of the city or town destination mentioned in the order or contract.

F. O. B. MILL DELIVERY.

10. On all sales made f. o. b. cars shipping part the responsibility of the shipper ceases when the car is sealed and the bill of lading is delivered to the buyer, such delivery to be considered complete when the bill of lading is placed in the mails.

TIME SHIPMENTS.

11. The seller is not responsible for damage or loss sustained due to delayed shipment, from any cause whatsoever, unless some definite agreement as to what such loss will be on account of the material not being shipped within the specified time is shown on the order or contract.

12. Where date of shipment is a part of the contract, the buyer, in order to collect damages from the seller, must specify on the order at the time it is placed the penalty for such nonfulfillment of the contract.

CANCELLATIONS.

13. Where definite date of shipment is not specified on the order, the buyer is not entitled to cancel such orders inside of thirty days from the date of the order, without the consent of the seller, nor is any buyer justified in cancelling an order at any time thereafter without giving the seller at least five days' notice, by letter, where the distance from the buyer to the general office of the seller is not more than five hundred miles, with an additional day's time for each five hundred miles beyond the first five hundred miles. Time to be reckoned from the mailing date of the letter.

Three days' time will be sufficient to allow for wire cancellations.

The seller is to be protected in all cases where stock has been manufactured, or worked to apply in the order, provided the buyer is notified promptly what such charge or loss will be on the

17. Both buyer and seller are exempt from any loss or damage caused by strikes or acts of God over which they have no control.

Cancellation of orders has been a serious matter, and while leniency is necessary in times like these, the nearer we get to real trade ethics, the better it will be for us. I would like to have you interested in this proposition and authorize a representative to attend this conference and lend the cooperation of this association to a matter in which I think you are all interested.

A few weeks ago a "National Prosperity Association" was organized in St. Louis, which is also a good thing. You know if everybody cries "Wolf!" and cries it loud enough and long enough, pretty soon we will all imagine that there is a wolf around. It has been my experience that if we all howl about business going to the bow-woods it generally goes there, and this year, when trade is very quiet, it is becoming manufacturers in any line to try to realize 100 per cent of normal—and if each man is able to get just that 45 per cent from his own customers, he is doing all he can expect. On the other hand, if he goes out cutting prices, whom does he benefit? Possibly he has a few more orders this week than last, but he takes the trade of the other fellow, while his competitor may be sitting still, as he ought, trying to be satisfied with conditions and operate just as economically as possible, to meet a condition which no one can control.

The business men of the country are in today. In any times of depression it is a mistake to try to buy trade, because no man is going to let his trade get away from him, and an epidemic of that kind spreads worse than smallpox. If you are not satisfied with your own business, don't go out and try to get more by cutting prices on members of this association. The object of this General Prosperity Association is to bring men into closer touch on these questions, and to get away from times to change and something to turn up. It is bound to come, for this great country of ours stands still only about so long. The time is going to come when furniture men will need panels and veneers and lumber and everything else. That being the case, if you can hold on and sit quietly in the boat you are in for a time, we will all be better off. The influence of this Prosperity Association, which should spread among business men the country over, would pacify the man who thinks because his trade is dull he is going to do something for himself if he goes out and cuts prices 10 to 20 per cent. If we will join in this prosperity talk and preach a little sunshine, we can help the situation materially. The questions of running on short time, attending the association meetings, etc., are also important, and my secretary is only too anxious to put information in your hands to show you that everybody in the trade is in the same boat. If you will only take advantage of this you will all realize that no body is getting any advantage over you. There is nothing like a good old-fashioned "experience meeting" where everybody tells honestly what his troubles are. I attended a meeting of Chicago business men recently, and somebody said as it that, "I was, and I was, and I was, and I was" he ever saw, which I thought was a pretty good compliment for Chicago. Now, we ought and we can make this association the same thing. Let us all try to be real "live wires".

President Anderson: We might take up the appointment of a delegate to the Minneapolis meeting which Mr. Debaugh speaks of. What is your pleasure in regard to that, gentlemen?

E. F. SAWYER, CHILLAC, MINN.

PROMINENT MEMBER.

part of the seller if not allowed to ship out such portion as may have been worked to apply on the order, with the further understanding that shipments can be made within the time specified in the foregoing; but the buyer will not be bound to accept the shipment if it cannot be shipped out within the three or five days, regardless of the circumstances which may prevent the seller from doing so.

The buyer is not permitted to cancel any order after it has been placed in transit, without the consent of the seller, unless the seller is compensated for such loss or damage as he may sustain.

14. All verbal or telephone conversations relative to any contracts or orders must be promptly confirmed, otherwise there will be no evidence to hold either party.

15. With mail orders, the original order received from the buyer is to be considered the contract, and all settlements are to be made upon the basis of the same, unless the buyer permits the seller to make certain changes which may be requested in acknowledging the order.

16. Shipments may be made without such permission or is able to instruct the mill, settlement will be made on the basis of the buyer's receipt, or, such amendments as may have been made.

CHANGES AND ADDITIONS.

16. Any changes or additions must be agreeable to both buyer and seller.

Mr. Kline: I move the association be represented by our president.

The motion was seconded and carried.

President Anderson: In regard to the National Prosperity Association, do you want to take any action, or make any resolution in that connection?

Mr. Lord: I move that the secretary be instructed to draw up a paper and mail to each member of the association, asking them to cooperate along the lines of mutual prosperity and optimistic talk, and that a copy of same be forwarded to the National Prosperity Association of St. Louis, to give them that lack of confidence is a great difficulty in times like the present.

On being seconded and put to vote, the motion prevailed.

Mr. Wall: In my mind, the paper read by the president is a very useful and instructive one if we will make use of it, and I move you, Mr. President, that it be printed in a separate folder and at least a dozen copies be sent to every member of the association. I think they could use it to very good advantage, and the arguments presented therein would be very convincing to nonmembers and, I believe, would help very materially in getting them to join hands and boost the game along.

Mr. Wall's motion was seconded and carried.

Report of Arbitration and Grievance Committee.

D. E. Kline, chairman, presented the report of the Arbitration and Grievance Committee, as follows:

President and Members National Veneer & Panel Manufacturers' Association: The Arbitration and Grievance Committee has during the past six months, submitted to it three complaints. Each of these complaints was made by a member of the association. Two of them were for alleged improper conduct on the part of the consignees of carload shipments of drawer bottoms. The consignees in these cases were placed in the hands of the chairman of our committee at our December meeting. Your committee, through the chairman, has already written to the consignees of the two shipments of drawer bottoms, stating the conditions as presented to us, and the replies received, apparently, perfectly frank replies. In the meantime, by their expressing perfect confidence in a confirmation of the report of the stock shipped as they alleged it to be. In the course of the correspondence to express to the chairman of this committee your opinion that the complainants were in error in shipping rotary cut drawer bottoms and backs that were excessive in length and perhaps also in width. It was understood that this material should be furnished to machine-sized dimensions as expressed in the classification and grading rules of the association; in other words, the chairman felt that the shippers, in manufacturing, had failed to conform to the standard of the exact lengths ordered, and have made allowance, in clipping to widths, in the natural shrinkage, and in reducing for the drawer bottoms to the approximate widths of the shippers took issue with the committee in this respect, claiming that it was customary in all cases, in shipping machine size to send it in excessive lengths, as well as in approximate widths, and that the shippers charged the chairman of this committee with prejudicing the claim, because he had ventured to express an opinion as to what was the chairman of the committee took exception to this charge on the part of the shippers, and reiterated his previously expressed opinion, and confirmed that opinion by correspondence with prominent members of the association, yet at the same time stating to them in a formal way that he was not disposed to proceed any further with the complaints unless their unreasonable objections were withdrawn and they were left at liberty to view the stock and decide the compensation upon their merits. At this point correspondence between the complainants and the committee ceased.

Later to-wit, at a meeting of the Veneer & Panel Manufacturers' Association, it was noted that the club referred to the fact that his personal attention had been called to one shipment that was complainant's and that, although the consignees had expressed special solicitude in having this committee examine the stock and report upon its condition. The club concluded that it was within its province to take the matter up as a subcommittee, and therefore all the papers in this case were referred to the club's chairman, Mr. P. B. Raymond. Within a few days thereafter, and in reply to

his letter upon the subject, he received a letter from the complainants saying that they had concluded to bring suit against the consignees, and requested a return of the papers, which were, in consequence, forwarded to them. As to the second of these complaints, no official knowledge has been had as to any settlement. Your chairman was advised that the consignees had a very considerable amount of the amount of the original bill, and that they had concluded to use as much of the stock as was necessary to them to meet the balance of the balance that might remain. Your committee regrets to report that as to the settlement of either of these matters, it has not advised.

The third complaint made by these parties was in regard to an alleged improper deduction for freight on a partial carload shipment, which the understander and agreed terms were that freight should be allowed if a full carload was shipped. Your committee was very reluctant to believe that the complainants were right in this case, but as the complainants were practically taken out of its hands, no decision was rendered.

In confirmation of the position that the committee took upon these matters, the chairman referred the correspondence to the president of the association, who confirmed the chairman in his views and who also personally wrote to the complainants without eliciting reply.

As to the fourth matter, which is the above report that during the past six months there has been mentioned at various gatherings of veneer and panel manufacturers, the requirements reported by various people to whom goods have been shipped, and that in many of the instances the consignees were advised that disputes of this kind would be reported to the Arbitration and Grievance Committee of the association, for adjustment, the committee has arrived at satisfactory settlements of the questions involved. This seems to indicate that although the committee has actually performed no service in the matter of arbitrating claims, its existence has had the moral effect of adjusting matters that might otherwise have been impositions upon shippers.

Respectfully submitted,

D. E. KLINE.

E. W. HANNA.

Membership.

In the absence of Chairman M. C. Dow, the Membership Committee met on Monday, Nov. 16, and several other committees, but both the president and secretary urged all members to make an active effort to secure other outside concerns to join the association, stating that in point of influence and ability to accomplish broad and lasting measures for the trade, as large a membership as is possible to secure should be sought.

Finances.

The financial statement presented by the secretary showed that although a few members are in arrears for dues a good balance is on hand with bills receivable amounting to a considerable sum.

President Anderson: The Executive Committee has obligated the association to refund to the various clubs a portion of the salary paid our assistant secretary. We are to pay each club \$200 annually, so this financial statement does not cover all our obligations. We owe the clubs nearly \$300 at this time.

Costs and Valuation.

B. W. Lord, chairman of the committee on Costs and Valuation, reported as follows:

This is a hard proposition. Every one has his own idea of figuring costs, and the object of the committee was to try to interest each member in figuring with greater accuracy, so he would appreciate the value of his stock and be more careful in making prices in a manufacturing rotary cut stock. For instance, one gets so many different orders from the same log that it is very hard to keep each order separate, and of necessity it has to be done on a very broad basis. We started a bulletin on the cost of manufacturing rotary cut stock on a basis of log measure, for a whole year, and we also have another bulletin in regard to the cost of quartered oak. This is on a hand basis and we will start a bulletin on panels very shortly. The object was in the committee keeping up these bulletins unless the members want them, and unless they will give them some little attention and give the committee some help by replying to them.

We need the cooperation of all members in this proposition, because it means a great deal of work in starting and following them up systematically. In talking with Mr. Anderson some time ago he seemed to agree with the committee that if we could educate members up to cost it would have very strong effect on maintaining prices and would prohibit a great many foolish prices which are now made by some manufacturers because they do not know what their stock actually costs them. In the bulletin on rotary cut stock on a basis of log measure, a person is apt to figure the cost on manufacture alone, and forget items like overhead charges, carrying expense, etc.; and the reason we started it was to try to have the members realize what it actually costs to run the business. The committee would like every one who has any suggestion whatever, to help them with any class of goods, and, Mr. Chairman, I would much like an expression from some of your members as to whether they think it wise to follow this up, because we really do not want to go ahead and try to get this cost system down to a fine basis unless the men want it; so I will ask you to call on some of them regarding it.

Mr. Lord's remarks called out a great deal of commendation on the work of the committee up to date. All members seemed to be united in appreciation of it, and encouraged the committee to continue along the same lines, promising cooperation and support.

Railroad Classification and Claims.

P. B. Raymond, chairman of this committee, reported that they went to New York to appear before the Official Classification Committee and that they were given a fair hearing, but a short time after it received notice that the Railroad Committee could not see their way clear to make any change in classification at present.

Classification and Grading.

D. E. Kline reported for the Committee on Classification and Grading that the Veneer Manufacturers' Club presented a set of rules at the last meeting that were officially adopted; that the Quartered Oak Club has a set of rules which they were using at present; and that the Panel Club had just been working on a set of rules, which were hardly in shape to be distributed.

It was suggested that these rules be read and considered by the association as a whole, which was done, whereupon M. M. Wall moved that the association approve and adopt the rules as read, empowering the committee to make such slight changes in wording as would put the rules in more readable shape, before they are printed or distributed to members.

Mr. Wall's motion was seconded by I. P. Grafman, and on being put to vote, prevailed. Considerable discussion followed, the fact that it was desirable to make all the rules of the clubs conform consistently with each other, and it was deemed wise that the new rules of the Panel Club be mailed to the other chairmen before being finally printed and distributed.

Mr. Kline's Paper.

The following very interesting and logical handling of the question "How to run the veneer factory on half time and prevent loss" was presented by D. E. Kline of Louisville.

Mr. President and Gentlemen of the National Veneer & Panel Manufacturers' Association: The secretary has requested me to advise you: "How much does it cost to make veneer and run a factory half time, or how to prevent loss."

It seems to me that two distinct subjects are embodied in this caption. Our system of cost ought to show each of us how much it costs to make veneers or panels when running half time; but how to prevent loss is quite another story.

It may be possible to run a factory under existing conditions without loss. Mr. Orr's experience is to the effect that it is a very close proposition. If it were after July 1, I could say

positively, but at present I am in some doubt.

It is to be assumed that each of us maintains some system of costs; systems that are doubtless more or less thorough. Some of us perhaps have schemes that may give us, at stated intervals, approximately the varying costs under prevailing conditions. I am inclined, however, to the opinion that the majority of us base our figures of cost on "average conditions" which is probably a safe proposition under normal conditions, but I believe will put us badly at sea under the adverse conditions of running short time or half time.

Cost is made up, first, of the timber or other raw material.

Labor follows and is of two kinds, productive and non-productive.

Productive labor is such that can be timed or measured to any operation. Non-productive labor is such that cannot be timed or measured, and includes managers, superintendents, foremen, engineers, firemen, watchmen, sweepers, oilers, etc. Non-productive labor, to some extent, may be charged to particular departments or operations, but must largely be charged to the factory as a whole and apportioned as best we can.

Factory expense follows, included in which are rents, taxes, insurance, interest or discount, fuel, oil, light, freight, depreciation of property and equipment and perishable tools, such as saws, knives, axes, adzes, sand paper, files, emery wheels, etc.

General expense, including inspectors and packers, cartage, office salaries, office supplies and postage, and finally,

Selling expense, including salaries of salesmen, traveling expenses, advertising and commissions.

Now, assuming on the previous experience plan, that for any previous period these items of materials, labor and expense of all kinds, which enter into the cost of placing our goods upon the market, have been carefully and correctly subdivided and apportioned, and that the correctness of our estimates has been verified at stock taking time—what is the effect upon our figures when short hours of running come around? Hands may be laid off; that stoppage of expenditure speaks for itself. But what about taxes, insurance, managers, superintendents, foremen, salesmen, office help on full salaries—these still cost 100 per cent in expense to your fifty per cent or less of output. It is also a fact that the same crew of hands engaged in the same kind of work does not produce in five hours' labor fifty per cent of the quantity they produce in ten hours' labor. A well-meaning force of hands, knowing that work is scarce and that it is probable that sooner or later a complete shutdown will occur, will not work with the same interest and activity on short hours per day as they do when there is plenty of work ahead and hours are full. Another cause for increased proportional cost is the inevitable fact that orders are not as well balanced for all departments of work when orders are scant, as when they are plentiful, by which I mean that there is likely to be more work in proportion in some departments than others and that, therefore, some one or more departments may be waiting on others, or killing time at our expense.

To sum up, in my opinion, the proportionate cost of labor is largely increased by reason of short hours.

There is a point in everybody's factory (measured by output with relation to cost) where profit-making starts. Where that point is in each one's factory, I cannot say, but I am convinced that it is possible to run a mill at a profit less of manufacture to run half time and make some profit, that it does not exist in this line of business. Our profits for many years, and under the best conditions, have been too little. Some benefit has accrued through association during the past two and one-half years, but we are far too young as an association to have convinced all of those engaged that their only salvation is in association. The association, in my opinion, is the only remedy.

Cutting of prices is not a remedy, but an aggravation of the evil. I thoroughly believe that this has been successfully demonstrated during the past few months. In our club organizations, where we have been getting together at short intervals, we have learned that our experiences were identical, viz., few orders and consequently short time. The cutters of prices, however, are for any amount, we have fared no better as to volume than those who have maintained prices; they have made no more hours, they have had the added cost, and the reduced selling price, and are, therefore, in worse condition in my opinion than if they had stood firm until the evil days are past.

We are going through troublous times and the end is not yet. It is not a case of the survival of the fittest, unless the fittest is he who conserves his capital by pursuing the most careful and cautious methods—one who does not rush in and take any contract at any price, or sell anyone, no matter what his financial and moral responsibility may be, for the sake of getting his orders. Such an one may have as much when business resumes as he had when it ceased; otherwise, we will have less and much less, and may work serious calamity to some of us.

I do not know that I have presented any arguments to you to substantiate my view. It is perhaps the case that my views are more in the way of assertion than argument; but I hope that I have presented some little food for thought.

Mr. Anderson: We would like to hear some expression of opinion on the work that has been done by the Executive Committee in employing an assistant secretary, and something about the credit and collection department.

Assistant Secretary's Work.

Mr. Young: As to what has been done since my appointment as assistant secretary, I can tell you in a very few words; as to what we hope to accomplish, I fear that would take more time than you are willing to devote to hearing me. With regard to credit and collections, as to how we intend to handle the money matters exactly, or go into their details, but to go after information from members of the association that cannot be obtained through the average agency, in the way of personal observation and experience. This experience bureau we will endeavor to make just what the name implies. It will bring to hand information peculiarly valuable to members of this association manufacturing all kinds of stock, because you all sell to about the same houses, and the experience of a rotary-cut man with any one of these buyers will guide a quartered oak or a panel man, and from it the latter may be able to learn what he may expect when he deals with them. Each member ought to compile a list of all buyers on his book for the past several years, classifying them according to the manner in which they are treated in regard to inspection, payments, unjust claims or demands, etc. It depends on members of the association whether or not this service will be valuable. Of course, you understand the information will be confidential with me. It is a trust which you repose in me as to that extent, and I want every one to cooperate. As to collections, I have done little as yet, but have had results.

Mr. Anderson: I am sure we don't need to state that we all have confidence in Mr. Young, and I think the association as a whole is in favor of the work an authorized member of the Executive Committee, to save time, I would like to ask that any member who has any objection to offer, or suggestion as to a desirable change in the plans outlined for this information bureau, shall talk to us about it at this time. Is there any one who is not in hearty cooperation with this movement?

Various members expressed themselves as eminently satisfied with the handling of affairs and recommended placing accounts in Mr. Young's

hands for collection, trying out the plan until the next meeting.

Mr. Kline: I move that action of the Executive Committee in the matter of the employment of Mr. Young be established as the basis of the credit and inspection experience bureau be hereby confirmed.

The motion was duly seconded and carried. President Anderson read a number of letters from members regretting their inability to be present, and then called for several other papers which had been prepared for the occasion.

Mr. Williamson's Paper.

B. W. Lord read a paper by D. W. Williamson of Baltimore, who was unable to be present, on "Is the Price of Veneer High Enough as Compared with Lumber Values?"

The principal difficulty you will encounter when you undertake to compare the value of veneer with the value of lumber will be to establish a basis of comparative cost. We mean to say that the production of veneer is so radically different in all its details that a comparison of its cost with the cost of lumber is almost impossible. To be sure, they are both produced from the same kind of trees, but the differences between them begin at the stump. Veneer logs and lumber logs are not the same, several that would be accepted by the sawmill would do for veneers. Therefore the sawmill men work on a different basis in the forest except the roots, while the veneer mill must leave 50 per cent of the forest or utilize it in some other way. For this reason, and for many others, the proposed resolves itself into a résumé of the differences between the method of production of veneer on the one hand, and the method of production of lumber on the other. For it must be understood in the outset that the comparative cost of veneer and lumber cannot be considered primarily on the basis of selling price as a resultant.

Now, the sawmill goes to the timber. Usually the timber is first procured and the sawmills cut it where the logs can be most economically mobilized.

There is no necessity for securing orders in advance of operation—the products are standard. There is little cutting to specifications; the grading is done after the lumber is cut and ready to be produced. The veneer mill logs are cut into lumber as it comes to the mill. The results are that the timber used by a sawmill is procured in large quantities, and the selection and no freight—while the processes of manufacture are uninterrupted and the products are guided by a knowledge of what the market demands.

Not so with the veneer mill. There is little or no advance order, and the veneer mill logs must be selected for veneer logs and collected from every direction, leaving out the poor and unfit logs and getting the prime, suitable logs for the purpose in view. No logs are too good; the best are the cheapest, and consequently the cost of veneer is high. Some sawmills sell their best logs to veneer mills for more money than they would bring if sawn into lumber.

It follows that the cost of veneer logs greatly exceeds the cost of saw logs. There are some objections to this statement, but they only prove the point, having paid more for logs and paid a considerable freight tariff because the mill cannot be located near the forest. In the veneer mill, the veneer mill then find that it has an easier proposition than the sawmill? By no means. The mill cannot proceed to order veneer to the market (except possibly in the case of quartered oak veneers). It must proceed to secure orders. That it must await the pleasure of the customer. The customer is an interrupted product. The orders are often small, the specifications are strict, delays are innumerable and costly. Deliveries are wanted in short order. The buyer writes: "If you cannot ship our bill in ten days we will order elsewhere. The stock must be delivered and free from knots, splits and other defects. Your grading rules cannot apply, as we require this for a job that will not stand to be questioned. We will furnish it the way we want it. We wish to favor you with the order, but the stock must be equal to what we have been getting from others. Now, give us a good lot of veneers and we will send you our business. Other people are clamoring for it, and we want to get started with you."

Almost the entire business of the veneer mill is made up of just such exasperating orders. Logs of every variety must be kept on hand, ready to ship at a moment's notice. In many cases, so that orders sent out too late, by neglect or oversight, can be filled in a hurry and shipment "rushed." The veneer mill is a busy, continuous work. It makes the operations spasmodic and its system defective.

It will be seen that the sawmill has immense advantages in the lower cost of lumber and in the character of its orders; but the greatest

come necessary for the active handling of its affairs to be placed in the hands of a paid secretary whose particular work it will be to promote its interests, and who will be able to give time to carrying out the details.

There is a man who is perhaps more suitable to fill this position than any other individual in the United States, and the association is to be congratulated on having been able to secure him. He is H. D. Hartley of the Pioneer Pole & Shaft Company of Plaqua, O.

Mr. Hartley's practical experience in the hickory trade in the shaft and pole line, coupled with his former experience in connection with the Forest Service at Washington, and added thereto his liberal education and demonstrated ability, insures for him the confidence of the association under an enlarged and advanced policy.

The retiring secretary, F. A. Curtis of Chicago, and his associates deserve credit for bringing the work to its present condition, and with little cost to the association, making possible the larger work now before this organization.

Mr. Hartley will be located in Detroit, Mich., where all correspondence should be addressed, care box 108.

Building Operations for May.

Official reports of building operations in forty-five leading cities throughout the country received by the American Contractor, Chicago, show somewhat of an improvement as the season advances. The aggregate loss, as compared with May, 1907, is twenty-five per cent, whereas the previous month suffered a decrease of thirty-three per cent, as compared with 1907. Only ten cities reported an increase, ranging from one to 163 per cent, while thirty-five reported losses ranging from two to seventy-three per cent. The details are as follows:

City—	1908, est.	1907, est.	Per cent gain, loss.
Albany.....	\$ 885,952	\$ 749,010	18
Birmingham.....	103,400	194,670	46

In the Toils.

HARDWOOD RECORD readers will be interested to know that the notorious Charles G. Horton of New York City will be placed on trial at the instance of the postal authorities on or about June 17. Under various aliases and sundry false company names he has been engaged in swindling lumber operators for the past twenty years, and in spite of the efforts of the Record

has succeeded in defrauding a good many of its readers. During the last year the editor of this publication has sent out at least fifty warnings to individuals to avoid all business transactions with Horton's Consumers Lumber Company and has advertised his crooked dealings for three years past in the columns of the paper.

There is so much evidence of swindling operations accumulating against Horton that it is doubtful if he escapes without a penitentiary sentence. The specific charge on which he is now under arrest is the use of the mails for carrying on fraudulent enterprises. The United States district attorney of Kings county has been assisted in securing evidence by the Lumbermen's Credit Association of this city and by several lumber associations. Horton has been arrested heretofore, but up to this time has succeeded in escaping a penitentiary sentence. It is to be hoped that now he will be put in such seclusion that he will not be able to molest lumbermen for some time to come.

Death of Henry Hays Coe.

It is with profound sorrow and regret that the Record announces the death of Hon. Henry Hays Coe, president of the Coe Manufacturing Company of Painesville, O., which occurred May 18 at his home.

Mr. Coe was born in Charleston, O., June 6, 1830. When twenty years old he removed to Painesville, where he began his business career. In 1852 the firm of Anderson & Coe was established for building machinery. Eventually the firm name was changed to Coe & Wilkes, and the business gradually grew into the manufac-

THE LATE HENRY H. COE, OF PAINESVILLE, O.

ture of venter machinery, based on the patents taken out by Mr. Coe. Later Mr. Wilkes retired and in 1900 the house was incorporated and became the Coe Manufacturing Company, the largest builders of venter machinery in the world. Mr. Coe was its president up to the time of his death.

Mr. Coe was a veteran in the Civil War, serving long and honorably, and in the community where he resided was often honored with responsible offices, among them that of county treasurer and mayor. In business and private life his character was unassuming, kindly and above reproach. In all his dealings with fellow manufacturers or citizens he was frank and honorable. Mr. Coe leaves one son, Harry Proctor Coe, upon whom the active management of his large affairs will devolve, and a daughter, Mrs. Henry B. Kimmel of Trenton, N. J.

A Great Concatenation.

As a precursor of what's going to happen at the annual concatenation of Hoo-Hoo at Chicago in September Vicegerent Fuller and a corps of able assistants pulled off a great concatenation at the Great Northern Hotel on the evening of June 5. There were about 150 Hoo-Hoo in attendance, including many distinguished members from out of the city. Forty-five candidates were permitted to have their eyes opened and stroke the fur of the Great Black Cat. It was the largest and most successful concatenation ever held in Chicago. Details of arrangements were elaborate and very pleasing. All the restaurant and parlor space on the second floor of the Great Northern Hotel were given over to the function. The Hoo-Hoo ceremonies lasted until after midnight, and these were followed by a very elaborate luncheon and no end of speech making, good order and good fellowship.

The order is to be congratulated on the realisation of interest in its affairs in Chicago.

Opens Toledo Yard.

D. G. Courtney, the well known hardwood manufacturer of Charleston, W. Va., who operates several large mills in that vicinity, has opened a distributing yard at Toledo, O., under the supervision of W. T. Hubbard, who is well known in the Toledo trade. This yard has been established with a view to making shipments more promptly in the territory centering at Toledo than could possibly be done from the mills. It will also enable Mr. Courtney to fill mixed orders to better advantage. The yard will be stocked with a full line of poplar, oak, basswood, ash, chestnut and gums; the specialty will be panel poplar, which can be furnished in any width or thickness.

University Crews Bemoan Scarcity of Red Cedar.

The material most used for making racing shells is red cedar. A new set of boats is purchased each year by most colleges, causing an ever increasing demand for this wood, and prices are apt to advance unless a growth of good cedar for the use of builders is found shortly.

It would be difficult to give a conservative estimate of the outlay each year for racing boats, when one considers that Cornell, Columbia, Georgetown, the Naval Academy, Syracuse, Pennsylvania, Wisconsin, Harvard, Yale, Princeton, New York University, California, Stanford, and Washington all maintain rowing crews, besides the many private rowing clubs throughout the country. The cost of an eight-oared shell is about \$800, and a four-oared about half that.

Tropical cedar has a too soft, though there is a report that there is a quantity of excellent cedar in Cuba, and with the growth of colonies along the line of the railway there is a chance that this will be worked. As some parts of Cuba are hardly tropical, it may be that some cedar of the right sort will be imported from there eventually.

There has been much experimenting in boat-building for college crews. When aluminum came first into popular use the builders made experiments with it. They found soon, however, that it would not do. Neither did the paper shells prove a success, being unable to stand great strains, and even more fragile than cedar boats.

Wisconsin News Notes.

The summer sawmill season at Bayfield started June 1, when the mills of the Hayfield Mill Company and the Washburn Lumber Company began operations. The mill of the Red Cliff Lumber Company will also begin operations soon, and then the milling season here will be under full swing.

The Flambeau Lumber Company of Lac du

Flambeau closed down their mill on June 3 for the summer. This company has a large amount of all grades of lumber on hand, and the demand being poor it was thought advisable to close for the next few months.

The Glidden Veneer Mills of Glidden, which have been closed for some time, will resume operations in the near future. It is reported that they will saw more hardwood than heretofore.

The Nash Lumber Company of Shangolden, whose mill was burned about a year ago, will not rebuild till early next spring, at which time they will erect a larger mill and one that will have a capacity of about 55,000 feet. They were very fortunate in having a large quantity of lumber on hand at the time of the fire, and on which they are now enjoying ready sales at good prices.

The hardwood lumber mill of Bekhne Brothers at Park Falls is running full time with a full force of men. They have enough logs on hand to keep the mill running for some time, and shipments are being received almost daily. They report a very satisfactory business.

The Roddis Lumber & Veneer Company of the same city is running to its full capacity to meet the demand upon it. It has a fine line of lumber on hand and full stock of veneers.

The Edward Hines Lumber Company has started its summer logging work in the woods near Cusson, Wis., and when the work is all under way there will be about 1,000 men employed there.

A machine to make 20,000 staves a day has been purchased by the St. Croix Lumber Company to be installed at Nimmesing Lake, Wis. The machine is an innovation in this district and will effect economy.

C. P. Crosby of Rhinelander says that trade in his line, or at any rate in his own business, has improved twenty per cent over previous months, and that there is a fair demand for birch, maple and basswood, as well as a light demand for red oak, ash and other hardwoods. Prices are quite firm, and in a number of cases of late, where he made quotations upon inquiries, he secured every order but one, in the latter case it was a question whether the stock was dry enough for the customer's wants.

The Mason-Donaldson Lumber Company of Rhinelander will rebuild their hardwood mill at Donaldson which was destroyed by fire a few weeks ago. Work will begin at once.

R. C. Dayton of the Wisconsin Veneer Company, Rhinelander, says business is keeping up fairly good with them, and he anticipates a good fall and winter business. This company has one of the best equipped veneer mills in the Northwest.

The Hawkins Lumber Company has removed its office from Minneapolis to Hawkins, Wis. In order to be in close touch with the mill. This company has a fine tract of timber and a well equipped mill.

J. T. Edwards, manager of the Medford Fruit Package Company of Medford, informs the Record that they have all the business they can handle, and especially in the berry box line. This company has two veneer machines running ten hours a day, cutting birch and red oak. A new machine has been ordered from the Merritt Manufacturing Company, Lockport, N. Y., which will cut to 100 inches.

A. R. Weick, secretary-manager of the John Weick Lumber Company, Stevens Point, has just returned from an extended trip in California. He was accompanied by two sisters, and was joined in San Francisco by his brother of Spokane, Wash. The party toured the coast to southern California and returned in an automobile.

The Western Steel & Iron Company of De Pere, Wis., have put in a sawmill in connection with their plant. Hereafter the company will saw all of the timber used in the manufacture of the digger and spade handles and also for the pant hook handles. Seventy-five thousand

feet of maple logs have been purchased by the company for the work.

R. C. Merryman of Marinette has just returned from a four months' trip in the West. He was accompanied by his wife, A. A. Fairchild, who has been connected with the N. Ludington Company of Marinette for twenty-five years, and for the past nine years been manager of same, has resigned and will leave the company on the 10th inst. Mr. Fairchild will go to British Columbia, where he will manage a large plant. His family will reside in Spokane.

Eben Glenn & Co. of Port Wing will put in a sawmill near Washburn for the purpose of cutting what hardwood timber they have along the line of the Northern Pacific between Washburn and Iron River.

The Maple Lumber Company, an Iowa corporation, with a branch at Weyerhaeuser, Wis., has filed articles and a statement to operate in Wisconsin. The company is capitalized at \$40,000 and has Wisconsin interests of \$34,286.

Superintendent Clark of the John Schroeder Lumber Company, Ashland, says they are having a fine run of logs just at this time and are running their mill full time.

The Stearns Lumber Company of Ashland has finished its drive of 21,000,000 feet of logs down Bad River. The company will operate two summer logging camps, employing 200 men. A loss of \$30,000 was incurred by fire on May 12, at Boylston, on the Great Northern line. The bush fires did the damage, burning a portable sawmill of Murphy Brothers, several hundred thousand shingles and quarter of a million feet of lumber. Several forest fires have been set by careless fishermen.

What will probably be the last log drive that will ever be seen on Black River is now in progress near La Crosse. A large crew is at Dells dam, twenty miles above Black River falls. The late rise in the water has given a fine driving stage and the drive will continue as long as the water will permit.

M. J. Sullivan, manager of the New Orleans branch of the National Hiscuit Company, has returned to Milwaukee and will again make this city his permanent home. "Regarding the South, I can only say that business there is progressing but slowly," said Mr. Sullivan. "This is due largely to the inactivity in the lumber business. Export activity has also fallen off considerably." Mr. Sullivan is well-known among the traveling men of the state. He was formerly grand counselor of the United Commercial Brokers of Wisconsin.

George H. Foster, president of the G. H. Foster Lumber Company of Oshkosh, has been chosen president of the Oshkosh fire and police patrol board. Mr. Foster is one of the best-known business men of the city. He is the son of the late Carlton Foster, a pioneer lumberman of Oshkosh and one of its earliest mayors. Mr. Foster has been identified with the lumber business all his working life. He was associated with the owners with the Foster-Hatzer and later with the Foster-Lothman companies, and some years ago organized the company of which he is now at the head.

Lumbermen's Golf Association.

The annual tournament of the Lumbermen's Golf Association will be held on the links of the Chicago Golf Club at Wheaton, Ill., Tuesday, June 23. Several trophies will be offered and promise to provoke a lively contest. Among them are the Hietter cup, to become the personal property of the lumberman winning it three times, and which may be contested for every year by any lumberman golf player in the country, provided he first joins the Chicago association. This, with the American Lumberman cup, the Pate cup, presented by the D. S. Pate Lumber Company, the Mashek cup, and three others, presented by the association, will make the tournament exceedingly interesting and worth while. Dinner will be served in the evening and the annual meeting held at that time.

The association wishes to call attention to the fact that its object is not merely to play golf, but to promote good fellowship in the lumber fraternity, and that consequently the dinner which follows the meet is of equal importance. Those who cannot attend the tournament will be as heartily welcomed to the dinner.

Wheaton is situated on the Chicago & Northwestern Railway and on the Aurora, Elgin & Chicago electric line, and is easy of access by automobile. The Chicago Golf Club has generously offered the use of the links from Monday, June 15, until the day of the tournament, except Saturday and Sunday. They also advise that members may engage rooms for Monday or Tuesday night, provided arrangements are made in advance.

Frank B. Stone, Railway Exchange, Chicago, is secretary of the Lumbermen's Golf Association.

New Philadelphia Concern.

On May 27 a corporation known as the Monarch Lumber Company, with a capitalization of \$50,000, took over the business of John J. Rumberger of Philadelphia, who is president of the new company; William T. Latham of Buckingham, W. Va., is vice president, and Howard B. France of Wilmington, Del., is secretary and treasurer.

As is well known, Mr. Rumberger has been engaged in the lumber trade during his entire business career, and is thoroughly acquainted with both the manufacturing and selling ends.

JOHN J. RUMBERGER, PRESIDENT NEW MONARCH LUMBER COMPANY.

Mr. Latham has been engaged in the manufacture of lumber for seventeen years, and is highly regarded. Mr. France began business with the Jackson & Sharp Company, car manufacturers of Wilmington, Del., when he was a youth, and was allied with that concern and its successor, the American Car & Foundry Company, for eighteen years. At various times he has been lumber buyer and superintendent of the wood-working department.

The new company is made up of competent and hustling elements, and should certainly secure its share of the eastern trade.

Miscellaneous Notes.

Recent dispatches from Appleton, Wis., say that Wisconsin manufacturers of print paper have advanced a proposition which, if adopted, will revolutionize the print paper industry of the country and the newspaper industry as well. They propose that newspapers in the future be printed on black instead of white paper, using white ink, thus bringing about

a saving of millions of dollars annually in pulp wood, assisting in the preservation of forests, and reducing the price of newspaper to about one-half the present price. Black paper can be made of old newspapers and almost any fibrous stock, while white paper requires spruce and hemlock wood. Wisconsin paper manufacturers intend bringing the matter before the eastern manufacturers, and if possible bring about concerted action with the publishers of the country. Action will probably be taken immediately after the conclusion of the congressional investigation now on in Washington.

The Camden Mill Company of Camden, Ark., which recently suffered a fire loss is again running full force. At a recent meeting of the directors it was decided to build a large sash, door and blind factory and to increase the capital stock from \$50,000 to \$100,000. Fourteen machines for this work have been ordered and will be installed as soon as the buildings can be erected. The company has also begun erecting adjoining its plant, which will be used as a site for the new buildings.

G. F. Blanchard, secretary of the Fayetteville Lumber Company of Fayetteville, Ark., who also owns a large planing mill and lumber yard, will make Talihina, Okla., his headquarters hereafter, installing a nice office building.

The Ozan Lumber Company, Prescott, Ark., is again running its night shift. This feature of the plant having been discontinued during the recent lull in the lumber trade.

The Steenerson Brothers Lumber Company was recently incorporated at Felton, Minn., at \$100,000.

A charter of incorporation has just been granted the Houka Tie Company, Houka, Miss., who will engage in a general timber and lumber business, especially railroad ties, piling and bridge timbers. The incorporators are D. H. Hall, G. H. Langford, and S. J. Riggan, and the amount of capital stock \$10,000.

The mill of the Midway Lumber Company, at Seale, La., commenced operation on April 6, and has been running ever since. Over a hundred men are given employment, and both pine and hardwood lumber are being manufactured. The operating force is A. E. Seale, president and general manager; L. P. Seale, vice-president.

The Klemeyer Lumber Company has been incorporated at St. Louis with a capital of \$50,000. W. T. Jones, H. C. Bayker and W. W. Selbert are interested.

The Hollywood Lumber and Coal Company of Berkeley Springs, W. Va., has purchased a tract of 7,000 acres of timber and mineral land in Webster county, West Virginia. The land is rich in hardwoods and contains a valuable seam of coal. The property will be developed at once. C. E. Glenn of Belington is manager and J. W. Scott of Pittsburgh has large holdings in the company.

The plant of the Myers Manufacturing Company at Warsaw, Ind., is busy night and day manufacturing hay cars, step ladders, porch swings, etc.

Consul General Robert J. Wynne of London reports that there is a decrease of 35 per cent in shipbuilding in the United Kingdom over the year ending in March, 1907.

In the construction of the earliest railways of Indiana, Illinois and Missouri there were several hundred thousand cross-ties used, many of which endured for twenty to thirty-five years without decay.

The J. B. Veeder Lumber Company of Oklahoma City and Morgantown, N. C., has been organized and capitalized at \$25,000.

E. O. Faulkner, head of the tie and timber department of the Santa Fe railroad, has just returned from a six months' trip around the globe, for the purpose of investigating supplies of timber suitable for ties, in various countries

of the Orient, and making a special study of the eucalyptus in Australia. Mr. Faulkner first went to Hawaii to investigate the ohia wood, about which considerable has been published, and which resulted in the Santa Fe purchasing a large quantity of ties of that wood. From there he went to Japan, the Philippines and Australia. His observations will result in extensive experiments in eucalyptus growing, and that the wood is remarkably well suited for ties Mr. Faulkner believes there is no question. However, it will require perhaps twenty years to determine the full value of the tree for this purpose.

The portable sawmill of George Stevens at Great Barrington, Mass., with 2,000,000 feet of sawn chestnut and other lumber, was destroyed by fire the last of May.

The Buckley Lumber Company has been incorporated at Abingdon, Va., by F. B. Hurt and others.

Repair work on the tracks of the Pennsylvania railroad on the main line east of Pittsburg and the Panhandle to the west, will begin immediately. With a final inspection from section foremen, and prompted by results of recent investigations, it is said that the Pennsylvania will go into the market within the next thirty days for more than 1,000,000 cross ties. Orders for additional trackage repairs and bridge improvements will follow and the repair gangs will be largely increased. The repairs on the main line and the Panhandle out of Pittsburg have been neglected in the past six months. It is asserted, as they have not been in ten years.

The H. J. Allen Lumber Company, recently incorporated, will engage in a general lumber business at Mounds, Ark., with its principal office located at Memphis, Tenn. The incorporators are James H. Allen of Memphis, Tenn., Gus K. Jones and Chris Ledwidge of Little Rock. The company is incorporated with a capital stock of \$10,000, all of which has been subscribed.

Another new incorporation is the Hood-Hay Lumber Company of Wheeling, W. Va., with chief works in Wetzel county, West Virginia. Capital stock \$150,000.

The McCoy-Isabell Lumber Company of Horatio, Ark., has dissolved partnership.

According to communications received from Lefebvre's Spur, on the line of the Escanaba and Lake Superior railroad, a large number of ties and a quantity of logs belonging to the I. Stephenson Company of Wells, Mich., were

threatened with destruction when a forest fire broke out near that place recently. The fire was discovered by A. Heyman, who lives at the Spur, and with the members of his family, after working for several hours, he succeeded in stopping the progress of the flames and prevented the loss of a large amount of property.

The Boyes Monorail Coaster Company of Brooklyn, N. Y., has been chartered, with a capital stock of \$25,000. It will engage in the manufacture and sale of roller coasters.

The Canadian Clothship Company of Arrprior, Ontario, will soon have its plant in running order to commence manufacturing these unsold necessities.

On May 24 fire attacked the plant of the National Box Company, Thirty-eight and Morgan streets, Chicago, destroying 2,000,000 feet of lumber, three frame buildings and 150,000 wooden pallets, causing a damage exceeding \$150,000. Five firemen were overcome while fighting the blaze, which could be seen for miles and attracted a crowd of 20,000 people. That the fire, the second in origin, seeks to damage the plant, was of incendiary origin is believed by officials of the company. An investigation will be made.

The American Timber and Lumber Company has been organized at Philadelphia, Pa., with a capital of \$125,000. The incorporators are J. T. Flournoy, L. P. Thomas and C. F. Thomas.

The Hawaii Mahogany Lumber Company is considering a proposition to furnish 2,500,000 ties for the Chicago, Milwaukee and St. Paul. The company is installing machinery in a new mill on the island of Hawaii, which will be used entirely to cut railroad ties. It heretofore has operated a small mill, but with the additional machinery it will be possible to put out 2,000 or more ties a day. The timber used for the purpose is known as ohia. A big contract has been secured for furnishing ties for the Santa Fe.

The Universal Lumber Company has been formed at New York City, with a capital of \$100,000.

The Railway Lumber and Supply Company has been incorporated at Kansas City, with a capital stock of \$25,000. L. H. Atkinson, C. V. Dodge, Jr., and A. Follett are among the incorporators.

Fire recently caused a loss of \$30,000 in the Kalamazoo Kitchen Cabinet Company's factory at Kalamazoo, Mich., which was only partially covered by insurance.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

CHICAGO

The editor of the HARDWOOD RECORD acknowledges receipt of an invitation to be present at the forthcoming eleventh annual meeting of the National Hardwood Lumber Association at the Hotel Pfister, Milwaukee, June 11 and 12, 1908.

E. Payson Smith of the E. Payson Smith Lumber Company, Minneapolis, called on Chicago friends the last of the month.

J. Gibson McIlvain, Jr., of the well-known hardwood house of J. Gibson McIlvain & Co., Philadelphia, spent several days in the city recently.

A. Fellabaum of the Frankfort Handle Manufacturing Company, Frankfort, Ind., was a caller at the RECORD office May 27.

A \$100,000 fire recently visited the plant of the Standard Sash & Door Company at Fifty-eighth street and center avenue, following a series of explosions believed to be of incendiary origin. Scores of firemen worked for several hours in an attempt to extinguish the flames, but did not succeed before several individuals were injured, and a number of adjoining buildings damaged. It was reported that there was

no insurance on the building of the sash and door plant, nor on the lumber which was consumed.

Giles Wright of the Giles Wright Lumber Company, Ashland, Ky., was in the city last week. Mr. Wright reports that he had a very satisfactory trade in oak and poplar.

W. A. Gilchrist of the Three States Lumber Company, Memphis, was a visitor to the Chicago market June 3.

Tom J. Christian of South Bend, Ind., sales manager for Miley & Wertz of Evansville, called at the RECORD office June 5. Mr. Christian reports that trade is fair, and seems to be improving; he finds it specially strong in quartered oak.

The stock has arrived at the editor's office. However, he bears a token slightly different from his usual stock in trade; this time it is a new edition of the Crescent Machine Company's catalogue, handsomely illustrated with cuts of the company's famous hand-saws, saw-tables, jointers, disk grinders, shapers, planers, boring machines, etc. Several new machines are also shown. The catalogue may be had by anyone interested in this line of tools, on application to the home office at Leeton, O. The advance announcement of the book ran in the form

of a huge card representing a stork, carrying in his bill a card descriptive of the new edition, which creates considerable amusement and forms an excellent ad for the Crescent Machine Company.

C. H. Martz, general manager of the Good Land Cypress Company, which has its offices in New Orleans and mills at Chacaboula, La., spent several days in this market. The Stinsons, J. and S. R. Lumber Company, an Alabama corporation, has opened Chicago offices at 270 Dearborn street, and will engage in the wholesale lumber business. The concern is capitalized at \$50,000.

Fire attacked the plant of the Chicago Millwork Supply Company at West Twelfth and Michigan streets June 4, destroying more than 200 employes into the street. The loss to the building and contents reached about \$15,000.

W. B. Mershon, the well known lumberman and sportsman of Saginaw, Mich., left on June 4 for a trip to the Casapedia salmon fishing grounds of Canada, to be gone a month. Mr. Mershon is accompanied by a party of friends. J. Stimson, well known lumberman of Huntington, Ind., made the Record a pleasant call June 10. Mr. Stimson reports a very good trade and is optimistic over the immediate future of the hardwood lumber business.

Henry Ballou, superintendent of Cobbs & Mitchell, Inc., of Cadillac, was a welcome caller at the Record office June 10.

Frank F. Fish, the popular secretary of the National Hardwood Lumber Association, has survived another streak of ill luck, which it was thought for a time might prevent his attending the Milwaukee meeting. On June 5, while attending a ball game, Mr. Fish stepped upon a chair, which broke down under his weight, causing him to suffer a complete fracture of one of the ankle bones, and severely strain the ligaments so that he will be practically laid up for some time. However, the ankle was placed in a plaster cast, and with the aid of ambulances, stretchers and crutches, Mr. Fish states he will positively attend the convention, although he undoubtedly ought not attempt the many duties which will naturally devolve upon him.

Thos. W. Howlett, representing the Philadelphia Textile Machinery Company of Philadelphia, was a caller at the Record office June 8. He reports an improvement in the veneer dryer machinery trade.

J. H. P. Smith, president of the Hardwood Lumber Company, Ashland, Ky., spent several days among his friends in the trade during the week. He reports an increasing and satisfactory trade.

Lewis Doster, the popular secretary of the Hardwood Manufacturers' Association, was a Chicago visitor during the week.

A. B. Garrett of Fort Madison, Iowa, manufacturer of black walnut, called at the Record office on June 10.

Another prominent visitor of June 10 was Van B. Perrine, the lumberman poet of Fort Wayne, Ind.

BOSTON

The Palmer & Parker Company, large dealers in hardwoods and manufacturers of veneers, Boston, have been running their mill five days a week. At times during the past few weeks new business has come forward in a satisfactory way, but it is not active as yet. Mr. Parker reports they have been opening up a few very fine figures in mahogany logs for piano veneers.

Chester Whitney of the Perry & Whitney Company has recently returned from a fishing trip at Lake Winnepesaukee, N. H.

Mr. Parker of the firm of Mershon, Schutte, Parker & Co., Saginaw, Mich., has been spending a few days in the eastern markets.

A shipment of Oregon spars, some of them measuring 110 feet in length, was recently re-

ceived in Boston by the Boston Lumber Company. This shipment came through from the coast in the remarkable short time of thirty days.

No complaints of car shortage are heard in this market. Not only is there a very large surplus of idle cars but the ones in actual use are doing at least three times the work they did a year ago.

Among the recent incorporations is the Brett Lumber Company, Lynn, Mass., with a capital stock of \$10,000. The incorporators are George W. Belonga, Susan J. Belonga, Elizabeth L. Kiley, Ossian D. Brett and Lizzie H. Brett. Mr. Belonga is a wealthy shoe manufacturer and Mr. Brett is the practical man and was formerly the O. B. Brett Company. It is reported that the mill of the old concern has been secured for the new company.

The new buildings erected in Keene, N. H., by Frank C. Pike are being fitted with machinery for the manufacture of chairs.

The New Hampshire Lumbermen's Association will hold its next meeting June 18.

The woodworking plant formerly operated by the Chase W. Leatherbe Lumber Company has been sold to the South Bay Manufacturing Company, a new incorporation. The officers of the new company are Thomas W. Harrison, president and general manager; C. F. Leatherbe, treasurer; William R. Beale, secretary, and James H. Briggs, superintendent.

Frank and Fred McQueen of the George McQueen Company, Boston, will retire from active business in a few weeks for a period of several months at least. No material changes are to be made in the affairs of the company.

Miss Mabel A. Evans, who managed the Boston office of the Wiley, Harker & Camp Company from the time of Mr. Pease's illness to May 1, when the office was closed, is entering upon her second month as manager of sales for the H. M. Bickford Company, Boston. Mr. Bickford of this firm has returned from a southern trip.

Warren P. Hill has been making a trip East in the interests of Samuel H. Shearer & Son of Philadelphia.

J. M. Riel of Chicago spent a few days in Boston late in May.

The C. F. Vail Chair Company's plant at Baldwinville, Mass., was recently destroyed by fire with a loss of about \$10,000.

Halph Abbott, surveyor general of Massachusetts, has resigned to enter the employ of the C. O. Skinner Company of Boston as salesman. The governor has appointed Charles H. Crane to succeed Mr. Abbott. This has not been confirmed by the council as yet. Boston lumber dealers feel they should have been consulted in this matter.

The C. W. Leatherbe Lumber Company of Boston is to be liquidated. William E. Litchfield has charge of this matter.

J. H. Randall of Randall & Orenit, hardwood dealers, is in the South and West on a business trip.

C. O. Skinner of the C. O. Skinner Company is in the West in the interests of his company.

Frank W. Lawrence of Lawrence & Wiggins and Frank B. Whitehouse of the H. M. Bickford Company are very busy with arrangements for the annual tournament of the Lumber Trade Golf Association, to be held at the Pine Brook Country Club, Newton, Mass., June 23 and 24.

NEW YORK

The Mann-Caven Lumber Company, wholesale hardwoods, 1 Madison avenue, New York, has been re-arranged under the same style with a capital of \$200,000 by R. A. Caven of Brooklyn and Frank B. Whitehouse of New York. The corporation will pursue the same line of business under predecessor.

The Lapping Lumber Company has engaged in the wholesale and manufacturing trade at 68 William street, Manhattan. The principals

therein are F. Kramer and S. F. Lillentern. It is understood that the company is negotiating for the purchase of timber lands in Tennessee.

H. Billeter, manager of the Lumber Underwriters, the well-known trade-insuring organization at 66 Broadway, has about recovered from his recent stage of typhoid fever and is negotiating for a short time at Atlantic City, N. J., and expects to be in harness again at 66 Broadway within a week or so.

J. J. DeRan of the DeRan Lumber Company, hardwood manufacturers of Clover Lick, W. Va., has been in town during the past week in the interest of business. The mills are running along as usual and business is reported as fair with them, although there are a large number of mills in their section which have ceased operations.

Louis Bossert, the wealthy Brooklyn millworker and head of the extensive interests of Louis Bossert & Son, has purchased the premises of the old Pierpont House, Brooklyn, on which he will erect a handsome family apartment house, making his winter headquarters in the new hotel when completed.

There is much interest being manifested in the approaching lumbermen's golf tournament of the Lumbermen's Golf Association of the East, which occurs on the Brad Burn Course, Newton, Mass., on June 22 and 23. The list of prizes offered by leading interests in the trade for this year's contest are handsomer than ever and a royal good time is expected. The annual election will also be held during the contest. Among the local lumbermen who will compete are C. L. Adams of Willson, Adams & Co., Henry Cape, C. R. Fisher of the Tolson & Cooke Company, Arthur E. Lane, Gus E. Robinson and L. P. Rider. (Quite a number of other lumbermen are planning to attend the contest.)

W. A. Eaton, secretary of the Stevens-Eaton Company, well known wholesale house of 1 Madison avenue, has sold his interest therein to his associates in the corporation, and on June 1 engaged in the wholesale trade on his own account with office at 1 Madison avenue, through which he will handle a full line of softwoods and shingles for the eastern trade. The Stevens-Eaton Company advises that there will be no change in the corporation except Mr. Eaton's withdrawal. The Stevens-Eaton Company has just added George W. Brown of Merchantsville, N. J., to their selling staff and Mr. Brown will represent them in southern New Jersey and Pennsylvania.

There were two important meetings at National Wholesale headquarters during the past fortnight, the Executive Committee meeting on May 20 to go over the work of the various departments in order to report to the trustees the general condition of affairs on the following day. On the 21st the trustees met, with all but four present. Trade relations, forestry and other matters were fully discussed. Routine reports from the various departments shows good progress all along the line thus far this year, particularly in the bureau of information and collection departments, and also the transportation bureau. A committee of three, to be appointed by the president, was voted to attend the trade organization conference at Minneapolis, Minn., June 19 and 20. The report of the Membership Committee showed good work in increasing the membership of the organization. Hardwood inspection matters were also considered, but no action was taken in reference to the recent conference on inspection matters, in line with the general policy of the association to continue neutral on this subject.

A matter which has created a great deal of interest in the local circles during the fortnight is the rumor that the Philadelphia wholesale interests represented in the exchange will shortly issue a challenge to a baseball contest to the New York Lumber Trade Association. Of course, if such a challenge is received, it will undoubtedly be promptly accepted and a big time made out of the occasion.

The new Machinery Club of New York, comprising a membership of 1,100 representatives of large machinery interests throughout the country, had a most auspicious opening of its club quarters in the Hudson Terminal building, 50 Church street, on May 21, preceded by a fine luncheon. Addresses were made by the officials of the club and a number of leading representatives.

Among the prominent visitors last week were J. W. Thompson of the J. W. Thompson Lumber Company, Memphis, Tenn., and Thomas F. Smouse of Cumberland, Md.

J. H. Flank & Co. of Union Hill, N. J., is the name of a new corporation just organized to conduct a general mill and woodworking business with a capital of \$25,000. The incorporators are E. J. and H. G. Flank of Englewood and L. E. Harris of Hackensack, N. J.

William E. Verity, a principal in the Brooklyn Lumber Company, died of consumption at Lake Placid, N. Y., on May 23 in the forty-third year of his age. The New York Lumber Trade Association, in line with its usual custom, appointed a committee of six prominent members to attend the funeral.

Charles Bossert, brother of Louis Bossert, prominent Brooklyn lumberman, died at his residence in that borough on May 18. Mr. Bossert was for many years foreman in the woodworking establishment of Louis Bossert & Son, but retired several years ago. He was in his sixty-eighth year, and is survived by one son, one daughter, four brothers and two sisters.

Miss A. Caroline Morgan, niece of D. Parker Morgan, D. D., and Frank P. McNulty, who is connected with the hardwood department of the Stevens-Eaton Company, were united in marriage in this city on June 3. The Rev. Dr. Morgan officiated, assisted by the Rev. Herbert Shipman and the Rev. H. A. McNulty. The Right Rev. Dr. Greer, bishop coadjutor of New York, pronounced the benediction. Mr. McNulty is well known in the hardwood trade of the metropolitan district as well as at middle west mill points, through which he has traveled for several years for Price & Hart, and later for the Stevens-Eaton Company.

There was a meeting of the creditors of the Tyler Lumber Company, 111 Broadway, New York, and Tyler, Fla., June 5, at the office of S. W. Dexter, 71 Broadway, at which time many claims were filed and G. Harold Porter was elected trustee with bonds of \$10,000. The schedule showed liabilities of \$335,398 and nominal assets \$609,558.

In the New York work horse parade on Decoration day, the Jersey City Lumber firms of Collins, Lavery & Co. and Vanderbeck & Sons were each awarded handsome prizes and ribbons in connection with their display.

O. O. Agler of Upham & Agler, Chicago, was a recent visitor in town in the interest of business.

At the annual meeting of Clark & Co., Newark, N. J., held May 27, H. B. Halsey, head of the large lumber firm of H. B. Halsey Company, South Orange, N. J., was elected vice-president of the Company, the other officers being re-elected.

PHILADELPHIA

The last monthly meeting of the Lumbermen's Exchange, prior to the adjournment for the summer months, was held on June 4, with President Frederick S. Underhill in the chair. The office and entertainment committee reported details concerning the coming baseball match for the benefit of charitable institutions, which will be played on June 16, at Columbia Park, between nine composed of members of the Lumbermen's Exchange and Builders' Exchange, as nearly complete and a large attendance is contemplated. A resolution was passed at this meeting that a committee be appointed to arrange for another excursion this fall. Also one instructing the

president to appoint a committee of one to represent the exchange at the usual golf tournament. Report of the delegates to the Pennsylvania Arbitration and Peace Conference was adopted; also recommendation of W. H. Lear and his committee on hardwood inspection that a resolution be drafted endorsing a previous resolution of the exchange and even to make it stronger, so as to coincide with a recent resolution of the Baltimore Lumber Exchange, was presented at the convention of the National Hardwood Lumber Association at Milwaukee, June 11, to be signed by all the members of the exchange who are members of the National Hardwood Lumber Association, and that each and every one of such signers use every effort in their power at the coming convention to urge that body to adopt such inspection rules as shall meet the desires of the eastern hardwood lumbermen, was adopted. E. P. Burton & Co. of Charleston, S. C., were elected members of the exchange, after which the meeting adjourned to meet again in September.

Wistar, Underhill & Co. are not dissatisfied with the volume of business coming in. They regard the outlook promising. T. N. Nixon of this firm is touring the Lehigh Valley district. Arthur T. Wistar is looking after the Metropolitan district, and James W. Anderson is taking care of the trade on the New Jersey coast. The firm states they are placing on the market at this time some excellent plain white and red oak, also a particularly fine lot of thick, sound, wormy chestnut, for which orders are coming in in good shape. Frederick S. Underhill will attend the convention of the National Hardwood Lumber Association at Milwaukee on June 11.

Schofield Brothers are rushing the completion of the plant of the Salsburgh Lumber Company, near Ularus, S. C., for which further improvements and additional machinery were found necessary. The firm do not quarrel with conditions, as, although there has been a slight falling off in trading, the volume of business, considering general conditions, is satisfactory. They have suffered a severe loss in the recent death of R. P. Ashley, who was an important member of their selling staff. Mr. Ashley was the president of the Salsburgh firm, a man of the strict integrity and a conscientious hard worker. The firm has engaged James C. Place as sales manager to look after the New York territory. J. Gibson McIlvain & Co., one of the oldest lumber concerns in the country, have passed through many panics, consequently are not frightened in regard to present state of affairs, but accept it as one of the periodical visitations of the commercial world. They continue to peg away regardless, and reap encouragingly if not to the profuse degree of a year ago. They feel satisfied that good times are not far off, and as an inducement to buyers place their immense stock of seasoned hardwoods on the market at figures tempting to the buyer.

Paul W. Fleck of the Paul W. Fleck Lumber Company is not worrying over troublous times, but meeting conditions as they arise with full confidence in the outlook for the near future.

The W. M. Ritter Lumber Company admits a recent slacking up in trading, but confidently look for an early reaction for the better in hardwood trading.

Samuel H. Shearer & Son report sales as averaging up fairly well. Wm. P. Shearer is making a trip through the southern mill districts looking up the stock situation.

The J. S. Kent Company reports that trading has been spotty and though total sales are behind previous showing for May the average has been very fair considering everything.

The Germain Company of Pittsburg recently opened an eastern office at 1020 and 1022 Real Estate Trust Building with C. O. Maus as eastern representative. Mr. Maus has the reputation of being a hustler and one of the most popular young men in the lumber business. He is a thorough optimist and is much pleased over his success in this territory so far. He reports that

he has recently received cargoes of assorted lumber from his house by the "Mulle Bohannon," "Mary B. Baird" and "Jona Tennil."

The Tomb Lumber Company state that though business has not come up to normal of late there is at present quite an improvement in trading. H. B. Tomb is making a visit to their mills and will at the same time take a short but much needed rest at his summer home.

The Monarch Lumber Company, incorporated under Delaware laws, May 25, capitalized at \$50,000, recently opened offices at 807 and 808 Harrison Building, where they will handle all kinds of lumber. The officers, well known in the lumber world, are, John J. Rumbarger, president; Wm. T. Latham, vice president, and Howard B. French, secretary and treasurer.

Helfpeny & Hamilton sincerely believe that the lingering dull times will soon be a matter of history only, as they report a decided improvement of late in trading. Their manager, Benj. C. Currie, Jr., keeps his men on the jump and where there is game they generally get a bag full.

The Philadelphia Hardwood Lumber Company is satisfied with results. Considering the general state of business the company is confident that it will have a fair share of trade.

L. Power & Co. report that they are fitting up the plant of the Lawrenceville Box & Lumber Company at Lawrenceville, Va.

Among the recent visitors to the Philadelphia trade were G. M. Chambers, secretary of the Kendall Lumber Company, Pittsburg, Pa.; R. P. Holmes of Cline Holmes Lumber Company, Hattiesburg, Miss.; A. A. Manes of Scotch Lumber Company, Fulton, Ga., and A. G. Schuyler of Henderson Lumber Company, Pittsburg, Pa.

The Fenwick Lumber Company of Wilkes-Barre, Pa., recently opened a sales office at 1224 Real Estate Trust Building, this city, which will be in charge of J. C. Tennant, second vice president and secretary of the company.

The Whiting Lumber Company, object to buy and sell lumber, capital \$500,000, was incorporated under New Jersey laws, May 21. The incorporators are Frank A. Whiting, William Whiting and Norman H. Grey.

The O. D. McHenry Lumber Company, Stillwater, Columbia County, Pa., obtained a charter under Pennsylvania law, on May 22; capital \$25,000; S. W. Edgar, treasurer.

The R. A. McCall Lumber Company, Pittsburg, Pa., obtained a charter under Pennsylvania laws on May 22; capitalized at \$10,000; Albert Bertelot, treasurer.

The Universal Lumber Company, Manhattant, was incorporated under New York laws on May 30; capital \$100,000. The incorporators are: P. T. Luzinia, J. W. Uppereau, F. H. Cottrou, New York City.

The Columbia Car Company, makers of railroad cars, with capital of \$50,000, was chartered under New Jersey laws, on June 1. The incorporators are M. A. Henry, Archworth Martin and Harvey L. Gray, who were also incorporators of the New York and New Jersey Lumber Company, chartered at the same time.

Announcement comes from Mt. Carmel, Pa., that John Gibson, a well known lumber dealer of that place, lost control of his automobile while coming down a steep mountain. Mr. Gibson turned the machine into a bank to prevent its dashing down 200 feet among rocks and trees, but the machine was wrecked nevertheless and Mr. Gibson sustained a broken collar bone and severe body bruises.

George B. Breen of the Breen Lumber Company, Inc., of Williamsport, Pa., has been confined to his home for some time through illness. It is announced, however, that he is able to be out again, which will be pleasant news to his many friends.

James Mansou of Williamsport, one of the best known hardwood men in eastern Pennsylvania, is cheerful over conditions. He is a thorough optimist and believes the hustler will get the business, consequently his men are un-

falling on the spot at the right time for orders.

Beecher & Barr of Pottsville, who are associated with various lumber manufacturing concerns, are always on the alert and so get the business. George G. Barr of this house believes in keeping his men constantly in touch with all buyers of lumber and through well developed office systems he is not only to have a man nearby when goods are wanted but to have also always on hand the right stuff at the right price to offer, consequently it may be seen this firm is better equipped than in arguing over the panic and dull times.

BALTIMORE

The Lumber Exchange, at the quarterly meeting held June 1, found itself with practically no business to transact beyond approving the resolutions adopted a few hours earlier by the managing committee, urging the National Hardwood Association at its forthcoming annual meeting to reinstate the rules of 1905, adopted at the Buffalo meeting. Nothing was done with reference to detailing a member of the exchange to act as representative at the annual meeting of the National association. It is hoped that someone will volunteer to make the trip. The members afterward sat down to an appetizing luncheon, which kept them together in social intercourse for over an hour.

James Harvey Rowland, one of the wealthiest lumbermen of the East, largely interested in the American Lumber Company of Williamsport, Pa., died at the Johns Hopkins Hospital May 24, after an illness of some weeks. He had not been in good health for a year or more, and an operation was decided upon, but his advanced age was against him. Mr. Rowland was 89 years old. He was widely known and generally popular, and a host of friends mourn his death.

Another death of a prominent lumberman is that of Charles E. Waters of the yard firm of George E. Waters & Co., who passed away May 23. His wife, a son and two daughters survive.

In order to facilitate the expansion of their business and admit of more effective control of assets, the hardwood firm of R. P. Baer & Co. of this city has headed the Virginia Hardwood Company, with headquarters at Taswell, Va., and the North Carolina Hardwood Company, with headquarters at Asheville, N. C. R. P. Baer is the president of both companies; O. M. Thayer of Mobile, Ala., vice-president, and M. S. Baer of Baltimore, secretary and treasurer. The incorporations will make no change whatever in the management of the business. Mr. Thayer is in active charge of the firm's mill at Mobile.

The Philadelphia members of the National Lumber Exporters' Association have raised the question of getting relief from certain storage charges assessed against them, but for the accruing of which neither they nor the steamship lines were responsible. They desire to lay the matter before the Interstate Commerce Commission and have the latter pass a ruling as to liability for these charges. Such a decision would be of the utmost importance to exporters, as similar differences have come up repeatedly at other ports. In connection with this matter Secretary E. M. Terry visited Philadelphia last week. It is thought that the amended steamship agreement on which the association has been at work during the past two years will be definitely concluded by the transportation various lines by the time the secretary's committee meets in Baltimore, on the 24th inst. The agreement makes a number of concessions to the exporters, among other things classifying wood and lumber and logs as heavy and light instead of hard and soft. Secretary Terry was in conference with Harvey M. Dickson of the Dickson Lumber Company at Norfolk, Va., and chairman of the committee on transportation, on May 22.

A most picturesque delegate to the Methodist Episcopal General Conference, which held its quadrennial session here during May, was T. D. Collins of Nebraska, Pa., who for some time managed to escape attention, but who was found to be a big lumber operator with fortunes estimated as high as \$10,000,000. Mr. Collins, who is 77 years old, was seen invariably in a blue shirt, black slouch hat and boots of the pattern of long ago. It was learned that, although none of the Baltimore members of the trade knew him, he has extensive timber lands in Pennsylvania, in the neighborhood of Williamsport and other sections, and also owns big sawmills on the Pacific coast. Just before the meeting of the conference he gave his check for \$100,000 in aid of mission work, and he is also said to maintain a mission school in Korea for 500 children at his own expense. He is very democratic in his manners, is averse to society and cares only for lumbering. He said he sleeps only four hours a day, retiring at midnight and getting up at 4 a. m. He has kept this up for years, but he finds it entirely sufficient. Notwithstanding his 77 years, he walks with a sprightly step and is mentally very alert.

S. S. Mann of the hardwood firm of Mann & Parker has been spending about two weeks at the mill of the firm at Robins Neck, S. C., where operations were commenced not long ago. The plant is now turning out almost the maximum of lumber.

Among the Baltimore visitors during the last week in May was Fred R. Richter of the Richter-Park Lumber Company of Philadelphia. John L. Alcock of J. L. Alcock & Co. returned last Monday from West Virginia, where he spent nearly a week looking after the getting out of lumber to fill a big foreign contract.

David T. Carter, formerly of the hardwood firm of Carter, Hughes & Co. and of the Iron Mountain Lumber Company, who retired from both concerns a month or more ago, has opened offices in the Carver building, Park and St. Patrick streets, and engaged in the wholesale hardwood business on his own account.

PITTSBURG

J. L. Lytle, president of the J. L. Lytle Lumber Company, made a short tour of West Virginia last week, winding up at Charleston. He found a good proportion of the hardwood mills running and stocks rather larger than the situation would seem to warrant.

W. D. Smith, of Parkersburg, W. Va., who is one of the best known wholesalers of hardwood in this part of the country, was calling on friends in town Monday. He reports the wholesale business to the England and Scotland yards very poor and does not believe that there will be any perceptible improvement until trade in this country has gone ahead to near its old point.

The A. M. Turner Lumber Company is disposed to think things are getting better slowly, and looks for some good orders to be placed this month. Its inquiry shows that many concerns are put out of lumber and will have to replenish their stocks as soon as they start up their plants.

The Crescent Lumber Company has handled some nice sales of poles lately, but find that they are very slow sellers. In spite of the increase of inquiry this company notices that actual orders placed are not coming much faster than last month.

Eleven "kitchens" were initiated at the last Pittsburg convention, which was held at the Hotel Henry in Fifth avenue, May 29. The exercises were more than unusually interesting and a royal welcome was given to the new members, all of whom were from the Pittsburg district.

William H. Schuette Lumber Company says that there is a better demand for ceiling, siding, etc. Prices, Mr. Schuette says, are very

badly cut and wholesalers seem to show no disposition to get together on this subject.

G. H. Balme, who represents the Byers-Allen Lumber Company of Ligonier, Pa., was calling on Pittsburgh friends this week. This company turns out about 15,000,000 feet a year and at present has its mill shut down, like many other plants of that sort in Pennsylvania. "Big stocks and no orders" is the cry, according to Mr. Balme.

The Mead & Speer Lumber Company is authority for the statement that most of the country mills are holding up well on oak prices, especially white oak. These mill owners paid \$10 per thousand for their stumpage in many cases and must get \$20 to \$23 per thousand for their lumber to break even. Mr. Mead says that the general feeling is much better than thirty days ago and that there is quite a call for minlog and bridge stock from Buffalo and vicinity.

The Buckeye Lumber Company is fortunate in having secured under contract about 200,000 feet of white oak, which will be cut at once for its Pittsburg trade. The tract is where the company will have the benefit of the Pittsburg freight rate and this will help it much in lining up good customers.

A. M. Kinney, who has been conducting several small hardwood operations at the Panhandle, will start another mill near McDonald, Pa., in about two weeks. This is to cut about 250,000 feet of choice oak timber, which is suitable for most any kind of lumber.

H. V. Curll, president of the H. V. Curll Lumber Company, says that his company will start its mill in West Virginia about June 15. The plant will have a capacity of about 20,000,000 feet a year. This will be marketed in from Philadelphia and Pittsburg, D. B. Curll having charge of the former and H. V. of the latter office.

The Clay-Schoppe Lumber Company will have by June 15 five portable mills and one stationary mill working on its tract near Coalmont, Pa., close to the Maryland line. Most of the company's timber there is hardwood and arrangements have already been made for marketing a large proportion of this in the Pittsburg district.

President W. D. Johnston of the American Lumber and Manufacturing Company spent a few days in Florida recently. The American has filed a suit with the Interstate Commerce Commission against the Southern Pacific Railroad Company, the Oregon Railroad and Navigation Company, the Oregon Short Line Railroad Company, the Union Pacific Railroad Company, the Chicago and Northern Railroad Company, the Lake Shore and Michigan Southern Railroad Company and the Bessemer and Lake Erie Railroad Company. The complaint alleges that the American in 1906 had shipped to it 13,400 feet of fir lumber from Paper Mills, Ore., to Queen Junction, Pa.

H. T. Newell of the Newell Brothers' Lumber Company is in the East this week looking up the New York trade. The company has enough orders ahead to keep its plant in West Virginia running for two months, which is a decidedly unusual thing this year.

The Miller Brothers' Lumber Company announces a larger call for building material in small lots from the country yards. J. C. Miller, who has recently returned from Ohio, reports the situation firm in that state, but states that there is too much cutting of piles.

William Whitmer & Sons, Inc., announce that the spruce market is held up well. They have recently made a deal to furnish a large amount of lumber for concerns in the Pittsburg district, and this order will help greatly on the early summer shipments.

The Henderson Lumber Company, which is printing广告 at its trade in minlog lumber reports that every resumption of work in the mines means more business for the lumber wholesaler. J. F. Henderson, president of this company, does not look for any big increase in lum-

ber business before fall, but sees no reason why conditions should not continue to improve slowly as soon as the presidential nominations are over.

BUFFALO

The hardwood lumbermen will go to the Milwaukee convention in force and are planning to make the trip in a body, especially as there are some things that are expected to be thrashed out at that meeting, or at a meeting the day before in Chicago. It is to be hoped that all differences on the inspection rules will be settled before the full body is in session.

The question of a separate lumbermen's club, which has been allowed to drift a while, till it is known just what the manufacturers' club is going to do. Hardwood lumbermen have always taken a leading interest in the latter and it may all work out together, especially as F. A. Beyer is president of the Manufacturers' Club.

The Buffalo lumbermen are trying to keep in line with the times in going slow about the annual output, as there is no stop taken towards it yet, though Chairman C. W. Betts will soon be asking the people where they want to go. The hardwood dealers are very closely united by their weekly meetings and it would be a fine thing if the entire interest could become as nearly a unit as they are, as it is conducive to a sort of fellow feeling that is much needed in business.

The chief point of interest in the Standard Hardwood Lumber Company just now is the marriage of Oliver W. Kreinbender, manager of the table factory owned by the members of the company, to Miss Lillian Gram, which took place on May 27.

Scatcherd & Son are still running their oak mills in Memphis, though as a rule there is a scarcity of logs in that section, so that a good many are idle. What will happen when the demand runs up to normal.

The office of T. Sullivan & Co., in its new position on the Niagara street front, looks very neat this spring with its new setting of turf. Pacific coast fir is coming in again and lake hardwoods are due this month.

The Buffalo Hardwood Lumber Company is very busy in yard, as there is a big lot of stock coming in all the time from the river barges that unload at Cincinnati. The yard shipments are also good right along.

The specialties of the trade of O. E. Yeager, such as hickory and poplar, are doing well and sales are kept up all along the line, in spite of the general slow movement of a good many sorts of hardwood lumber.

So long as I. N. Stewart & Bro. can ship several cars of cherry a week there is no kick coming from that yard, and that is what they are doing and have been doing for some time. Other hardwoods look alike.

A. Miller has been looking to the eastern market a good deal of late, as it appears that this market is so taken on using soft woods that the hardwood trade here is not what it used to be.

There is an occasional shutdown of the Hugh McLean sawmills, but only on account of the scarcity of logs. Otherwise the interests of that sort in the St. Lawrence valley and the Southwest are moving as usual.

G. Elias & Bro. are one of the few firms that are getting quite a good amount of lumber in by lake, having had several cargoes in already and looking for more right along. The door mill is always busy.

The yard trade of F. W. Vetter keeps up well, considering the general state of trade. There is always something in a yard that carries a full assortment of hardwood, which the consumer must have, for that is the plan they all buy on.

President Beyer of the Pascola Lumber Company is keeping his oak mills in Missouri going fast enough to furnish the stock needed, being

well aware that oak lumber is one of the things that is well to have on hand.

DETROIT

George I. McClure, secretary of the McClure Lumber Company, has filed a personal petition in bankruptcy in the local United States court. He gives his liabilities at \$82,900.99, while the amount of assets is not stated. The assets consist of \$25,000 life insurance, most of it held as collateral for loans and partly subject to a lien for back payments, and 11,238 shares of the stock of the McClure Lumber Company. The largest creditor is the First National Bank of this city, which holds notes for \$17,000 against the petitioner. "My difficulty has all been caused by the sawmill we operated in Eutaw, Ala.," said George McClure. "When the hard times struck the South we began to go back and could not make ends meet. The Detroit end of the business, however, has made money." The petition is merely a personal one and does not affect the firm in any way. The creditors range from \$5 up to the bank claim and include accounts owed his dentist, physician, tailor and others. The First National Bank of Birmingham, Ala., holds notes to the extent of \$25,000.

"There is much to say about the hardwood trade now, except that it is very dull," said William Brownlee of Brownlee-Kelly Company.

The following hardwood dealers were in Detroit June 4 and 5: H. L. Dutton of the Worcester Lumber Company, Chassell, Mich.; C. I. Duggan of the Tindle & Jackson Company, Pellston, Mich., and E. J. Clark, president of the Peninsula Bark & Lumber Company, Sault Ste. Marie, Mich.

W. H. Damm M. Mitchell of Cadillac, Mich., was in Detroit on business this week.

"Satisfactory conditions prevail in the hardwood trade at present," says Thomas Forman of the Thos. Forman Company. "Inquiries and sales keep up very well and we feel very comfortable over the situation."

GRAND RAPIDS

The furniture manufacturers will put their fall lines on the exhibition floors Wednesday, June 24, the season continuing through the greater part of July. The display made here will be without doubt the strongest and best ever shown, and while a big volume of business is not anticipated the feeling grows that a very fair number of orders will be placed. The recent meetings of Chicago, Grand Rapids and all the leading manufacturers, with unanimous action taken guaranteeing the trade that there will be no cutting of prices on this season's line of goods, will go very far towards establishing confidence and buyers who need the stuff will not be afraid to place their orders. This was one of the chief difficulties last January and during succeeding months, the lack of confidence in the stability of prices, and the trade bought only what they had to, not what they needed. There is a much better feeling now—with big harvests coming on, the presidential excitement lessened and prices firm. The furniture associations are getting out tags to be placed on every piece displayed this season guaranteeing that there will be no price cutting during the coming six months. The W. H. White, Thos. White and W. L. Martin, of the W. H. White Company of Boyne City were in the city June 3.

Thomas Hume of Muskegon and George Hefferan of Grand Rapids, members of the Hume-Bennett Lumber Company, which is operating at Sanger, Cal., have returned from a business trip to California and other western points. Mr. Hume is president and Mr. Hefferan is treasurer of the company. From the present outlook the company will operate only one of its mills this year and the cut will be small. Mr. Hefferan reports a better demand for lum-

ber in California than in Washington and Oregon.

Chas. M. Hackley, son of the late C. H. Hackley, of Muskegon, who lost his eyesight about a month ago through an accidental explosion, has recovered sufficiently for removal from the Hackley hospital to his country place at Lake Harbor. His sight, however, can never be restored.

Chas. W. Garfield, president of the Michigan Forestry Commission, in addressing the local horticultural society June 6 said: "I wonder if you people know that there is an earnest and practical interest in forestry by some of our lumbermen? W. B. Mershon, my associate on the forestry commission, with four other men, have taken a large tract of land near the source of the Au Sable river and they are establishing nurseries and doing planting on a considerable scale. Each of the five men has agreed to put in \$5,000 a year for five years in this experiment in reforestation. All the land is not poor, and they have such a wide range of soil that they will be enabled not only to experiment with pines and spruces but with some of the hardwoods. The planting of 73,900 seedlings in the Au Sable forestry farm has been completed, while there are 12,000 trees in the nursery for planting next year. About 1,200 basswood and 1,000 black ash trees have also been set out.

R. D. Graham of this city, president of the state board of agriculture and also a member of the state forestry committee of inquiry, has returned from Iosco county, where the members of the board selected a tract of 42,000 acres, which is to be used by the Michigan Agricultural College in giving the students practical work in forestry. It is planned to start a nursery this year and to conduct the tract along progressive forestry lines.

Col. Chas. Bogardus and his wife have presented the University of Michigan with a tract of 1,441 acres lying along Lake Douglas, in Cheboygan county. The land includes 160 acres of hardwood and has a frontage of three miles on Lake Douglas. It will be used for field work by the engineering department and by forestry and botany students.

Peter White of Marquette, the grand old man of the upper peninsula, dropped dead June 6 in front of the city hall, Detroit. Mr. White was a director of the Cleveland Cliffs Iron Company, president of the First National Bank of Marquette and was the owner of large tracts of timber land in the upper peninsula.

CLEVELAND

Charles E. Wheeler, a Cleveland man who has just returned from a six-year sojourn in the Philippines, brings back some interesting information about the Insular Lumber Company, a concern with offices in New York, but backed by Cleveland capital. The Insular company is shipping large quantities of a native wood known as Philippine mahogany, to this country. It corresponds to African mahogany and is about the same as regards cost. The company has the largest forest of hardwoods on the islands, having over 400,000,000 feet of standing timber, much of which is of large size. As Wheeler says, the Philippines contain a large variety of woods, there being over 700 kinds, about a hundred of which are suitable for cabinet purposes. The Insular company operates a large mill, and a railroad has been built on the property, which has an estimated stand of 40,000 feet to the acre.

On the morning of May 22 the entire plant of the Dayton Manufacturing & Lumber Company at Dayton, Ohio, was destroyed, the loss being over \$175,000. The blaze was discovered about midnight and an effort made to check it, but without avail. The origin of the fire is unknown.

W. W. Reilly, a prominent hardwood dealer

of Buffalo, N. Y., was a visitor in Cleveland several days ago.

W. P. Hiltton, for several years in charge of the hardwood flooring department of the Advance Lumber Company, with headquarters in the Rockefeller building, this city, has severed that connection and is now in charge of offices on the ninth floor of the Citizens' building, representing Peter Kuntz of Dayton, prominent hardwood manufacturer, with a string of hardwood yards throughout Ohio. Mr. Hiltton made the change June 1.

The W. B. McAllister Company is preparing the display of hardwoods to be installed in the Builders' Exchange for the Martin-Barriss Company. The display contains some rare and valuable woods and is exceedingly interesting. It will be installed within a short time.

W. W. Stone of the T. B. Stone Lumber Company of Cincinnati called on a number of Cleveland dealers recently.

The two new public library branches, to be erected in Cleveland, will be finished in hardwood. Andrew Carnegie has provided the money, and work will be proceeded with this summer. Contracts will be let early in June for the \$110,000 West Side branch and the South Side building to cost \$40,000.

The Lake Erie Lumber Company has increased its capital from \$25,000 to \$50,000 for the purpose of increasing the scope of its operations. It carries a large stock of hardwood. Robert Jenks is president, B. L. Jenks vice president and J. H. Amlich secretary and treasurer. Its headquarters are at Hamilton avenue, near Marquette street.

W. A. Cool is back from an extended trip through New York and the East.

A number of local hardwood men will attend both the convention of the National Hardwood Lumber Association to be held at Milwaukee, June 11 and 12, and the gathering of the National Lumber Manufacturers' Association at Minneapolis on June 16, 17 and 18.

The Theodore Kuntz Company is going quite extensively into the manufacture of school desks. Special machinery has been installed and a large five-story building has been erected at the Kuntz plant for manufacturing auto bodies for the White Automobiles. The regular line of sewing-machine cabinets will be continued. The Kuntz Company has one of the largest lumber yards, in connection with its plant, to be found in Ohio. Logs are received in the rough cut and finished right on the ground.

SAGINAW VALLEY

W. D. Young & Co. are running a portion of their plant nights and a portion days. They are filling orders, the firm having exceptional advantages by reason of its export business. It has a ample supply of logs, and its splendid plant in all departments is giving excellent satisfaction. If any trade is to be had, Walter Young will "dig" it up.

The big woodenware works of Bonstead & Co., which has been running low, resumed operations recently on full time, giving work to over 200 hands. This plant works up several million feet of basswood and other hardwoods a year. The Kneeland-Bigelow Company's plant is still running day and night, and Manager Bigelow is quite optimistic as to the future of trade. Several contracts for large lots of lumber for flooring and other purposes have enabled the company to keep the plant in operation. The Kneeland, Buell & Bigelow mill is running ten hours a day. It is cutting out a large quantity of hardwood stock.

Manufacturers are much concerned in the question of inspection rules, which will come up at the Milwaukee meeting of the National Hardwood Lumber Association, and they are exerting every effort to have the manufacturing interests of the state put up a solid front at the meeting, June 11.

J. W. McGraw of Bay City is running a large portable mill on the south branch of the Au Sable cutting out hardwood from a tract of several thousand acres which he owns. Mr. McGraw believes that good times are at hand, that the depression has been discounted, and that within sixty days there will be an improvement manifest to everybody.

The old Welch mill recently burned will not be rebuilt. This takes one mill out of Bay City's quota but the Richardson Lumber Company's mill takes its place.

The flooring plants in the valley are doing as well as could be expected under the circumstances.

The mill machinery plant is one of the institutions here that is running full force with a full crew and has orders booked to keep the plant busy during the season.

James Grimore & Son of Au Gres are having 1,250,000 feet of logs manufactured at that place and two other mills in the vicinity.

The interior mills are fairly busy. Lobdell & Churchill at Onaway will install two new boilers in their plant and make other improvements as soon as the company finishes cutting out 3,500,000 feet of logs in the yard. This plant manufactured 12,000,000 feet of hardwood lumber last year and are making a good record this season.

Biss & Van Auken are doing a fairly good business at their plant.

Lumber in this section is feeling the blight that has fallen upon business in all branches. The last three years were phenomenal, and hence the dullness this year is more keenly felt. It is hard to make comparisons, as the contrast is so marked. Manufacturers are disposed to compare with the past two years, and even a moderately fair business now looks bad set against these record seasons.

Some lumber is changing hands all the time, and the consensus of opinion is that the fall trade will show improvement. The mills are running and lumber is being manufactured, but conditions are slow in getting on anything like a basis comparative with last year. It does not appear to be so much the price as the lack of demand for lumber at any price. Hardwood is understood to mean: existing conditions apply equally to pine and hemlock.

Log run maple or No. 2 and better is holding steadily at \$17 and \$19; beech at \$16 and \$18; elm is rather slow at \$22 and \$24; birch at \$18 and \$20, and basswood, which usually moves readily, is selling at \$23 and \$25. Ash is always salable here at about \$30 and red oak at \$35.

COLUMBUS

H. M. Hayward of the M. A. Hayward concern, which does principally a commission business in the hardwoods, returned this week from a two months' trip to Michigan and northern Indiana. He says that manufacturing establishments in those localities are all running, but not on full time. Only one plant was idle and that was shut down for the purpose of making repairs and taking the annual inventory. According to Mr. Hayward, the situation in Michigan is quiet, but dealers are hopeful relative to the future and truly believe that the turn for improvement is near at hand.

C. G. McLaughlin of the McLaughlin-Hoffman Lumber Company returned last week from an extensive trip through Virginia, West Virginia and eastern Tennessee. He says that only about half the mills are running and that the lumbermen in those districts are not expecting much improvement in business until after Jan. 1, 1909. Although the market for hardwoods is dull at this time, Mr. McLaughlin seems to think that the pendulum is swinging in the right direction and that in due time conditions will become normal throughout the country.

W. H. Schleyer of the Powell Lumber Com-

pany, which does a wholesale business in Columbus, has just returned from a trip through Michigan, where he sold a number of good-sized lots of plain oak. Mr. Schleyer says that quartered oak is very firm, but that there is but little in the way of demand. He is optimistic regarding the future, and firmly believes that in these conditions will become normal.

W. H. Putman, president and general manager of the General Lumber Company, says that financial conditions are all right, but business men have gotten into a rut and now need a leader to get them started in the right direction. He is optimistic regarding the future and firmly believes that after the presidential nominations have been disposed of business conditions will gradually become normal. Mr. Putman says that the lumber trade in Columbus is very quiet, but does not hesitate to say that he expects much better conditions during the fall and winter months.

For the first time since December last salesmen are beginning to call upon the Columbus dealers, and during the past week a large number were heard from. Some of the best lumbermen of this city state that it was a big mistake to take salesmen off the road; they should have been kept at work throughout the panic, whether they made expenses or not. It is believed that had all companies kept their men at work, even in a small way, business conditions would be much better than they are now.

Among the retailers it is figured that the per cent of business now being handled is much better than it was in January and February, but not so good as it was a year ago at this time. The volume of business is now figured at from 60 to 70 per cent of what it was a year ago, and in January it was only 30 per cent of what it was at the same time in 1907.

T. J. Dundon of T. J. Dundon & Co., who is making his annual pilgrimage to Ireland, has written his company that he will call for America June 24 and will arrive in Columbus about July 1.

The contract for the new building of the Columbus Lithograph Company has been let, also that for the new music hall to be built at Delaware, Ohio. Columbus lumber companies will furnish the lumber for both buildings. A number of other large contracts are pending in this city and as soon as they are closed it is believed that the lumber business will show greater activity.

INDIANAPOLIS

100-100 of this city had a big con-entation and picnic at the Idle Wild Club, north of the city, June 9. A large number of lumbermen and their families attended.

A branch office of the Klemeyer Lumber Company of Missouri, with J. L. Klemeyer in charge, has been opened at Vincennes. The company is capitalized at \$50,000, about half of which is represented in Indiana.

The Walnut Lumber Company has bought the plant and business of the National Veneer and Lumber Company and the two yards and plants have been consolidated at the location of the latter company. Walter Bass, formerly with the National Veneer and Lumber Company is with the consolidated company.

John J. Valdenaire of Valdenaire Lumber Company is attending to business again after about four weeks' service as a juror in the trial of one of the city graft cases.

G. M. Higginns, H. Bowles and E. L. Trinkle have organized the Harlinsburg Lumber Company at Harlinsburg, and in addition to conducting a general lumber business will manufacture spokes.

Miss Stella Mossman, daughter of the senior member of the firm of Mossman & Varuell of Fort Wayne was married on June 4 to George A. Philbrick, who is connected with that company. They will reside in Fort Wayne.

The Home Lumber Company of this city has been reorganized under the name of the Home Lumber and Supply Company with \$25,000 capital. The board of directors is now composed of Hugo Wulberg, Sr., Hugo Wulberg, Jr., and H. C. Prange.

The Indiana Railroad Commission has refused to order a revision of classified freight rates and to include into the matter of lumber rates on the grounds that the profits of the railroads have been reduced by industrial conditions and legislation that has increased operating expenses.

Frederick M. Bachman, president of the F. M. Bachman Company, has been elected a director of the German-American Trust Company, in which Henry C. Atkins, president of E. C. Atkins & Co., is also an officer.

Thomas Farley, for years one of the best known saw manufacturers in the city, died at his home recently, leaving an estate valued at about \$100,000.

J. D. Williams, for several years located in the State Life Building, will move within a few days to a suite of offices on the Tenth floor of the new I. O. O. F. Building.

Local hardwood lumbermen will probably be well represented at the convention of the National Hardwood Lumber Association at Milwaukee June 11 and 12.

William H. Bultman of the Wolf-In-Luring Lumber Company, Evansville, is making a two weeks' trip through central Illinois looking after the interests of his company.

Building operations in the city during May amounted to \$762,977, as compared with \$547,847.25 in May, 1917. The amount of the permits issued last month was larger than the amount for any month of last year, and this is taken as an indication of returning prosperity.

C. D. M. Houghton of the Greer-Houghton Lumber Company, K. of P. Building, recently made a very successful business trip to Fort Wayne and vicinity.

Charles V. McAdams, who had been a member of the Indiana Railroad Commission since its organization, resigned a few days ago. W. H. Thompson of Muncie has been appointed to succeed him by Governor J. Frank Hanly.

The Interior Hardwood Company is having a nice business at present and is anticipating a good run through the summer season. The company suffered little from the financial stringency and has been busy almost all spring.

MILWAUKEE

Plans are under way by Milwaukee hardwood men for the National Hardwood Lumber Convention which will be held in Milwaukee June 11 and 12. A large attendance is expected and preparations are being completed for the entertainment of a record-breaking number of delegates from every part of the country.

Senator W. H. Hatten, a millionaire lumberman of New London, Wis., was a recent Milwaukee visitor. Mr. Hatten ventured to predict that within the next twenty-five years the state of Wisconsin will boast a population of more than 5,000,000. Mr. Hatten was of the opinion that the lumbering and agricultural interests of the state warranted such an increase in population and was strong in his view that Wisconsin is one of the leading states of the Union.

Ex-Mayor A. H. Stange of Merrill, Wis., a well known Wisconsin lumberman, was in Milwaukee on business the past week. Mr. Stange says that business with the northern Wisconsin lumber mills is gradually improving and that stocks are being lowered somewhat.

An inheritance tax question that is affecting every state of the Union is now in the Milwaukee courts. The case in question arises out of the efforts of Wisconsin to levy \$2,825 inheritance tax against a \$150,000 legacy which is being held in trust for Adrian Cameron, the 10-year-old son of Frank Cameron, president of the Tibbits-

Cameron Lumber Company of Milwaukee. The \$150,000 consists mostly of bonds and corporation stock and was bequeathed to the young man by an aunt who died in California. Attorneys claim that the state of California is the only state having the right to tax the property, otherwise it would be a case of double taxation.

Kenneth W. Jacobs' well-known coeperage plant in Milwaukee recently suffered a disastrous fire that destroyed the warehouse and dry kilns, an attempt to burn the furniture plant of the B. A. Kipp Company and the six fires at the plant of the Milwaukee Chair Company are believed to be all of incendiary origin. State Fire Marshal End is cooperating with the Milwaukee authorities in this case as in the others and developments are soon expected.

The Koch & Loeber Company, Milwaukee manufacturers of wooden and willow ware, has been officially declared bankrupt by Judge Quarles in the Milwaukee bankruptcy court. Liabilities are given as \$290,000 and assets are scheduled at \$150,000.

Only thirty-seven cases of bankruptcy have been recorded for the present year in the Milwaukee court. Liabilities of these amounted to \$270,000, of which \$200,000 is represented by the Koch & Loeber Company.

A civic organization has been formed at West Allis, Wis., with Jay L. Cusick, well-known lumberman at that place, for its chief factor. Mr. Cusick has been elected as secretary of the organization, which is modeled after the civic societies of Milwaukee.

Forest fires have again devastated several timber districts in northern Wisconsin and only the arrival of timely rains prevented more serious losses. Bayfield county suffered the worst damage and thousands of acres of valuable standing timber were burned over.

The Mason-Ivins-Landis Lumber Company of Rhineland recently suffered the destruction of its sawmill, entailing a loss of \$40,000, fully covered by insurance. It is said that the plant will be rebuilt.

Fire recently destroyed the plant of the Appleton Toy & Furniture Company at Appleton, causing a loss of \$25,000. An insurance of \$16,000 was carried.

The Namokogan dam at Cable, Wis., was recently blown out by dynamite at the hands of disgruntled farmers in the vicinity who have been suffering by the inundation of their lands. The going out of the dam will mean a great loss of logs and facilities to the North Wisconsin Lumber & Manufacturing Company of Hayward, Wis., the dam having furnished the company water for log driving for many years.

The erection of a new warehouse 60x150 feet has been started by the Wolf River Chair Company at New London, Wis.

A large and up-to-date hand sawmill has been completed at Cornucopia by the Thompson & Fleish Lumber Company.

As soon as the present supply of logs has been exhausted the sawmill of the Bird & Wells Lumber Company at Wausaukee will be closed. Lack of demand is given as the reason.

The log drive record for Wisconsin has been broken by the Hatten Lumber Company of New London. The drive of 2,500,000 feet was taken down the Embarras river from Norwegian dam to New London, a distance of 200 miles, in forty-two days.

O. H. Ingram, the millionaire lumberman of Eau Claire, has been elected president of a new law enforcement league at that city.

The Maple Lumber Company, an Iowa corporation with a capital stock of \$40,000 and Wisconsin interests of \$34,286, has filed articles to operate in Wisconsin.

BRISTOL

The Standard Oak Veneer Company and the Allen Panel Company, operating on the Southern

railway twenty miles south of Bristol, suffered losses aggregating \$10,000 by the high water and floods that visited that section last week. There was no insurance. Other concerns in that locality suffered heavily from the floods, which were the worst in the history of that section.

William E. Uptegrove of New York, the firm of William E. Uptegrove & Bro., and interested in the American Cigar Box Lumber Company, operating extensively near here, was a recent visitor in this section.

R. B. Burns has returned from a trip in the East in the interest of the Tug River Lumber Company.

W. H. Stiles has resigned his position as land and timber agent for the Carolina, Clinchfield & Ohio railroad and will, it is stated on good authority, at once enter the wholesale lumber and manufacturing business on his own account. Mr. Stiles was for a number of years connected with Sanford & Treadway of New Haven, Conn., who are well known here and has a wide acquaintance among the hardwood trade. He was also connected with the Kingsport Lumber Company, owned largely by George L. Carter. He will probably locate in Bristol.

C. L. Matthews has returned from West Virginia and reports that T. W. Raine, a wealthy timber land owner of that section, is beginning the construction of a standard gauge railroad from Sewell Creek to a point on the Chesapeake & Ohio railroad, known as Meadow View. The road is being built for the development of one of the largest tracts of timber in that state, and it is said that interests controlled by Mr. Raine propose to install several band mills and develop the property on a large scale.

Nathan Bradley of the Bradley Lumber Company, Bay City, Mich., has completed the organization of a large woodworking concern at Elizabethton, Tenn., twenty miles south of Bristol.

M. L. Galloway of the Galloway-Pease Company has returned from a trip to Michigan. The suit of his company against the Chaska Lumber Company, in which Chancellor Hayes recently rendered a decree for about \$12,000 in favor of the complainants, has been settled.

Samuel H. Sells of the Sells Lumber & Manufacturing Company and a prominent young lumberman of this section, is a candidate for the state senate as the republican nominee.

H. P. Wyman of the Came-Wyman Lumber Company is on a trip to his company's timber lands near Bluff City.

Harlow Dixon of the John T. Dixon Lumber Company, Elizabethton, was in Bristol on business this week. The lumber business in that section is quite brisk, he reports, and shipments are heavy.

CINCINNATI

President B. F. Dulwacker of the Cincinnati Lumbermen's Club has announced his standing committees for the year, which includes the names of many of the earnest workers of the club. Mr. Dulwacker also announced at the last meeting of the club, which was held at the Business Men's Club, May 29, that hereafter every Saturday at 1:15 p. m., at the Business Men's Club, the club will hold a weekly meeting instead of a monthly one. The calling of a weekly meeting brings the members closer into harmony and allows them to take up more subjects in which they are interested, making the club more beneficial. At least twenty members of the club will attend the convention of the National Hardwood Lumber Association of Milwaukee, June 11 and 12. The standing committees for the year are as follows:

ADVISORY.

S. W. Richey, chairman; H. H. Froberg, W. J. Eskman, C. F. Korn, M. B. Farrin, W. A. (Continued on page 52.)

LOUISVILLE AS A H

The City.

Louisville, the chief city of Kentucky, located at the falls of the Ohio on its northern border, is one of the great hardwood markets of the United States. It has a population of about 275,000, but with its immediate surrounding suburbs, including also the cities of New Albany and Jeffersonville, on the Indiana side of the river, it contains well toward 400,000 people. It is the third city of the South in size and importance. Along the magnificent Ohio river it has a wharfage of more than three miles; it has 75,000 buildings; 105 schools of various kinds, with an enrollment of about 45,000 students; 156 churches; 190 miles of paved streets; more than 150 miles of street car tracks; thirteen banks and five trust companies; forty-two clubs; a splendid sewerage system; more than 1,500 acres of parks with connecting boulevards; a free public library with five branches, and several special libraries.

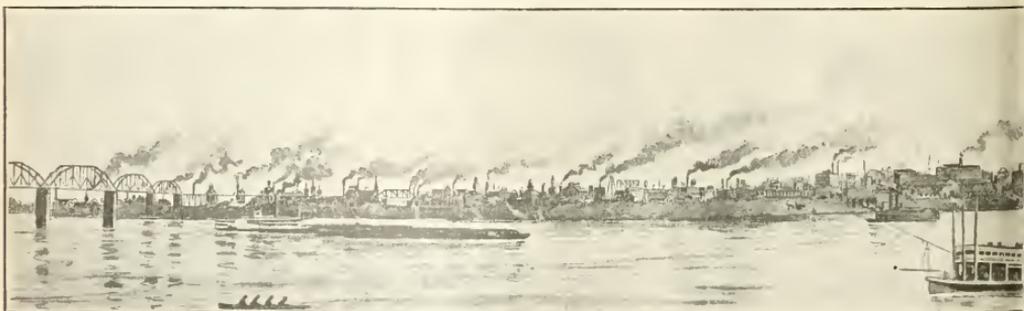

Perhaps to the world at large Louisville is best known as the largest exporting point in the world for whiskies and tobacco, but far from least in importance is the fact that during the last few years it has taken advantage of its natural geographical situation, midway between the splendid hardwood forests of the South and the consuming regions of the North, to become one of the largest hardwood distributing centers of the

TODD BUILDING.

country, drawing upon a wide range of territory in Indiana, Kentucky and Tennessee. It is an exceedingly catholic market, particularly in its lumber wares, and annually manufactures from the round log many millions of feet of mahogany, oak, poplar, ash, hickory, chestnut and other woods; it is largely engaged in the production of veneers and panels, hardwood flooring and dimension stock, and is the chief commercial center of the hickory handle industry of the United States as well.

The statuary bronze figure of Daniel Boone gazing down into the beautiful valley of the Kentucky from the summit of the Cumberlandds comes upon one suddenly at a turn of the road in Cherokee Park. It is typical of the old days and the old quests. It is emblematic of the homeseeker of the West. The city of Louisville, which is a direct result of Boone's descent into this valley, stands perhaps first among American communities as a city of homes. Of the many great and fair cities in the United States Louisville, with its beautiful detached dwellings and thickly shaded streets, appeals to the visitor as one of the chief and most alluring residence places of the country. When Boone stood at the summit of the Cumberlandds and chose Kentucky, rather than another land, for the course of empire, he opened a trail toward the sandy shores

VIEW OF THE CITY OF LOUISVILLE, BETWEEN THE BIG FOUR AND P.

RDWOOD CENTER.

and green valleys ascending southward from the falls of the Ohio. Boone the path-finder tarried to become Boone the home-lover. In his wake came hundreds filled with his own matchless enthusiasm and spirit. He opened up the great valley of the Ohio, which has become the workshop of the world. Down this great waterway has floated much of the wealth of the nation in coal, iron and timber. This constant stream of wealth has been augmented year by year, and even to this day the river is dotted with coal barges bearing their burden of black diamonds from its source to Cincinnati, Louisville and the other great cities along its course to the Gulf. At this moment great rafts of logs cut from the forests of the upper Kentucky and Big Sandy rivers are tied along its banks just above the city, and there are being manufactured into lumber.

No state in the Union has so many navigable rivers as has Kentucky; 1,285 miles of waterway—the Ohio, the Big Sandy, Kentucky, Green, Barren and Mississippi rivers—serve 226 towns within its borders. Nine-foot stages of water are now being made, through recent congressional appropriation, and navigation will be insured in all this range of territory the year through. Louisville has a network of railroads extending in all directions, which penetrate the forest area of the South and supplement the streams

WALNUT ST. BAPTIST CHURCH

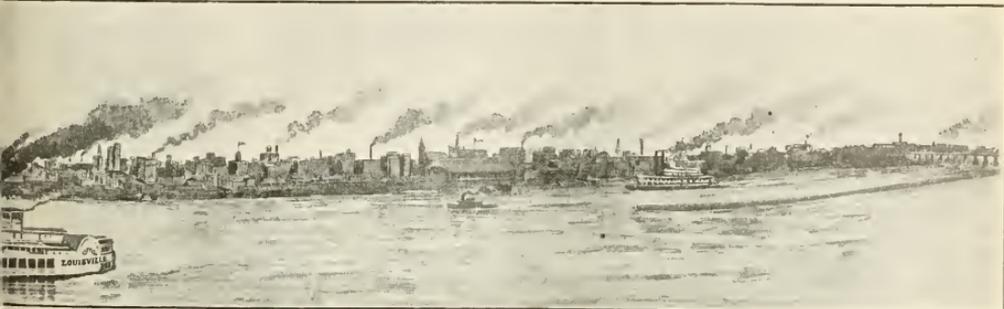

in delivering their hoard of timber and mineral wealth to the city; and to the North, Northeast and Northwest other great lines of railroad afford means of distributing lumber products to all parts of the country.

The spirit of modernism has taken an active hold of Louisville during the last few years, and it now has many public office, hotel and private buildings that compare favorably with those of any of the other chief cities of the land. Pictured in this story are several specimens of these modern structures, but as this sketch pertains chiefly to the hardwood lumber industry, specific reference will be made only to the various large interests that in the aggregate make Louisville one of the chief hardwood centers of the country.

Hardwood Lumber and Flooring Operations.

Perhaps the best known lumber house of Louisville is C. C. Mengel & Brother Company, manufacturer of mahogany lumber and veneers. This company has large holdings of mahogany timber in both Honduras and Africa and makes direct importation of logs to its big Louisville plant, where they are manufactured into lumber and veneers and distributed to all parts of the United States.

Another well-known concern is the Wood-Mosaic Flooring & Lumber Company, whose operations include a big sawmill, veneer plant, flooring factory and lumber yards at

VANIA BRIDGES, FROM THE INDIANA SHORE OF THE OHIO RIVER.

BROADSIDE VIEW OF ONE OF W. P. BROWN & SONS LUMBER COMPANY'S YARDS.

New Albany, immediately across the river from Louisville; a sawmill at Highland Park, a suburb of the city, and a wood-mosaic flooring plant at Rochester, N. Y. The moving spirit of this enterprise is W. A. McLean, vice-president and general manager. The source of supply of the New Albany plant is entirely from the choicest oak timber standing in southern Indiana, while its Highland Park mill is stocked from Kentucky and Tennessee timber.

An important lumber manufacturing institution of Louisville is that of E. B. Norman & Co., Inc. Of this corporation E. B. Norman is president and treasurer; R. Carnahan of Oneida, Ky., vice-president and secretary, and A. E. Lanning superintendent of mills. The company has a modern hand sawmill plant on the Ohio river at Louisville, and nearby a shook factory. Its log supply comes out of the Big Sandy and the Kentucky rivers, and is floated in rafts to its log harbor eight miles above Louisville, where the logs are dropped down in strings to the sawmill. This company specializes in oak, ash, basswood and chestnut, and manufactures large quantities of white oak timbers for shipbuilding and railroad work up to sixty feet in length. The company's mills have an annual output of 10,000,000 feet, and it also buys a large amount of stock from interior mills to supplement its own large manufacture. Several pictures accompanying this article show portions of the lumber operations of E. B. Norman & Co., Inc.

One of the largest lumber distributing

plants at Louisville is that of the W. P. Brown & Sons Lumber Company. The company's offices and principal yard are located at Sixth and Hill streets, and it has a second yard at Ninth and Zane streets. The W. P. Brown & Sons Lumber Company capitalizes and operates several mills in Kentucky and Tennessee, and groups its stocks at Louisville for distribution to its trade,

southern varieties at its big Third street yard, and operates sawmills at St. John's and New Hope, Ky. Mr. Norman is one of the pioneers in the hardwood trade of Louisville, and has a patronage ranging from Louisville throughout the entire North and East.

The Edward L. Davis Lumber Company is another important hardwood manufacturing concern of Louisville, of which Edward L. Davis is president; J. L. Berry, vice-president; C. M. Sears, treasurer, and J. E. Davis, secretary. This company operates a sawmill at Louisville, another at Glasgow and a third at Pineville, Ky. It specializes in oak, hickory, ash and dimension stock.

The Louisville Lumber Company at Twenty-ninth and Chestnut streets is one of the comparatively new hardwood houses of the city, but is operated by men well posted in the business. It has a large and well-appointed distributing yard at Louisville, and operates four sawmills—three in Jackson and one in Houston county, Tennessee. James S. Escott is president; Theodore Harris, vice-president; Henry C. Wilback, secretary and treasurer. Alfred Struck, general manager, is ably assisted in the active work of the enterprise by Charles H. Stotz. This company specializes in oak, poplar, chestnut and hickory, in all thicknesses from three-eighths to four inches.

Another comparatively new concern is the Southern Lumber Company, with general offices at 312 Keller building, Louisville. Of this company E. C. Miller of Franklin, Ind., is president; C. A. Overstreet, vice-president,

SEELBACH HOTEL.

which extends over a large portion of the United States. The company is made up of the veteran Indianapolis lumberman, W. P. Brown, and his two sons, who are in active charge of the operations—J. G. and T. M. Brown.

The Norman Lumber Company, of which A. E. Norman is president, carries a large and varied assortment of hardwoods of all

and E. M. Overstreet, secretary, treasurer and manager. This company maintains a large yard at Somerset, Ky., where it groups small mill stocks. It also operates mills and yards at McKinney and South Fork, Ky. Its source of supply for lumber is one of the best timber sections of Kentucky, and it specializes in oak and poplar.

Gamble Brothers, a portion of whose plant is herewith pictured, is an important remanufacturing institution at Highland Park, engaged largely in the production of oak and poplar dimension stock for furniture and kindred trades as well as oak flooring. Gamble Brothers have had long experience in the making of dimension stock, and their facilities in the way of material, dry kilns and woodworking machinery are such that they command a very handsome trade in their line of production.

The Kentucky Hardwood Flooring Company has a modern oak flooring plant, which turns out a very high-class product. The company's mill and flooring warehouse is pictured in this article. It enjoys the advantage of being within reach of the very best oak grown in the United States, suitable for flooring purposes, and with its equipment in the way of machinery and expert workers has gained a reputation for the production of flooring second to none in the country.

ENTRANCE TO CAVE HILL CEMETERY.

Among other important hardwood lumber enterprises at Louisville are the Louisville Point Lumber Company, which operates a large sawmill; the North Vernon Lumber Company of North Vernon, Ind., which maintains a distributing yard at Louisville; and the Ohio River Sawmill Company, which also has a yard there and is a branch of H. A. McCowen & Co. of Salem, Ind. Several other concerns which are engaged in the manufacture of lumber elsewhere maintain offices in Louisville.

Veneers and Panels.

Louisville and its big New Albany suburb across the river occupy a very important part in the production of veneers and panels. The Kentucky Veneer Works, Inc., of which H. M. McCracken is president, F. I. Brown vice-president, F. C. McCracken secretary and W. Geiger treasurer, conducts a large producing plant at Louisville and makes all varieties of quarter-sawed and sliced cut veneers and thin hardwood lumber. The specialty of this house is figured and plain mahogany veneer.

Another important institution is the Louisville Veneer Mills, of which D. E. Kline is the presiding genius. This concern not only manufactures veneers, thin lumber and panels but produces a considerable quantity of hardwood lumber.

OFFICE AND YARD OF LOUISVILLE LUMBER COMPANY.

RD OF THE WOOD-MOSAIC FLOORING & LUMBER COMPANY, AT NEW ALBANY, IND.

Across the river is located the big and modern, electrically-driven panel and tabletop factory of the New Albany Veneering Company. E. V. Knight is president and manager of this institution, and W. A. McLean is vice-president. This is said to be the largest panel plant in the United States, and it produces strictly high-class stock.

Another important veneer and panel plant located at New Albany is that of the Indiana Panel & Veneer Company.

A Business Club.

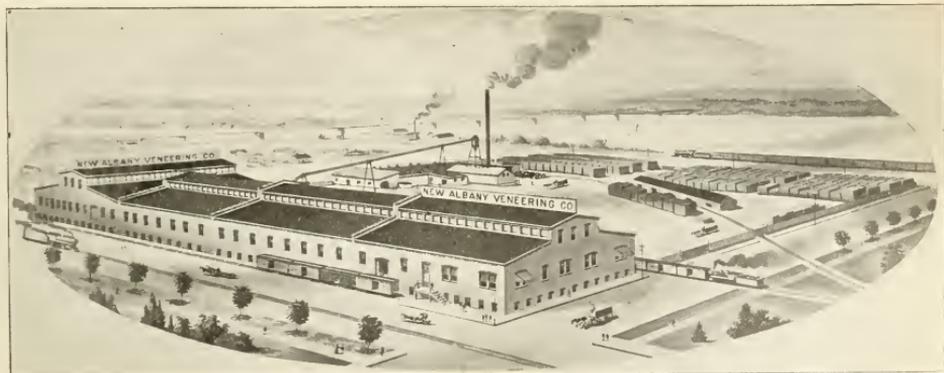

Louisville has many social, literary and professional clubs, but the one that is doing things for the city is the Commercial Club—a strong, active organization of business men who are using every endeavor to thoroughly advertise the commercial prosperity and business possibilities of that city to the world at large. Of this organization R. S. Brown is president. The latest thing done by the Commercial Club was to inaugurate a Bureau of Industries. Any Kentuckian or Louisvillian will say "Grand old state," or "Fine old city"—and, for that matter, everybody says that and has said it since the county of Jef-

BOYS' HIGH SCHOOL.

ferson and the county of Lincoln and the county of Fayette became the state of Kentucky.

But the Bureau of Industries of the Commercial Club insists that Kentucky and Louisville are more than that—that they are practical, steam-heated, fire-proof, modern instances of old traditions in modern practice. They insist that courtesy, hospitality and trade success go hand in hand. The association preaches that Kentucky is a livable, lovable American commonwealth, and a man can wear a G. A. R. or C. S. A. button and not prevent him from being a thriving business man and public-spirited citizen. The modern Kentuckian does not rest on deeds of a glorious past. The association prides itself on the spirit that makes traditions possible. It prides itself on Louisville's clergy, bench, bar and markets. Louisville wants more good citizens. It wants more capital. It wants more workers with brain and muscle, and alleges that any man can get good returns from any form of investment if he can deliver the goods. Although Louisville is already a great manufacturing center it wants more factories, more industrial institutions of every kind,

COURT HOUSE.

and to anyone who will contribute a new manufacturing industry it gives five years' exemption from taxation.

Louisville is a city in which beautiful women are the rule rather than a rarity, and in which the automobile has not yet relegated the beautiful Kentucky thoroughbred to the past. Rents are cheap in Louisville, and at the same time new public buildings, private homes and flats are springing up all along the fine residence streets, and in the beautiful country lanes and hills to the southeast and west of the city. The living question does not have to be solved in Louisville—it solves itself.

Visitors.

In conclusion it will be noted that but casual reference has been made in this article to individual hardwood lumbermen and remanufacturers—producers of veneers, panels and other hardwood products. This little sketch, with accompanying pictures, has been prepared to tell something about Louisville in brief. It is printed at the earnest request of several of the chief hardwood lumber and veneer producers of the region, who wish the story to take the form of an invitation to every man interested in any feature of business that has been developed at Louisville, to come and see them individually and collect-

ively, and thoroughly "do" their city. Although Louisville has been a lumber market for more than a half century, it is in its zenith at the present time. There are upwards of 60,000,000 feet of hardwood, a good deal of which is very high-class stock, in pile in the yards of the city at this time. With one exception there is more hardwood lumber ready for distribution there than in any other city of the South. When buyers make their pilgrimages to lumber centers, Louisville wants to be counted in as a point to be visited, and the members of the lumber, veneer and flooring fraternities will assure them not only a most cordial reception and good time, but will convince them that their city is the logical market for a large portion of their supplies of oak, poplar, ash, hickory, mahogany, veneers, panels and hardwood flooring.

The receipts and shipments of lumber during the month of May were just about half what they were for the same month last year, but even at that the actual amount of lumber shipped showed a slight increase over the amount of April. The receipts of lumber during the last month amounted to 5,104 cars, as compared with the previous month of 5,584 cars and for the same month of the year previous of 9,312. The shipments last month were 3,594 cars, as compared with 3,561 cars for the month previous and 7,274 cars for the previous. The amount of business transacted during the month of last year was the greatest known in the history of the lumber field here, and it is doubtful if that mark will be equalled again soon. The receipts, too, were the largest so far on record. The fact that the month of May this year was very light did not discourage local dealers, as they anticipated it and were glad to note the increase over the month previous, which shows that the trade is gradually getting down to a steady level.

Trade will soon pick up here, that is, if Frank Wiborg's efforts are successful. He is starting a Sunshine League, identical to the one originated at St. Louis some time ago. They have set July 1 as the day for the general resumption of trade. The league will get the support of all the business organizations, and it is their intention to have all the large factories start up again, or at least to employ as many of their men as possible. Confidence is not lacking, and it is about time to resume operations in full, and not wait for the beginning of next year.

The addition to the building occupied by the Acme Lumber & Veneer Company at Eighth and Harriet streets is fast nearing completion. The addition was made in order to make more room for the prospering concern.

E. W. Robbins of the Maley, Thompson & Moffett Lumber Company states that trade with them has been rather quiet during the past fortnight. All the mills of the company are running full time, and he looks for a change in the situation within a short time.

W. J. Griffith of Olive Springs, Tenn., was a recent caller among the lumbermen in an effort to get trade for his concern.

William Guelker of Dulheimer Brothers has returned from a trip to the mills of the company in Kentucky.

R. F. Dulwester, who returned from the South recently, states that the production of lumber in the South is very light, with anything like a fair demand. Demand would not take very long for it to be absorbed. Demand locally is generally quiet.

Attorney Chapman C. Archer of this city in a bankruptcy proceeding filed in the district court admits that he owes debts which he is unable

to pay and that he is willing to surrender all of his property to his creditors. Archer, Mitchell and Tutill were all members of the Cypress Lumber Company, and his liabilities along with those of the company aggregate \$750,000. Archer's assets aggregate \$234,850, which includes bonds and real estate. William Mitchell, a brick manufacturer of Delhi, also a member of the defunct company, filed a petition in bankruptcy. The liabilities, which are those of the Cypress Lumber Company, amount to \$778,100, and his assets are stated to be \$23,286.

The Curry Woodworking Company has sworn out a warrant for the arrest of their collector on a charge of embezzlement of \$600, which he is supposed to have spent on his sweetheart.

M. B. Farrin and family left the latter part of the week for a vacation trip to New York, where he will take charge of his new launch, "The Dida." It is 57 feet long and 11 feet 6 inches wide. The party will sail up the Hudson river and they may end at Detroit. Mr. Farrin expects the trip that he desires to take will consume about three weeks. He has several deals hanging fire in Cincinnati, which include the erection of two factory buildings with a floor space of about 90,000 feet, to be built on Spring Grove avenue, Winton Place. That matter will rest until Mr. Farrin returns from his jaunt.

"If the Cincinnati Reds win the National League pennant this year, we, the Chamber of Commerce, will have a spread right on the floor of the Chamber of Commerce. That will be the greatest advertisement that Cincinnati ever received, should her stalwart athletes corral the 1908 rag, and from present indications there is more than a possible chance. People talk about advertising Cincinnati, why let our Reds win the pennant and that will be the greatest ever thought of by any person in the United States. We will shape the name of Cincinnati on their lips," and at that Mr. Egan is not a baseball fan, but every place he goes that is about all he hears.

The logs of the Maley, Thompson & Moffett Lumber Company, which were drifted up the mill creek during a recent flood, are being drawn out of the bottoms and cut up into marketable lumber. This little scheme of utilizing the mill creek for commercial purposes has saved the concern considerable money.

The United States Timber Company's entire plant at West Irvine, Ky., was disposed of at auction sale last week by the Ezekiel & Bernhelm Company. The sale was made by order of the United States district court of the southern district of Ohio, and a great many Cincinnati buyers were interested. R. De V. Carroll was trustee in bankruptcy. The plant brought only \$7,800, nearly 87 cents on the dollar of the appraisement.

C. Crane & Co. have purchased a tract of land in Madisonville, near the Pennsylvania railroad, and will use the property to extend their already large plant by using this as lumber yards.

W. W. Stone of the T. B. Stone Lumber Company, with offices in the Union Trust building, has been on a business trip to New York. He said in letters received that trade in Gotham is rather quiet, and that there is little chance for any transactions to be made. T. B. Stone of the company asserts that trade during the past week has been fairly active. "We have received some very good orders in that time, and it leads me to believe that trade will show some improvement within a short time."

W. R. Dunn of the Boyce Lumber Company of Abingdon, Va., was here during the past fortnight. He said things in his town are rather quiet.

Lewis Motron of Bristol, Tenn., was another visitor during the past week to take a look into the hardwood situation here.

M. M. Morgan of the Nicola, Stone & Meyers Company, who has trade with them has been very quiet in his business, and that he does not look for any material change for some time. Charles Cunningham of L. W. Radina & Co.

says trade has shown some improvement during the past two weeks. "We are selling a great deal of wagon load lumber and have filled a number of carload orders during the past few weeks."

J. Watt Graham of the Graham Lumber Company says that business with them is very irregular. "One day we are a little busy and the next day we have to hunt around for something to do," is the way he put it.

The A. M. Lewin Lumber Company of McLean and Bank street, with a branch on Langdon avenue, Weston, has been incorporated with a capital stock of \$150,000 by A. M. Lewin, H. P. Lewin, B. H. Lewin, Alfred Mack and Henry Mack. The company was formerly run by A. M. Lewin and the new concern takes over all the property and business. The concern does a large business in buildlers' materials.

Sam L. Moyer, vice president of the Lunkenheimer Company, took unto himself a bride last week and left immediately for a wedding tour through the East. His spouse is Miss Ella Louise Hewetsob of Newport, Ky. The wedding was a secret until a short time before the ceremony, when the news leaked out. Mr. Moyer is also a councilman in this city.

Thomas P. Egan, president of the J. A. Fay & Egan Company, manufacturers of woodworking machinery, was elected vice president for Ohio at the recent convention of the National Association of Manufacturers of the United States in New York. Mr. Egan was the originator and first president of this association.

The Cincinnati Coal, Iron & Timber Company has been incorporated by Frank H. Adair, R. W. Wilson, James M. Stone, A. W. Schulman and Burton C. Jacobson, Jr.

At the first meeting of the creditors of Walter G. Beck, bankrupt box manufacturer of this city, held in the office of Bankruptcy Referee Greig August Lasance was selected as trustee of the estate. His bond was fixed at \$800, which he furnished.

"The month of May with us has been the poorest on record this year," said J. E. Tutill, local representative of E. L. Edwards of Dayton. "Usually that month and June are the best of the year, and from present indications we cannot see much change for the month of June. In April we had a good month, and we were beginning to see light again, and then the slump came."

Sam W. Riechy of Riechy, Halsted & Quick says that trade with them has been very quiet for some time, and he does not look for any material change for the balance of the year. Mr. Riechy is the proud father of a son, recently arrived at his home.

T. B. Stone of the Babcock Brothers Lumber Company of Pittsburg was a visitor in town recently.

W. Trester of Hamburg, Germany, was in town recently looking into the lumber situation here. He is making a trip through the hardwood district, placing orders for his concern.

W. E. Johns of the William H. Perry Lumber Company returned in the latter part of the month from a business trip to Chicago. He reports business locally the same as for some weeks and says he does not look for any material change for some weeks. W. B. Wolfe of the company, who is the latest among the lumbermen to become a benedict, returned from his honeymoon through the hills of Kentucky and departed immediately to Nashville, where he will superintend a lumber shipment to the Cincinnati yards of the company.

R. Gilbert of the J. W. Darling Lumber Company says trade with his concern was fairly active for cottonwood and the lower grades of gum, which was due to the rapid absorption of the box manufacturers. There is some inquiry for the better grades of gum, but the lower grades have the call at present. "I look for a fair amount of business to be done in the middle of July, and then the usual summer lull will be noted." J. W. Darling of the company

has returned from a trip to Joppa, Ill., where the company's yards are located. He stayed in the Queen City for a short time and then departed for St. Louis on a business trip.

H. P. Garrett of the Broadhead-Garrett Company of Clay City, Ky., was here during the past week looking into the hardwood situation.

Harry Shrimpton of the Shrimpton Lumber Company has returned from a short sojourn through the South, where he went to look after business.

The S. B. Adams Lumber Company, which for two months or so conducted business at 43 Mitchell building, closed up office very suddenly and its members departed to parts unknown. The sudden disappearance of the company has stirred up some comment among local lumbermen and they are at a loss to know the reason of the sudden closing.

Ferd Bosken of the Cincinnati Hardwood Lumber Company says that they are doing only a fair business. The company has recently entered into the manufacture of cressanant walnut veneers and so far has met with considerable success.

W. B. Hays of the Wiborg & Hanna Company says trade is only fair, but that his company has done a fairly good export business during the past weeks.

W. Miller of Knoxville, Tenn., was a recent visitor to the Queen City. J. E. Kimball of the same city was here and both are reported to have disposed of some of their concern's holdings.

At a meeting of the club held June 6 the annual outing of the club was decided upon and will be held at Chester Park June 23. It was decided to suspend the next weekly meeting, owing to the convention at Milwaukee, as a majority of the members will not be in town. Fred Mowbray of Mowbray & Robinson issued a motion to refrain from using the Louisville & Nashville road as much as possible, and to throw all the trees possible over to the Cincinnati Southern in an effort to make them recognize the absorption of the switching rates. This met with the hearty approval of the members present. The names of the Dwight-Hinckley Lumber Company, the Francke Lumber Company of St. Bernard and the James C. McEntee Lumber Company were referred to the membership committee for action at the next weekly meeting, which will be held June 20, possibly at the Haven hotel.

ST. LOUIS

The receipts of lumber by rail for the month of May this year were 9,684 cars, as compared with 16,827 cars during May last year, a falling off of 7,143 cars. The receipts of lumber by river during May of this year were 355,996 feet, as compared with 250,000 feet during last May, an increase of 105,996 feet. During May, 1908, there were 7,653 cars shipped by rail, as against 10,697 cars during May last year, a falling off of 3,544 cars. There were 48,000 feet of lumber shipped by river during May this year, as against 742,000 feet last May, a loss of 294,000 feet.

The following shows the inspection and measurement of hardwood done by the Lumbermen's Exchange of St. Louis for the month of May, 1908, as compared with the same month last year:

Quarterned oak.....	1908.	1907.
Plain white oak.....	92,248.	44,870.
Plain red oak.....	2,659.	
Cypress.....	96,216.	319,853.
Cottonwood.....	320,620.	182,682.
Poplar.....	67,784.	
Maple.....	18,441.	40,093.
Gum.....	10,423.	
Ash.....	22,244.	122,435.
White pine.....	18,875.	20,655.
Yellow pine.....	22,248.	4,167.
Sycamore.....	12,967.	23,965.
Swamp.....	10,491.	
Elm.....	1,472.	383.
Totals.....	755,417.	759,541.

This shows a falling off of 24,124 feet of lum-

ber inspected and measured this year as compared with last.

A. H. Bush, secretary of the Lumbermen's Exchange of St. Louis and an enthusiastic member of the Travelers' Protective Association, was recently elected one of the Missouri directors of the association for a two-year term.

Harry Swartz has left the Geo. H. Barnes Lumber Company of this city to go to Bachelor, La., to accept a position with the Northern Lumber Company.

Arthur E. E. Luedinghaus, son of Henry Luedinghaus, president of the Luedinghaus-Espenbach Wagon Company and secretary of the company, died recently after an illness of several months. Henry Luedinghaus is a pioneer wagon maker of St. Louis.

The Maney Manufacturing Company, of East St. Louis, filed articles of incorporation recently with a capital stock of \$75,000. The company will manufacture farm implements. J. W. Maney, Herbert C. Well and John Maney are the incorporators.

William Lethman of the Lethman Cypress Company, who was down at the mills of the company in the South looking over the situation, reports conditions satisfactory, but not showing any decided betterment.

Arthur O. Encelman, 73 years of age, who was for many years one of the old Schutenbu-Boeckeler Lumber Company, died recently. For quite a number of years he has not been engaged in business.

After doing business for many years as a partnership enterprise the H. B. Poorman Box Manufacturing Company has incorporated with a capital stock of \$20,000, fully paid. James T. Gill, O. F. Gill and Thos. J. Burke are the incorporators.

There was a marked increase in the number of new structures started last month, and in the cost. The total cost of construction in May of this year was \$1,880,767, against \$1,983,758 last May.

The Kiermeyer Lumber Company of this city has incorporated with a capital stock of \$50,000.

The Beckers-Schnelle Lumber Company has incorporated with a capital stock of \$50,000. A. H. Schnelle and C. L. A. Beckers in the retail lumber business are two of the incorporators.

Theodore Plummer, president of the Plummer Lumber Company, estimates that business is only about sixty per cent of what it was at this time last year. He says their company knows that there is no money in lumber until prices are fair, so if they can get their price they sell, but do not until they can. They are not hunting for business merely to make sales.

L. M. Borgess, secretary of the Steele & Hibbard Lumber Company, who has been out on the road selling lumber for the company, says he sold more lumber during his last trip than on any trip he has made for several months.

An improvement in prices is noted by W. E. Keown of the International Hardwood Lumber Company. Mr. Keown says business is also improving.

An increase in business is reported by the Chas. F. Luehrmann Hardwood Lumber Company. E. W. Luehrmann, vice president of the company, says business is getting to be quite satisfactory with them.

A much better business in May is reported by C. E. Thomas of the Thomas & Proetz Lumber Company. He says that there are quite a number of items on the hardwood list that are very scarce among the majority of yards, but as his company is pretty well supplied with them he anticipates a good demand in the near future and also an advance in prices.

If the St. Louis hardwood lumbermen do not get the 1909 convention of the National Hardwood Lumber Association that will not be their fault. Not only will the committee appointed by the Lumbermen's Club, and composed of such hustlers as Thomas C. Whitmarsh, W. W. Dings, W. A. Bonaack, Henry Rolles and W. E. Barnes, go to Milwaukee prepared to get the conven-

tion or know the reason why, but a number of the members of the exchange are going and they will give their aid individually and collectively. Plans were outlined at a recent meeting and statistics prepared sufficient to convince the most skeptical that St. Louis is the only logical place to hold the convention.

Armed with invitations from Mayor Wells, the Merchant's Exchange, Business Men's League, Lumbermen's Exchange and the Lumbermen's Club, a committee composed of W. E. Barnes, editor of the St. Louis Lumberman; Henry J. Rolles of Wilson-Rohles-Rolles Lumber Co.; Thomas C. Whitmarsh, manager of the W. F. Ferguson Lumber Co.; George E. Hibbard of the Steele & Hibbard Lumber Co.; R. J. O'Reilly of the R. J. O'Reilly Lumber Co. will appear at the National Hardwood Lumber Association's convention at Milwaukee in the effort to bring the 1909 convention to St. Louis.

EVANSVILLE

Ralph May of May Bros., Memphis, Tenn., with Mrs. May, was in Evansville this week. Mr. May is attending to some business connected with their yard here. He came here from Dumas, Ark., where one of the plants of the firm is located.

Thirty thousand feet of lumber, comprising two full carloads, were sold at the H. Hermann Lumber Company's yard here on June 5. It is a consignment recently shipped here by a southern lumber concern. Consignees being unable to accept the lumber on account of quality, and having advanced freight charges, suit was brought in the superior court and the lumber was sold to satisfy the claim for freight charges. The lumber was purchased by the Schultze-Waltman company, of this city.

William White of the C. P. White Lumber Company, Boonville, Ind., was in the city a few days ago. It was reported some time ago that the plant of the firm, now located at Boonville, would be removed to this city, but it seems that, owing to the business depression, the final steps were not taken.

Maley & Wertz report business as improving quite noticeably. The inquiries are numerous and that they have taken several nice orders for future delivery. Their mill has been closed down this week and they have been busy putting in a lumber transfer. They now have the equipment in the sorting shed built ready for operation. The lumber coming out will now be transferred to wagons to be taken into the yard, where they formerly used trucks. The new system will be a great saving, as it now takes about three less men than formerly.

The Malley & Wertz mills at Grammer, Edinburg and Vincennes are running steadily.

The Lucas Land & Lumber Company of Waverly, Tenn., have opened a distributing yard here under the management of J. S. Williams, formerly with Heath-Witbeck Company of Chicago.

A letter was received by Claude Malley of Malley & Wertz from Frank May of May Bros., Memphis, Tenn., this week. In which Mr. May said business was very quiet in Memphis, but that their mill at Dumas, Ark., was being operated full time. Mr. May said he expected to be at the convention at Milwaukee, June 11 and 12. Evansville will be well represented at this convention. Malley & Wertz will be represented by both Mr. Malley and Mr. Wertz, and Young & Cutsinger will be represented by Bedna Young.

NASHVILLE

What is known as the "logging season" for Nashville lumbermen, many of whom are located on the Cumberland river, is reported as being well high over, and these aforesaid gentlemen are heaving sighs of relief. Last year when conditions were excellent these lumbermen contracted for all the timber they could up the river, the same to be cut and rafted down to

them as the tides of the river would permit. They were greedy for timber last year; now, they declare that the very "tides of fate" has punned and marked them. They state that the river has been up practically all the time during the logging season and every rise has caused a "chill" when the lumbermen remembered the logs it would bring down the river—logs they did not want, but had to take, as they had been contracted for. The river is now getting a trifle low for logging, but it is still high enough to handle cross-ties, and quite a lot are being brought down.

The Nashville Tie and Cedar Company has been shipping a lot of ties down the river of late and has a good many contracts ahead for early delivery. A shipment of 100 carloads is reported recently. This amount of ties and even more, however, can be handled in what is called one tow. About twenty carloads of ties can be put aboard one barge and a tow boat can get down the river with six barges, or 120 carloads—about six trainloads. Most of these ties are being unloaded at Cairo and Joppa, Ill.

Two of Nashville's most prominent and most popular lumbermen had unique experiences a day or two ago on the occasion of "tag day" in Nashville. This day is one the United Charities evolved as a means of making money for their fresh air campaign in the city summer months. Ten automobiles full of flowers were stationed at prominent places in the city, each accompanied by pretty girls and women. Everybody was "held up" by these beauties for "sweet charity's sake" and made to buy a flower. When they paid the toll a pretty girl plinned a flower on their coat and they were thus tagged. John Ransom owns a very nice automobile. He was asked for the use of his machine on this day. He is always generous to a fault, but he was loth to let a bunch of women have his car, so he told them to get some other machine and he would duplicate in a donation whatever they made in that car. The ladies let him off after such an offer on his part. They got another car and the machine with its load of flowers and pretty girls made at its station between \$85 and \$100. Instead of having to pay some \$8 or \$10, as he had anticipated, the good-natured John R. had to "cough up" close to \$100. John W. Love also owns an automobile, but his experience was a little different from that of Mr. Ransom. Mr. Love was spinning home to dinner when a fair one planted herself right between the car tracks and bade him stop and be tagged. He stopped all right, but expostulated with the fair one and averred that he had no money on his person. The fair one thought he ought to have some change about him even if he didn't, and she argued with him. Finally he thought of a scheme. He would leave his watch with her as a pledge for the faithful performance of a promise to bring some change on his way back. She took the watch. It was John W. Love's watch, but at that time she one daisy plinned to his coat, but at that time he got off light as compared to his next door neighbor and fellow lumberman, John B. Ransom.

Richard Wilson of the Wilson Land and Lumber Company is ill and the doctor has advised him to take a long rest and recuperate. He has stomach trouble and will probably sail for Europe ere long.

James B. Read of Scottsville, Ky., has sold out his interest in the firm of Love, Boyd & Co. to the other members. He was the junior partner in the concern. Mr. Read during the past week lost his three-year-old baby.

Lewis Doster, the genial and popular secretary of the Hardwood Manufacturers' Association, is getting to be quite a golf fiend. He has joined the Nashville Golf and Country Club, one of the select and most ornate of the city and one which has excellent golf links. The stalling secretary can be seen most any day in the late afternoon taking a little recreation after

a hard day at the office. He wears a little red cap and his fellow players can tell him in this cap no matter if he's half a mile away. The same founder, who is spending his time now in Polk county, Tennessee, developing the property of the Conasauga Lumber Company, was in the city this past week. He and the elder Benedict, John B. Ransom, John W. Love, M. F. Green and the Burns brothers are the principal owners in this enterprise. They own a tract of 50,000 acres, on which it is estimated there are over 200,000,000 feet of timber. A double saw mill has been erected and it cuts about 20,000 a day. Other mills will be erected as they work up different portions of the tract. It is estimated that it will require fifteen or twenty years to cut out this tract. Hamilton Love, who has suffered with rheumatism for many months, is improving slowly. If he continues to improve his brother, John W. Love, will leave early in July for Markland, Nova Scotia, where he owns a hotel. Mr. Love will take his family with him.

MEMPHIS

The last meeting of the Lumbermen's Club for the season was held at the Hotel Gayoso May 30 and, while the attendance was not particularly large, owing to the absence of a number of lumbermen from Memphis, it was one of the most important gatherings held this year. The meeting was under the auspices of the River and Rail Committee, and rate matters were thoroughly discussed. The most prominent feature was the address on "Legal Phases of the Rate Question," by W. A. Percy, who is perhaps more familiar with this subject than any attorney in the South. Mr. Percy is the attorney in the three cases brought before the Interstate Commerce Commission by prominent hardwood interests of Memphis, as follows: J. W. Thompson et al. vs. Illinois Central and Yazoo & Mississippi Valley Railroads; Geo. D. Burgess et al. vs. Trans-Continental Freight Bureau, and Jas. E. Stark et al. vs. St. Louis, Iron Mountain & Southern. The first involves the rate on lumber from Memphis to New Orleans for export; the second, rates on lumber from Memphis to the Gulf and the third, from Arkansas points to Memphis, Cairo, St. Louis and other points. Mr. Percy appeared before the Interstate Commerce Commission in the argument of these cases a short time ago and gave an interesting review of the testimony and arguments before that tribunal. He also reviewed the case brought by the Central Yellow Pine Association and by the associations of Georgia and Alabama, in which both have won victory over the railroads, the ruling of the Interstate Commerce Commission in the case of the first named having been sustained by the Supreme Court of the United States and the latter having secured an injunction from the Federal Court restraining the roads from putting the advance in yellow pine rates into effect. Mr. Percy believed that owing to the similarity of principles involved in the Memphis suits and the yellow pine case, the plaintiffs in these suits would be successful. He does not know when the commission will hand down its decision, but believes that the arguments made by counsel for Memphis shippers will be strong enough to more than offset the points made by the dependants and is decidedly optimistic regarding the final outcome.

Mr. Percy stated that the only way the railroad companies ever equalized rates was through an advance of the lower to equal the higher. He stated that in order to offset the advance on hardwood lumber rates to the Pacific coast the railroads had advanced the eastbound rates on Pacific coast lumber. He further stated that the Pacific coast shippers were fighting the advance subject to the Interstate Commerce Commission but as the Memphis shippers were doing nothing they had begun action by se-

curring a Federal injunction restraining the roads from putting the advance into effect.

In the Thompson case Mr. Percy stated that the only arguments brought by the dependants to sustain their contention for a higher rate had to do with the theory of lumber knocking out the end of cars and by the detention of cars at New Orleans awaiting loading of ships. He said that C. C. Cameron had made the wonderful discovery that lumber knocked out the end of cars and made it necessary to charge a higher rate. Regarding the detention theory he asserted that, while the railroads claimed that there was delay of about seventeen days, the plaintiffs were able to introduce documents showing that the detention did not amount to more than half of this time at the very outside.

Mr. Percy believed that the lumbermen of Memphis ought to contest every advance threatened by the railroads in this section, and he urged upon the club that it take this course. His idea was that the railroads would not be so willing to disturb existing rates if they realized they had a fight on their hands every time they attempted to do so. He stated that during prosperity and adversity alike the railroads plead for higher rates. He said that during periods of prosperity they justified their action on the ground that the volume of business was so large that it was impossible to handle it economically and therefore profitably, making a higher rate necessary. Durling periods of depression he said they argued that there was so little business offering that the volume thereof did not furnish sufficient revenue for the roads and therefore made it necessary to put higher rates into effect.

One of the largest tolling points made by Mr. Percy was the rate on yellow pine tonnage. He stated that lumber takes the second lowest classification of any commodity, that it is a year-round traffic, that cars can be loaded to their full tonnage, that loading and unloading are generally done by consignor and consignee and yet, in the face of these facts, he shows by the tariff sheets of the Illinois Central that it is charging a higher rate per ton per mile on lumber than it is on any other tonnage. He stated that lumber takes the average rate charged for all other commodities handled by that system. He also showed that while hardwood lumber is much heavier than Pacific coast lumber, the roads out of Memphis are charging a higher rate for handling the former over a rolling country than the trans-continental roads are charging for handling the latter over the high grades of the Pacific slope. On conclusion of Mr. Percy's address a rising vote of thanks was extended him for the very excellent and entertaining talk he had made.

Directly in line with his suggestion, the club decided that it would assume the aggressive in all matters involving an advance in rates by the railroads and the River and Rail Committee was empowered to take such action as it saw fit. In other words it is clothed with authority to take whatever action it may give notice of intention to advance their rates.

The club also adopted resolutions endorsing the action of the meeting called at the Instance of the Illinois Manufacturers' Association protesting against the threatened advance in rates by the railroads of the country. This convention was held in Chicago a short time ago.

On motion of W. H. Russe, president of the National Hardwood Lumber Association, a committee, headed by W. L. Crenshaw, was appointed to ascertain the number who will attend the annual of that organization at Milwaukee and to make transportation arrangements for the trip.

Jno. W. Dickson, of the J. W. Dickson Company, was in Chicago May 14 and 15 to attend the committee conferences of the National Hardwood Lumber Association. In fact, he was in that city when he received information that his mill in east Memphis had burned with

a loss of about \$10,000. Mr. Dickson states that the company will rebuild the mill as soon as possible.

Dispatches received here from Water Valley, Miss., state that the shops of the Illinois Central at that point have increased their force within the past few days, and that the management plans to re-instate between 300 and 400 workmen within the next thirty days. The Illinois Central is getting all its engines and cars in repair, regardless of the fact that all this equipment is not necessary for handling the present volume of business. The officials believe there will be a sufficient increase in traffic this fall to make this necessary.

Captain Ralph Bennett, of the lumbermen's baseball team of Memphis, is having his men out every few days for practice, and they are rounding into excellent form. He says that they will not rub it in on Nashville by challenging the lumbermen of that city for another contest, but states that he is awaiting with anxiety some sign that the boys on the Cumberland are willing to try their fortunes on the diamond with the lumber laddies in the Bluff city. It will be recalled that each team won one game for the cup offered by the American Lumberman, with the result that there is yet one game to be played before the ownership of the trophy is decided. There is little doubt in the minds of the Memphis lumbermen as to who will own the cup eventually.

The Standard Lumber Company, with headquarters in this city, has recently secured a new mill at Sison, Miss., to be operated in connection with its plant at Earle, Ark., and it is now making arrangements to build a mill on its tract of hardwood timber land in Louisiana. Messrs. W. J. Richardson and P. H. Ravises are the principal owners of this company and it is their announced intention to branch out along manufacturing lines as rapidly as possible.

The Norton Lumber Company of Richey, Minn., has completed its plant at that point and this is now in readiness for operation. The company has upwards of 75,000,000 feet of hardwood timber on land it controls and is making arrangements to begin operations on a liberal scale.

Geo. B. Grant has joined forces with the J. W. Darling Lumber Company of Cincinnati and will look after the interests of that company in this territory. Mr. Grant was until last December manager of the southern interests of the Buffalo Hardwood Lumber Company and, after resigning that position, he became one of the incorporators and officers of the English-Grant Lumber Company, with headquarters at Little Rock.

Geo. W. McClure of the Bellgrade Lumber Company, J. F. McIntyre of the Memphis Rim & Bow Company, S. B. Anderson of the Anderson company and other prominent lumbermen of this city visited the offices of the Lamb-Fish Lumber Company at Charleston, Miss., in a body this week as guests of that corporation. The party was in charge of Geo. Dwyer, who recently resigned his position as assistant general freight agent of the Illinois Central to become identified with the Lamb-Fish interests. The gentlemen returned yesterday afternoon and are quite enthusiastic over the big plant and its perfect equipment. It has been constructed at a cost of approximately \$400,000 and is conceded to be the largest exclusive hardwood plant in the South. In addition to the mill and other necessary structures in connection with the plant, a clubhouse is maintained at which the visitors were entertained. The plant is now being operated and is turning out about 125,000 feet of lumber a day, mostly cypress.

Weather conditions in this territory during the past fortnight have been only fairly favorable, heavy rain having fallen during the latter portion of this period. This has interfered to some extent with the operation of mills and also with getting timber in the woods. How-

ever, bad weather is not as serious a factor now as it would be under more normal conditions, as manufacturers are disposed to keep production down to the lowest possible limit and cut only in cases where it is necessary to save stock already on hand. It is difficult to estimate the percentage of production as compared with an average for this time of year, but there are conservative authorities here who declare it will not reach even 50 per cent.

The Three States Lumber Company states that it will close down its big hardwood mill at Buxette, Ark., within the next few days, as it has almost completed cutting out its supply of logs at that point. The company is also making arrangements to close down one of its mills in Mississippi where it has been cutting cottonwood almost exclusively. W. A. Gilchrist, who is in charge of the interests of the company in this territory, is of the opinion that the only solution of the situation will come from a curtailment of production, and he is therefore an ardent advocate of this course. He is not only urging it for others, but he is willing to go the pace himself.

Max Sondheimer, president of the E. Sondheimer Company, left this week for New York and other eastern points. Mr. Sondheimer before leaving stated that not more than one-third of the milling capacity of the company was engaged and he says there is no disposition to run except at points where such action is necessary to save the supply of timber in hand.

The rate situation here has not been settled. The special committee, of which A. L. Foster is chairman and which has conducted all the negotiations looking to readjustment of rates, reported at the meeting of the Lumbermen's Club Saturday that there was probability of some further concession on the part of the Illinois Central. It will be recalled that the railroad made a proposition to reduce rates one cent per hundred pounds on lumber shipments north and east out of Memphis and that the committee on behalf of the lumbermen refused to accept this offer. Mr. Foster expressed the hope that if it were possible to secure concession from the Illinois Central the other roads would be as liberal. The committee has its mind made up positively that a one-cent reduction is not anything like adequate, and this feeling was all the more strongly entertained after the address of the Hon. W. A. Percy before the club Saturday afternoon.

J. W. Thompson, of the J. W. Thompson Lumber Company, has returned from a trip, including Chicago, New York, Philadelphia and other points.

Frank B. Robertson, president of the Robertson-Pooshe Lumber Company, and E. E. Goodlander of the Goodlander-Robertson Lumber Company, left Memphis this week for a western trip. They expect to arrange their itinerary so as to be in Milwaukee during the annual of the National Hardwood Lumber Association.

NEW ORLEANS

R. H. Downman's suggestion in favor of a big cypress holding company to control all the cypress stumpage of the country with conservatism as its object, broached at the last annual meeting of the Southern Cypress Manufacturers' Association, has as yet, to all outward appearances, borne no fruit. The idea has been something of a hobby with Mr. Downman for some time and his speech at the banquet of the lumbermen was expected. Mr. Downman controls the largest cypress holding in Louisiana, he is one of the largest individual holders in the state, and he believes the central holding company is the only method of conservation possible. Many agree with him, but there are others who do not. Frank B. Williams of Patterson, generally conceded to be the largest individual holder of cypress in the state, is declared to be among the latter. When this sub-

ject was discussed at the banquet last month and Mr. Williams was looked for to give an expression of his views he had disappeared. The well-known lumberman quietly withdrew while Mr. Downman was talking, and no one has been able to get much from him on the subject.

J. S. Gardner of Otts Mill, Livingston parish, this state, who has done considerable work in experimenting with woods, announces that he has discovered a remarkable process for coloring the wood of a growing tree in such a manner as to produce somewhat astounding results. Mr. Gardner went to the state capital the other day with his invention and displayed the result of his experiments. He had a log which had been sawn into strips and which showed the thoroughness of the coloring. Mr. Gardner says that by inoculating the growing tree with certain acids he can produce in a short time a saw log that will be dyed through and through any color desired. He believes with his invention that it is possible to make a forest of trees that will rival some of the finest imported colored woods.

W. Osmond Orton and associates have organized in this city a new company that will engage in dredging for sunken logs in the countless sawmill streams in Louisiana and Mississippi. The company proposes to get these logs and then manufacture them into lumber, marketing all that prove to be marketable. It is the first company of its kind organized here and has a big territory in which to work. In East and West Pearl river alone the value of the sunken logs is placed even by the most conservative estimators at more than \$500,000. In all of the sawmill streams that are tributaries to Amite river there are also thousands of dollars' worth of sunken logs. The industry is believed to be a big one and the work of the new company will be watched with interest. Frank G. Conkili, Henry V. Mielly, Dudley M. Shively and S. M. Robinson are the incorporators.

The Louisiana Lumber Company, Ltd., has been incorporated in New Orleans with an authorized capital of \$10,000, to manufacture and deal generally in staves, cooperage materials and forest products. The company will do a general lumber manufacturing and stave and lumber export business. F. J. Foxley, John C. Livesedge, W. H. Scott and D. Thomas Rees are the incorporators.

Advices from Gulfport, Miss., state that the Central Naval Stores & Supply Company has been incorporated there with an authorized capital of \$100,000. G. F. Mason, J. W. Wade and others are the incorporators.

According to a statement of Edgar E. Dumont, resident manager of the Standard Export Lumber Company of New Orleans and Gulfport, that firm expects to do a good export business out of Pascagoula in the next few weeks. The company has chartered several steamers to handle the export shipments. One of these, the Crusader, 2,744 tons, will take 3,200,000 superficial feet of square timber, the largest cargo ever loaded at a Mississippi sound port.

ASHLAND

E. L. Salisbury of the Wright-Salisbury Lumber Company is on a business trip through Ohio in the interests of the firm. The company is operating its mill full time and has on hand a fine lot of timber; in fact, about the best lot it has ever had.

J. J. Meade of the Meade & Speer Company of Pittsburg was a business visitor in the city last week.

The Kenova Poplar Manufacturing Company of Kenova, W. Va., operating its plant full time on its old facility, reports:

The American Wood & Timber Company, recently incorporated at Farmers, Ky., at a meeting held May 20, elected the following directors: S. B. Reese, B. F. Seary, E. Slaughter and N. Goodman, who elected officers as follows:

President, S. B. Reese; vice president, N. Goodman; secretary and treasurer, E. Slaughter, with B. Minear of Morehead as general superintendent. This company now operates all the booms and log ponds, and controls all bank leases on the Licking river, from Farmers for a distance of about eight miles up the river, and is without doubt the largest operation of its kind in the state. It has now stored in its booms and log ponds over eighty thousand logs, consisting of the finest poplar and oak. This lumber is owned by the S. B. Reese Lumber Company, the Licking River Lumber Company and the Farmers Lumber Company; also some ties belonging to Wheeler-Holden Company. The Boom Company advises that it does not expect any more logs this season and that the mills will be furnished from the present supply on hand for the season's cut.

Edward Barber of Illingworth, Ingham & Co. of Cincinnati was a business visitor in the city last week, returning from Farmers, Ky., where he had been loading several cars of export oak received from the Licking River Lumber Company. Mr. Barber returned to Cincinnati via Ironton, Ohio, looking after business interests at that place.

W. A. Biggs of Wilson & Biggs, Greenup, Ky., was a business visitor in the city last week. Mr. Biggs' firm deals largely in ties of all kinds and sizes. They handle a very considerable bill oak. Mr. Biggs advises that business is improving, but is not to be compared with that of last year.

F. G. Eberhart, Jr., president of the Licking River Lumber Company of this city, who spent last week with this company has returned to his home in Mishawaka, Ind.

W. M. Famin of the city of the Keys-Fannin Lumber Company of Henderson, W. Va., is on a business trip through the East in the interests of his company.

M. W. Thomas, who for a number of years has been associated with lumber concerns of this city and vicinity, two of the most prominent ones being O. F. L. Beckett & Co. and the Ashland Lumber Company, of which latter company he was president for several years, has severed his connection with these companies. Mr. Thomas has not yet decided definitely as to his future plans, but will not engage in active business for some time. He has been unusually successful in his business career and possesses considerable property. He owns the new three-story double front Citizens' Bank building erected here last year, and is at present building for himself a fine residence on Winchester avenue, one of the principal streets of the city. The Ashland Lumber Company will continue to operate as formerly, and will not admit any new member to take the place of Mr. Thomas. The present owners of the company are Messrs. Scott, Beckett and Meredith.

J. E. Burke, secretary of the Wright Salisbury Lumber Company, and Miss Eva Marie Chapman surprised their many friends in this city recently by announcing their marriage, which occurred Feb. 19 last. Mr. Burke and happy bride are on a honeymoon trip, visiting the Great Lakes, Niagara Falls, and other points of interest. This young couple have hosts of friends who wish them a long, useful and happy life.

William C. White, the Catskills lumber merchant, was a business visitor in the city this week. Mr. White states that the timber market in his city is very quiet, there being practically no stir in the timber business.

J. H. P. Smith, president of the Hardwood Lumber Company, is in Cincinnati on business.

Fred Fischel, secretary and manager of the Phebel Lumber Company of Salt Lick, Ky., spent a day in the city this week on his return from one of their large timber tracts in Magoffin County, where they have a number of men at work cutting timber into the river. Mr. Fischel reports quite a volume of business and expresses himself, as most manufacturers, that the lumber cut from timber now being

logged will bring better prices than the present market.

The mills of the city and vicinity are all running full time with the exception of one. All the sheet-pile and wire mills are running full time with the exception of the A.C.A.I. furnace.

R. G. Page, secretary of the Licking River Lumber Company, is on a business trip through Ohio, Michigan and Indiana, and will be out of the city several days. Mr. Page secured some orders for hardwoods, and states that the lumber supply of the consuming trade is far below normal and that they are placing orders for very small amounts. He also says that an initial 50 cents or \$1 per thousand could be realized, buying would be stimulated to such an extent that it would be difficult to supply the demand, as all the consumers would want to cover their shortages and increase their stocks at the lowest prices, and this would surely increase the demand and raise prices.

Charles Kitchin of Vansant, Kitchin & Co. is proving an enthusiastic candidate for the congressional nomination, and is spending the greater part of his time visiting the influential politicians of this district.

The Yellow Poplar Lumber Company of Coal Grove, Ohio, continues to operate full time and is putting on steaks a large amount of fine poplar lumber. This company has applied to the War department for permission to construct a splash dam in the Russell Fork of Levisa Fork of the river in the town of Round River in Dickenson County, Va. It owns a large amount of timber which comes through these creeks into the Big Sandy, and through the Big Sandy into the Ohio, to be manufactured at the plant at Coal Grove.

The Chesapeake & Ohio is a very important factor in this territory, and lumbermen are pleased to note the resumption of improvements on several of its branches. Beginning the first of this month they resumed the work, which was abandoned about a year ago, of double tracking from Huntington to Charleston, W. Va.; considerable improvements will be made on the Lexington Division, as well as the Big Sandy. This will not only improve the service of the road, but there will be a demand for more labor, lumber, timber and steel.

E. S. Stephens, Inspector for Duhamel Bros. of Cincinnati, was in the city several days last week, during which time he purchased several cars of lumber from local dealers, including four cars from the Hardwood Lumber Company, and several cars from the Licking River Lumber Company, which stock he inspected and loaded at the mill at Farmers, Ky.

W. Salisbury, secretary and manager of the Park City Lumber Company of this city, reports good business for last month. His company has been awarded the contracts for supplying all the lumber for the new Central Fire Station building and the new ten-room school building, both to be erected this season. Mr. Salisbury, with many other Ashland citizens, looks favorably on the outlook at present.

CHARLOTTE

The Western Carolina Lumber & Box Company is the name of a new corporation now establishing a large plant for the manufacturing of boxes at Bluffton, N. C. The new plant will be in operation in less than thirty days and the output of the company will be box shooks. It is understood that the company has already disposed of its output for a year in advance.

A charter has just been granted the Wilmington, N. C. Lumber and Lumber Company of Wilmington, N. C., at a capital stock of \$20,000. The company is owned by Wm. W. Gilson, E. J. DeGrove and Norwood Giles of Wilmington are the incorporators, and the company is authorized to engage in a woodworking and general lumber business.

The principal offices of the Asheboro Lumber Manufacturing Company have just been changed, by amendment to the company's charter, from Asheboro to Fayetteville, N. C.

The charter of the McClamrock Mantel Company of Greensboro, N. C. has been amended so that the capital actually paid in is \$18,000 instead of \$32,000.

A deal has just been closed at Winston-Salem, N. C., by the Lamb-Fish Land Company, which owns 250,000 acres of fine timber land in Mississippi, by which the company acquires property located on the line of the Southern railway, upon which it will immediately erect a large box shuck factory. The mill will be about 70x150 feet, and work will commence at once. Machinery for the manufacture of plug tobacco boxes, from gum and oak lumber, will be installed.

A charter has just been granted the Carolina Hardwood Lumber Company of Asheville, N. C., at a capital of \$15,000. Incorporators are R. P. Baser of Baltimore, and others. The company is authorized to buy and sell timber lands, manufacture all kinds of hardwood, operate saw mills, etc.

After being closed down for a considerable length of time the plant of the Greensboro Furniture Manufacturing Company of Greensboro, N. C., is now in full operation. The company has recently received a large number of orders and hopes to continue full operations uninterrupted.

On June 1 the large crate manufacturing plant of H. T. Baker, located at Magnolia, thirty miles from Wilmington, N. C., was burned. The loss amounts to about \$5,000.

The engine and boiler rooms and sawmill of the Whiteville Lumber Company, located at Whiteville, N. C., were burned recently, loss being estimated at about \$100,000, with only partial insurance. About 200 men are temporarily employed by the fire.

The sawmill of J. A. Hyatt, located in Lancaster county, S. C., was burned recently, causing loss of about \$1,000.

Every lumberman of this state is deeply interested in the fight which the North Carolina Corporation Commission is making before the Interstate Commerce Commission against the Norfolk & Western against discriminatory and excessive freight rates. The recent action of the Southern and the Seaboard railways, in joining the N. & W. in the suit is of widespread interest. The Interstate Commerce Commission has just notified the Corporation Commission of this action and great interest centers on the hearing of the cases, which will be held at an early date.

MINNEAPOLIS

An excellent demand for hardwood for doors, millwork and interior finish in the Twin Cities is indicated for the season that is now just fairly started, and a lot of work is being done in these lines, the heaviest ever known, and the volume of operations was shown by the record breaking total of building permits. This year they are running a little behind, but are far above the average, and from the amount of figuring that is being done the building demand is going to be heavy. Minneapolis permits for May amounted to \$5,000,000, and the total cost of \$1,506,050. Last year in May there were 708 permits issued, with a total cost of \$1,026,425. The total for five months of the present year was \$3,490,505, compared with \$4,057,585 for the same months last year. The St. Paul record for May was \$891,409, a slight increase over last year, when the record was \$889,542. The total for five months was \$2,107,597, while for the same months last year it was \$2,553,043.

E. Payson Smith of the Payson Smith Lumber Company has gone for a short business trip to southern points to look after their hardwood and yellow pine interests. A. S. Elias, who is

in charge of the company's headquarters, says they are having a very fair run of business and on the whole have little complaint to make. The demand for northern hardwood is in good proportion to the light supplies that are in sight, he believes.

Harry C. Reynolds, secretary of the Southern Lumber Company, Inc. of Clayton, Ga., manufacturers of hardwood, has been in Minneapolis on a visit for several days. He was formerly associated here with his father, the late W. T. Reynolds, in white cedar post and pole business, and having lived here several years, has many friends in the city who were glad to shake his hand again.

L. E. Brown, sales manager of the Brown Brothers' Lumber Company, Rhineland, Wis., was a business visitor in Minneapolis a few days ago.

The Villamea Box and Lumber Company of St. Paul had a peculiar accident in their factory a few days ago. A 5-foot drive wheel burst and threw pieces in every direction, one going through a 2-foot floor to the room above and out through the roof, but no employee was struck or injured.

The Reed & Sherwood Lumber and Manufacturing Company of Anoka, Minn., is going to build a two-story brick factory building to accommodate the growing needs for space for their woodworking machinery.

The Osterhout & Fox Lumber Company, newly organized, has opened offices in the Lumber Exchange and will handle west coast lumber, shingles, hardwood lumber and flooring and other specialties. Creston W. Osterhout, head of the company and its active manager, has been associated with the Virginia Lumber Company of Virginia, Minn., and recently has been in the lumber business in California. He is well qualified by experience to look after both buying and selling.

E. Payson Smith, president of the Payson Smith Lumber Company, is absent on a trip to Milwaukee, Chicago and Indianapolis. He will also make a visit to his mill in southeast Missouri before returning home. Mr. Smith says that business for the first three months of the present year were better than those of the same period of 1907. He anticipates a good fall business.

G. W. Everts of the Forbes-Everts Lumber Company, is absent on a business trip to their mill in Missouri. Manager H. A. Broughton has well appointed offices at 1043 Lumber Exchange, and is one of those good fellows that make it agreeable for all visitors. He is looking forward to a big fall business, but does not think it will open before October.

Wm. C. Bailey, one of the pioneer lumbermen of the northwest, always has a pleasant smile and a warm handshake for a newspaper man. Mr. Bailey is located at 600 Central avenue, where he has been for years. He has a trade especially desirable among the wagonmen throughout the Northwest. Mr. Bailey was one of the founders of the National Hardwood Lumber Association, and was its first vice president. He was one of the first subscribers to the Record and has not missed one issue. He says it is better today than ever, and every hardwood lumberman in the country should be a reader of it.

A number of the lumbermen will attend the annual meeting of the National Hardwood Lumber Association at Milwaukee, June 11 and 12. It is possible a car will be chartered and all go in a body.

LITTLE ROCK

The Lumber interests, particularly in the southwestern and southern portion of the state, have suffered severely from the recent severe storms. Some companies estimate that as high as 50,000,000 feet have been blown down by the storms, in several individual instances, while

the total loss is very great. Mills have been put to cut this fallen timber, however, and the majority of it will be worked up. Hans and Herman Diecks of Kansas City, chief owners of the interests of the Diecks Lumber Company, one of the largest lumber concerns in the South-west, visited the scene of the storm's work and immediately ordered their mills to center their efforts on the waste timber. Aside from the injury to commercial timber an almost equally great damage has been done the young forests.

A big deal in hardwood has been closed here by A. C. McComb of Oshkosh, Wis., becomes the owner of 11,000 acres of virgin timber in eastern Arkansas, located along the Memphis & Helena railway in Desha county. The timber was originally a part of the holdings of Max Fleisher of the Fleisher State Company of Memphis. The timber is chiefly white and red oak.

The Rock Island Railway Company sustained a \$10,000 loss recently through the burning of a large supply of ties along the track at Abbott.

The plant of the Cunningham & Kitchen Company of Tinsman has been destroyed by fire, entailing a loss of about \$5,000.

The Backeye Lumber Company of Augusta, Ark. has placed in commission eighteen new spoke machines, which will require the addition of about seventy-five men to the working force.

Among the new hardwood concerns is the Carter-Glatly Lumber Company, with headquarters at Riverside, in Woodruff county. The concern is capitalized at \$20,000. The incorporators are R. J. Carter, J. D. Carter, William and Emma Glatly.

W. A. Matthews & Co. of Clarksville, Tenn., will establish a stave mill at Pine Bluff, on the site of the old Ezell Stave Company's plant. The promoters are extensively engaged in the stave industry in Tennessee and northern Mississippi. Their plant will be largely for the manufacture of tight barrel staves for the foreign trade.

The Nashville Lumber Company of Nashville, Ark. will add a furniture factory as well as a spoke and handle factory to their already extensive lumber interests in Howard county. The Williams' Coopersage Company of Leslie was a sufferer as a result of the recent flood conditions in their section, among their losses being a railway bridge, which was swept away by the river.

A new interest for Des Arc is an ax handle factory, which is to be put in operation soon.

The Camden Mill Company has increased its capital stock from \$50,000 to \$100,000, and will add a plant for the manufacture of sash, doors, etc. Fourteen new machines will be installed.

The Ozan Sawmill Company of Prescott rushed work on several miles of tram railway during the days immediately after the heavy storms and are now engaged in working up the timber felled by the wind.

At a recent annual meeting of the stockholders of the Nashville Lumber Company the following officers were elected: C. C. Henderson, president, W. W. Brown, vice president, W. K. Ramsey, treasurer, J. V. Bishop, secretary, and A. C. Ramsey, general manager.

The Stout-Greer Lumber Company has branched out in a rather novel direction for lumbermen. It has established two of perhaps the largest demonstration farms in the state in Calhoun county, and is experimenting with scientific farm methods in conjunction with the efforts of the government special agents. On one of the farms have been placed 10,000 Elbert's peach trees, and other fruit trees have been introduced. Garden products are to be interspersed among the orchard growth.

A general concatenation of the order of Hoo-Hoo for southeast Arkansas has been called for June 20, at Pine Bluff, by Vicegerent Louis Rucks. George Darby and James Holmes of that city have the affair in charge. A large class of kittens will be put through the "degrees." Prominent Hoo-Hoo from over the southwest, particularly from Texas, are expected to be in attendance, among them J. A. Bomar of Houston, Tex.,

and J. F. Davis of Louisiana. Bolling Arthur Johnson of Chicago, founder of the order, has promised to attend.

CADILLAC

G. R. & I. railway officials, Vice President and General Manager J. H. P. Hughart, General Freight Agent E. C. Leavenworth and Commercial Agent M. F. Quintance were here last week conferring with Cadillac lumbermen. Their visit left a good impression and it is hoped they will come often.

Mr. and Mrs. W. W. Mitchell are in Detroit for a week.

F. A. Diggins has returned from a few days' visit in Detroit.

M. D. Reeder of the Roynce City Lumber Company passed through the city June 1.

A. W. Newark, secretary of the Cadillac Handle Company, is expected home this week from a business trip.

Preparations have been made for the starting of the Mitchell-Diggins Iron furnace, which will give employment to about 200 men.

The Cadillac Handle Company is running a day and night shift in cutting its stock of logs on hand.

W. H. White and Thomas White of the W. H. White Company, Boyne City, passed through the city last week.

The G. R. & I. railway have started their northern Michigan train service by putting on the "Northland Limited" train running semi-weekly until June 28, when daily service will be given. This train carries through sleeping cars between St. Louis, Louisville, Indianapolis and Cincinnati.

Quite a delegation from Cadillac will attend the eleventh annual convention of the National Hardwood Lumber Association at Milwaukee, June 11 and 12.

Lumber manufacturers in this vicinity report orders coming in but slowly, but there is a feeling prevalent that trade will open up in every way before long.

TOLEDO

Judge Taylor has appointed Adam Schauss receiver for the Kleper Bros. Furniture Company and he is now in charge of the business and assets of the company. No list of either assets or liabilities have yet been filed or made public, but it is thought that the claims will far exceed the assets. The company suffered a heavy loss from fire recently and the present embarrassment is in part due to that.

Fire this week destroyed the dry shed and carpenter shop of the H. C. Wason Company, lumber dealers at Toledo. The entire loss is estimated at about \$10,000 and was well covered by insurance. The blaze is supposed to have been caused by tramps smoking in the dry shed. There is now a whirl of activity at the plant of the Ames-Honner Brush Company, caused by the receipt of an order for 23,000 brushes, backed with rosewood, for use in the United States army. The work is to be completed within thirty days after the placing of the order, and a large number of extra men have been put on the job.

Creditors of the Fremont Lumber Company of Fremont, O., have filed a petition in involuntary bankruptcy in the United States courts here. The petitioners hold claims aggregating more than \$1,000.

Tariff duty amounting to about \$1,000 was paid on a cargo of railway ties which came in from Canada a few days ago. This is one of the largest importation fees ever charged on a single timber cargo at Toledo. The ties are intended for the use of the Washburn railroad. Damage amounting to about \$200,000 was caused by the burning of the plant of the Dayton

Lumber & Manufacturing Company and several residences in its vicinity. The plant was a total loss and was only partially covered by insurance.

WAUSAU

The Appleton Toy & Furniture Company's plant at Appleton was recently destroyed by fire, loss \$25,000. Philip V. Hammel and Julius Kahn of that city were the owners. They carried \$16,000 insurance. Five years ago the plant was totally destroyed by the same element, and three years ago it was partially destroyed.

The Neason-Donaldson Lumber Company of Rhinelander suffered the loss of its mill by fire at State Line station recently. The loss is \$55,000, the company carrying a blanket policy for \$150,000 insurance on all its holdings. The mill was built only last year, and the company has over 3,000,000 feet of logs ready for sawing. As the firm owns 23,000 acres of timber land in that section it is likely that the mill will be rebuilt.

The Namakong dam near Cable was blown out with dynamite recently by unknown parties. The dam furnished power for the North Wisconsin Lumber & Manufacturing Company of Hayward, and its destruction means a big loss to that concern.

Major R. A. Reik, who took charge of the Rhinelander Manufacturing Company's plant at Rhinelander some time ago, proposes to operate it twelve months each year hereafter, instead of at irregular intervals. This has become a necessity in order to supply the demand for manufactured products—mostly refrigerators. The first few years the plant was in operation the company was gaining experience in a business unfamiliar to the stockholders, and the balance was on the wrong side of the ledger. Honest, well made goods were being put on the market, which found favor with the buyer. Mr. Reik took the management, saw where beneficial changes could be made, and looked after the smallest details. The result has been that the company's affairs have been put on a dividend paying basis.

The Sheboagan Furniture Manufacturers' Association held its annual banquet recently. The members went over the conditions confronting them, and exchanged views on things which it is believed will work for the betterment of the association.

George Price of Cranston has purchased a 150-horsepower engine, two new boilers and most of the machinery of a planing mill, which will be added to the equipment of his woodworking plant. He will be enabled to give employment to an additional number of men. He manufactures bent stock for wagons, interior finishings for buildings, planed and matched material, telegraph cross-arms, pins, etc.

Shawano and Oconto county attorneys recently appeared before Gifford Pinchot, chief of the Forest Service, and made arguments urging immediate settlement of claims growing out of logging operations on the Menominee Indian reservation last winter and spring. They were accompanied by Wisconsin members of Congress. About forty contracts for logging were let on this reservation, the work being under supervision of the Interior Department. By recent legislation the logging on this reservation is now under the Forest Service. Special inspectors reported that regulations had not been followed, and Mr. Pinchot has held up payments amounting to about \$150,000. Wholesale houses of Milwaukee and Chicago are also interested in that they furnished supplies to Shawano merchants and the latter have been unable to meet their accounts because of the government's failure to pay Indians and contractors. Mr. Pinchot said he would defer action until he had received an official report from inspectors.

D. B. Stevens has withdrawn from the Stevens Lumber Company, Rhinelander, and the business will hereafter be conducted by his sons,

W. T. and Charles. He intends to spend the summer on the Pacific coast.

William F. McKnight of Grand Rapids, Mich., has sold his one-third interest in the Northern Lumber Company operating near Marquette for \$65,000 to Pennsylvania men who previously held some of the stock.

A large force of men is at work at Neopit getting things in readiness to build the big sawmill which the government will construct there this summer to cut timber on the Menominee Indian reservation. A concrete dam 400 feet long, to furnish power for the mill, will be built. Surveyors will soon lay out a town site and buildings to house at least a thousand people will be constructed by the government. Eben Olson & Co. of Port Wing expect to build a sawmill in the near future, near Washburn, where the company owns a large supply of hardwood, principally oak logs. A large tract of standing timber is also owned by it.

Brown Bros. Lumber Company of Rhinelander has installed the Kernin safety grabhook on its cars. The device was recently invented by G. Kernin of Cranston.

The new band mill of the Filth & Thompson Lumber Company of Wausau, built at Cornucopia, has been put in operation.

The Wolf River Chair Company of New London has commenced the erection of a warehouse 60x150 feet and two stories high.

The Yawkey Lumber Company of Wausau has incorporated for \$300,000. The firm will operate near Hazelhurst.

A. S. Trow & Co. of La Crosse are preparing for their last run, and after the present supply of logs is cut the mill will be dismantled. The Trow mill has been in operation since 1882 and is the only mill left in that city.

The Northwestern Manufacturing Company of Fort Atkinson is operating a full force at present and has turned out 200 more buggies than it did last year at this time. The company expects to manufacture about 20,000 before beginning work on sleds. The firm employs 250 hands. Friends of A. H. Stange of the Stange Lumber Company, Merrill, are pushing him as a candidate for Congress on the Democratic ticket in the Tenth district. The district is overwhelmingly Republican.

The Uniform Stave & Package Company of Brandon is selling part of its stock of stave bolts for cordwood, because of a lack of yard space.

A pathetic story of the pranks that the fickle Jada Fortune plays in her most heartless moods

came to its climax one day this week when Charles J. L. Meyer, once a millionaire, prominent lumberman and railroad magnate of Wisconsin, sought admission to the Milwaukee poorhouse. Stripped of wealth, of social station, of business standing, Meyer, a patriarch of seventy-seven years, knocked at the doors of the Associated Charities, which was established years ago, in part through his lavish contributions to charity, and he was told that by his removal to Chicago, two years since, he had forfeited all right to enter the Milwaukee county poorhouse. Being offered money by Gustav Frelson, the agent, the old man drew himself erect, saying he had money enough to pay his board for a few days and for his return to Chicago, where for two years he has resided in a room at 93 Aberdeen street. "I merely was seeking my rights as a citizen reduced to penury," he said, "but I am not asking for alms." "I will write letters to your two sons-in-law, who are men of wealth, and will bring them to a sense of duty toward you," said Frelson as his aged visitor, with a sweeping bow, left the office.

Years ago when the logging industry in Wisconsin was at its height, Meyer was the owner of a large sash, door and blind factory and wholesale lumber business in Fond du Lac. He was associated with the late Senator Sawyer of Oshkosh and was counted as one of the big men of the state. He was a prominent figure in the councils of the Republican party and twice was a delegate-at-large to national conventions.

Fortune took a reef in prosperity. Meyer sold his sash, door and blind factory and it became the property of the Winnebago Manufacturing Company. Its former owner, who had found his El Dorado in the forests of Wisconsin, went to Hermansville, Mich., where he owned great hardwood forests. He assisted in forming the Wisconsin Land & Lumber Company, now one of the largest of its kind in the state. The town of Hermansville was laid out by him and for years depended upon his gigantic enterprises.

Once reverses set in, however, they came in a steady stream. Meyer lost money here and there. He was tied up in so many enterprises that he was forced to sacrifice one to save another, losing both in the operation. Great inroads were made upon his fortune, which dwindled so rapidly that fifteen years ago Meyer failed in business. He went to Milwaukee and tried to recoup, but by this time the weight of years was beginning to press upon his shoulders, and in whacking away at his artery, ill-fortune, he found it hard to make his blows tell.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

CHICAGO

The local hardwood situation shows marked improvement during the last fortnight. There is quite a little railroad buying going on, supplemented with considerable trade from furniture and other woodworking institutions. The trade generally is very optimistic over the outlook, and it is thought the volume of business will be back to normal even before the November election period.

Stocks of lumber in the hands of Chicago consumers are exceedingly low, as they have bought very sparingly for months and have cleaned out very closely. The average Chicago jobber has only a fair stock, as he has gauged his wholesale purchases by his volume of demand. There is evidence that there will be a general stocking up all along the line within a very short time.

However, even with the renaissance of a considerable demand prices on a good many items of stock are still in a satisfactory. There are enough individual manufacturers who see some

necessity for moving stock to cause prices to remain demoralized to a considerable extent. The variety of wood that is getting hit hardest, not only in Chicago but in the general markets, is gum. Unfortunately operators were caught with a considerable stock of logs on hand which had to be put into lumber to save them from going to waste. After it was manufactured over-activity to market it has caused a serious decline. However, gum is still in a good deal better shape than balmock and yellow pine, for which slight consolation the gum producer should be grateful.

BOSTON

Hand-to-mouth buying characterizes the condition of the Boston market in hardwoods. Buying is limited to immediate wants in most instances, and these are no larger than they have been for two months. While trading is comparatively light dealers entertain more optimistic views than they did. General business in other lines is beginning to show slight improvement. The stock markets of the country are doing

better, money is easier and the iron and steel business is making good gains. All these features should reflect favorably on the call for hardwoods later.

Some very fine figures in mahogany veneers have changed hands recently at good prices. White holly veneers are in fair request from buyers in this country and abroad. Leading architects report this class of stock in more favor than formerly. Manufacturers of interior house finish are only moderately busy and furniture manufacturers have not resumed active operations.

Quarted oak is not in large offering as compared with some other times, but as demand is light buyers find little difficulty in placing orders. Dealers predict a marked shortage when the demand picks up, to be followed by higher prices than prevailed a year ago. Already some of the best stock is held at higher prices. Plain oak continues in free offering and prices are still being shaded more or less. Brown ash is steady with offerings moderate only. Hickory is well held. The market for cypress is still very much unsettled. Manufacturers are making offers to sell at low prices. Several large buyers have taken advantage of the drop to replenish, while others do not believe the bottom has been reached.

NEW YORK

Hardwood conditions in the metropolitan district do not show any material improvement. Prices are fairly firm on certain items, such as quarted oak, but for the most part values must be regarded as showing some readjustment in line with general business conditions. Concerning the latter it must be admitted that the hopeful signs of early spring have not materialized to any extent and that, generally speaking, business conditions so far as the lumber trade is concerned have never been in as poor shape as they are today, and the primary cause of this dullness is expressed by authorities as resting entirely on the loan market. It is a peculiar state of affairs and about the only thing which can right the situation is a return of sufficient confidence to enable freer loans. So far as the desire to do business is concerned, it is freely admitted in leading real estate and building circles that there is a large amount of work which is ready to proceed if loans were obtainable. Also that labor was never more anxious to give a competent day's work as it is at the present time, and above all is the great opportunity presented today to building investors to erect all kinds of structures at a saving of about twenty per cent of the cost as compared with a year ago. This latter fact alone would provide an enormous amount of building at once if loans were obtainable. Almost every banker will freely admit that the investing accounts in his bank are full of money with no inclination to loan, lenders being inclined to hold off until after election. Such being the case, it is readily appreciated that it is purely a matter of confidence and not of real money stringency. Naturally in view of these conditions the general belief in the trade is that there will be only comparatively small business offering between now and fall, and in fact everybody has pretty much resigned themselves to those conditions, unless something should arise which would release the loan market.

Under these conditions it is needless to dwell on the different kinds of hardwoods and prices. Good, well-manufactured stock where wanted is bringing fair prices, but generally speaking there are ample supplies for current wants and prices are showing a readjustment in sympathy with the general business situation as above noted.

PHILADELPHIA

While it cannot be said there has been an acceleration of trade during the last few weeks,

neither has there been a retrogression. After the presidential excitement is over improvement is looked for, and although buying may continue upon a more or less conservative basis for a time, in proportion as the necessary confidence is restored will it be carried on more freely. As stocks in both hard and soft woods have been much reduced, any increased demand will clean up seasoned material in a very short time, in consequence of which firmer values will follow. Through the eastern Pennsylvania district hand to mouth buying is the general rule, but a cheerful feeling is growing among the manufacturers and dealers as to the outlook for hardwoods. With glowing reports coming in from the South, West and Canadian fields as to the probable satisfactory outcome of crops, there is an increasing conviction that it is simply a matter of a short time when the prosperous hum of the hammer, saw and planer will again greet the ear.

The furniture factories of eastern Pennsylvania are running fairly well; a little more activity is noticeable in the ash and door mills, although far below the normal for the time of year, attributable to the large drop in building work compared with a year ago. May, 1908, showing being fifty per cent behind that of May, 1907. Flooring manufacturers are fairly active; box making still continues spasmodic. A little twining up is noticeable in veneer and cigar box making. The values in hardwoods remain easy, especially in higher grades, with quarter-sawed oak at the top of the list as to scarcity and price; plain oak, however, is a little off, but on the whole hardwood prices have held better than the softwoods, and with stocks kept well in hand at the mill district there need be no fear of any decided further falling off of values.

PITTSBURG

Business of all kinds and especially the lumber business is in a waiting stage. Everybody is holding up orders and halting all kinds of improvement projects pending the results of the national political convulsions at Chicago and Denver. It is pretty certain that whoever is named in these convulsions, business will go ahead with much more spirit than has been manifested for the past eight months. It is admitted on all sides that business has been held up in many lines about as long as conditions will stand for and that it will soon be a necessity for trade to break loose in these quarters, whatever the political situation may be. This is especially true of the industrial and manufacturing world. Large plants which have closed down for months are now facing a possibility of being without lumber in a short time. They must soon begin to order stock in a pretty good quantity and to judge from their inquiries this necessity is becoming more evident to them every day.

In the Pittsburgh district conditions are much better than two months ago, although it cannot be said that the lumber business itself has improved to any great extent. More plants are in operation and they are working nearer to their full capacity. A number of large mines have resumed work and this with the renewed activity in iron and steel circles is causing considerable inquiry for hardwood stock. In that respect the market is much better than May 1. Prices, however, have shown no disposition to advance and the cutting has been so hard and so persistent that list quotations cut little figure in prices actually paid for lumber. The bulk of the inquiry at present seems to be for bridge timbers and stock for small manufacturing plants. Ties and poles are not moving to any extent.

The building situation is so unfavorable that yards are buying only here and there a carload lot, and mixed carloads at that. Poplar is the only one of the hardwoods which has withstood the strain and is now being sold at the prices which prevailed before the hard times. Oak has fallen off in demand and prices considerably

during the past three months and although white oak is a good marketable stock the lower grades of oak are dragging heavily on the wholesalers' hands. This is also true of the medium grades of chestnut. For hickory, ash and elm there is a good demand, chiefly from Ohio, Michigan and Indiana plants.

BALTIMORE

A steady, though slow, improvement is noted in the hardwood trade of this section. The number of inquiries is considerably larger, and while a majority of these requests are designed to bring out competitive bidding, the proportion of orders is augmented, though as yet the offerings are so liberal that prices have stiffened little, if at all. The fact remains, however, that there is little lumber at the most of the mills, many of which are shut down.

The foreign demand is very poor. The congestion abroad has been so pronounced as to force values very low, with the result that shipping on consignment has come to a stop, while forwarding on contracts is also largely checked because the foreign buyers who have contracts at figures appreciably higher in some cases than the market rates will endeavor by one means or another to bring the price down. They will claim that a material part of a shipment is below grade and will seek to take advantage of other technicalities, so that in the end the shipper stands to lose. The lumber sent abroad on consignments, of course, fares still worse; it is simply thrown upon the market and not infrequently goes for a song. Naturally, the whole situation is affected by these conditions, which promise, however, to accomplish the goal of stopping shipments, which is greatly to be desired in view of the congestion.

Some firms report that their business for May was well up to the results of the corresponding month of 1907, apart from the question of prices. The figures are still easy, but some of the big consumers again manifest an interest in the market and activity seems to be slowly returning, though nothing like a rush is expected this year.

BUFFALO

The state of the hardwood trade is not much changed, no particular point being raised of late unless it be that some dealers are saying that they expect to see oak run very short just as soon as the demand improves. Quarted oak has never been plenty in late years and now the prospect of all oak going out unless the cut can be increased and the reports keep coming in from the Southwest that the logs are running very scarce.

Very few people can get the poplar that they want, if they are in the market for any amount. A buyer had it the other day that there was none of a certain cut, but one or two dealers managed to show that they had some. So it goes. It will not do in these days to get too much of any lumber, and on that account it is hard to get just enough.

There seems to be a better keeping up of the demand for expensive hardwood lumber than of the cheaper sorts. Possibly the price of all yellow pine is so low that it is thought better to come down to something in that line when a departure from the highest is made. So the reports from dealers in cherry, walnut and mahogany are more favorable than the average, with such woods as birch and chestnut still lagging.

CLEVELAND

Nothing has happened with the past fortnight to affect the hardwood market in this section, and there is little new to report. Prices

cutting, particularly on plain oak, is still in evidence and weakens the market in other lines as well. There is a healthy call for quartered oak. Poplar is quite firm, but most of the other hardwoods are rather quiet, with the exception of maple flooring which continues active. The volume of business is somewhat larger than a month ago, and the general tone is considerably more satisfactory. As soon as the banks begin to make loans it is hoped that things will boom again. Until that time, however, the lumber industry in Cleveland is bowing along under forced sales, content in knowing that it is breaking even.

COLUMBUS

The lumber situation in Columbus is decidedly quiet, but there is a steadier undertone to the market and the outlook shows slight improvement. During the month of June dealers will make an effort to reduce stocks so as to be in a better position to take inventory in the month of July. In some lines values hold steady, while in others considerable weakness is evident. In many cases the price paid for lumber is governed by the need of money on the part of the seller. If the dealer needs money badly he is liable to sell at any price he can get, but if such is not the case he may hold out for the regular market price. From present indications the low point of the market has been touched and Columbus dealers are not anticipating any further declines of importance.

Stocks are generally very low, and of the oaks there is little to be had. Gum firsts and seconds are held mostly at \$32 and some sales have been made as low as \$27. The asking price on No. 1 common red is \$23.50 and some sales have been made as low as \$20.50. The real market for cottonwood is \$33 for firsts and seconds, and it has been offered as low as \$30. Quartered oak is very firm and there is but little in the market. No. 1 common rough is quoted at \$48 to \$50 and firsts and seconds at \$72 to \$75. Poplar is receiving the most attention of the hardwoods and the price ranges from \$25 to \$60. Manufacturers and jobbers predict a better market in the fall and most of them are optimistic regarding the future.

INDIANAPOLIS

The market has stiffened considerably during the last few days. Dealers who held off as long as possible, almost to the point of exhausted stocks, have been forced to place orders. Local lumbermen are more optimistic than they have been for several months, for the spring trade has exceeded their expectations. Many look for an advance in prices soon.

Building operations are exceeding the record made last year and the factories are placing orders quite freely. Conditions are now almost on a normal basis and prospects are that the volume of business will continue to increase.

MILWAUKEE

A feeling of confidence exists among dealers here. Several orders of note were placed by leading plants the past week. There is a tendency among the manufacturing plants, however, to be reticent about placing orders, and it is felt that the improvement is due largely to the great amount of building going on in and about the city.

The market is firm and prices in general are advancing. Oak remains unchanged, with an excellent demand for the plain variety. Quartered oak does not find so ready a call in the market. Hickory is strong as usual and the supply is never equal to the demand. There is little market here, and prices in this wood remain about the same. The basswood market

has shown considerable stiffening and there are prospects that elm is soon to advance. Demand for hard maple is steadily increasing and prices are advancing somewhat. The poplar trade is holding its own and because of the fact that stocks are not large dealers are of the opinion that prices will be maintained.

BRISTOL

While some say the situation in this section is far from satisfactory, others insist that it is not as bad as it might be, and there seems to be considerable stock moving. One thing is certain, those who get business are compelled to go out and hustle for it. One prominent Bristol lumberman stated this week that he would be satisfied if trade conditions remained as they are now the remainder of the year, as he is able to produce a fair volume of stock and market it, produce a fair margin, however. It is the consensus of opinion that there will be a gradual improvement in the demand for hardwoods through the summer and fall, though few expect to see any great amount of business done until after the presidential election.

Exporters say that the heavy consignments of American lumbermen to their foreign customers has injured the markets abroad, and that conditions there are unsatisfactory, though the outlook is hopeful.

CINCINNATI

The actual amount of business transacted here during the month of May was not as good as was generally anticipated, but still showed a slight increase over the month previous, and were it not for the inclement weather of the earlier part of the month the volume of business would have showed a decided increase. For fully two weeks all building operations were delayed, which put a check on the demand for building material. But now the weather is much better and the demand is much brisker. The demand for all grades of oak has shown vast improvement and is running poplar a close second. Red gum, sap gum and cottonwood were features of the trade the past few weeks. The veneer trade has also showed slight improvement.

Such woods as mahogany, walnut and oak have netted a small increase in sales, which was due to purchases by the furniture dealers. Dealers here expect that this month will be the best so far this year, that is, with favorable weather conditions.

EVANSVILLE

A distinct improvement in the market for hardwood lumber has been noted by nearly all the manufacturers and dealers here this week. Inquiries have been coming in more freely and in a great many cases inquiries have been made for stock to be delivered later in the year. Cotton poplar still leads in the year. Considerable lumber has been shipped out the past two weeks and orders are being taken for delivery during the balance of the year. Prices are holding up well, there being few indications of concessions being made from the market prices. Most of the inquiries being received are for quartered oak, red and white; both these woods being in good demand. Very little plain oak is moving in this market, as the price on this wood does not justify local manufacturers in taking orders for this class of stock; however, the market for this wood will improve as soon as the surplus stock is disposed of which is coming in from other sources.

ST. LOUIS

Optimism prevails among the hardwood lumbermen of St. Louis as to the future, although just now trade is rather quiet. The excellent

crop conditions, as well as other satisfactory elements, give great encouragement as to the future. According to reports received here logs brought in from the woods some time ago are the only timbers being sawed, as the wet weather has caused logging to be suspended almost entirely. For several weeks work has been suspended in the woods and it has been almost impossible to bring in any logs. From present indications these conditions are likely to last for some time to come.

There is a scarcity of quartered oak and it is in excellent demand. There has been an improvement in plain oak conditions also and there is a ready sale for the better grades. Ash is also having a good sale and the quantity on hand is limited. There is also a ready sale for poplar. In fact, this wood has been in such good demand and has been such a good seller that common is scarce. There is a decided weakness in gum and cottonwood and comparatively little is being sold, except to large consumers. These have acquired a good stock. Whenever there is a bargain in this item it is taken up quickly. Cypress conditions show little change. Buying is limited, although there is enough of this wood being sold to stop concessions, or rather the concessions that were formerly asked.

NASHVILLE

The local market, in spite of the fact that conditions are not as satisfactory as they were this time last year, is quite active, especially on certain woods, notably quartered oak. This wood right now is as tight as it ever was, and the tendency is still upward. This wood, in spite of conditions that have existed in the no distant past, has never gone off one bit. There are no quartered oak strips to be found on the market; this commodity is most useful for hardwood flooring. Plain oak is a trifle dull. Poplar is quoted as only fair. Ash is dull and hickory is little better. Some grades of chestnut are in demand, such as sound yellow, used largely for cothens. Local milling trade is good, but the wholesale feature is not so good. Business for May was considerably better than that for April, but at that it is 40 per cent only of what it was this time last year.

MEMPHIS

The demand for hardwood lumber is improving to some extent and the volume of business is slowly increasing, but the price situation is not satisfactory, as some items have been forced by competition from other points to a low level, even as compared with that which prevailed some time ago. One of the items that has suffered materially is the chestnut, which has suffered. Some of the trade here are trying to hold their prices and are refusing to meet the views of buyers, who claim to be able to operate to better advantage at other points. For a long while low grade cottonwood displayed a steady undertone, but the box situation has become somewhat unsatisfactory, and this is reflected in both cottonwood and gum. The price at which log run cottonwood and gum are obtainable is comparatively low and this, together with competition from other materials entering in-o box manufacture and the rather less satisfactory condition among box manufacturers, is perhaps largely responsible for the recent easiness in both kinds of lumber.

The strongest feature of the list is quartered oak. The demand for this is not so large, but offerings are small, with the result that buyers are able to secure their own terms where they have anything to offer. Plain oak in the higher grades, too, is selling quite well, but the lower grades are not in much demand and prices are comparatively low. The movement in ash is somewhat disappointing and no great activity is expected in this until more of the car plants and

other industries using it are being operated on fuller time. The supply of ash in the higher grades, however, is not burdensome, and it is not being forced on the market. The higher grades of cottonwood and gum are in but moderate request. There is some movement in cypress at prices that have recently prevailed, but the demand for this is not active at all. There is no great amount of poplar offered for sale and prices on this lumber are well maintained largely because of this fact. The export demand is very limited and advices received by prominent local exporters have created the belief that there will be no particularly active demand from that direction until the consigned stocks have been materially reduced. Some of the foreign correspondents of local firms advise that there is no use to make firm offers under present conditions, as there is so little prospect of any business being put through on satisfactory terms. Production is being kept within very moderate bounds and the disposition is rather to decrease than to increase the cut of the mills in this territory. The feeling is that there will be an improved demand in the near future and this is one of the reasons manufacturers prefer to pursue a conservative course with regard to the operation of their mills. If improved demand should soon develop it would afford an opportunity of disposing of present holdings to better advantage, and those who own lumber prefer to take their chances on keeping their prices up on what they have than to produce more lumber and dispose of their present stock on the present rather unsatisfactory market.

NEW ORLEANS

New Orleans exporters are somewhat discouraged over the export situation existing throughout this section and in the absence of the European demand are able to do practically nothing. They have done little during the last two or three months and do not expect conditions to change any until after the summer has gone. At the present time there is no Antwerp demand for lumber and there is nothing being sold on the Rhine. In addition to this the London situation is declared to be unsatisfactory, advices to local brokers from their London homes stating that the bulk lumber sheds on the London wharves are crowded with consignment stuff for which there is little or no demand. Holland is still somewhat active in the market after sawn timber, one New Orleans house shipping a cargo through Port Arthur this week. All in all exports are in unsatisfactory shape with no indications of an early change for the better. Hardwood mills of this section are following in the footsteps of other mills in curtailment. A fair domestic demand is said to be helping them a trifle.

Activity in the building industry of Louisiana has been responsible for a fair demand on interior woodwork and there is a good market at present for that character of stuff. Attractive residences for which considerable interior finish of hardwood are required are being erected in various parts of the city, and this has stimulated in a large measure the demand for hardwood products. As a result of this building activity at present the demand is better than it has been for some time.

ASHLAND

With stocks generally low, lumbermen are looking for higher prices in a few months, and they are not putting forth any special efforts to move their stock at the present time. There are a few kinds of lumber that are holding up well in price and demand, especially is this true of poplar, basswood, and quarter-sawn white oak. There is no question in the minds of the lumbermen of this vicinity but that prices must increase from now on, and it is

also very true that prices and markets have passed through a change which was little expected when the financial stringency came on.

With several mills in this vicinity the sawing season will soon be closed. The supply of logs not being as large this year as last, they will be unable to operate as late in the season as they did last year. The supplies received from the Big Sandy river and its tributaries are not worth mentioning at this time, and as there is no sign of any activity for new logs the mills will close earlier than usual.

CHARLOTTE

One of the best indications that the effects of the recent panic are about spent is the fact that lumber mills that were forced to close down during the period of stringency are resuming operations. During the past fortnight several large concerns have started up work, after a suspension of several months, and several large new companies have secured charters, which further shows the general confidence in the early return of normal activities in lumber circles.

Hardwood dealers report inquiries more frequent, and orders coming in more satisfactorily than for some time. During the past two weeks weather conditions have been favorable to wood work and the time has been well spent. On the whole, conditions are taken to be decidedly more encouraging than at any other period this year. Prices on various grades of hardwoods are improved. There are scarcely ever a time when more buildups were under way in this state than now. This fact is perhaps due to the cheapness of labor, and the ease with which it may be secured, and also to the readiness with which railroads are now handling business. All of this means much to lumbermen and as a consequence a tone of optimism marks the comments of all lumbermen interviewed.

MINNEAPOLIS

The demand from retail yards in the Northwest continues to be very light. The yards are mostly run very low on hardwood stock, but are distinctly low in all except the necessary. As soon as the retail demand becomes more active, hardwood dealers expect a lively call for yard stock, with rush orders accompanying most of the letters. City trade continues to be fairly good, coming not so much from furniture men as from the sash and door and interior finish people. The building demand is nearly equal to last year, and flooring is a strong feature of the market. Birch is the largest seller, and there is every reason to believe that at the present rate of business birch will be good property. The new stock is lighter than last year, and demand will soon clean up the old lumber. Oak is not so active, but northern stocks are extremely light and the offerings from the South are not so heavy as they were. Basswood has been a good seller and the price is stiff. On the whole, the hardwood situation in this section is stronger than for any other branch of the lumber business. Prices all along the line are very fair, and advances on birch and basswood may be expected before fall.

TOLEDO

It is the general opinion here that in the near future there will be a decided improvement in trade conditions. A slight increase in activity is already noted, and as a consequence some heavier orders are being placed. Manufacturing plants are doing a good business and are taking fair cargoes to supply their needs. In the building lines there is also some increase in the volume of business, and a better class of structures are under way than those of the early season.

Architects report that they are busy on contemplated work which will materialize a little later, and which will require considerable hardwood in their construction.

All the better grades of poplar are holding firm and show no disposition to decrease in value. Some common stuff has been reported as selling at a slight reduction, but the decline is not general. Oak holds up well, as does ash, chestnut and hickory. A fair business is being done in all these lines, but not rushing. The receipts of lumber have been somewhat increased recently and shipments are prompt.

LIVERPOOL

Trade still remains in a very depressed condition and prices of most lumber has come considerably lower, mainly under the influence of large consignment parcels which have been arriving. Several parcels of hickory logs have been sold at very low prices, but the quality of the wood landing has been very inferior and is no real guide as to true values ruling. Good wood will still bring good prices and shippers are advised to send good wood to this market; but inferior wood is not wanted and will only bring poor prices. Ash logs and planks are also very weak, especially the small second growth wood, which should on no account be shipped here without definite orders. It is well for shippers to accept the best offers they can get, as it is felt values will be lower later in the season. The larger first growth wood is not so firm as when last reported, but large quantities have come forward and have been sold at easier prices. Poplar is considerably lower, as is also oak of all descriptions. Coffin and wagon oak planks have been sold at extremely low prices, as have also satin walnut and similar woods of that description. Mahogany has been firmer slightly, mainly owing to some good buying on behalf of some of our British railway companies. We do not hold very strong views as to the future firmness of this market and, in fact, think values will be lower later on in the year.

LIDGERWOOD Combination Portable Logger

Patented

Especially Designed to Log the Mixed Forests of the Lake States and the Mississippi River Valleys. A machine that can be used twelve months in the year. Suits itself to all ground and timber conditions. Constructed of either wood or steel. With or without loading boom.

RIGGED AS CABLEWAY SKIDDER.

To be used when timber is small and runs high to the area, when sloughs, streams or swampy places are encountered, or ground is rough, rocky, or broken by cliffs or ravines. Logs can be carried suspended over rough ground.

RIGGED AS A SLACK ROPE MACHINE.

When conditions render long hauls necessary use as a slack rope machine and pull large loads.

RIGGED AS A SNAKER.

Should be used with smooth, dry ground conditions, especially where timber is large and scattered.

**SMITH of
SMITHVILLE**

No. 133-A. SEVEN INCH, FOUR SIDE HARDWOOD MOULDER

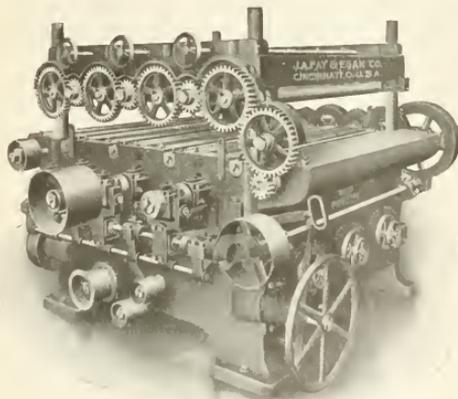

HARDWOOD manufacturers are constantly demanding machine tools of a more sturdy character. Many attempts have been made by machine builders to meet this need, resulting in added complications, with very slight improvements. We have, however, developed a moulding stick of the 7-inch type that is both sturdy and simple, a machine that contains all of the elements of a very heavy large size moulder, yet it is only a seven-inch machine. Write us today for a special circular

A FINE HARDWOOD FINISH

No. 4 TRIPLE DRUM SANDER.

Cannot be produced unless your sander is constructed along the right lines.

The machine shown herewith is designed to sandpaper planed surfaces of material for furniture, pianos, organs, or any class of work requiring a perfect surface either for varnishing or painting.

The feeding mechanism consists of eight powerful rolls, four above and four below the platen. The frame carrying the upper feed rolls can be elevated automatically or by hand wheel.

This is the only sander whose upper feed rolls and bed can be elevated above the drums to give access to them in case they should need repairing.

The drums carry three grades of sandpaper, the third or last being the finest which gives a finish to the work, after which it is dusted thoroughly by a rapidly revolving brush, making it ready for the varnishing room.

**The Mechanical Construction
of this Machine is Superior to All**

Write for descriptive circular and testimonials.

A Refuse Burner under Your Boilers

That's exactly what the Gordon Hollow Blast Grate is, figuratively speaking.

It enables you to burn all your refuse under your boilers, thus disposing of it WITHOUT EXPENSE, and without the best to run your mill. Users report that it gives as good results with wet, green or frozen sawdust as a draft grate gives with dry wood.

It is equally satisfactory with wet or green slabs.

Not infrequently

IT PAYS FOR ITSELF EVERY THIRTY DAYS.

Saves labor in firing.—Lasts forever.—Only expense first cost.—Equally efficient in ordinary furnaces or Dutch ovens.—Adapted for any number of boilers from one up.—No change in construction necessary. A hole must be made through each wall, for the pipe, aside from this, not a brick need be disturbed.—The largest outfit can be put in place in an hour, quit time Saturday, and starting up time Monday, with practically no difficulty about maintaining a fire at night, when the breeze is wild, and no objection to so doing.

SOLD ON APPROVAL, we paying the freight BOTH WAYS in the event of rejection.

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock 17 1/2 inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

A floor to adore

For thirty-three years Wilce's Hardwood Floor-
ing has been among the foremost on the market
and because it stands today "unequaled" is the
best evidence that its manufacturer has kept
abreast of modern methods and the advanced
demands of the trade. To convince yourself of the
above statements, try our polished surface floor-
ing, tongued and grooved, hollow backed, with
matched ends and holes for blind nailing—you'll
find it reduces the expense of laying and polishing.
*Our Booklet tells all about Hardwood Flooring and
how to care for it—also prices—and is free.*

General Market Conditions.

There is a slow and steady development in hardwood trading, with every promise of increasing demand as the season advances. Business still lacks vim and the larger holders are perforce obliged to stand very nearly to list on prices, or suffer substantial loss. There is a belief that lumber is going to move with a good deal of freedom within the next few weeks at a substantial advance over the minimum prices at which some stock is now being sold.

The volume of business of the furniture trade, which ordinarily is a very large buyer of hardwoods throughout the Middle West, is still pretty slack, but building operations throughout the chief commercial centers of the country are showing remarkable strength for a dull period. Most of these buildings require hardwood finish and flooring, and in the aggregate a large quantity of hardwoods is being consumed in this line. The flooring trade is holding up very well, but prices on both oak and maple have suffered somewhat in common with lumber values.

There seems to be a slight renaissance of demand for walnut abroad, but still the trade is far from satisfactory. The local demand for mahogany and other high-class imported woods in this country is fair, and stocks are comparatively light.

On the whole the hardwood situation is the most promising it has been since last year and undeniably the fall will develop an excellent volume of business at fair prices, and the year will surely close in good shape.

A Favorable Decision.

The famous case of George D. Burgess et al. versus the Transcontinental Freight Bureau et al. has at last been considered by the Interstate Commerce Commission, and on June 16 Commissioner

Charles A. Prouty handed down a decision which means a decisive victory for lumbermen in a reduction of the eighty-five cents on hardwood lumber between eastern points and the Pacific coast.

Although lumbermen contend that the rate from eastern points to the coast should be any greater than that from the coast to the East, they are nevertheless extremely gratified over the attitude of the commission in deciding that the railroads must return to their former seventy-five-cent schedule.

The commissioner in his findings held that the roads are entitled to charge a higher rate from East to West than from West to East, because principally high grades of hardwood move to the coast, and such lumber is worth more than certain other grades which might be shipped, or which come this way; therefore the shipper can afford to pay more for its transportation, as this fact differentiates the westbound from eastbound movement, and perhaps somewhat justifies a higher rate upon the former. Also the defendants urge that certain competition exists under which the eastbound rate is made, and suggest that for this reason it should not be taken as a standard by which to fix a westbound charge.

In handing down the decision the commissioner also states that where shippers have paid an excessive rate they may recover the difference between the rate paid and what would then have been a reasonable charge—whether or not shippers have been damaged by payment of the excessive rate; however, reparation will be allowed only from the date of filing complaint.

Of course the decisions of the Interstate Commerce Commission are subject to litigation, and this makes it possible for the defendants to pursue their usual course and exhaust every means to have the matter delayed, and if possible the decision set aside.

As is well known, roads have been transporting lumber east and hauling empty cars back to the coast, which seems decidedly strange when by charging a reasonable rate they might have returned them loaded at a profit. Also this course has prevented lumbermen from building up anything like a good trade in hardwoods on the coast. The roads allege that their hauling cars back there empty is a reason for an advance on the rate of lumber moving east, while the complainants argue that it is an equally good reason for reducing rates on hardwood lumber moving west.

Nearly all of the prominent hardwood concerns of Memphis and Nashville, together with others from Cincinnati, Chicago and Wisconsin points, are mentioned as complainants in the case. George D. Burgess of Memphis and E. P. Arpin of Grand Rapids, Wis., were two of the hardest workers in behalf of the lumbermen. The Hardwood Manufacturers' Association and the National Hardwood Lumber Association stood behind all individual efforts, and played no small part in the presentation of a strong case, and the securing of a favorable decision.

New President National Association.

The new president of the National Hardwood Lumber Association comes to his office under the most favorable auspices, and beyond that the office takes over a man who will honor the position in a very marked degree.

Oliver O. Agler, the incumbent, is primarily a self-made man.

He has youth, a clear head, good judgment, frankness and a very catholic understanding of both northern and southern hardwoods. Beyond this he has had long experience in association work. He accepted the nomination of chief executive of the organization absolutely under protest, but his unanimous and popular election must needs be a source of gratification even to a man as modest as he, and it enables him to enter upon the discharge of his duties entirely unhampered; he has no friends who will expect reward and no enemies to punish.

Thus Mr. Agler occupies the most enviable position of any man who was ever elected to the presidency of a leading lumber organization, and it is the belief of his friends—who constitute practically every member of the association—that he will give it the cleanest, most forceful and ablest administration it has ever had.

Forestry vs. Forest Economy.

There has been a great deal of good public sentiment created during the past few years on the necessity of forestry and reforestation. It has been impressed upon the minds of the public very forcefully that at the rate hardwood forests are being denuded the country is at the beginning of the end of its hardwood supplies.

There is no question about the importance of scientific practical forestry and reforestation methods, and their being not only desirable but essential for both the state and the individual; but paramount to this lies the fact that the practice of sensible and reasonable woods and sawmill economies will tend to perpetuate the hardwood forests of the nation in a much more substantial and logical manner than will the comparatively slow process of reforestation. This is a proposition that could be started today, and the only reason it is not practiced with more diligence by everyone interested in the industry is because of the higher cost of production that these practices entail. This, together with the naturally deteriorating grades of forest products, makes the manufacture of low-grade lumber from woods and log refuse comparatively non-profitable.

Therefore it is with a good deal of gratification that the RECORD supports the suggestion that the Interstate Commerce Commission be given increased authority, particularly in the matter of establishing freight rates on low grade products.

With the plenty of cheap timber during the years of the past, many operators knowing the patent waste in their woods and sawmill operations have made tentative efforts toward the utilization of small and coarse timber, tops, slabs, edgings, etc., but the majority of them have given up the enterprise owing to its meager financial returns. They have declared it a picaresque business, especially when they found that their labor cost exceeded the total value of their output.

However, the time is at hand when logical methods should be introduced into every woods and sawmill operation, to get out of the present waste product every available foot of merchantable

lumber. While the undertaking might have been a failure ten years ago, owing to labor cost and low prices on dimension and other small material—the price of dimension stock has so far advanced today that every manufacturer operating on a conservative and business-like basis can show some little profit out of his woods and sawmill refuse.

It is a subject worth the consideration of every manufacturer of hardwoods in the land.

Small Opportunity for Money Making.

All past eras of financial depression have heretofore proven splendid periods for the jobbing and large consuming lumber trades to take advantage of a low range of values, buy heavily and eventually reap a substantial reward.

During the recent dull-trade period this opportunity for money making has proven very meagre to the average large buyer, and comparatively few jobbers and large consumers have been able to

place their money advantageously in lumber purchases. There have been numerous odd lots of inferior stock bought and sold at a ridiculously low range of prices, but the large operators have been so financially entrenched that they have not been obliged to realize on their holdings, and hence very few large blocks of lumber have changed hands at low prices. There have been scores of wealthy jobbers who have carried hundreds of thousands of dollars in the bank since last October, waiting an opportunity to buy round lots of lumber at "their" prices, but in most instances they have signally failed to find the opportunity.

Generally speaking it is doubtful if the jobbing trade owns twenty-five per cent as much lumber as it did a year ago, and it is also doubtful if the average wholesale consumer has thirty-five per cent as much stock in his possession as he had during the period named.

Another singular feature of the recent depression is the fact that apparently manufacturers were mighty well entrenched financially, as there have been practically no failures in the hardwood manufacturing industry for the past six months. Such failures as have occurred have been among the jobbers, and it is remarkable that so

few of this element have been obliged to go into liquidation.

Undeniably a good many wholesale consumers have been very hard up, but the remanufacturers of hardwood lumber as a class have stood up splendidly under the severe financial strain, and failures in the furniture, interior finish, car and kindred trades, have been very few.

Why This Silence?

The managing director of the New York lumber "organ" has been so busy of late in writing in the amendments and publishing the copyrighted rules of the N. H. L. A. that he has not even had time to consult with the lego-lumber luminary over on Twenty-fifth street and Eleventh avenue and ascertain if the new rules are entirely satisfactory. This is unfortunate, for the hardwood lumber public is anxiously waiting to know whether or not Cray is happy. If he is the National Hardwood Lumber Association has not lived in vain.

The Song of the Cross-Cut Saw

(See Supplement Drawing by Thomas J. Nicholl.)

*Deep into the heart of the white oak tree
The pendulum saw cuts its hungry way.
Its bright teeth glitter and gleam all the day
And it sings a song of the life to be.
"New birth you are promised," it seems to say,
"From the pleached forest your journey's begun.
Long you have basked in the light of the sun
And tossed your green head in midsummer play.
The work of life is beginning for you;
Who can tell what joy the new day will bring—
You may line an abode for lovers true,
Or be carved a throne that will hold a king.
You're in transit now, in the wooded glen,
From the homes of birds to the homes of men."*

LAURA RAITZ LAW.

TOM J. NICHOLS

CROSS CUTTING

Pert, Pertinent and Impertinent.

A Limit.

A single man who died one day
Straightway to heaven went;
St. Peter barred the gates, they say,
And elsewhere had him sent.

The next man had been married,
So they let him in the gate;
"Because," said Pete, "a married man
Has suffered torments great."

The next man said, "I must come in,
For I was married twice."
St. Peter said, "Get out, you stiff,
No room for fools in paradise!"

Captured.

Her arms were soft and round,
He said,
And that is why he lost
His head.

He really can't be blamed
A speck—

Her arms were soft and round,
His neck.
—EXCHANGE.

Another Version.

Mary had a little Lamb,
He was her steady Beau;
And everywhere that Mary went
The Lamb put up the dough!
—THE PULLISTINE

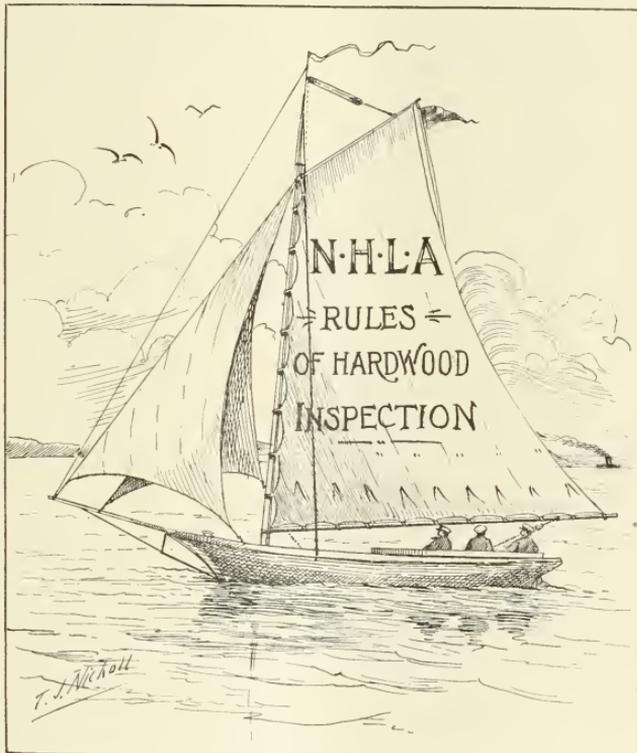

Still Another.

Mary had a little lamb,
This fact you've heard before;
But have you heard she passed her plate
And had a little more?
—LIPPINCOTT'S.

Coming.

Summer roses;
Summer girls;
Summer poses;
Summer curls;
Revelations
On the beach;
Wild flirtations
With a peach;
Bathers daily
Wade or float;
Idiot's gayly
Rock the boat.
Sunburn, freckles—
Just a few
Piquant speckles—
Peek-a-boo
Waists mysterious;
Moon and stars,
Swift, delicious
Motor cars;
'Tis the season
Just for rhyme
Without reason—
Summer time.
—WASHINGTON TIMES.

May Fair Weather Attend.

Amended Inspection Rules of the National Hardwood Lumber Association again go a-sailing.

Won't Own It.

Many married women
who profess to pity
"old maids" secretly
envy them.

And Succeed!

Some people squander
a lot of money trying
to make fools of themselves.

Wouldn't Be Safe.

No man on earth
would want his friends
to know what he knows
about himself.

Lessons From Legislation.

Deeds are better than words—for letters
may go to the jury.

Senile Dementia.

Love is like the measles—the older
the patient the worse the case.

The Spendthrift.

I.

Into my great inheritance
I came when I was young;
I spent it freely with both hands;
I mocked, with jeering tongue,
At those who sorrowfully said,
"Beware! The end is near!"
And, drunk with riches, shook my head,
Regarding not their fear.

II.

My squandered forests, backed and hewed,
Are gone; my rivers fall;

My stricken hillsides, stark and nude,
Stand shivering in the gale.
Down to the sea my teeming soil
In yellow torrents goes;
The guardian of the farmers' toil
With each year lesser grows.

III.

Lord! Of Thy bounty heedless still,
My store of good I spend;
Thy brimming cup I careless spill,
Regarding not the end.
My riches melt away like snow

Beneath the April rain;
And though my hand prepareth Woe,
Yet may I not refrain.

IV.

O stay my sinful hand and lend
My faltering heart Thine aid.
That these my spendthrift days may end
And at Thy feet be laid.
The will to show the past retrieved,
Try gifts renewed, restored,
That I have spent what I received,
Thy pardon grant, O Lord!
—FORESTRY AND IRRIGATION.

A Celebrity.

Sophomore (airily): Yes, I suppose I'm one of the most prominent fellows in college!
Venerable Visitor: Indeed! What capacity?
Sophomore (proudly): Eighteen beers, eleven cocktails and six whisky straits!

Also Defines Them.

Not only love of woman but love of graft laughs at locksmiths.

Definition.

A thief is any man who robs you outside of trusts, legislatures and city halls.

As Young as She Looks.

Years count for nothing nowadays; a man is as old as his arteries, but a woman is only as old as her art.

Can Be Cultivated.

A man's idea of a good conscience is one that enables him to forget everything prejudicial to his own interests.

Two Reasons.

Inconstancy in woman is due to levity; in man, to curiosity.

A Poor Agent.

Credit is the agent that helps a man to keep in debt.

Some Important Foreign Woods.

ARTICLE I.

Mahogany.

Mahogany is a word which we are all familiar with; we know it as the name of the chief or principal cabinet wood of the world, and yet the vast majority of the people of the north temperate zone know little or nothing of its appearance in the forests, the nature of its growth or any of its principal characteristics. Therefore, I shall endeavor to give in this brief article a few facts concerning it from my own observations in its native haunts in the tropic and semi-tropical woods.

One of the accompanying illustrations represents the fruit of the mahogany tree. The nut is usually from four to five inches long and two or two and a half inches thick, and is four-valved, but the number of these sections of both its outer and inner hulls vary from three to five. It resembles in some respects the mockernut, a western species of hickory, and when full grown has a reddish, velvety cast, and before being opened looks as if it ought to possess some kind of an edible kernel, but in this respect it is deceiving, for in reality it is the reverse of this, as it certainly possesses no good qualities except ability to propagate its kind. It is termed a pericarp or capsule, and the latter is certainly an appropriate name, as it means an envelope or small receptacle for bitter or nauseating doses. So it is with the mahogany nut, as it contains a white powder which is, if anything, more bitter and distasteful than quinine. This powder or whitish dust is found between the folds and in the minute cavities of the closely packed bundle of winged seeds snugly pressed in the interior of the nut. When it ripens the hull bursts and the sections separate and spread outward at the points and form an opening through which these winged seeds are exposed and come in contact with the wind, which works them loose from their delicate fastenings, and they go fluttering away from the lofty branches of the tops of the great mahoganies, which tower high above the dense growth of the tropical bush and even above the other trees of the surrounding forest. These winged seeds when released from the nut are about three inches long and quite similar to the samaras of the soft maple, or gauzy and silky in appearance like the wing of an insect.

The leaf of the mahogany is very similar to that of the black walnut, being compound in form. The leaflets are from three to four inches long with serrate edges and from six to ten in number. They are attached to the midrib or main stem at regular spaces along the opposite sides, not opposite to each other, but in staggered position along the rib. Mahogany attains a wonderful growth in its natural habitat. Its great sweeping crown is lifted high above the surroundings

and is supported on a straight gigantic trunk of fine proportions.

The area of the growth of mahogany is worldwide; it is scattered throughout the tropical zone. However, it never grows in stands entirely of its kind or even in groups, but the individual trees stand singly here and there all over the wooded slopes of the mighty mountains. They seem like proud sentinels stationed in advantageous positions to keep vigilant watch over the vast solitudes of the jungle.

Mahogany, like most all other varieties of timber, when grown out in the open and thus removed from the stimulating in-

FIG. 1. FRUIT OF THE MAHOGANY TREE.

fluence of surrounding trees, does not attain a great height or develop the magnificent trunk which gives it such superiority as a lumber tree. Under domestic conditions it becomes somewhat dwarfed in stature; but while civilization seems somewhat adverse to its development as to size, it enhances its beauty, and it takes upon itself the looks and dignified airs of an ornamental tree. To these new conditions it seems capable of adapting itself with great success, and by reason of its beautiful clusters of small white flowers, its large red fruit so attractive among the light green leaves, the spraylike form of its foliage and

its general appearance, it is truly ornamental.

In the city of Belize, British Honduras, and other towns in Central America it is not uncommon to see mahogany planted, or even natural growth, along the streets, in parks and in grounds surrounding many beautiful homes.

The methods of cutting timber at most mahogany camps is extravagant and wasteful in the extreme and in many cases very carelessly carried on. The native laborers take no more thought of economy or care in felling the costly mahogany than we would in cutting the cheapest varieties of timber in this country. In order to get the trees down with the expenditure of the least possible amount of muscular effort and the minimum of labor, they waste the timber on every hand. They sacrifice a very large per cent of the most valuable wood by lack of judgment and their unskilled way of slashing and butchering it, and also by their inclination to take only that which is easiest to get. The high stump represented in Fig. 2 illustrates this quite clearly, showing the mass of bristling splinters that have been drawn from the butt and choicest log by shattering in falling. This stump, being unusually large, represents a waste of about 9,000 feet of inch board, which is far above the average, but the proportion is about the same in smaller trees. The butt log usually is the most highly figured and, therefore, the most valuable part of any tree, and this is especially true of mahogany. Several feet from the ground the trunk begins to broaden out into huge buttresses which are similar to cypress, notwithstanding the fact that it invariably grows on dry ground, while the cypress is inclined to that which is wet.

The mahogany reaches its greatest development on the high, dry mountain slopes, while the cypress flourishes in low, swampy regions. These mahogany spurs spread out and form massive spines or triangular braces that go into the ground and disappear fully eight feet from a line perpendicular with the body of the tree. These spurs are thin in comparison to their surface, usually not over five or six inches thick, according to their lateral measurement. The recesses between them are so large that several men could be concealed therein or find shelter during a tropical storm.

One of the native methods of cutting down mahogany is to hack notches in the top edges of these spines, as represented in Fig. 3, in which they place poles crossways and thus erect a temporary scaffold, which rests on the spurs in such a way that they can stand upon it, and with the use of a puncheon, or footboard, they get clear above the swell, and thus avoid the labor of

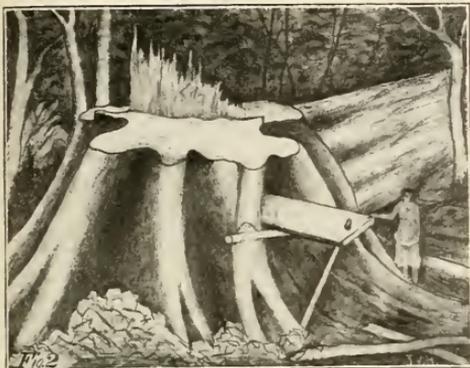

FIG. 2. TYPICAL STUMP LEFT BY NATIVES AFTER CUTTING TREE.

chopping in the spurs. This is a mistake—an inexcusable practice by which people who are in the business of taking mahogany from the stump lose more than they are aware. There are several reasons why this is true. In the first place, the fee or royalty paid to the owners of the timber is usually a stipulated price per tree, regardless of size, and it would cost no more to take out an extra log than to leave the great high stump standing in the woods as a monument to the destructive achievements of some thoughtless lumberman. There would be another gain from the fact that a butt log of any solid tree is more valuable than a top log, either for figured or plain lumber or veneers. When trucking roads have been chopped out and cleared off, which is always necessary to reach every tree, it would not be much more additional expense to bring out all the merchantable wood than to only take a choice log or two out of the clean, smooth part of the trunk. In the aggregate it would very materially increase the output from an entire mahogany cutting.

The making of these roads is one of the most laborious and difficult features of a logging proposition in the tropics. The smaller trees must be cut low, leaving no stumps in the way, which is very laborious when we consider the density of the bush and the almost inextricable tangle of lianas and great crimped and fluted vines and other creepers, forming a growth so matted together that often after a tree has been cut through it only partially falls and remains hanging in a slanting position, supported by the surrounding vegetation. This must all be cut away before the leaning tree can be brought to the prostrate position in which it must be placed before it can be handled. It is said that the mahogany spurs contain a peculiar figure of their own, which would doubtless be beautiful and valuable if developed and introduced to the trade, and

the matter would certainly bear investigation.

The writer has given the subject of grubbing or low cutting of valuable timber much attention and many practical tests, both as to walnut and mahogany, and is of the opinion that the nature and position of these spurs is such that they could be worked off with much less labor than generally supposed and a wonderful saving thus accomplished. Those great high stumps are probably excusable in cutting redwood or fir, but not in mahogany. The texture of this wood is such that it cuts and chips easily, and a couple of fairly good axmen with sharp tools ought to chop off these spurs on a line with the body of the tree and fell it almost as quick as by the wasteful method of high cutting, and also remove the danger of checking the butt log. The cavities between the spurs seem to extend in under the tree, so that there would be but little more than the tap root left to support the tree after the spurs were cut away, and this would be broken off or pulled up by the immense strain brought to bear upon it by the weight of the falling tree.

Another great item of waste in getting out mahogany is in slabbing the logs. No matter how large, they are hewn down to a square, not leaving a wane, as is the custom in dressing walnut. This causes a loss of from twenty-five to thirty per cent of the timber, and in case the log should happen to be figured the loss is still greater, as the most prominently striped wood is near the surface or bark. The log is harder to handle in the square than round, and the only possible gain in slabbing them is that they stow more closely, and a little greater tonnage can be placed in a certain amount of space in the ship; but even these claims are no longer tenable. The capacity of vessels and transportation facilities have grown till this practice is no longer necessary. Instead of being an economy, it is now an

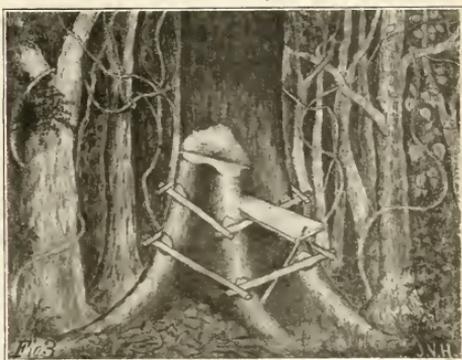

FIG. 3. NATIVE METHOD OF SCAFFOLDING IN FELLING MAHOGANY.

extravagance. Each year logs are more and more being shipped in the round, but the waste of mahogany is still appalling, as in many cases fully 60 per cent of the body of the tree is a total loss.

J. V. HAMILTON.

New Hardwood Operations in Honduras.

According to authentic information from Ceiba, Honduras, relative to the development of that country, it seems that American capitalists are playing an active part and that one coterie of them now has in view the working of a concession of 8,000 acres of hardwood timber. On a small area of this tract some 6,000 mahogany trees have been located and marked for cutting. In the event of the carrying out of the project, the construction of twenty miles of railways with spurs will be undertaken. Steamships will also be chartered to transport the timber and other products to parts of the United States. It is also the intention to plant rubber, banana and cacao as the land is cleared.

The Vaccaro Brothers railroad was officially opened for transportation traffic on April 11, and is now operating under regular schedule between Ceiba and Salado. Ceiba's release from land isolation is now apparent in the commercial activity caused by the many daily visitors who come from the various towns located along the thirty-five miles of completed road.

The track is of three-foot gauge, 40-pound steel rails, cross-tied American pine ties and substantially ballasted. The roadbed passes over several American girder bridges, and all material used in the superstructure and rolling stock is of American manufacture. There are at present three 30-ton locomotives, sixty freight and several passenger cars in use, while additional equipment will be made as conditions demand.

It is the intention to construct a "loop" around Ceiba, a part of which will be built along the beach, and thereby enable the planters to discharge their cargo from the train to Lighten direct. This method will effect an important economy to fruit shippers and greatly assist lumber development. As a result of this road the development of banana cultivation is greatly increasing, and the shipments from this port will doubtless double the present 4,000,000 bunches that are annually exported.

Eleventh Annual National Hardwood Lumber Assn.

OFFICERS AND NEW DIRECTORS ELECTED

President

Oliver Otis Agler, Chicago.

First Vice-President

Fred. A. Diggins, Cadillac, Mich.

Second Vice-President

Frederick S. Underhill, Philadelphia

Third Vice-President

Frank A. Beyer, Buffalo, N. Y.

Gardner I. Jones, Boston.

Michael J. Quinlan, Soperton, Wis.

Fred. W. Mowbray, Cincinnati.

Alexander Willson, Pittsburg

John H. Jenks, Cleveland, O.

Treasurer

Geo. D. Burgess, Memphis

A review of the first day's proceedings of the National Hardwood Lumber Association, which met in annual convention at Milwaukee June 11 and 12, was given in the last issue of the **HARDWOOD RECORD**, with the exception of the report of the Committee on Waterways, of which Capt. C. F. Liebke of St. Louis was chairman, which is given below. The sessions which followed were equally interesting, and the entire occasion proved one of the most memorable in the history of that great lumber organization.

The meetings were characterized by enthusiasm and good fellowship; the legislation appeared to be the wisest for the good of all that could be put through; the officers handled the vast amount of work with parliamentary precision, dignity and dispatch. Moreover the many entertainment features generously provided by Wisconsin lumbermen and engineered almost wholly by G. J. Landeck were eminently enjoyable, so that the visitors left Milwaukee with a feeling of the utmost satisfaction and a realization of the fact that both inside and outside the convention, they had been remarkably well treated.

Report of Committee on Waterways.

To the members of the National Hardwood Lumber Association in convention at Milwaukee, Wis.: As chairman of the Waterways Committee of the National Hardwood Lumber Association, I beg leave to submit the following report for your consideration:

In the last several years the people of the United States have been most actively interested and engaged in the improvement of our waterways system, and especially has this agitation been great in the last two houses of Congress. The president of the United States sent a special message to the sixth Congress urging appropriation to make necessary improvements in the Mississippi valley navigable waters, and an inland Waterways Commission was appointed by the president to investigate and offer a plan of relief of this freight traffic congestion. At the second and last convention of the Lakes-to-the-Gulf Deep Waterway Association, held at Memphis, Tenn., October 4 and 5, 1907, the members of the United States and the members of the Inland Waterways Commission appointed by him, attended this convention, they making an inspection trip by boat down the Mississippi river from Kewok, Iowa. There were also in attendance at this convention governors from twenty states. More than 2,500 delegates were in attendance at this convention.

I am informed that the next legislature of Illinois is more than likely to pass an act appropriating \$20,000,000 towards building their end of the canal, and when that is done there should be no difficulty in pushing through Congress the \$50,000,000 appropriation asked for, in \$10,000,000 instalments for five years.

I wish to urge upon this convention the adoption of resolutions and individual application to our representatives in Congress by members of this association, for appropriation for waterway improvement of \$20,000,000 in five yearly instalments of \$4,000,000 each. I would suggest that each member of this association write their

representatives and senators in Congress, urging active support of the next waterway improvement appropriation bill, which will be presented to the sixty-first Congress. Delegates should be appointed from this convention to the Lakes-to-the-Gulf Deep Waterway Association to be held in Chicago, October 7, 8 and 9 of this year, and I desire to place this suggestion in the form of a motion for the appointment by the president of this association of five to ten delegates to the Lakes-to-the-Gulf convention to be held in Chicago.

Mr. President and members of this association, after all our efforts to plead and urge for the success of this great national project, these efforts sink into insignificance when compared with an article published in the Los Angeles Times under the heading of "Bringing the Sea to the American Farmer." Gentlemen, I am going to ask you to let me read this to you. It is no doubt that many of you have read it, but the oftener you read it the better it sounds.

"There is nothing more magnificent and more beneficent in the majestic march of American enterprise than this mighty project of the Lakes-to-the-Gulf Deep Waterway. When it reaches its consummation thirty states will have come within the tremendous advantages of water transportation. Twenty thousand miles will have been added to the coast line of the Republic. The congestion of the present canal system will be cured. Nearly every problem of modern American transportation will be solved. The fast freight boats from the place to be permanently installed. And the sea will have been brought to the American farmer."

The fact is, however, that it is in fact indispensable to the future development of the country.

"There are three things," said Lord Bacon, "which make a nation great and prosperous, a fertile soil, busy workshops and easy conveyance for men and commodities from the place to another. Two of these prerequisites the republic possesses in abundance. The other element—transportation—is the problem of America and the world."

The matter of railway transportation has been the chief concern of this republic for the last five years. The sober thought of economists is reaching the conclusion that land transportation can be solved only by the co-operation of water transportation. The vast railroad problem can best be settled by the development of our inland waterways.

The nations which are our chief competitors have realized this proposition and are moving with magnificent energy and liberality to execution. The United States is larger than the quadrupled her inland waterways at an expense of \$7,050,000,000. Germany has 10,000 miles of inland waterway, and the German people are to be made a highway of every stream that has water enough to fill a canal. China has so wonderful a system of canals that almost every town can ship by water to the sea.

In Belgium and Holland the ocean is brought to the farmer, and small as they are, Belgium and Holland are world powers in commerce and manufacture. A ton of raw material comes to them by water, and the German people, with all their vast stretch of seacoast, have 4,000 miles of canals. Russia has built canals on a scale of mail from that sea to Petersburg to the Black sea or the Caspian or to the Arctic ocean; and there are seven seaports on the coast of our competitor, while we spent as much as we have laid out on all our rivers and harbors in all our history. They know it.

In the grand strategy of trade it is high time that we were profiting by their example and entering into the same competition, while the patent principle that it is easier to move an object floating on a liquid than to carry it on wheels is still in our minds.

A recent writer, advocating a canal from Ash-tabula to Pittsburg, declares that it would do for the St. Louis dollar what the St. Marie canal did for the St. Louis dollar and what the St. Louis dollar did for the St. Louis dollar.

freight will carry a ton a thousand miles. Even on our Erie canal it will bear it 327 miles. On the new Erie it is estimated that the dollar will take the ton 1,900 miles, while on the average a dollar on the American railways will only take a ton 123 miles.

America has the best natural system of waterways in the world. If she would only develop them.

The natural and dominating artery in the drainage of the continent is the Mississippi. The swirl and roar of the "Father of Waters" is the anthem of our national prosperity. The Mississippi valley is nature's edict of union for the people of the forty states of the Union. It is the nation's great asset in inland navigation. With its tributaries it touches and thrills all but sixteen of the forty states of the Union.

The deep water canal from Chicago to Joliet and St. Louis to the Gulf is the key to the most splendid commercial development of all our future. Chicago, with splendid liberality and sagacity, has expended \$60,000,000 to open it as a drainage ditch and barge canal. One hundred millions more, it is estimated, will make it a ship canal with from fourteen to twenty feet of water. The government could not make a better investment of its riches if it studied all the promising opportunities of the country. If it should do no more than the "800" canal it would have saved every year, even if it cost \$200,000,000. So say the masters of freight and transportation like James J. Hill.

The fast freight boats of constructed sterncraft and engineering the Lakes-to-the-Gulf canal would slice the continent through with a new seaboard from the Gulf to New Orleans. It would go through the congested freight yards like a surgeon's knife. It would break the freight gorge in the most congested places of the country, and St. Louis and lighten the load of tonnage from Duluth through Buffalo and Cleveland to New Orleans and Mobile. The canal and the west coast would make of it the busiest and richest canal in the world. The cotton of the south would go by water to a hundred manufacturing cities of the north. Southern lumber would pass to Cleveland and Milwaukee as cheaply as the tramp steamers carry it to Amsterdam. Coal from Alabama and the southwest would compete with coal from Pennsylvania on the docks of Omaha and St. Paul.

Northern corn and hay and wheat would go cheaply to a hundred southern cities that demand them. Our great lake ships would pass out into the Gulf and restore to the salt sea our merchant marine, earning profits during winters now lost.

Our shipbuilders, with the cheapest coal in the world, brought by the most economical handling in the world, to the cheapest iron in the world, would produce the most efficient creating vessels.

It would be the best ship subsidy that a great government ever made. It would take from Winnipeg its laurels as the greatest wheat center of the world and bring it home to American soil.

And, in the end, bringing the canal, with all its marvelous advantages of water transportation, to the western and southern farms. Surely this is an enterprise of the greatest magnitude and capital of the great age in which we live.

SECOND DAY'S SESSION.

Part of the report of the Inspection Rules Committee, J. M. Fritchard, chairman, was then taken up and the section pertaining to wagon stock adopted:

Inspection Rules Committee Report.

Mr. President and gentlemen of the National Hardwood Lumber Association: Merely to recall the name of the Inspection Rules Committee of the Inspection Rules Committee, will state that by order of the executive committee all questions relating to the interpretation of the rules are referred to this committee, and replies

to these inquiries are made by the chairman. All resolutions from organized bodies, and letters from members and others, in any way pertaining to the rules are referred to this committee for consideration, as all recommendations for amendments or additions to the rules are finally come from the inspection rules committee.

On December 1, 1907, the rules, as revised at Atlantic City, went into effect. Unfortunately was on the heels of the most peculiar

J. H. West.
F. A. Curtis.
The following persons were named as representatives of the National Wagon Manufacturers' Association:
E. W. McCullough, secretary.

J. L. Moore.
J. F. Block.
Adolph Schieter.
This special committee met at our association offices in Chicago, March 20 and 21, 1908. Professors and Mr. Cline, of the Forest Service of the Government, were present by invitation, and explained tests of wagon material made at Purdue University, which information was very valuable to the committee in its deliberations.

The rules previously suggested by the National Wagon Manufacturers' Association were then taken up and a conclusion reached that they should be modified, and the defects objected to in grading the various parts should be outlined as specifically as possible. Along these lines the committee worked until the afternoon of May 21, when the following rules were formulated, and the same have the unanimous endorsement of the special committee for adoption by both associations:

Text of the Wagon Stock Rules.

The following is the text of the wagon stock grading and inspection rules as formulated by special committees representing National Hardwood Lumber Association and National Wagon Manufacturers' Association and approved by the Inspection Rules Committee of the National Hardwood Lumber Association, Chicago, March 20-21, 1908:

O. O. AGLER, CHICAGO, PRESIDENT.

panic that ever afflicted our country. Many orders were cancelled, most mills were shut down, and business generally was practically at a standstill, but troubles of this nature did not arise from the worries of the lumberman, but in times of dull trade inspection is most critical.

A set of uniform inspection rules is unquestionably the greatest need of the hardwood trade, and the National Hardwood Lumber Association has made so much progress toward this end, that uniformity is now practically an established fact. It has been made clear to the committee that too much stress can be laid on the importance of certain rules which are only adapted to certain local requirements, and which cannot be wholly applied in a scheme for rules of a national and international scope. These conditions have been met as nearly as possible and it ought not to be a great hardship on our members to care for some special conditions by special agreement, since it must be remembered that it is only a few years ago that practically all transactions in lumber were made a matter of special contract, and that before the existence of the National Hardwood Lumber Association there were no recognized standard rules governing the trade. The rules are not only unreasonably criticized and faults are found which justify being somewhere else. We do not want to give the impression, however, that criticism of the rules are not welcome—honest criticism is invited; for it is through this method that we can obtain perfection or as nearly so as possible.

All communications received by the committee have had careful consideration, and many valuable and helpful suggestions obtained, and in our deliberations we have been guided by what seemed to us to be for the best interests of the National Hardwood Lumber Association, and the trade as a whole.

CONFERENCE WITH WAGON MAKERS.

In September, 1907, the National Hardwood Lumber Association received a communication from the National Wagon Manufacturers' Association, relating to the adoption of rules for grading wagon material. This communication was referred to the inspection rules committee by the executive committee with instructions to arrange a conference with representatives of this organization. Pursuant to instructions, a conference with a committee representing the National Wagon Manufacturers' Association was held at our association headquarters in Chicago, December 18, 1907. As a result of this meeting a special committee was appointed to work out the details and draft a set of rules for grading wagon stock, to be presented to both associations for approval. The following persons were appointed on this committee to represent the National Hardwood Lumber Association:
J. M. Fritchard, chairman.
H. H. Houston.
F. S. Hendrickson.

F. A. DIGGINS, CADILLAC, FIRST VICE-PRESIDENT.

NOTE.—The highest grade established under these rules shall be known commercially as "No. 1" or "Wagonmakers' Grade" and it is urged that when the reports of these committees have been approved by the respective associations, this grade name shall be used in common by the producers and consumers.

AXLES.

GRADE.—Live tough black or shell bark hickory, cut 6 feet in length to include all the clear and perfect stock. Defects as follows admissible:
STAYS.—Penetrating not more than 1-16 inch and which has not developed into a rotting condition.

KNOTS.—Four sound pin knots not exceeding 1/4 inch in diameter, or two sound knots 3/4 inch in diameter, near the center line longitudinally on top or side, and not over 12 inches of center or within 6 inches of ends. Knots (except pin knots) not to be closer than 12 inches apart.

SPLITS.—On either end, extending not more than 6 inches in axle or 3 inches on both ends.
SEASON CHECKS.—Not more than 1/2 inch deep and not more than 12 inches long.
HEARTS OR HEART RINGS.—None.

SHAKES.—That will plane out with 3/8 inch cut.

WORM HOLES AND GRUB HOLES.—Not more than two pin worm holes not nearer than 6 inches to each other. Not more than two grub holes that will penetrate more than 6 inches at either end of the piece.

BIRD PECKS.—Bird pecks allowed if sound, or if unsound part is not to exceed 1/4 inch in diameter and not over 1/4 inch in depth.

WANE.—Axles with wane will be measured excluding the wane.

SAP.—Bright sap considered no defect.

GRAIN.—Grain can cross 3 inches in entire length of axle.

DEFECTS REMOVABLE.—If defects not admitted can be cut out so as to reduce axle to a smaller size used and ordered by the buyer, it shall be so inspected.

HEWN AXLES shall be measured to square to the size they are ordered.

DEFECTS AT CENTER axles that will admit of piece working 5 feet 6 inches long will be admitted.

BOLSTERS.

GRADE.—To be cut from good, tough, straight-grained oak or hickory (when oak is specified it will be understood as being white or red oak) suitable for wagon material. To be clear and perfect stock, excepting the following defects, which will be admissible:
STAYS.—Penetrating not more than 1-16 inch, and which shows no signs of rot.

KNOTS.—One sound knot not over 1/2 inch in diameter, not more than 12 inches from the center of the piece, or 3 sound pin knots not exceeding 1/4 inch diameter located in same manner.

SPLITS.—None.
SEASON CHECKS.—Not more than 1/2 inch deep, not more than 12 inches long.

HEART RINGS.—None.

SHAKES.—If they can be plane out with 3/8 inch cut.

WORM HOLES.—Not more than 6 pin worm holes in a bolster, these holes not to be in clusters of more than 3 holes 6 inches apart.

BIRD PECKS.—Allowed if sound.

WANE.—Will be measured excluding the wane.

SAP.—Bright sap accepted.

GRAIN.—Grain can cross 2 inches in length of bolster as maximum.

DEFECTS REMOVABLE.—If defects not admitted can be cut out so as to reduce bolster to a smaller size used and ordered by the buyer, it shall be so inspected.

SANDBOARDS.

GRADE.—To be cut from good, tough, straight-grained oak or hickory (when oak is specified it will be understood as being white or red oak) suitable for wagon material. To be clear and perfect stock, excepting the following defects, which will be admissible:
STAYS.—Penetrating not more than 1-16 inch, and which shows no signs of rot.

KNOTS.—One sound knot not over 1/2 inch in diameter, not more than 12 inches from the center of the piece, or 3 sound pin knots not exceeding 1/4 inch diameter located in same manner.

SPLITS.—None.
SEASON CHECKS.—Not more than 1/2 inch deep, not more than 12 inches long.

HEART RINGS.—None.

F. S. UNDERHILL, PHILADELPHIA, SECOND VICE-PRESIDENT.

SHAKES.—If they can be plane out with 3/8 inch cut.

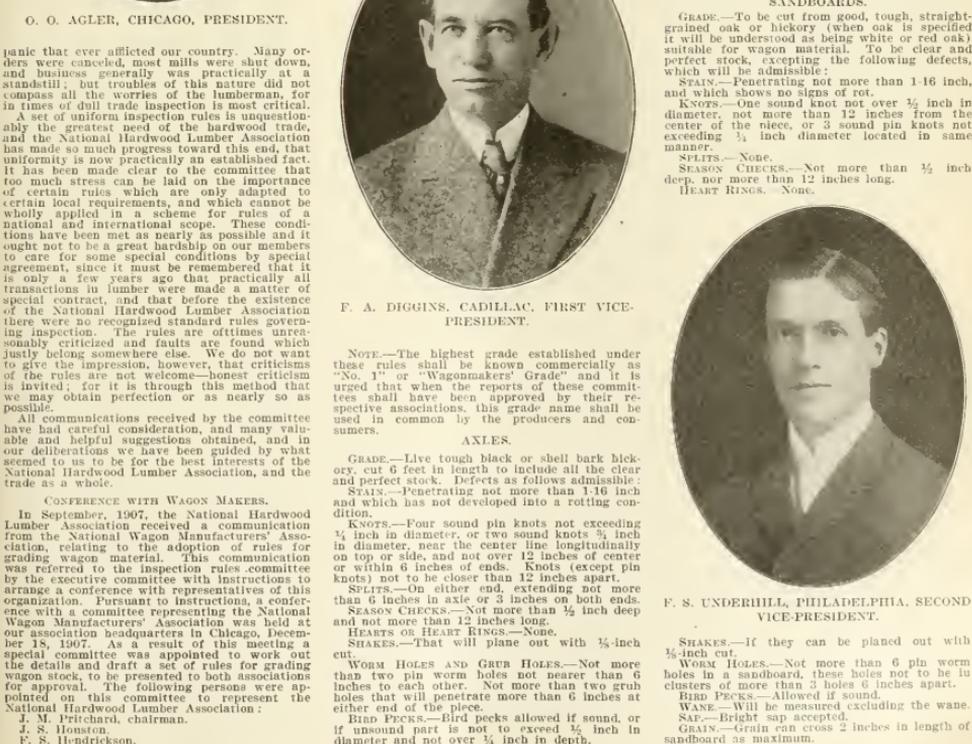

WORM HOLES.—Not more than 6 pin worm holes in a sandboard, these holes not to be in clusters of more than 3 holes 6 inches apart.

BIRD PECKS.—Allowed if sound.

WANE.—Will be measured excluding the wane.

SAP.—Bright sap accepted.

GRAIN.—Grain can cross 2 inches in length of sandboard as maximum.

DEFECTS REMOVABLE.—If defects not admitted to be cut out so as to reduce sandboard to a smaller size used and ordered by the buyer, it shall be so inspected.

REACHES.

GRADE.—To be cut from good, tough, straight-grained oak or hickory (when oak is specified it will be understood as being white or red oak) suitable for wagon material. To be clear and perfect stock free from knots, splits, hearts, grub holes, heart rings, shakes, bird pecks, or wane. Bright sap accepted. The following defects will be admitted:

STAIN.—Penetrating not more than 1-16 inch, and which shows no signs of rot.

SEASON CHECKS.—Not over 1/4 inch deep or 12 inches long.

WORM HOLES.—Not more than 6 pin worm holes in 1 reach; these holes not to be in clusters of more than 3 holes 6 inches apart.

POLES.

GRADE.—To be cut from good, tough, straight-grained oak or hickory (when oak is specified it will be understood as being white or red oak) suitable for wagon material. To be clear and perfect stock, free from knots, splits, hearts, grub holes, heart rings, shakes, or bird pecks. Bright sap accepted. The following defects will be admitted:

STAIN.—Penetrating not more than 1-16 inch, and which shows no signs of rot.

SEASON CHECKS.—Not over 1/4 inch deep or 12 inches long.

WORM HOLES.—Not more than 6 pin worm holes in a pole; these holes not to be in clusters of more than 3 holes 6 inches apart.

EVENERS.

GRADE.—To be cut from good, tough, straight-grained hickory suitable for wagon material. To be clear and perfect stock, free from knots, splits, hearts, grub holes, heart rings, shakes, worm holes, or wane. The following defects are admissible:

STAIN.—Penetrating not more than 1-16 inch, and which shows no signs of rot.

SEASON CHECKS.—Not over 1/4 inch deep or 12 inches long.

WORM HOLES.—None.

BRIGHT SAP.—No objection.

BIRD PECKS.—Sound bird pecks admitted.

SAWED FELLOES.

GRADE.—Sound white or red oak, free from knots and all other defects, except that 1-16 inch stain will be allowed if said stain shows no signs of rot. Must be manufactured so that grain will run straight through center of each piece. Cut full sizes and proper circles.

No. 2 GRADE.

NOTE.—This grade is intended to include such stock as cannot be accepted under No. 1 or

SPLITS.—On either end, extending not more than 6 inches in axle or 3 inches on both ends.

SEASON CHECKS.—No objection.

HEARTS OR HEART RINGS.—Not allowed.

SHAKES.—That will plane out with 1/2 inch cut.

WORM HOLES.—No objection, except the powder post worm.

BIRD PECKS.—No objection.

WANES.—One-inch wane allowed.

GRAINS.—Grain can cross in not less than 4 feet.

DEFECTS REMOVABLE.—Any defects not admitted that can be cut out so as to reduce axle to a smaller size used and ordered by the buyer, it shall be so inspected.

HEAVY AXES. shall be measured to square to the size they are ordered.

Defects at ends of axles that will admit working 5 feet 6 inches to be accepted.

NOTE.—The committee did not deem it expedient at this time, to fix rules and grades for bolsters, sandboards, reaches, poles, eveners, and felloes, of the "No. 2 grade."

These rules apply in grading other hardwoods manufactured for wagon stock.

Memorial From Philadelphia.

F. S. Underhill presented a memorial from the Philadelphia Lumbermen's Exchange recommending permanent changes in the rules, so that buyers may understand exactly where they stand in making purchases. Mr. Underhill stated that he found many of Phila-

delphia to be presented to the National Hardwood Lumber Association at its convention to be held June 11 and 12, 1908, by the president of this exchange, F. S. Underhill.

And, see, the undersigned members of the National Hardwood Lumber Association, desire to and do hereby further endorse the action taken by the Lumbermen's Exchange of Philadelphia in passing the above resolutions, and recommend that the National Hardwood Lumber

GEORGE D. BURGESS, MEMPHIS, TREASURER.

ber Association adopt at its Milwaukee convention the amendments of the 1907 rules, a copy of which is attached hereto, as suggested at the conference held in Philadelphia, March 6, 1908, at which the following associations were represented:

Eastern States Retail Lumber Dealers' Association.

Lumber Trade Club of Boston.

Massachusetts Wholesale Lumber Dealers' Association.

Retail Lumber Dealers' Association of Philadelphia.

Lumbermen's Exchange of Philadelphia.

Lumbermen's Exchange of Baltimore.

New York Lumber Trade Association.

SECOND DAY'S SESSION.

Report of Committee on Officers' Reports.

The first order of business was the report of the Committee on Officers' Reports.

Edward Buckley of Manistee, Mich., then read the report of the committee, as follows: "Your committee, appointed to consider officers'

F. F. FISH, CHICAGO, SECRETARY.

delphia's recommendations had been incorporated in the rules presented by the committee, which had previously been distributed in leaflet form, for consideration and discussion. He then read the memorial, as follows:

Mr. President and gentlemen of the National Hardwood Lumber Association: We, the members of your association, submit to you the action and resolution of our Philadelphia Lumbermen's Exchange and the eastern associations, as follows:

At a meeting of the Lumbermen's Exchange of Philadelphia, held March 12, 1908, the following resolution was unanimously adopted and a copy was forwarded at that time to you:

Resolved, That the Lumbermen's Exchange of Philadelphia believes that certain modifications are necessary in the rules of the National Hardwood Lumber Association, revised May 23 and 24, 1907, to take effect December 1, 1907.

We, therefore, ask the National Hardwood Lumber Association to modify the rules of 1907 so as to meet the requirements of the lumbermen of the East, believing it will be to the best interest of the entire hardwood trade and lead to uniform legislation.

At a meeting of the Lumbermen's Exchange of Philadelphia, held June 4, 1908, it was unanimously decided that the above resolution should be embodied in a petition to be signed by the members of this exchange who are members of the National Hardwood Lumber Association, and

O. E. YEAGER, BUFFALO, THIRD VICE-PRESIDENT.

"Wagonmakers' Grade," yet is satisfactory to those using a lower grade.

AXLES.

GRADE.—To be cut 6 feet in length from live black or shellbark hickory. Defects as follows admissible:

STAIN.—Sound stain accepted.

KNOTS.—Not to exceed 3 sound 1 1/2 inch knots, or their equivalent in smaller knots.

reports, and but one recommendation in the report of the president, that the Inspection Rules Committee's report be adopted as read, and your committee concur in this recommendation of the president.

Your committee has considered the recommendation made by Secretary Fish to the effect that a bureau of information be established, to consist of members to be appointed by the president and to work in connection with the secretary, for the purpose of obtaining a list of the

- "Cottonwood, not less than 33 1/3 per cent.
- "Poplar not less than 50 per cent.
- "Tupelo, plain and quartered sycamore, white ash, plain oak, chestnut, red gum and sap gum, not less than 33 1/3 per cent.
- "Quartered oak, not less than 25 per cent.
- "Birch, black ash and maple, not less than 20 per cent.
- "Cherry, beech, soft elm and basswood, not less than 25 per cent.
- "Butternut, not less than 10 per cent.
- "African mahogany, not less than 35 per cent.
- "Tulsa mahogany, 25 1/2 per cent.
- "Mexican mahogany, not less than 40 per cent.

6. Page 11, under caption "Standard Defects," add the following note:
"Bright sap is no defect unless so stated under caption of the respective woods."

7. Page 11, under caption "Explanations," paragraph 2, substitute the following: "The term 'clear face cutting' as used in these rules, applies only to the description of the cutting, and means a cutting having one face clear and the reverse face sound. The clear face of cutting must be determined from the poor side of the piece of lumber."

8. Under caption "Squares," page 13, substitute the name "firsts and seconds" for No. 1, and No. 1 common for No. 2.

9. Page 13, under the caption "Maple Strip Plank," eliminate the word "maple."

10. Page 13, under caption "Strip Inspection," add paragraph:

"Inspection must be made from the good face of the piece."

11. Page 14, paragraph 5, substitute the following: "Clear cherry strips grade as above, excepting that no sap is admitted on the face

wide, 4 feet and over long. Pieces 4 and 5 feet long must be clear. Pieces 3 and 4 inches wide, 6 and 7 feet long, must be clear; Pieces 3 and 4 inches wide, 8 to 11 feet long, must work two-thirds clear face in not over two pieces; pieces 3 and 4 inches wide, 12 feet and over long, must work two-thirds clear face in not over three pieces. No piece of cutting to be less than 2 feet long by the full width of the piece."

Pieces 3 inches and over wide, 6 to 11 feet long, must work two-thirds clear face in not over two pieces; 12 feet and over long, must work two-thirds clear face in not over three pieces.

No piece of cutting considered which is less than 4 inches wide and 2 feet long, or 3 inches wide and 3 feet long. Not over 10 per cent of 4, 5, 6 and 7 feet lengths admitted in this grade.

The above paragraph to be submitted for all woods for the grade of No. 1 common, where the lengths are 4 feet and over long. 17. Page 17, under caption "No. 2 Common," add: "There shall not be to exceed 10 per cent of 4 and 5 feet lengths. This is to apply to all grades of No. 2 common where the lengths are 4 feet and over long, excepting mahogany and walnut."

18. Page 20, under the caption "Cherry," paragraph 3, add the following words: "In the grade of firsts and seconds."

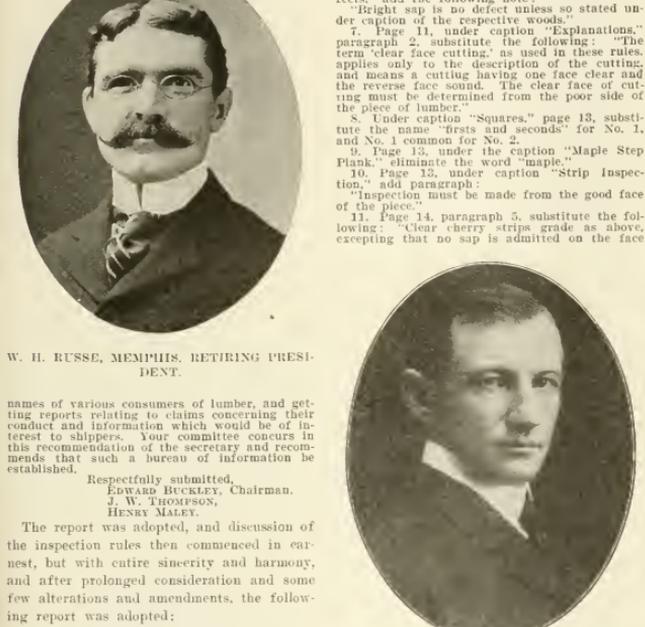

19. Page 21, under caption "Cherry" in No. 1 common, eliminating the paragraph. There is no restriction as to heart in No. 1 commons. Add to description of cuttings in No. 1 common, as follows: "Each piece of cutting must have one clear face and not to exceed one-half bright sap in the aggregate on the reverse side."

20. Page 21, under caption "No. 2 Common," add: "Bright sap no defect on the reverse side of cutting."

21. Page 23, under caption "Wormy," eliminate present rule and substitute the following: "Wormy chestnut to be 4 inches and over wide, 6 to 16 feet long. Worm holes admitted in this grade without limit, but aside from worm holes the piece must cut two-thirds sound. Pieces 6, 7, 8, 9 and 10 feet long must work two-thirds sound in not over two pieces. Pieces 11 feet and over long must work two-thirds sound in not over three pieces. No piece of cutting considered in this grade which is less than 3 inches wide and 2 feet long. There shall not be to exceed 10 per cent of 6, 7 and 8 feet lengths admitted in this grade."

22. Page 23, under caption "Mexican and African Mahogany," in No. 2 common, description of cuttings should read: "No piece of cutting to be considered which is less than 3 inches wide and 2 feet long."

23. Page 33, under caption "Quarter Saw Red and White Oak," eliminate entirely paragraph 6, which reads: "15 per cent may be 1 1/2

W. H. RUSSE, MEMPHIS, RETIRING PRESIDENT.

names of various consumers of lumber, and getting reports relating to claims concerning their conduct and information which would be of interest to shippers. Your committee concurs in this recommendation of the secretary and recommends that such a bureau of information be established.

Respectfully submitted,
EDWARD BUCKLEY, Chairman.
J. W. THOMPSON,
HENRY MALEY.

The report was adopted, and discussion of the inspection rules then commenced in earnest, but with entire sincerity and harmony, and after prolonged consideration and some few alterations and amendments, the following report was adopted:

Committee Report on Inspection Rules as Finally Adopted.

1. Paragraph 4, page 9, substitute the following: "Lumber should be properly manufactured, of good average widths and lengths, and must be standard thickness when shipped dry. It should have parallel edges and all ragged and bad ends must be trimmed off. Tapering lumber in standard lengths must be measured one-third the length of the piece from the narrow end."

2. Page 9, paragraph 6, change to read as follows: "Fractions of over one-half foot, as shown on the board rule, must be counted up to the next higher figure; fractions of exactly one-half foot and less, as shown on the board rule, must be counted back to the next lower figure."

3. Page 9, paragraph 8, substitute the following: "All lumber of standard grades and thickness must be tallied face or surface measure, and this tally will be the number of feet, board measure, of 1-inch lumber. If the lumber is thicker than 1 inch, then the tally so obtained must be multiplied by the thickness as expressed in inches and fractions of an inch. All lumber thicker than 1 inch thick must be counted face measure."

4. Page 10, paragraphs 3 and 4, substitute the following: "In the grade of No. 1 common no piece shall contain heart to exceed one-half its length in the aggregate. In the grade of No. 2 common, no piece shall contain heart to exceed three-fourths its length in the aggregate."

5. Page 10, under caption "Standard Grades," add a paragraph:
"The percentage of firsts in the combined grade of firsts and seconds in the various woods shall be as follows:

EARL PALMER, PADUCAH, DIRECTOR.

side of the piece. Clear plain oak strips grade as above, excepting that 2 1/2, 3 and 3 1/2 inch pieces will admit of 1/2 inch of bright sap, and 4, 5 and 5 1/2 inch pieces will admit of 3/4 inch of bright sap, on face side. Clear quartered oak strips grade as above, excepting that 2 1/2 and 3 inch pieces will admit of 1/2 inch bright sap, 3 1/2, 4 and 4 1/2 inch pieces will admit of 3/4 inch of bright sap, and 5 and 5 1/2 inch pieces will admit of 1 inch of bright sap, on the face side."

12. Page 14, add paragraph:
"In the grade of No. 1 common strips bright sap is no defect in plain or quartered oak."

13. Page 15. Eliminate the paragraph referring to the inspection of lumber for specific purposes.

14. Page 16. Butternut to be taken from this group and placed with walnut.

15. Page 16, caption "Firsts," line three, omit the word "twelve" and substitute the word "ten." This to apply to firsts in all woods. Under caption is to apply to all woods where firsts and seconds are based on surface measure:

- 6 feet surface measure 1 standard defect or its equivalent.
- 9 feet surface measure 2 standard defects or their equivalent.
- 13 feet surface measure 3 standard defects or their equivalent.
- 18 feet and over surface measure 4 standard defects or their equivalent.

16. Page 16, under caption "No. 1 commons," substitute the following:
"No. 1 commons must be 4 inches and over

GEORGE E. HIBBARD, ST. LOUIS, DIRECTOR.

sent on heart edge, provided sap edge is full thickness.

24. Page 35, paragraph 2, substitute the following: "Pieces 13 inches and over wide, 14 to 16 feet surface measure, will admit of one standard defect or its equivalent in 2 inches of bright sap in the aggregate."

25. Page 35, under caption "Seconds," change paragraph 1 to read as follows: "Seconds must be 7 inches and over wide, 8 feet and over

long." Change paragraph 2 to read: "Pieces 7 inches wide must be clear of defects, including sap."

26a. Page 35, paragraph 4, under caption "Seconds," change to read: "Pieces 10 inches and over wide, 11 to 14 feet surface measure, may have 3 inches of bright sap in the aggregate, and one standard defect, or its equivalent, or two standard defects, or their equivalent, if there is no sap."

26b. Slightly discolored sap is no defect in the grade of No. 1 common poplar.

27. Page 36, under caption "Poplar," No. 2 common to be divided into two grades, as follows:

No. 2a. Sound, discolored sap is no defect in this grade.

4 inches and over wide, 4 feet and over long.

Pieces 4 to 10 feet long must work one-half clear face in not over three pieces. Pieces 11 to 16 feet long must work one-half clear face in not over four pieces. No piece of cutting considered which is less than 3 inches wide and 2 feet long.

No. 2b. To read the same as present rule for No. 2 common.

28. Page 38, under caption "Quarter Sawn Sycamore," in No. 1 commons, change sentence in paragraph 1, which reads: "Pieces 3 and 4 inches wide, 4 to 7 feet long, must be clear," to read: "Pieces 3 and 4 inches wide, 6 and 7 feet long, must be clear."

29. Page 40, under caption "Walnut," in No. 1 commons, eliminate paragraph, "There is no restriction as to heart in No. 1 commons." Add: "No. 1 commons must be 4 inches and over wide, 4 feet and over long."

In paragraph 2, eliminate the word "inch." Correct paragraph 3 to read as follows: "Pieces 6 inches and over wide must work two-thirds clear face," etc.

No. 2 common walnut. Add: "No. 2 common must be 3 inches and over wide, 4 feet and over long."

30. White maple. Paragraph 5. Worm holes are no defect in No. 2 common soft maple. Soft maple to be classified with soft elm.

Paragraph 30. Add the following rule for grading white maple:

White maple as contemplated by this rule means the product of the white part of the maple log. Grades shall be No. 1 and No. 2.

No. 1.

No. 1 shall be white two sides and two edges and may contain the same defects as are allowed in the regular grade of maple firsts and seconds.

No. 2.

No. 2 shall be white one side and two edges. The reverse side to be at least 50 per cent white and may contain the same defects as are allowed in the regular grades of maple firsts and seconds.

Intermission was then taken.

SECOND DAY'S AFTERNOON SESSION.

H. C. Mills opened the session with the

C. F. SWEET, GRAND RAPIDS, DIRECTOR.

following resolution, which was tabled after considerable discussion:

Proposed addition to the last paragraph on page 7 of the 1907 Book of Rules for Measurement and Inspection.

The seller shall have due notice by the con-

signee of application for an original National inspection, when the consignee desires to bind the seller thereby, and of the name and post-office address of the inspector, and a reasonable time, acting by return mail, to lay the contract or copy of same before the said inspector. This clause not to apply on lumber for which the contract or order states that it is for export.

Resolution on Freight Matters.

Geo. D. Burgess presented a resolution, which after being slightly amended, was adopted, as follows:

Whereas, As the daily press state that the railroads operating east of the Mississippi and north of the Ohio rivers contemplate an arbitrary advance of 10 per cent in all freight rates; and

Whereas, As a large share of the estimated increase in revenue to the railroads would come out of the pockets of the lumbermen; and

Whereas, During the last few years rates on forest products have been advanced; and

Whereas, We feel confident that such an advance will injure and disorganize all shippers, especially the lumbermen, who are suffering from business depression probably more than any other line of business; and

Whereas, The National Hardwood Lumber Association, in convention assembled, most decidedly objects to the railroads putting into effect any advance in freight rates; be it

Resolved, That the National Hardwood Lumber Association requests the railroad companies that the entire matter of the proposed increase in freight rates be referred to the Interstate

C. H. BARNABY, GREENCASTLE, IND., DIRECTOR.

Commerce Commission as to the reasonableness and justice of the proposed advance, and hold in abeyance such increase in rates until the Interstate Commerce Commission have heard all parties interested and have passed judgment on the entire question. Be it further

Resolved, That in the event the railroads decline to submit the question to the Interstate Commerce Commission, that as a matter of protection we use all honorable means, either as an association or join with other organizations, in fighting such proposed advance to the bitter end.

Provision for Changing Rules.

Earl Palmer presented a resolution relative to further changes in the rules, and moved its adoption:

Whereas, At a meeting of the National Hardwood Lumber Association held in Milwaukee, June 11 and 12, 1908, a new set of inspection rules was promulgated, which, in the belief of the members, will serve the interests of the hardwood trade for some time to come; and

Whereas, We recognize that frequent changes in the inspection rules are not desirable; therefore, be it

Resolved, That any further changes in the inspection rules shall be made only upon an affirmative vote to be polled by the secretary of the entire membership, by mail, said vote to be canvassed by the board of directors, and that a majority of all votes cast shall decide the question.

An amendment to the resolution was presented by Mr. Agler in the following speech:

Mr. President: I have not had time to give this very serious consideration, but I think it is one of the most important questions we have had to handle today. We don't want any mistakes made upon it. You should consider the effect on the attendance at the annual meetings of taking up these questions by mail. I believe many members will agree with me that a great deal of the benefit of this association

THEO FATHAUER, CHICAGO, DIRECTOR.

is gained at these annual meetings, and I can't see how, by taking this proposed action, it is going to make rules for one year. It seems to me it might be a good idea to have a vote taken at the annual meetings by the members present, and if you want to have the rules made more permanent so that they cannot be changed except upon a three-fourths vote or a two-thirds vote, you can do so. There are a great many members who do not follow the trend of association affairs and are not entirely familiar with the conditions that prevail in the various markets. I would not want to see so high a percentage that would enable 25 or 30 per cent to prevent the other 70 or 75 per cent of the members doing what, in their best judgment, would be for the interests of the association. I offer this as an amendment.

A motion covering the resolution as amended was carried.

New By-Law.

F. S. Underhill—I move that the executive committee be instructed to prepare a by-law covering this section, so that it will become a part of our by-laws.

A vote was taken and the motion was carried.

Rules Effective August 1.

D. F. Clark—I move that the secretary of the association prepare these rules, and that they be published and distributed to the trade and the members, and that they go into effect August 1, 1908.

Motion seconded and carried.

Wholesale Dealers' Weights Considered.

F. A. Diggins—Mr. Chairman, I have been asked to offer for adoption by this convention the estimated weights of hardwood lumber as used by the National Wholesale Lumber Dealers' Association. Inasmuch as I know little of them and do not wish to become responsible for them, I submit them and ask that they be referred to the executive committee, with power to act in the matter.

The motion prevailed, after some discussion.

Inspection Methods.

J. H. Dion—I offer a resolution to the effect that, when an inspection is made, if the receiver wants the inspector to sort out the different grades as he comes across them, that he be instructed to do so, so that we can become familiar with the worklags of the rules.

The resolution was tabled after F. P. Southgate, chief inspector, had explained that such procedure was customary, when requested.

F. S. Underhill presented the following resolution which was unanimously carried:

Resolved. That the thanks of this association

G. J. LANDECK, MILWAUKEE, DIRECTOR.

are due and are hereby tendered to the inspection rules committee for their untiring work during the past year.

Election of Officers.

Theo. Fathauer made a very strong and eulogistic address nominating O. O. Agler for president of the association the coming year. The nomination was heartily supported by Hon. John M. Woods, who moved that the secretary be instructed to cast one ballot for Mr. Agler.

J. H. P. SMITH, ASHLAND, KY., DIRECTOR.

Upon call for a rising vote Mr. Woods' motion was unanimously carried.

Mr. Agler's Response.

President Agler—Gentlemen: I am completely overcome by all the kind things that have been said here this afternoon, and I hardly know

what to say in reply. If it were not for the responsibility that I feel in accepting this office, I believe I would content myself with simply expressing in my own feeble way my appreciation of the high honor that you have conferred upon me at this time. I consider the National Hardwood Lumber Association one of the greatest trade organizations in this country, and I regard it a great honor to serve as president of this association.

I want to thank the Chicago Hardwood Lumber Exchange and the committee who so ably placed my name before the members of this association, and to say that it was with a great deal of reluctance that I consented for them to do so. I was reluctant about it because I appreciate the responsibility that it carries with it.

I consider the National Hardwood Lumber Association a great big business institution, and as I look at it we are doing business in a great many states, and in a way we have branch offices or departments in various states. It has been my hobby, during my short business career, to try to know as much about each department of my business as possible. I feel that you elected me as president of this association because you felt that on account of my connection with it for the past few years in an official capacity I may be competent to fill this office, and I hope you have not been mistaken. I do not think that in a way I am familiar with the workings of a good many of the markets that are operating under the National rules; but I have an ambition this year to get around and see as many of you as possible in your own markets, and become more familiar with the needs and requirements of this association.

I am going to do the best I can, and I pre-

G. W. STONEMAN, DE VALLS BLUFF, ARK., DIRECTOR.

sume when your secretary makes his rounds I will try to accompany him. I don't want you to feel that "Here comes the president of the National association." I want to go in the attitude of an employee of this association. I am going to tell you frankly and freely all that I can about the association, because I believe, as members, you are entitled to know, and I want you to talk to me in the same frank, open manner, and any information that you give me I propose to turn over to the board of managers for the use and benefit of this association. I do not know that there is anything further that I can say except that I am going to give you the very best that is in me, and if I make a mistake it will not be because of any intention, but because I have overlooked my part. (Applause.)

I want to be the president of this association for New England, New York and the east, as well as the western states. I want you to feel that this is your association as well as mine. I want every one to try to help build up this association. When you consider that the board of managers consists of only twenty-one, you can see how small their efforts are, regardless of how hard they work, as compared with well-directed work by the association members. My predecessor sets the mark at 1,000 members. That rather scares me, but when you stop to think that we have now about 650 members, if each member to-day will get one new member, you can see what that will do for us. And just a word about soliciting new members. I have had a little experience in this, and I know

what I am talking about. If a man is coming into this association expecting about fifteen minutes after he comes in to commence drawing dividends on the \$25 he put up, he is going to be disappointed, and rather than have him come in and be disappointed, we prefer not to have him come in. Every man doing a hardwood business has been reaping the benefits of the work of this association for the last ten years, whether he is a member of this association or not. (Applause.) And he ought to be

EDWARD BUCKLEY, MANISTEE, DIRECTOR.

willing, if it is put to him right, to contribute the small amount of the membership fee in this association, to give us his financial support and his moral support, which we appreciate as much and sometimes more than his money. (Applause.)

Selection of Other Officers.

With equal harmony and unanimity the following officers were elected:

First Vice-President—F. A. Diggins.

Second Vice-President—F. S. Underhill.

FRANK A. BEYER, BUFFALO, DIRECTOR.

Third Vice-President—O. E. Yeager.
Treasurer—Geo. D. Burgess.

Choice of Directors.

The committee on the selection of directors, appointed by the president, agreeable to motion, reported as follows, and the report was unanimously ratified:

FOR THREE YEARS.

Edward Buckley, Manistee, Mich.
 Frank A. Beyer, Buffalo, N. Y.
 Gardner I. Jones, Boston, Mass.
 Fred W. Mowbray, Cincinnati, O.
 M. J. Quinlan, Soperton, Wis.

FOR TWO YEARS.

Alex. Willson, Pittsburg, Pa.

GARDINER I. JONES, BOSTON, DIRECTOR.

FOR ONE YEAR.

J. H. Jenks, Cleveland, O.

Detroit Gets Next Annual.

After considerable discussion it was decided to hold the twelfth annual convention at Detroit.

After a rising vote to W. H. Russe for his conduct of association affairs during the two

M. J. QUINLAN, SOPERTON, WIS., DIRECTOR.

years of his presidency, the convention adjourned.

National Lumber Manufacturers' Convention.

The lumbermen of Minneapolis, St. Paul and vicinity did themselves proud in their reception and entertainment of delegates to the annual convention of the National Lumber Manufacturers' Association, held at the first named city June 16 and 17. This great lumber organization represents the affiliation of a number of strong associations which represent special branches of the industry, or different localities in which lumbering operations are most extensive.

The meetings were held in the Plaza hotel, delightfully located in one of the handsomest and coolest parts of the city, and the leisure hours of delegates were spent in automobile rides through the parks of Minneapolis and to the many famous summer resorts and charming lakes in the vicinity.

FIRST SESSION.

After a cordial welcome to the city by its mayor, and a fitting response by President William Irvine of Chippewa Falls, Wis., the latter delivered his address as follows:

The President's Address.

The National Lumber Manufacturers' Association in its sixth annual session assembles today in the fair city of the head of navigation of the Father of Waters, and the lumbermen of the old Northwest extend to its members the most cordial greeting. It was the privilege of this association a year ago to convene upon the historic shores of Hampton Roads, and I have pleasure in saying that the reception and entertainment accorded our members on that occasion were second in line with the royal reputation of the Old Dominion. The conditions as fair as the Virginia skies our last assembly was convened, were no cloud upon the commercial horizon to give warning of a relative boom to break upon us. It came, however, in full force, as all well know, and our industry, in common with all others, has felt the reception and entertainment of general depression. Our people throughout the country are meeting the conditions with the best possible grace, with patience as fair as the recovery of our great industries and their ultimate return to normal conditions.

Your representative in the honor of attending the conference on conservation of natural resources at the White House, May 13, 14 and 15, in response to an invitation from the President. The attendance of federal state representatives was notable and the sessions were full of interest. It surely was a wise con-

R. A. LONG, KANSAS CITY, PRESIDENT.

ception to invite the attention of the country to the importance of conserving its natural resources to as great an extent as possible, and good results will undoubtedly follow the conference. Many interesting and instructive addresses were delivered, prominent among them being the able paper presented by our esteemed associate, R. A. Long, who covered the subject of forest preservation from the standpoint of a practical lumberman.

In February of this year I had the pleasure of visiting the Yale Forest School at New Haven. I was very pleasantly entertained by Professor Graves, who, with his efficient associates, is doing good work along very practical lines in fitting his students for useful employment in a field which is calling for intelligent information as to the best methods of conserving the forests of the country, while furnishing their products in response to the country's commercial needs. I was very favorably impressed with the school and its work, and believe the support you have given the institution has been well applied. The call of your committee should be promptly responsive, and the balance of the fund which you have undertaken to supply should be immediately available. The committee's report will advise you as to what has been done and what remains to be done.

The lumbering industry was not favorably received for quite a period by a great many practical lumbermen, but gradually they have all

been awakened to the fact that forestry is a science which should be cultivated to the utmost extent.

The public prints, voicing public sentiment, condemn the lumbermen in no uncertain terms for the destruction of the forests, ignorant of the fact that the lumber-consuming public should be held equally at fault, for the reason that it has furnished the demand for the forest products, without which they would not have been produced. The viewpoint has changed materially within a comparatively brief period, and the conditions obtaining a few years ago are not the conditions of today. The earlier lumberman was in a constant struggle with the wolf and had no time for questions of reproduction, care of smaller growth and kindred subjects. The great question in the forest was that of getting to market the merchantable product in such a manner as to permit the operator to pay his labor and supply bills, with the hope of a reasonable return from his investment. The products of the forest were used in the building of railroads, cities and towns, and to supply the manifold requirements of the people in general; and to the observer of the time the best interests of all classes were advanced by the methods then in effect. No great fortunes were accumulated by the makers of lumber of a few years ago, and as a matter of fact the increase in the value of stumpage which has followed the diminishing supply has furnished the major part of the lumberman's profits during later years.

Lumbermen who have bought trees for their commercial value have very naturally cut the trees into saw logs, and will continue to do so to do in response to the demand for the product. The cutting of today, however, is done on mechanical equipment, and the product of this succeeding year will see improvement in this regard.

Gifford Pinchot and his able associates have labored hard, and with a great measure of success, in the effort to induce more economical cutting of the smaller growth. A good many operators are making a profit along the lines suggested, but in many instances they are not convinced that they can afford to leave any portion of their merchantable standing timber, the tax-gatherer offering a very substantial rate to such a course in the majority of instances.

Individual effort in the line of forest preservation and its sparing is not accomplished by a forced result, but from the Federal policy followed by the timber States, good results will undoubtedly be realized. The Federal policy of the States in establishing forest reserves is commendable, and it is eminently proper that the States should include all vacant lands on which there is any species of standing timber, and that the eventual cutting of the trees should be done under the supervision of men trained to the work of forest and timber, so that the ripe trees only shall be cut and the seed trees be permitted to stand and permitted to grow to reasonable maturity.

Travel through the forests discloses the fact that the lumbering industry is not favorably received, and her efforts in that direction would show greater results were it not for the ravages

ment jurists have always held that the right of eminent domain, which the state reserves in the interests of all the people, carried with it the right of taking property for the public good, in the protection of the streams, the forests, the farms and the people. In all cases where private property is taken for the public good the owner is entitled to compensation. Now, if he is obliged to leave timber standing in the forest for a future generation the public should in some manner share with him the burden, and perhaps this can be reached in great measure by withholding the forest from taxation until the timber is cut.

In Massachusetts, New Hampshire and some other states, lands may be condemned for forestry, and in Massachusetts it requires only a two-thirds vote at a town meeting to acquire public domain and to condemn same for the cultivation of forests and the preservation of water supply. New York state has a forest preserve board which is authorized to purchase for the state and condemn property, if necessary, and has been and is now purchasing lands, structures and water for a state forest in the Adirondacks. The forestry commission of the state of Pennsylvania is empowered by and with the consent of the governor to purchase and condemn lands for forestry in any county within the state, and so long ago as 1883 a law was passed by that state providing that tax assessors must make returns of the area of timber land in their district.

This was a step in the right direction toward getting information as to the quantity of our forest supply. If the assessor is also required to report on his return the character and commercial stampage of various woods that the farmer

As the states are now favoring legislation regarding the size of trees to be cut into lumber and other forest products there should be no tax required, except as the timber is cut, and this annual tax should be on a certain price per thousand for lumber, a given price per cord for oak or hickory bolts, shingle bolts, cordwood, etc., so as equitably to cover all products. The size of timber to be cut would be determined by the variety of the wood and the purpose for which it is to be used. Second growth hickory and small oak trees are just required for handles, spines and hubs, and one would have to be permitted to cut trees down to six inches or less in diameter for these purposes.

The timber owner who registered his tract as a private forest would be required to practice forestry under the direction of a qualified state or United States forester, and would then pay taxes only as he cuts the timber. He would then have some greater interest in protecting and growing timber trees and in reproducing the crop, and in cutting out the trees as they mature he would utilize every part of the tree and find commercial and new uses for limbs and inferior odds and ends, so that waste would be prevented. I would favor every part of the tree and find commercial and new uses for limbs and inferior odds and ends, so that waste would be prevented. I would favor that the farmer who has a twenty or forty acre wood lot could have the benefit, and that forestry might be encouraged for he carries into practice in every neighborhood where trees grow. There will come a time when forestry will be a profitable business, as it is now in Germany and some other countries. But there is a long time, from twenty to a hundred years, between the starting and the harvesting of a crop, and one has to forego present profits, and he should be encouraged by the state to the end that he pay

and as to superior values and inferior values. A community is benefited by a commodity having been produced at home and the money for labor, cost and profit kept at home. The nation is much better for this added wealth, and because of this development of home resources the state is justified in rewarding the individual.

And if the state thus encourages and recompenses the individual for crops of annual production how much more is it justifiable in encouraging and in the same manner recompensing one who in forestry can produce only one crop in a generation? And as this growth is for future generations it seems manifestly fair to provide that the tax shall be paid by those who in the future shall utilize, enjoy, use or receive revenue from these forest products. If the timber crop was to be harvested now the tax would be paid now, but if the desire of the state is that the forest be cared for and perpetuated, and that the individual can produce only one crop (other land products), then only should such growth be taxed yearly as it is cut for the market. Practical encouragement would thus be given to prevent waste and to grow forests for future generations. But if the state pursues the policy of high taxation, as many ill advised and wrongly informed politicians are advocating, then just so much pressure is constantly brought to bear on the owner to rush in, build mills and cut his forests and take his products and exchange for some other character of investment, while he is alive and can give the business liquidation and of re-investment his attention. Most of us have had the experience of our cut-over lands being assessed for much more than they will sell for. My own company has sold 120,000 acres of cut-over land, and has as much

PROMINENT HARDWOOD MEN ON BOARD OF GOVERNORS.

or timber owner claims to own each township and each county would show approximately the amount of each variety of timber contained within its borders, and thus with the aid of the reports of the United States and state forestry on the stampage of state forests and reservations valuable information as to the timber supply of each state could be obtained. My experience is that nearly all farmers and timber owners have a fairly accurate idea of the amount of timber they own, or some good judge of timber in their neighborhood knows about what his neighbors own. Of course a timber census made by expert cruisers would be more accurate, but it would require large appropriation for the expense and until this is deemed practical the county and township assessor could collect valuable statistical information.

I believe if the tax laws were amended so as to encourage the growth of timber, so that parties owning timber tracts could be permitted to describe and register them for forest growth, subject to approval of the state forester, who would inspect and pass upon the size, quality and conditions of the timber, as to whether it would be economy to have the timber acquire greater growth and maturity, or whether it would be better economy that it should be cut soon on account of ripened or deceased condition. In fact, if the tax laws were amended so that it would be better economy that it should be cut soon on account of ripened or deceased condition, the former condition was found to be true, and it is desirable that the timber should be grown and protected from fire for benefit of a future generation the tract would be accepted as a private forest reserve and no taxes assessed against it, except as the timber is cut.

no tax until his crop is matured and ready for the market.

There are certain kinds of taxes in which present revenue is not the all important consideration. A protective tariff is one of these. It is a growing importation in the United States and other new countries in grain and meat products caused European countries to apply a tax, or tariff of protective duties, with minimum duties to such countries as should grant reciprocal favors. But the object of this tax is not for revenue but for the purpose of discouraging competition against their own citizens, and to encourage by an increase of market value, to the extent at least of the tax, a greater production and more economical methods at home. In many instances in this and other countries a bounty is given to the producer, but in the case of a product, and this bounty, which is an indirect tax upon the consumer, is justified by the consideration that the consumer of the country is discouraged by the individual, or for a valuable service rendered the state by him in the production of the product, and that the product, under conditions than it could be produced abroad, but which the state regards as wisely economy in keeping our money at home and paying the laborer more prosperous wages than the foreign competitor has to pay for his labor.

It is true that the tax on commodities in the end falls upon the consumer. Yet we are each and all users and consumers of nearly everything that is produced and in this manner are continually paying taxes and hardly know it, and thus the indirect way is more agreeable than a direct method of taxation would be. Land is taxed directly, but due regard is had to advantages of location and to the fertility of the soil,

more ready to sell, at fifty per cent less than the assessed valuation. It would be economy for the owner to rush in, build mills and cut his forests and take his products and exchange for some other character of investment, while he is alive and can give the business liquidation and of re-investment his attention. Most of us have had the experience of our cut-over lands being assessed for much more than they will sell for. My own company has sold 120,000 acres of cut-over land, and has as much

I have not yet read the full text of the law enacted in the state of Maine which has lately been approved by Supreme Court decision, but I have no doubt of its fairness and flexibility as to the sizes that timber may be cut, but I have some doubt as to how far legislation can go in this manner of restriction. There would necessarily have to be different sizes or limits as to which the different crops may be harvested. The useful size would have to be considered, as well as the products that can be made, such as handles, hoop poles, hop poles, telegraph poles or railroad ties. But the right of the state to regulate laws for the preservation of its forests and to a great extent control as to the cutting of private forests, especially on the watersheds of rivers and streams, is now unquestioned and should now ask that the owners of timber lands be treated justly by the state as regards taxation. In a poor soil production will be made inferior citizens. If a soil is better adapted for agriculture, agriculture should be encouraged, and the farm tax on such a soil will be more ducting capacity. If the soil is better adapted for tree growth, then forestry should be encouraged and the forest or its product taxed on a basis of the annual growth or its annual production, and all this under the wise application of the maxims above referred to of equality and trust economy.

Railroads vs. Shippers.

A paper by J. H. Bloedel of Bellingham, Wash., reviewed the trouble of Pacific Coast lumbermen with the railroads, complaining of their arbitrary raising of rates in times of depression as well as prosperity, and encouraging lumbermen's support of the early completion of the Panama canal, the inland waterways, the widening and deepening of canals and river channels, and the promotion of a reasonable ship subsidy act, together with more liberal coasting regulations. The paper recommended broadening the scope and strengthening the hands of the Interstate Commerce Commission and expressed the opinion that "high freights and the preservation of our forests do not travel the same road," inasmuch as much stock is now left in the woods which can not be profitably marketed on the prevailing basis.

Committee Appointments.

The final business of the session was the appointment of committees by the president, as follows:

Resolutions—E. C. Fosburgh, chairman, Norfolk, Va.; Edward Hines, Chicago, Ill.; F. H. Lardoe, Wausau, Wis.; W. W. Cameron, Waco, Tex.; W. B. Stillwell, Savannah, Ga.; R. M. Carrier, Sardin, Miss.; W. C. Miles, Globe, Wash.; V. H. Beckman, Seattle, Wash.; J. A. Bruce, Strader, La.; D. H. Barber, Kallspeil, Mont.; B. K. Lewis, Coeur d'Alene, Ida.

Credit rating group—J. B. White, chairman, Kansas City, Mo.; N. M. McLeod, St. Louis, Mo.; V. H. Beckman, Seattle, Wash.; George H. Chapman, Stanley, Wis.; H. M. Graham, Erlson, Ga.

Credentials—N. H. Clapp, Jr., chairman, Warren, Ark.; V. H. Beckman, Seattle, Wash.; George E. Watson, New Orleans, La.

Auditing—W. M. Carrier, chairman, Sardin, Miss.; R. A. Kellogg, Spokane, Wash.; C. W. Greer, Thornton, Ark.

Board of Governors.

At a meeting of the board of governors, immediately after adjournment, it was decided after due consideration that, as the association is a federation of which associations are the only members, all questions must in the beginning be acted upon by the respective associations and be introduced by the associations before being acted upon by the convention.

SECOND SESSION.

After the report of the Committee on Credentials F. E. Weyerhaeuser of St. Paul, chairman of the Committee on Yale Forest School Fund, presented a report as follows:

Record of receipts and disbursements during the year is shown by Treasurer Carson's report as follows:

To subscription to date	\$66,396.20	
To interest and premium on bonds	3,750.00	\$70,146.20
Cr.		
By check for stationery	1.85	
By check for Lufkin Land & Lumber Co. bonds	15,000.00	
By check for expenses for Rhodes office	402.55	
By check for Weed Lumber Co. bonds	9,983.33	
By check for E. P. Burton Lumber Co. bonds	10,000.00	
By check for F. E. Weyerhaeuser (accrued interest on Lufkin Land & Lumber Co. bonds)	252.50	
By check for exchange	8.20	
By check for Prof. Graves, New Haven	3,300.00	
By check for Capt. J. B. White, Co. bonds and accrued interest	10,166.66	
By check for F. E. Weyerhaeuser Lumber Co. bonds	10,000.00	

By check for interest on same and exchange	4.58
By check for St. Croix Lumber Co. bonds	5,000.00
By check for express on bonds to Yale University	50.00
By check for exchange	2.97
By check for Finkbine Lumber Co. bonds	5,025.00
	69,197.24
	\$ 948.96

The following bonds were forwarded to President Hadley, Yale University, October 18, 1907:

Weed Lumber Company bonds.....\$10,000.00
E. P. Burton Lumber Company bonds..... 10,000.00
St. Croix Lumber Company bonds..... 15,000.00
Long-Bell Lumber Company bonds..... 15,000.00

The following bonds are on hand:
Gulf Lumber Company bonds.....\$10,000.00
Finkbine Lumber Company bonds..... 5,000.00

We have done very little work in the last year in soliciting subscriptions, because the time was not opportune. We hope a little later to begin again and trust we will receive a more liberal response on the next canvass. We would like instructions as to these \$15,000 bonds, and, if agreeable, the acceptance of this report.

On motion of J. B. White the report was accepted and ordered placed on file, after which E. C. Fosburgh offered a motion that the committee be authorized to turn over the bonds on hand to the Yale Forest School. This motion carried unanimously.

President Irvine called upon Mr. Chapman, one of the Yale faculty, who reviewed the work of the school very interestingly.

After the report of the Auditing Committee, and the Credit Rating Department, both of which were accepted, R. S. Kellogg of the United States Forest Service, addressed the meeting, urging particularly the necessity of lumbermen cooperating in securing timber statistics by giving inquiries for figures prompt attention.

Right of Injunction.

Edward Hines of Chicago offered a resolution:

Resolved, That this association learns with profound surprise that the Resolutions Committee of the national Republican convention are considering the adoption of the anti-injunction plank in its platform. Therefore be it

Resolved, That this association unanimously protests against such action as an insult to the intelligence of the American people and the integrity of our courts and if adopted would remove the last prop to the protection of life and property in this country.

Note that this association represents lumber manufacturers from the Atlantic to the Pacific ocean, from Canada to the Gulf.

Upon being put to a rising vote the resolution carried unanimously, and the secretary was instructed to prepare and send to the proper committee of the convention a telegram containing the resolution just passed.

Resolutions.

The Committee on Resolutions next presented its report, as follows:

Your Committee on Resolutions beg leave to submit the following report:

Referring to communication under date of June 11 from H. S. Kellogg, chief of the forestry department of the United States: Would recommend that associations affiliated with this body be requested to furnish such samples of the various woods as they are able to, and to encourage the advertisement of our American woods abroad.

Your committee most heartily indorse the able paper read by Capt. J. B. White at our meeting yesterday, and further recommend that our secretary be instructed to have Captain White's paper printed and copy of same furnished to the forestry department and distributed generally among our different associations.

Your committee further recommend that a standing committee, composed of one member from each of our affiliated associations, be appointed, to be known as the Committee for the Conservation of Our Forests, said committee to act in conjunction with the forestry department.

We further recommend that the sessions of this committee be held in Washington city, at such times as the committee may deem necessary. Any expense which may be deemed necessary in connection with their work we recommend shall be paid out of the funds of the association.

Your committee further recommend that the paper to be read by Mr. Kellogg of the forestry department be printed and circulated among our different affiliated associations, and that the thanks of this association be extended to Mr. Kellogg and his department for the valuable service rendered to the lumber industry.

Your committee further recommend that Capt. J. B. White be requested to prepare suitable resolutions expressing the appreciation of the national association to the citizens of Minneapolis for the many courtesies so gracefully extended to our members during their sojourn in Minneapolis.

All the above resolutions were adopted.

Election of Officers.

President Irvine appointed as Nominating Committee Edward Hines, E. C. Fosburgh and W. C. Miles, to present nominations for president, vice president and treasurer. Their report was adopted unanimously, after which the association proceeded to the election of members of the board of governors, one being elected for each association represented. The result of the election of officers and members of the board was as follows:

R. A. Long, president, Kansas City, Mo.
E. G. Griggs, vice-president, Tacoma, Wash.
J. A. Freeman, treasurer, St. Louis, Mo.

BOARD OF GOVERNORS.

George H. Chapman, Stanley, Wis.
H. M. Graham, Erlson, Ga.
E. C. Fosburgh, Norfolk, Va.
J. B. White, Kansas City, Mo.
Edward Hines, Chicago, Ill.
John B. Ransom, Nashville, Tenn.
J. H. Bloedel, Bellingham, Wash.
W. C. Miles, Globe, Wash.

F. H. Lardoe, Wausau, Wis.
H. H. Dowman, New Orleans, La.
William Denry, Pocatoh, Idaho.
William Irvine (ex officio), Chippewa Falls, Wis.

Further Resolutions.

The Committee on Resolutions offered a supplementary report in line with previous suggestions, as follows:

Resolved, That the National Lumber Manufacturers' Association do hereby urge Congress to enact an amendment to the interstate commerce act whereby the Interstate Commerce Commission may, at its discretion, upon proper complaint, suspend and investigate advances in freight rates as to their reasonableness, before they become effective.

E. C. FOSBURGH,
WILLIAM B. STILLWELL,
JOHN A. BRUCE,
R. M. CARRIER,
F. H. PARDOE,
V. H. BECKMAN,
W. C. MILES,
B. R. LEWIS.

J. B. White offered an appropriate resolution of thanks to Minneapolis lumbermen for their royal entertainment of visitors, which was unanimously adopted. The meeting then adjourned and the board of governors met, reelecting George K. Smith of St. Louis secretary, ordering a copy of the anti injunction resolution sent to the Democratic National Convention, and fixing Seattle as the next meeting place.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.]

A Correction.

CADILLAC, MICH., June 15.—Editor HARDWOOD RECORD: At the recent meeting of the National Hardwood Lumber Association at Milwaukee, the statement was made that the first shed for end-piling built in the west was erected at Cadillac, Mich., and the time of its erection was carelessly fixed by the speaker at about twelve years ago. Actual book records show that it was built over twenty years ago. This correction is not made because it is essential that anyone should know of this, but because I wish to avoid even the appearance of having made a statement that was incorrect.

F. A. DIGGINS.

More About Board Measure.

CINCINNATI, O., June 16.—Editor HARDWOOD RECORD: We have just noticed your article relative to "Board Measure" on page 24 of your June 10 issue and would suggest that you have made an error in your manner of figuring invoice in question. If a lumberman were to receive an invoice as follows: 20,505 feet 6-4 white maple—resawed—at \$55.00, resawing \$3.00—it would mean to him that he was paying \$58 per thousand board measure. In order to determine as to what the cost would then be for the 5-8 stock you would simply add one-half to the \$58, making \$87, and then divide by two—as there would, of course, be two pieces to each board; this would give you \$43.50 per thousand this count, or, as you call it, %, though in reality you understand each piece would naturally be thicker than %, provided the proper saw were used in the resawing.

RICHEY, HALSTED & QUICK.

An Announcement.

PENNSBORO, W. VA., June 17.—Editor HARDWOOD RECORD: Owing to the continued financial stringency and business depression, we recently found it necessary to secure some additional capital to enable us to carry our business and to take care of our obligations in the proper manner. When this was decided upon, we immediately commenced negotiations for the necessary funds, which were well under way and about consummated when some of our creditors became unduly impatient and instituted proceedings, which made it necessary to apply to the court for the appointment of a receiver for this firm, and by the order of Judge H. B. Woods, of the circuit court of the county of Hitchcock, in chancery, on June 17, 1908, George P. Morgan and Jas. Newman were appointed receivers, with power to conduct the business of the firm.

Our solvency is not questioned and we expect to pay all liabilities in full, but this action was deemed imperative to best conserve the interests of all concerned. We thank you for all past favors extended us, and will be pleased to have you give publicity to this little explanation.

THE COLLINS COMPANY.

Consignments Still Work Havoc.

NEW ORLEANS, June 8.—Editor HARDWOOD RECORD: I enclose copy of letter received from the other side, which gives some very lucid information about the present situation of the market in continental Europe. What is said about Antwerp and Havre ports, refers with the same force to every other port of Europe.

OSCAR GARTNER.

"Dear Sir: I notice in a southern paper a bill advertisement from a merchant in which they offer arduing facilities for all kinds of American timber and lumber, and further liberal advances to be given against such consignments. This is again followed up with a notice in the editorial part of the paper, specially calling attention to the advertisement.

Of course I understand that advertisements are necessary to the conduct of a paper, but on the other hand it should watch the interest of its readers, and it is very wrong indeed to invite them to make consignments under present circumstances. I learned in Antwerp the other day that people here declined to give advances on American shipments, and it would indeed be very good if such a resolution could be strictly adhered to; I am afraid, however, that it will not be, but one thing is certain and that is that the market all over Europe is spoiled by these consignments, which are evidently only made with the purpose of raising as much money as possible. But in doing that, market prices are spoiled for a long time to come, as the stock which is now being offered for sale in all English and continental ports is so enormous that it will last a year. There is absolutely no room in Antwerp any more where to store goods. Shed room was taken up long ago, and now the goods are being piled up on the wharves, and drive from the city in order to find any. The same thing is being reported from all ports. In Havre and Antwerp, per enclosed, which will be of interest to you.

"I do not think it will do much good to protest against these consignments, as you are a member of the National Lumber Exporters' Association, would certainly advise you to bring this matter before them again, as in spite of all their efforts to keep down consignments, there are more being made to-day than ever be-

From "The Onliest One-Horse Lumber Concern in the South."

MONROE, LA., June 20.—Editor HARDWOOD RECORD: We herewith hand you our check for \$2 and would ask that you discontinue our name as a subscriber to the RECORD, since we are hardly interested in the hardwood business now. Our output is entirely taken by the local trade, and from what prices we have been offered from the trade we are sure we would be unable to make tongue and buckle meet by selling to the dealers. In some instances we have been offered actually less than the cost of the logs for lumber loaded on the cars, and since our health is all right now, and we are working principally for money, we thought best to cut out the dealers and, like Billie Ward's goat go to it on our own hook and sell direct to the consumer.

BENJAMIN LUMBER COMPANY,
By H. L. BEBOUT, Manager.

The Meaning of White Maple.

At the Milwaukee meeting there was an attempt on the part of leading white maple producers to inject into the rules a distinct and unmistakable rule covering this particular quality of the wood, but apparently owing to the want of knowledge of the subject on the part of many the important feature of end-piling-under-shed was omitted from the white maple specification.

The leading producers in the section of the country that grows the finest maple in the world

TYPE OF END-PILING SHED FOR WHITE MAPLE.

fore. There is no doubt that they are due to the effect of the financial crisis. Still, people should be warned. Buyers asked to place firm orders on shipments from the States simply laugh and say, "For what earthly use shall we give orders when we can buy all we need from the consignments at any price we think fit to pay." Only the other day good firsts and seconds oak sold in public sale at 80 francs, duty paid ex magazine; now the duty and the Antwerp charges amount to 5 francs, and the price per cubic meter in Antwerp would therefore be 75 francs, or \$33 per 1,000 feet. This price tells worlds against consignments, for what shipper is there who would sell what will knowingly sell his goods at such a price c. l. f. Antwerp? If you were to offer any of the mills in the States such a price they would simply laugh at you, and maybe kick you out of the office, and yet these same people go on shipping their stock to Antwerp, and are then complaining for the price such buyers. I can only advise you once more not to make any consignments at all, for you can see where you are being shipped at \$33 per 1,000 feet c. l. f. Antwerp, I should not be in a position to make a profit on this price."

"I have been flooded with popular logs in immense quantities, of which one can buy extra big selected all clear logs at \$25 per M. ex yard, from which of course you will still have to deduct handling charges, agents' commission, etc. Consignments are being consigned to me arrive, which the buyers here can gobble up at their own prices, and it is therefore absolutely impossible to get any firm orders, and all we can do is to wait until the smart (?) American shippers have been flooded sufficiently to stop their consignments. I have a considerable quantity of lumber in Havre that they do not know where to put additional arrivals, as all the sheds and yards are absolutely filled up.

—the upper portion of the lower peninsula of Michigan have demonstrated that it is impossible to cure the clear white of maple without discoloration or stick-staining in any other way than by piling it on end under sheds. When the clear white of winter-sawed maple is thus piled and housed it comes out entirely free from any discoloration of any sort and of clear, even, ivory whiteness. Lumber thus handled commands a price of well toward \$20 a thousand in excess of yard-piled white maple, and on this product the manufacturers of the Cadillac region have gained a distinct and exceptional reputation.

The accompanying illustration shows the method of construction of end-piling sheds as employed in that part of Michigan and also the way the stock is piled therein.

The editor of the RECORD has had occasion to arbitrate several disputes during the last few years on what constitutes strictly white maple. In one case a shipment made to Germany for a special order demanded clear white stock; the lumber was cross-piled stock and was rejected, and there was no end of trouble in settling the account. It would be wise for buyers who want and are willing to pay for strictly winter-sawed, end-cured white maple to specify, in addition to the National rule, the time the lumber is to be sawed and the method by which it must be seasoned.

Utilization of Hardwoods.

ARTICLE VII.

The Manufacture of Motor Boats.

From the very first men have been building boats with the idea of getting the maximum amount of both comfort and speed out of them. Of course, the two qualities are in a way contradictory, for if we emphasize the comfort we are liable to end with a house-boat; while if speed is all we want the birch bark canoe strongly appeals to us. A happy medium, however, is the motor boat, which is rapidly growing into popularity not only as a pleasure craft, but, like the automobile, many business men regard it as an absolute necessity, and having once tried it in connection with their business would not feel that they could well dispense with it, especially when their enterprises are spread over considerable ground and are more readily accessible by water than by land. This mode of transportation appeals strongly to lumbermen, and many lakes and streams near timber operations are "alive" with the little craft.

At first thought its construction might be considered somewhat intricate, but on closer observation we discover that although great care must be taken in each phase of the operation, yet the entire work is comparatively simple. This is due no doubt to the fact that the modern factory for the manufacture of motor boats is a wonder in precision and systematic development. And thereby hangs this tale.

First of all great care is taken in the choice of the lumber used. In a motor boat every piece is not only called upon to bear its full share of wear and tear, but it is also quite conspicuous and so must be of the best grade. The lumber which is stacked at one end of the factory usually begins its trip through the plant by being split into narrower pieces by means of a buzz saw. It then passes through the planer, and if necessary its edges are smoothed off by the buzz planer. Next it is carefully guided through the shaper.

A notable fact in the well organized plant is that every board is made an exact duplicate of a numbered model, which has served the same purpose before. The advantages of such a scheme are apparent. Every board in the boat is fashioned after a standard

which has already "made good." Every board turned out is uniform and every part in it can be immediately and exactly replaced. Thus delay in securing repairs is reduced to a minimum and certainty of adjustment is assured.

The first step in the actual building of the motor boat is to place the keel on the form or model boat. This keel is made of two by three inch straight grained clear white oak, although the shaft-log which is attached to it is made of cypress, fastened between strips of oak. The transom or rear end of the boat is also fastened to the keel, and is made of oak usually in two pieces which meet in a broad "V."

In the meantime the ribs have been planed down to the exact shape of their model, and have been steamed so as to be easily bent. Some boats have been made in two sections, one rib running from the coaming on each side to the keel—or in other words, the boat is built in separate halves, which are then fastened together. It is not necessary, however, to build a boat in this way, for a single rib may run from one coaming to the other, being bent over the keel. It is true that although the first few ribs sometimes crack when they are bent at such a sharp angle, as they are fastened at both ends, this does not matter very much, for they are still stronger than two separate ribs.

With the exception of the two pieces of cypress used in the shaft-log all the wood employed in these parts is oak. However, all the planking is made of the best Louisiana red cypress. The planking process is perhaps the most difficult part of the whole operation. These planks must be fitted along the stem and keel so that each calking seam will be uniform throughout. This is absolutely necessary, for if the seam is such that in some places the calking will be driven through while in others there will be no room for it, the only possible result will be that the boat will leak, which is exactly what it must not do.

After the planks have been nailed in place, the boat is gently slid off the form, which is again used in building up the next one. The boat itself is now placed upon a stand, and all the nails are coun-

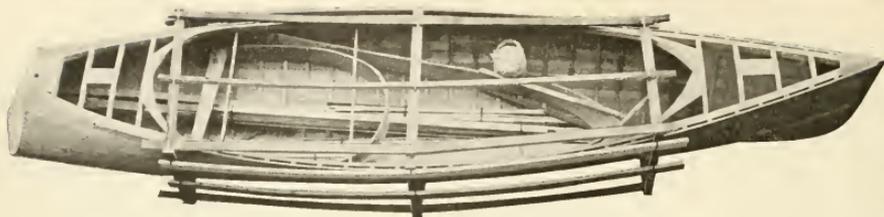

A NEAT PLEASURE CRAFT.

ter-sunk and clinched. As might be imagined, the craft at this time is in a very rough condition, but after the entire outside hull has been planed down, the counter-sunk nail holes plugged up with putty, and the whole boat thoroughly calked and sand-papered, it begins to assume a more seaworthy appearance.

The next step in the process is the finishing up of the interior, which has previously received its first coat of paint. Considerable remains to be done here for the clamps must be carefully fastened in place, the engine bed made safe and strong, the flooring securely laid, and the decks, covering boards, coamings, seats, coiling and other parts fitted, bent and put into position. The lockers containing the batteries and other electrical equipment, and the paneled bulk-head in the forward end of the cock pit are also put in position. The entire interior, with the exception of the seats and flooring, is made

SIDE VIEW SEMI-KNOCKDOWN.

INTERIOR SEMI-KNOCKDOWN, CRATED FOR SHIPMENT.

of the best selected oak, which is hand-finished and receives three separate coats of spar varnish before being sent out.

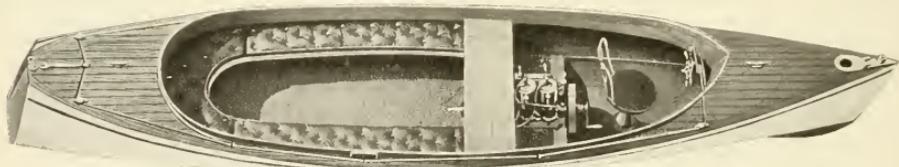

It is now time to install the engine. The flooring around the engine bed has not been nailed down, so that the engine is soon in its fixed position, and the entire installation process complete.

By this time the boat has almost reached the far end of the factory, and it is here that it receives the finishing touches. Four

In glancing over the entire construction of the boat, one cannot help noting another phase of the systematic methods previously referred to. With very few exceptions the men work in pairs, and each pair has its own separate work to do. Thus two men fit the keel and ribs on the form, two others lay and fasten the planking, and still another planes down the hull after the nails have been counter-sunk. One man is kept busy puttying, while his partner is

mately ten days elapse from the time the first board is planed down to the time when the boat is crated for shipment.

Besides sending out completed boats most concerns sell a knocked-down boat, only partially completed. In other words, the first part of the work, which is the most difficult, is done at the factory, but the later stages in its development, such as the laying of the floors and deck, fastening of the coamings, and all similar

VIEW SHOWING INTERIOR COMPLETED BOAT.

coats of marine paint are applied to the outside hull, and as has been stated before, three coats of varnish add to the appearance of the interior.

The last step before shipment is the thorough testing of the completed boat. Of course it looks all right, but appearances count for little unless supplemented by results, and these can only be determined by placing the boat in a tank and actually operating it.

likewise engaged in calking. As can be readily seen the men soon become adept in their particular line of work, and so efficiency as well as speed is obtained.

The ordinary motor boat ranges from sixteen to twenty-four feet in length, the most popular being the "twenty-footer." In the average boat of this size 147 feet of cypress are employed and 165 feet of oak. In the ordinary factory one boat is turned out per day, although approxi-

work, are left to the purchaser. Of course these boats are less in price and many of them are sold.

The several cuts with which this article is illustrated were furnished the RECORD by the Outing Boat Company of Kankakee, Ill., and they illustrate admirably several of the boats described. Incidentally, still another type is shown in the advertisement of this concern which appears on another page.

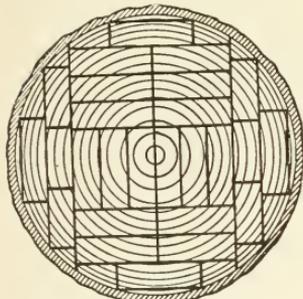

CLARENCE BOYLE, JR.

IN THE TEST TANK—LAST OPERATION BEFORE SHIPMENT.

the Metropolitan Street Railway Company of New York made a test covering several years, which proved satisfactory. But these few examples cannot be regarded as final, for there have been instances when creosoted blocks have given poor results, although there is little doubt that they may be traced to poor preservative treatment, careless selection of wood, or faulty construction.

While wood preservation has in general attained greater perfection in Europe than in America, our treatment of paving blocks is more thorough than the English method and American longleaf pine is a denser, harder wood, with greater resisting powers than the European variety employed. The Rush street bridge in Chicago carries as heavy traffic as any in that city. It has two twenty-foot roadways, paved in '99, one with creosoted longleaf blocks, the other with the same wood uncreosoted. The former after seven years, is still in good condition, and

METHOD OF CUTTING PLANKS FROM LOGS.

bids fair to last several more, while the latter had to be renewed in 1902. This and other evidence should overthrow the traditional doctrine of the limited value of creosote as preservative treatment for wood paving.

In the United States the timber is impregnated by the vacuum-pressure method, closed cylinders about 6 feet in diameter by 10 in length are used, and the amount of oil usually injected is 16 to 22 pounds per cubic foot; this apparently excessive amount may seem extravagant but inasmuch as paving blocks are subjected to more exacting conditions than any other creosoted products, experts do not consider it so, believing that blocks so treated will yield better returns in the investment even at the increased cost. In Paris the vacuum pressure is only now being introduced; there the blocks are treated by merely soaking a short time in an open tank, the amount of oil injected being very small, and results correspondingly unsatisfactory.

To give the best service wood block pavement requires a concrete foundation five to six inches thick for heavy traffic. Portland cement-mortar makes the best top cushion for the foundation. The blocks are rigidly

inspected as to imperfections in sawing, knots, decay, defective edges, squareness of angle and thoroughness of impregnation. Sapwood is entirely excluded by most wood-paving specifications, but under existing market conditions it is practically impossible to obtain strictly all-heart southern pine; commercial long-leaf southern pine is also seldom free from an admixture of loblolly. The true longleaf has usually so narrow a sapwood that it could be overlooked without danger to the pavement, but in loblolly the sapwood is often very wide; still in this species it has been proved that the sapwood under equal conditions of moisture is as strong as the heart, so that when effective seasoning of paving material is assured, the prohibition of sapwood is needless and should be omitted from specifications. A more pertinent clause would be one excluding fast-grown timber—say all showing less than eight rings to the inch—since it is the porous wood resulting from fast growth, rather than sap, which unfit timber for paving purposes.

There is great difference of opinion as to the proper angle at which wood blocks should be laid, as to joints, proper fillers, top dressings, etc. While these are important phases of contractors' work, it is in the care of pavement after it is laid, that American

cities fail most seriously. Once laid it is expected to take care of itself, while in Europe the streets are cleaned with regularity and care, being flushed with water frequently and never allowed to dry out as they do here during long hot spells in summer.

To learn the results of actual service on woods that manufacturers seemed unlikely to try under existing public prejudice against unproved woods, the Forest Service recently undertook the laying of an experimental pavement in which a number of untried woods should be laid beside those already standard. This experiment was carried out in co-operation with the city of Minneapolis, which selected the area and laid the pavement, and with prominent creosoting, quarry and lumber companies, which donated the material necessary. The accompanying diagram shows the plan of this work. It is expected that eventually it will prove a valuable source of information as to what species of wood may be laid, the heartwood and sapwood question, length of blocks, angle of courses, and other points involved in laying satisfactory pavements, and that it will assist in bringing about the introduction of other suitable and available woods to supplement those now in use, though of course results will not be complete for several years.

Millions for Tribute but not One Cent for Defense.

The people of West Virginia thoroughly appreciate at least one phase of the forestry question. In a recent article in *Forestry and Irrigation*—herewith quoted—F. M. Eaton of Richmond presents their side in a manner that shows he knows whereof he speaks:

Somewhere among the dead bills presented to the last Congress of the United States lies a bill—the White Mountain-Appalachian bill.

Does the ordinary reader and voter of this country know that it has been there, and is there? Or, if he knows it, does he know what it is for?

I doubt that very many can say yes to either question.

Down here in the West Virginia mountains, where the water goes in a terrible hurry on its way to the Atlantic Ocean and the Gulf of Mexico, if one knows the purpose of the bill one gets an idea of its value.

Down these mountain sides, where the angle of 45 degrees is a common occurrence, and "up and down" pretty common, the rain water slides as though it were an express train making up lost time. In the original forest it has its beaten track of one large or small ravine bottom, full of large and small boulders, fallen tree trunks, and debris from the trees above, with the banks held by fern roots and roots of bushes, checking, in large measure, the rush of the water. On the adjacent hillsides are the bushes, ferns and dead branches, and now and then the dead trunks of former trees. These all tend

to moderate the flow of the water and dissipate it.

Now go on the tract that has been lumbered over and then burned. There your ravine bottoms are the same, all but the bushes and ferns on the banks, but up on the hillsides are furrows by the dozen; and the deeper and broader they get—why, the deeper and broader still they get; and they are continually multiplying themselves. Now, there is nothing but the bare earth to check the force of the water, and small streams gather in every little depression, to dig it deeper and broader, week by week, and month by month. In union there is strength, for water as well as anything else, and it tells its story here.

Every little drop of water gets a little soil. Lots of little drops of water get a pebble. Lots more of little drops of water, with their multiplying amount of soil, get a stone; and still more of the little drops of water get a small boulder. Down they go, merrily, to the stream, down goes the stream to the river, then to the ocean or gulf; and with them, eventually, the soil, the pebble, the stone and the small boulder.

The stone and small boulder may go in pieces, yet they go; and on the way they fill the streams and rivers. The White Mountain-Appalachian bill was drawn up for the express purpose of preventing this destruction, by cutting the forest in such a way that the soil will always be protected from this erosion, and a plentiful supply of trees will be

kept for the use of our children and our children's children.

I see by a local paper that one of our congressional representatives has secured a much-coveted place on the committee on rivers and harbors. What should a man do when he has secured a position on the committee on rivers and harbors?

Now, a man from this state, and a great many other states along the line, will wish to get a good, big appropriation (capital A) for the dredging of the Ohio, and also the Mississippi. One complements the other.

Well, that is all right; they need dredging, but where on this earth are we going to stop dredging? By neglecting the problem, what causes the necessity of dredging, and sticking to the dredging itself, to the exclusion of all else, our representatives lead one to think that they consider the leak at the bung hole a small matter compared with the leak at the spigot.

Man dredges; and from her waste and wasted lands, old Nature is filling in. Man

dredges; and old Nature, from those ever-increasing furrows, continues to fill in. Faster and faster, she fills in; and in the meantime, she takes a little spare time to have floods, which destroy not only the houses and the manufactories on the banks of the river, but also the farms, depositing on the fertile land the pebbles and stones which she has left over from her fight with the dredgers.

Silly, isn't it? Not on Nature's part, for she is only getting revenge for our misuse of her. But it is silly of man.

Why not ally ourselves with her? Why not save ourselves the loss of lives, goods and lands? Why do so much dredging to no purpose?

Poor, old Uncle Sam! There he is being plundered right before our eyes; and the man who puts in his vote for large sums for dredging and lets the bill die in committee feels very complacent and thinks he has done a big thing for his country. Millions for tribute, but not one cent for defense! Queer, isn't it!

Manufacture of Folding Screens.

Since the use of folding screens began many carpenters, cabinetmakers and woodworkers in general have benefited by it. Busy millmen with large orders on hand for sash and door stock do not like to stop and dicker over the cost of making a few folding screens, but if a large store desires a hundred, or a hundred gross, the millman may turn in his estimate and bid for the contract. If there is a run of trade in folding screens, such as exists in some communities at the present time, the business-like carpenter or millman finds it to his advantage to so arrange matters that he may derive considerable profit from the work.

Screens can be made during slow times in the shop and there is a good margin of profit in them, although when only an occasional one is made the gain is slight, owing to the necessity of getting tools together and planning for the special article. In some shops this is overcome by making a dozen screens even on

a single order, trusting that the other eleven will be bought up in time.

The sketches are presented with a view of elaborating on the designing and making of the modern types of screens. Formerly it was considered all right to attach the corners of the frames with nails. Sometimes screws were used. There were types of bolted and flanged joints. The requirements of the present time involve the uniting of the corners, as in Fig. 1 at a. Buyers abhor nail heads. Even screwheads are not wanted. Therefore a good joint with all wood parts is made. In Fig. 2 is shown a frame set up.

As to the timber employed, much depends upon the style of folding screen wanted. There are cheap lines for the children's nursery, the kitchen and the rear porch that can be manufactured from pine or other easily worked stock. Such timber is usually stained to imitate the hardwoods. Sometimes it is

painted. The screen for the hall, the library or sitting room must be better.

Weathered oak is the popular stock. The oak pieces are obtained about the right proportions and cut to match the parts of the frame. The filling in of the frame is not done at the shop, as a rule. The frames are almost always wanted free and open and hinged, ready for tacking on the burlap or other material. The hinges may be of the common one-way type or of the swinging variety, so that the folds may be turned in any direction. Polished brass or white-metal hinges set off dark colored woods to advantage.

While the average buyer of the folding screen wants the frame only, there are others who order the body part finished. Fig. 3 shows a zinc body frame, constructed with cylindrical pieces of oak, turned down to two and one-half inches diameter. The height is usually about five feet. The hinging is done with brass strapping which passes about the poles alternately, as shown, and is tacked at the tips. This makes it possible to turn the rolls very readily. The zinc sheets are cut out at the nearest tinner's and the metal hinge straps are soldered on or riveted on, as desired. The zinc surfaces are later decorated with colors. A very attractive folding screen results.

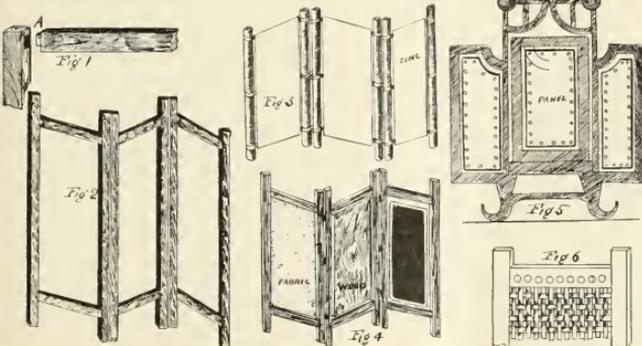

Fig. 4 shows some of the panels employed in the body work. Often the body is made by stretching a piece of common burlap, canvas or fine silk across the frame and tacking it, although some handsome wood panels are used. The middle frame of the screen shows such a panel. A leather design is represented by the black surface.

There are certain forms of folding screens that have a variety of woods in them, as in Fig. 5; these are usually turned out on special orders and are very valuable. Often selected hardwoods are engraved and attached, while there are other screens containing considerable brass or metal work in the form of scrolls, angles and general figures; there are opportunities for adjusting fret saw work to the screen of this nature. Then there are the chair-back styles, as shown in Fig. 6. The frame is bored with a series of holes along the sides, and through these holes material is pulled, making the braided or plaited effect. The variety of design possible in the folding screen line is unlimited, and there is a wide field for artisans.

New Lumbermen's Club.

The Lumbermen's Club of Kansas City, Mo., has been organized with a membership of 150. Its objects are similar to those of a large number of like organizations throughout the country, and are to promote social fellowship and the general interests of the lumber business. Quarters have been secured at the Hotel Kupper, which consists of a private dining room, a billiard room with three tables, and a lounge room. The rooms may be entered from Eleventh street and from the lobby of the hotel.

The officers of the club are W. E. Cooper, president; J. H. Bernardin, first vice president; L. L. Siebel, second vice president; J. H. Foreman, treasurer; Thomas H. Russell, secretary.

The Glue Factory Next to the Ducktown Lumber Yard.

When the glue factory at Ducktown burned one night last summer, the joke was on the Ducktown Saw & Planing Mill. It was such a big joke that, though Mr. Henegar, the president of the factory, had but sixty-five per cent insurance on his property, he had to laugh while the flames were at their height—so hard that one of the pipemen of Company No. 6 had to hold him.

When the conflagration first broke out Mr. Spence, the secretary of the sawmill, seeing the sky becoming full of illuminated soot in that direction—for his place was next door to

the flux were six piles of oak and hickory boards ready to be shipped to a plow factory at Rogersville next day. Around these the glue surged and boiled and rising higher and higher each minute, submerged each one half way to the top before receding.

So quite naturally Henegar, who had been glum and out of humor all evening, broke forth into a smile and then a laugh. He offered his sympathy to Spence, even going so far as to say that the glue yard was at his disposal if he cared to unstick and thaw out his hickory and oak.

"Quit your kidding," said Spence. "Can't you see that your blame glue is damaging my prosperity?" And, shaking his fist at Henegar, he withdrew from the conflagration.

The following morning, after several hours of troubled sleep, Spence dressed and went at once to the scene of the previous night's disaster. There he had a conversation with his yard foreman and discussed the best method

to around the piles and, knocking them down as far as the glue line, hauled the stuck portions to the sawmill. They were placed on the carriage and the signal given for the latter to start toward the saw. It did so, and with a sound similar to a resined bow being drawn across a fiddle string, said saw dispersed the glue, with the result that in an hour the lumber was all cut over again and had the same market value it possessed two days before.

After the job was finished Spence filled a gunny sack full of glue sawdust and took it home for domestic use in mending broken furniture and other articles around the house. As he threw the stuff over his shoulder he told the foreman not to tell Henegar about it for fear he would send in a bill.

GUIDO D. JONES.

Cornered at Last.

Within the last few days the courts have intervened in the long uninterrupted swindling career of the notorious Charles G. Horton—a man who has preyed upon the lumber trade for nearly twenty years past. Absolutely devoid of moral scruples, endowed with considerable literary ability, a smooth tongue, the "gift of gab," and a thorough knowledge of human nature—he has brought chagrin to hundreds of small millmen throughout the country, and in fact has succeeded in fleecing a few large and well-posted lumber concerns.

However, on June 18 he was sentenced in the United States Court at New York City for a term of three months in the county penitentiary and a fine of \$250, a penalty which though small as compared with his offences, will at least serve to keep him out of mischief for a while, and should prove a good example for others who may attempt to engage in like enterprises. The judge lectured him severely but said that in the case there were two mitigating circumstances—his poor health and his age.

Horton's great game has been to pose as a commission merchant, soliciting shipments of lumber preferably from small concerns, selling such shipments at good market prices, and then pocketing the proceeds without making remittances to the shipper. Armed with a number of fictitious references and a large quantity of the most attractive business literature, he solicited shipments in every direction. His methods seemed reasonable, his offers invariably sounded plausible and attractive, and his prices were just a trifle above the average, so that the shippers were wont to bite without looking into his references or questioning his methods in any extent.

As soon as a shipment was received Horton's letters promptly stopped, and owing to the fact that the shippers selected were usually located at a considerable distance from New York, they did not take the trouble to make an expensive trip for the purpose of forcing collection; moreover, the larger firms were never very anxious to acknowledge the fact that they had been taken in so easily. This probably accounts for the fact that Horton conducted his brazen practices so long without being detected. Again, the swindler's name never appeared on his letter-heads, but he transacted his affairs under various firm names, his latest being the Consumers Lumber Company. He appointed his stenographer secretary-treasurer and took further methods to conceal his connections with the so-called company. Horton has recently known that pressure was being brought upon him, and his secretary-treasurer had made preparations for a trip to Ireland, and was only apprehended by the authorities one day before the boat sailed.

"Henegar broke forth into a smile."

the glue factory—put on his Panama at once and traced out the source of the soot. Arriving there, he saw that his investments were in danger, so he smiled with much enthusiasm and, tossing the hat into the atmosphere, said "Hurrah!" three times. Then going over to Mr. Henegar, who was watching the destruction of his property, Spence began to condone with him at once. He even went so far as to offer his lumber yard to him for a temporary glue factory.

But while conversing thus the water from the fire department and the heat from the fire started a lot of glue stored on his third floor to running. As the lumber yard and mill was situated on lower real estate than the glue institution, quite naturally the glue upon being transformed sauntered toward it and began to wind sinuously about the various piles of seasoned and unseasoned lumber.

Upon seeing this Spence became less joyous and sympathetic. In fact, he adjourned his smile "sine die" and began to worry. He worried a heap, too, for there in the path of

"Blame good idea," returned Spence.

to unglue the seasoned property and make it into salable lumber again, for it had become once more only virgin wood in the rough.

The yard foreman agitated the top of his head with a fingernail for a moment and then smiled blandly. He said he could straighten out matters all right so that the seasoned oak and hickory wouldn't be lost at all.

"How?" inquired his boss, feverishly.

"By simply cutting it over again with the band-saw. Easy as pie! Treat the piles of stuck lumber as so many big logs!"

"Blame good idea," returned Spence, much encouraged; "but can you saw through glue?"

"Sure; the same as paper."

Tips to the Millman.

It often takes but a little thing to start a box to heating, and conversely it takes but a small thing to stop the process when the small thing is applied in the right place. In the case of the readjustment of the cap of a box that has been removed for inspection or for work on it it sometimes happens that the cap will be replaced in a slightly different position from that in which it had been running, and the result is a hot-box directly, even though care had been exercised in replacing it. A case in point happened to us recently. The moulder journals had worn the middle box down to a point where there were no more liners to take out and the work was "wavy," so the box had to have a new lining with labbit.

The work was done successfully in a few minutes on the middle box and on the small journal on the outside of the machine, but for want of more time it was decided to let the outside or grooved journal run as it was for the present. When the machine was started there was no longer any wavy work, but there was a decided hot-box on this outside journal. The floor man was in for stopping, taking off the cap, readjusting the liners and possibly adding some more. Here was a case that looked to me like simply a case of cause and effect; the cause of the heating was that some adjustment of the cap had been disturbed from its former position and was binding. What was the remedy? It was a small one, that was evident, so instead of stopping the machine I took a hammer and tapped a few sharp blows on the cap to settle it to its former position and put in enough oil to help carry off the heat. The box has run cool ever since without any extra care or attention.

It does not pay to do too much "fooling" with every little thing that happens in the mill. Decide what is the trouble and apply the remedy at once. A light tap of a hammer in settling the cap of a box will often save stopping and losing time. As I learned when a boy a threat is as good as a licking, sometimes, and a bluff is good as long as it works.

If every machinist who gets hold of a planer cylinder would only think for a moment before he tries to straighten it up—"How was it done? Where was it made?"—it would save planer men a vast amount of trouble and give us a chance to do some decent work on machines without having a constant fight on our hands to keep tight boxes on a cylinder out of balance. It always happens that this sort of trouble is on a machine that is as old as Methuselah's cat, and all have the old time straight cap and four bolts to hold it down. Of course there is a partial dismantling of the machine to get at the lower head, and it is this lower head, with the driving spool standing out six inches from the end of the box, that is sure to cause the trouble. The old time designers did not seem to have any idea that a shaft

driven from away out on the end would be likely to spring, and most of the old machines have this same fatal defect.

The fact that implement makers and other users of different kinds of woods cannot be so particular now as they were as to the kind of timber they use brings to mind the fact that the time is not so far past when nothing but the best Indiana white oak would do for wagon work, and then the oak had to be without a flaw after it was worked out. It is no trouble now to find a market for the once despised Louisiana red and white oak, for there is a place for it all. Necessity is the mother of invention, and we can now find many graces in a timber once despised and cast aside. When we read of maple being used for ash, and cottonwood taking the place of poplar it is time to expect any sort of a change without any surprise. Even the tupelo gum, that is so plentiful and formerly so neglected is coming into its own, and is gradually proving itself one of the useful woods.

Most belting salesmen seem to have a special desire to sell belting made without rivets, claiming that it will last as long without rivets as with them. Perhaps this is so, but just the same many prefer the rivets; one small lot that came to me without rivets, through an error in ordering, did not last as long as the proverbial snowball in a hotter place than this, and I will take good care that the error is not repeated, at least with that brand of belt. Perhaps I am assuming too much when I say "most belting salesmen," but all of them with whom I have dealings recommend belting run without rivets, and I infer that the balance of the fraternity do the same thing.

This suggests the fact that many traveling salesmen have rather unpleasant experiences with us millmen, as I know from three years' experience on the road, and a fellow feeling for their lonesome state, always among strangers, or at best only chance acquaintances, has made me careful to welcome their coming and speed their parting.

When laying out holes in the belting for lacing do not locate them so near together that the strength of the belt will be impaired. It is better to have the lacing a little wider to strengthen the joint than it is to use narrow lacing with a greater number of holes. A few extra strands drawn through the holes after making the lace will serve to protect these strands which are doing the work.

A sight-feed oiler mounted over the piston rod of the engine to drop oil on it while at work will save packing and reduce friction on the rods to a minimum. Lubricating oil is sometimes used for this purpose, but as the

When an injector "kicks off" and refuses to work well do not try jarring it with a hammer, but look for sediment or scale in some of the valves. The feed pipe to the boiler will sometimes accumulate enough scale to seriously interfere with the working of an injector, and for this reason should be arranged so it can be examined.

Compression couplings that can be attached without keys are convenient for small powers, but for larger sizes of shafting these couplings should be pinned and keyed, thus affording all the convenience of adjustment of the smaller sizes. When made this way they may be easily removed whenever repairs or changes are necessary, a thing that is usually very difficult in the case of a flange coupling.

A Canadian mechanic has brought out an overhead guide for a circular saw. The guide is to be used on the periphery of the saw in the same manner as the lower guide with the difference that the top guide is to be adjusted to the different thickness of the cut, being made by lever adjustment, after the method in use on the guides of a band mill. One of the most successful mill operators in this country was a firm believer in using more than one guide on his circular saws. Besides the front guide he used one on the back of the saw and one on the bottom, the purpose of the three being to give strength and stability to the larger and thinner plates then in use. The guide now being put on the top is for the same purpose, but in a position where it will be more effective than on the bottom of the saw. With a 10-inch collar and the three guides it is claimed to be possible to use twelve gauge saws 72 inches in diameter.

As a rule cheap tools are not good, neither are good tools cheap. The statement is only true, however, so long as it is confined to the question of first cost, as after that the cheap tool becomes expensive, while the good tool repays its expense. How difficult it is to bring this home to the mind of the buyer, especially those who buy from paper specifications without any regard to the reputation of the maker, only those who sell tools know. Two quotations, each given by different makers, but to the same specifications, frequently vary as much as from 50 to 100 per cent, and yet as much is expected from the low-priced tool as from the higher-priced one. Given work to do a good tool soon pays for itself and will last longer, besides turning out work far superior to the cheap one, since the defective tool produces defective work, and at the same time demoralizes the operator.

It is always a good plan to watch a new engine carefully for a few days for loose pins, nuts or set screws, as an ounce of prevention in the way of finding these things quantity needed is small it is preferable to use cylinder oil.

before they do any damage is worth the traditional pound of cure.

Grate bars should fit a furnace close enough to prevent the fuel from dropping through, but not close enough to bind when they expand with the heat of firing. The writer saw a boiler front pushed out a half inch from having to force a set of new bars in a place that was just half an inch too short for

them; also unless there is room for expansion sideways as well the bars are apt to give trouble.

A manhole guard or dog is a small item in cost, and it is a good idea to have an extra one or more around the boiler room. One can never tell when they will be needed, and they are needed badly when one of them breaks.

H. C. HANER,
Hilo, Hawaii.

Stringed Instruments and "Woodwinds."

The violin is the most popular of small instruments, and forms one of the great trinity of solo instruments, the piano and the pipe organ making up the number. The power which this little instrument possesses for delighting the ear and moving the emotions is astonishing in view of the fact that it is not complex as to materials and manner of manufacture. Violins are not made to

peasant labor, employees working in their own homes and accepting wages which relegate them to pauperdom, and place the independent American workman out of the running.

There is no essential difference between the violin, cello and double bass as regards the materials employed, all being instruments of the same kind but varying as to size and compass. Violin bodies are made up of two woods—spruce for the front and maple for the back and sides. Maple is chosen for its strength; spruce for the entire body would not do; it would provide too weak a structure and, what is worse, would produce a flabby tone. Its resonance, however, makes it invaluable for the upper side of the body, and we are told it was used by the great Italian makers of the seventeenth and eighteenth century. Violin bodies are "bellied," that is, raised above the sides or "ribs," and there is considerable variation among different models in respect to this feature, inasmuch as opinions differ as to what degree of elevation produces the best tone. The front and the back consist of a single piece each, while the ribs are composed of six pieces.

The varnishing is an item of great importance in the making of a violin. It is the condition of the varnish, as compared with that of other violins, that gives to old instruments—the Stradivarius, Guarnerius, etc.—their enormous commercial value. The varnish adds to the resonance; but this is a matter of interest to the varnish maker, not the lumberman.

The bridge is of maple, as also are the "necks" or handles. Ebony or ebonized hardwood is utilized for the fingerboard, tail-piece, pegs and other trimmings. Hard rubber appears to be the most popular material for the chin-rest, but ebony is also employed here.

any considerable extent in the United States, being mostly imported from Europe.

The chief center of violin manufacture at the present time is a small section of Germany and Austria in the vicinity of Markneukirchen, which is a great market for small musical instruments. Violins, violoncellos and double basses are there manufactured by

ticularly interested in botany. Brazil and Pernambuco, as I understand it, are woods used in making dyestuffs. The bow timber is probably Brazilian lancewood, which would be likely to have the needed characteristics of elasticity and strength, and snakewood from other localities is sometimes used.

The "frog," or black piece near the handle end, is of ebony; there is also much mother-of-pearl, silver and leather used. "Catgut" strings aren't catgut at all; they are sheepgut; but this fact is of only passing interest to the lumberman.

The mandolin is a rather complex instrument in its relation to the cabinetmaker's art. The making of the shell or curved portion of the body is an interesting process as viewed in the mandolin and guitar department of a large factory. Rosewood, mahogany and whitewood are the chief timbers employed. These are assembled in strips and in various combinations. The strips are bent by the aid of appliances especially manufactured for the purpose. Alternating strips of rosewood and whitewood, or mahogany and

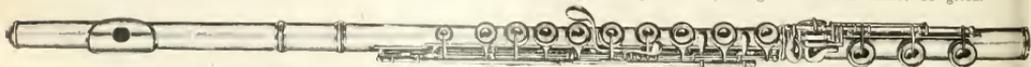

THE VIOLIN, THE GREAT SOLO INSTRUMENT.

THE MANDOLIN, A COMPLEX INSTRUMENT FROM THE CABINET-MAKERS' STANDPOINT.

whitewood, make a beautiful shell. Another very handsome type is made of strips of rosewood or mahogany inlaid with other very thin wood. Mandolin tops are of spruce, often with expensive wood inlays around the edges and a tortoise shell shield, or celluloid imitation, below the sound-hole. It is said that rosewood shells produce the best tone, though the reason cannot be given.

THE FLUTE, ONE OF THE "WOODWINDS."

Mandolin and guitar necks are often of mahogany or rosewood. Fingerboards are ordinarily of ebony or ebonyized wood. They are quite commonly inlaid with pearl in both mandolins and guitars, and boards entirely overlaid with pearl are sometimes seen. Pegs are usually of ebony or ivory.

The guitar is much simpler than the man-

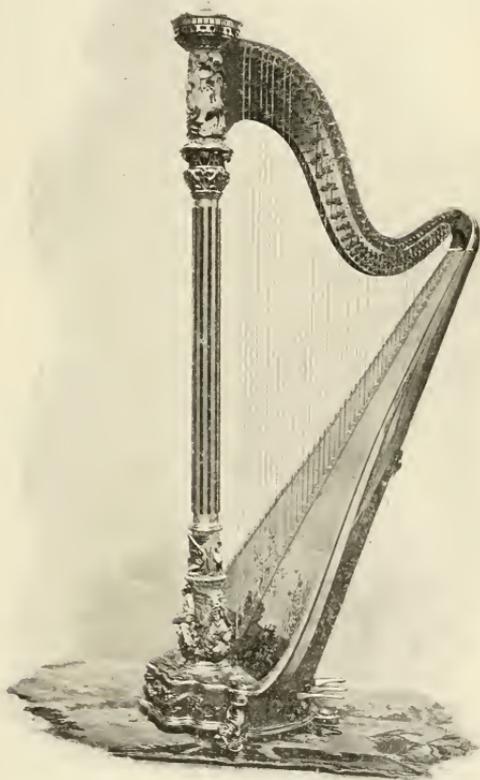

chestra parlance as "the woodwinds," are the flute, piccolo, clarinet, oboe, bassoon, English horn, etc., the separate characteristics of which no one except a person familiar with orchestra work can understand. Indeed, few have any idea what an English horn is, or can distinguish between the oboe and the clarinet. Paradoxical as it may

more than three thousand years old showing specimens of quite elaborate construction. It is one of the most beautiful as it is one of the most neglected of instruments. None of the others are sold in such small quantities. This is largely due to the great cost of a good harp and to the fact that the instrument has been superseded by the pianoforte, of which it was the earliest precursor. Its great beauty, however, is recognized by all masters of tone; no large orchestra is complete without its two harpists, and the harp soloist is likely to be one of the favored members of the organization, as he is also one of the best paid. According to some authorities the harp had its origin in the bow of the primitive warrior, which when drawn would naturally give forth a musical tone, and which roughly resembles the harp in shape—especially the instruments depicted in the old Egyptian frescoes.

However that may be, the modern harp is not built of yew, lancewood, snakewood or any of the timbers of which bows are made. The woods now used are maple, spruce and red beech, with some use of other varieties merely for ornamental purposes. A powerful hardwood must be employed to bear the strain of something like 1,700 pounds, which is exerted by the strings, which explains the choice of maple for the framework. The soundboard, which readers will have little difficulty in recognizing as the flat surface directly beneath the strings, is made of spruce, as in the resonant parts of other instruments. The center bridge, which runs longitudinally up and down the soundboard and directly supports the strings, is of quarter-sawn red beech in the Lyon & Healy harp, which is the chief instrument of its kind made in America and indeed of world-wide reputation for its excellence. This wood is very desirable for the purpose on account of its unusual elasticity—a quality which is indispensable on account of the heavy pull of the strings.

The curved surface which forms the backing of the soundboard and is the part nearest the player is made of quartered curly or birdseye maple in good harps. The interior is hollow, frequently with openings in the maple back to let out the sound and facilitate and modify vibrations—much on the principle of the violin, except that the soundholes are in the back instead of in the spruce front. The beautiful columnar post that forms the front support is a solid block of maple, often decked with ornaments beautifully carved out of thick pieces of mahogany or the maple itself.

The finish of harps is frequently white enamel and gold instead of the matured wood. One particularly beautiful harp post in the Lyon & Healy factory was in this style elaborately carved, the capital having as its chief feature a series of niches containing the effigies of praying saints. This factory recently turned out a specially made harp in an original Japanese design, which was minutely carved and probably represented the top mark of artistic decoration of these instru-

A BEAUTIFULLY CARVED HARP.

dolin as regards its construction. Tops are of spruce, while the sides and back may be of rosewood, mahogany, oak—quarter-sawn or plain—and other woods. There is a similar variety in necks and fingerboards.

The banjo, an instrument that is rapidly losing its popularity, is a kind of "cross" between the guitar and tambourine. A maple cylinder surrounds the drum-head, while the neck and fingerboard are similar to the guitar.

The wood wind-instruments, known in or-

seent, the "woodwinds" are occasionally made of metal, but not often. The favored timbers are granddilla and ebony. The former comes from two widely separated countries—Cuba and Mozambique, on the east coast of Africa. It is very hard, dense and impervious to moisture, like ebony, and its only use, so far as can be discovered, is in musical instruments. Other timbers used in these instruments are snake and boxwood.

That most charming instrument, the harp, is of prehistoric origin, Egyptian frescoes

ments. The corners of the sound-body are often inlaid with satinwood or primavera for ornamental purposes. Thus it may be seen that the lowest retail price at which they may be had—about \$600—is not exorbitant.

A few other well-known and a large number of obscure instruments are made entirely or in part of wood. The zither and auto-harp have sounding boards of spruce, with

hardwood backs. Castanets are made of boxwood or ebony. "The bones" are seldom really made of bone, as the process is difficult and not worth while. They are generally of rosewood, ebony or some other fancy species. Batoons are made of fine hardwoods.

The illustrations accompanying this article were loaned the RECORD by Lyon & Healy of Chicago, the foremost musical instrument manufacturers of the country.

CHARLES KLAUBER.

News Miscellany.

Model New Plant.

The cuts shown on this page represent the new factory of the Phoenix Manufacturing Company at Eau Claire, Wis., and its old plant, which has been transformed into a storage warehouse. Apropos of this change and great improvement in the plant, a brief review of its history will not be out of place.

The Phoenix Manufacturing Company was formed December 5, 1865, by H. P. Graham and Robert Tolles, both of whom are now dead, although some of their descendants are still connected with the house. In those days there were no railroads in that part of the country, and the equipment was brought to the site of the plant by steamboats. Most of the business at that time consisted of repair work. The plant has been in continual operation ever since it was first established, and today it forms one of the best-known concerns in the country engaged in the manufacture of sawmill and kindred machinery.

It covers an acre of ground and includes twelve large buildings—machine shops, warehouse and foundries, together with a separate office building. The new portion of the plant is a building 202 feet long by 92 feet wide, with a partition in one end, which when removed gives a total length of 360 feet; modern machines with the latest improvements and devices have been installed, which not only improve the work of the plant but increase its capacity. One feature of the new building is a large crane running on a track 42 feet wide and over 200 feet long; this is the largest crane in Eau Claire, and it has two lifts, one capable of lifting a load weighing fifteen tons and the other five tons, with emergency lift of twenty-five tons. The crane operator sits in a cage from which he directs and controls to a nicety the electric machinery which operates the crane. It is so constructed that a load may be delivered to any portion of the floor where a chalk-mark is made. Four motors control the various parts of the crane.

In the new building are a large shop, superintendent's and foreman's offices, vaults for storing drawings and plans, pattern rooms, and a strictly modern drafting room, with high-power electric light and apparatus for producing blue-

prints by artificial light. It is also fitted up so that photographs may be made.

The building is well heated, lighted and ventilated, and has hot and cold water equipment. A railroad track runs through the new building, thus facilitating sending out products, and a larger force is employed than ever before.

A remarkable feature in the construction of the new building was that the work did not interfere with the regular operations of the plant, but as fast as the old building was torn down the machinery was set up in one of the warehouses, so that the work continued without interruption. Other interesting features of the plant are its new boiler-room and its steel warehouse-foundry, which is 140 by 100 feet. In this building are departments where lumbermen's supplies are made and also an erecting room. Another building is taken up in the manufacturing of logging sleighs, snow-plows and machinery for making logging roads. The making of steam log-hauling locomotives has become quite a feature with the Phoenix Manufacturing Company.

The Day of the Small Mill.

The American people are nothing if not practical. They are quick to learn and quick to profit by experience. They have discovered that it is often more profitable to build one or more small mills than a big mill; that it is better to have less tied up in plant and more available as working capital, and that it is sometimes more economical to take the mill to the timber than to bring the timber in the form of logs to the mill.

When astute lumbermen first began to realize this the average small mill was an exceedingly crude affair. About all there was of it was the engine and boiler and the main saw and carriage. But this primitive outfit did not satisfy the progressive timber owner. He wanted a mill that, while small and compact, was complete; one that would turn out the greatest possible quantity of lumber; and, above all, one that would manufacture it properly at the same time.

Meanwhile the Gordon Hollow Blast Grate Company of Greenville, Mich., had placed upon the market its "Tower" edgers and trimmers, enabling the manufacturer to convert his small mill into a large mill in miniature, and thus solving the complex problems of the small millman to his complete satisfaction.

Conservation Commissioners at Work.

On June 19 the actual work of the National Conservation Commission appointed by President Roosevelt to study and protect the natural resources of the country was commenced at Chicago. The executive committee is composed of a representative from each of the several departments which compose the commission; those present at the conference in Chicago were Chief Forester Gifford Pinchot, Representative Burton of Ohio, representing the waterways; Senator Smoot of Utah, representing forest matters; Senator Nelson of Minnesota, representing lands; and Representative DuBois of Pennsylvania, appearing for the department of minerals. The full commission will meet in Washington, D. C., on Dec. 1. After a brief discussion of the various subjects to be looked into, it was decided that each department should devote the next five months to collecting information to be used at the meeting of the entire body.

President Roosevelt has written a letter to the commission outlining its work in a general way, which reads in part as follows:

"The work of the commission should be conditioned upon keeping ever in mind the great fact that the life of the nation depends absolutely on the material resources which already have made the nation great. Our object is to conserve the foundation of our prosperity. We need to use these resources, but to use them so as to conserve them.

"The commissions must keep in mind the further fact that all of the national resources are so related that their use may and should be co-ordinated. Thus, the development of the water transportation, which requires less iron and less coal than rail transportation, will reduce the draft on mineral resources.

"Judicious development of forests will not only supply fuel and structural material but increase the navigability of the streams and so promote water transportation; and the control of streams will reduce soil erosion and permit American farms to increase in fertility and productivity and so continue to feed the country and maintain a healthy and beneficial foreign commerce."

On June 20 the above committee met in joint conference with the Inland Waterways Commission. In a letter to the latter, President Roosevelt says:

"It is an unpleasant fact that, although the federal government has in the last half century spent more than a third of a billion of dollars in waterway improvements, and although the demand for transportation has steadily increased, navigation on our rivers has not only not increased but has actually and greatly diminished.

"The method hitherto pursued has been thoroughly ineffective; money has been spent freely for improving navigation, but river navigation, at least, has not been improved, and there is a reasonable and just demand on the part of the

SANFORD & TREADWAY PLANING MILL AT MENOMINEE, MICH.

people for the improvement of navigation in our rivers in some way which will yield practical results.

"Pending further opportunity for action by Congress, the work of the commission should be continued with the view of still further perfecting the general plan by additional investigation, and by ascertaining definitely and specifically why the methods hitherto have failed. To this end I ask that the present members of the Waterways Commission continue their most commendable public service."

Well Known Michigan Hardwood House.

The HARDWOOD RECORD is pleased to present herewith several pictures of the northern lumber operations of Sanford & Treadway at Menominee, Mich. This well-known house was established in 1844, and has been prominent in the New England trade ever since that time. It maintains its home office at New Haven, Conn., and manufactures and ships all varieties of northern and southern hardwoods.

The company owns 6,000 acres of fine timberland on Roan mountain in eastern Tennessee; from this tract it cuts forty to fifty thousand feet daily, which is handled through the Roan mountain and Elizabethtown, Tenn., yards. At these points the company has excellent shipping facilities. Through another timber tract near Mountain City, Tenn., it handles out a large amount of stock daily. At the present time it has on sticks in these three yards several million feet of hardwoods. The disposition of this

stock is made through the New Haven offices, and by traveling representatives located at Baltimore, Md., and Columbus, O.

The company's northern operation at Menominee, Mich., makes a specialty of basswood, handling all grades and thicknesses in the rough and also finished timber. The office is in charge of W. C. Mansfield, who also conducts sales operations in southern hardwoods in the northern markets.

The Menominee plant is fully equipped with the most modern planing mill machinery and complete dry kilns, and is now operating entirely on basswood moulding, bevel-siding, ceiling and other specialties; these products are shipped out by the Ann Arbor, Chicago & North-Western and Chicago, Milwaukee & St. Paul railroads, to all points of consumption.

In addition to basswood a well-assorted stock of ash, soft and rock elm, birch and other northern woods are maintained in the Menominee yards.

Death of Peter Benson.

Peter Benson, widely known to lumbermen as a member of the house of James Kennedy & Co. of Glasgow, Scotland, and American manager for that company, died at Colorado Springs on June 14. Mr. Benson was forty-nine years old and came to this country several years ago, residing first at Ft. Wayne, Ind., and later at Cincinnati, where the company's offices are now located.

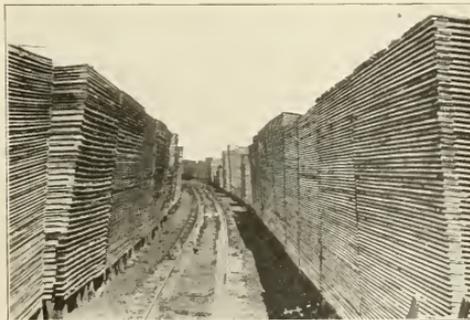

Ross McCulloch and Van B. Perrine of Ft. Wayne went to Colorado Springs immediately upon receiving notice of Mr. Benson's demise and

brought the body back to the former city for burial. Something of the esteem and affection with which Mr. Benson's American friends regarded him may be appreciated from the fact that they wished his body buried in this country—with permission of his relatives in Scotland—that they might have the privilege of dropping an occasional flower upon his grave.

Peter Benson was a man of unusually strong and lovable character. He reflected all that is finest and most admirable, and because of these gifts he made fast friends whose sorrow over his death and devotion to his memory will last through life. In the words of one of them, "Keen and forceful and just in his dealings with all men, he was also thoughtful and tender and helpful, and so his going away is a deep grief to the wide circle of men and women to whom he had endeared himself."

Frost Veneer Plant Destroyed.

In a fire which broke out at Antigo, Wis., June 13, the plant of the Frost Veneer Seating Company at that place was destroyed and the loss is estimated at about \$50,000. The operation represented one of the old industries of the city and was a branch of the company's operations at Sheboygan, Wis. The origin of the fire is unknown. Only the rain which was falling at the time prevented the blaze from spreading to other adjoining buildings. The burned buildings included the factory proper and the warehouses, in which were stored a large amount of valuable furniture and seats. The company has about 2,500,000 feet of logs on hand. The seventy-five men employed will be thrown out of work for several months as a result of the catastrophe.

ALLEY IN MENOMINEE, MICH., YARD, SANFORD & TREADWAY.

TYPICAL VIEW WELL-KEPT YARD OF SANFORD & TREADWAY.

A Planer Point.

It is not so important whether the bed of a smoothing planer is set on inclines or not as how these inclines are constructed and operated. The ordinary method of constructing the incline wedges on a smoothing planer is to let the base of the triangular wedge rest loosely on the extended base of the machine; and the bed rests on the hypotenuse of the triangle without any additional support.

The proper plan would be to have adjustable gibs both at the base of the triangular wedges and at their hypotenuse. This would secure greater firmness to the bed and prevent the wedges pulling away from it when setting the machine for planing to dimensions.

The usual plan of operating the inclines is by a single screw in the center at the feeding-in end of the machine, controlled by a hand-wheel. This construction has its bad features, which appear after the machine has been used for a while and the surfaces of the inclines have worn unevenly, as they inevitably must. When such is the case the surface of the bed will not be parallel with the cutting edge of the knives, one side being lower than the other. Hence the impossibility of planing a straight surface when such is the case.

A better adjustment of the wedges would be by parallel screws—mounted on ball bearings so as to turn easily—and operated by bevel gearing, pulling both wedges in exactly the same plane, shown in the accompanying diagram. These gears should be arranged so as to be moved in or out independently, so as to constantly keep the hypotenuses of the wedges in the same plane, no matter how unevenly the wear on them may be. The arrangement would always insure the surface of the bed to rest perfectly parallel with the cutting edge of the knives, which would give a straight surface to the stock at all times.

With this method of raising and lowering the bed, a board the full width of the machine could be planed to exactly the same thickness on both edges and throughout its entire surface, which is essential to very fine surfacing.

There is a machine on the market with this improved construction. It is manufactured by J. A. Fay & Egan Company, 414-424 W. Front street, Cincinnati, Ohio. They call it their No. 156 cabinet smoothing planer, and it is illustrated herewith.

Demise of Samuel Williams.

The lumber fraternity of Philadelphia has lost one of its most valued members in the death of Samuel Williams, head of the hardwood lumber house of Thomas Williams, Sr., & Co., which occurred at Haverford, Pa., on June 18. Mr. Williams was ill but one week, and

his death will be a sad surprise to his many friends in the trade outside Philadelphia.

His work will be greatly missed in the various societies and associations with which he was affiliated. He was particularly active in the work of St. Mary's Episcopal Church at Ardmore and in the Society of Sons of Colonial Wars and Sons of the Revolution.

Mr. Williams leaves a widow and two sons—Robert F. Williams, treasurer of the Merion & Radnor Gas & Electric Company, and Samuel Chester Williams, associated with his father's lumber interests; also a brother, David Williams, and a sister, Mrs. G. B. Roberts of Bals. Funeral services were held June 22 and interment was at Laurel Hill.

McIlvain's Lumber News.

The *HARDWOOD RECORD* wishes to acknowledge receipt of the anniversary number of *McIlvain's Lumber News*, published monthly by the well-known hardwood house of J. Gibson McIlvain & Co. of Philadelphia. The paper contains some very interesting matter in the way of editorials, an authoritative review of market conditions in the hardwood industry, a charming poem on "The Forest," an article on the World's Fair walnut log, some attractive "funny stuff" with numerous amusing anecdotes related by well-known men, and a complete illustrated history of the lumber house of McIlvain, which has probably been in the lumber business longer than any other concern in the United States, having existed uninterruptedly for 110 years!

McIlvain's Lumber News is always a sample of typographical excellence and is full of good things, and its anniversary number is printed on heavy enameled paper, in two colors, presenting an exceedingly attractive appearance.

Exports of Forest Products.

Recent statistics of the Forest Service show that Uncle Sam's exports of forest products have shown higher and higher values during the last five or six years. This has been the case, although reports show that there has not been a corresponding increase in volume. For instance, the quantity of sawed timber exported from this country has increased less than 12 per cent in the last four years, while the price has increased over 50 per cent. Again, the amount of rosin exported has increased but little, while the price has more than doubled.

From 1902 to 1906 the value of staves showed very little increase, but in the year 1907 there was a decrease in the number exported of about 10 per cent, together with an increase in the price of about 20 per cent. This last would seem to indicate a recognition of the fact that

the supply of the highest grades of white oak is rapidly diminishing. The staves exported are almost exclusively of the highest grades of white oak and form about a fifth of the annual production of white oak staves in the United States. As might be supposed, a large part—80 per cent—of the staves went to Europe, 40 per cent to France. The export trade makes a heavy drain on the supply of white oak.

Boards, deals, planks and sawed timber made up 50 per cent of the total value of forest product exports. Rosin ranks next, with nearly 10 per cent of the total value of these exports. Spirits of turpentine follows with about 10 per cent. Four-fifths of the rosin and turpentine go to Europe.

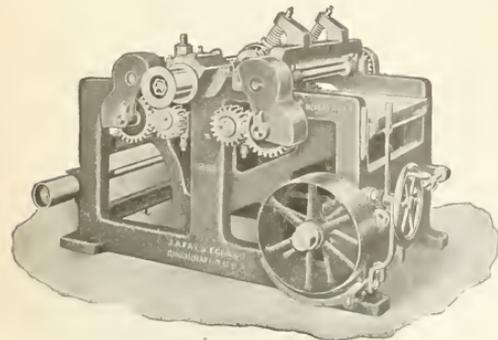

The amount of wood exported in the form of hewn or sawed timber and lumber was about 7 per cent of the total lumber cut in the United States in 1907. More yellow pine is exported than any other kind of timber. The order is yellow pine, Douglas fir and redwood. Although there are no figures which bear directly on the amount of yellow pine lumber annually exported, it is estimated that at least 13 per cent of the yellow pine cut finds its way to other countries. Probably a third of the Douglas fir exported went to South America.

Increasing the Business by Specializing the Product.

Under the above title the *Selling Magazine* describes the evolution of a well-known machinery house—not from three types of machines to a hundred, but from a hundred types to three! This reduction, or rather specialization, of output has taken place in the plant of the S. A. Woods Machine Company of Boston in the past fifty years. The line was when the company manufactured almost all kinds of woodworking machinery, supplying a shop with everything it needed in the way of equipment.

When Frank F. Woods, who is now director of the company's affairs, assumed charge he found an immense business was being done, but was not at all satisfied with the net returns and proceeded to analyze conditions with the determination of finding out why this was so. Believing that he had found the reason, he proceeded to take what he deemed the logical course to put the factory on a more paying basis.

It took a goodly supply of nerve to deliberately stop manufacturing machines which were well known, and in which quite a trade had been built up, but he proceeded to cut the number from over one hundred to just three, and to devote his time and energy toward making these better in every way, and pushing their sale as well as their manufacture. He reorganized his shop as rapidly as possible, gathering all similar operations under one foreman.

NO. 156 CABINET SMOOTHING PLANER, MANUFACTURED BY J. A. FAY & EGAN CO., CINCINNATI.

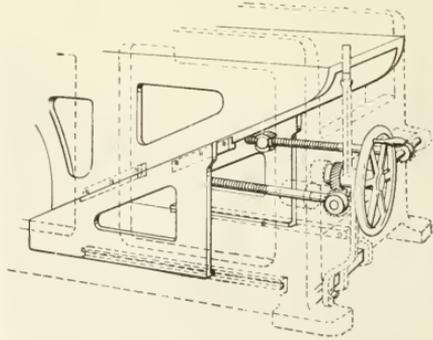

DIAGRAM OF PLANER, SHOWING PROPER ADJUSTMENT OF WEDGES.

Many machines were scrapped that might have served had not been determined to have the best tools and the best methods, and, so far as possible, similar tools for similar work. So that men could change from one to the other without delay of any kind. In this way he has developed specialists in every department, and the workmanship has improved at the same time costs were being reduced.

But this cutting down meant more than this. It meant that, instead of scattering the brains and energy of the force over a hundred different machines, it has concentrated and developed these three to far greater perfection than had ever been thought possible before. Also the work of advertising men, demonstrators and salesmen is much more simple and hence more effective.

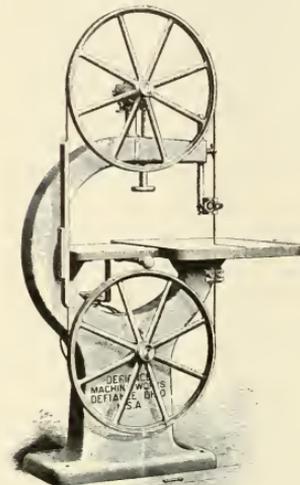

Of Interest to Woodworkers.

All lumbermen will be interested in the engraving which accompanies this article. It shows a new 28-inch band sawing machine containing many patented features and improvements, which is now being put upon the market by the Defiance Machine Works of Defiance, O. These machines are being made in very large quantities by automatic apparatus, which enables the company to turn them out at a very small cost—a feature well worth considering, and one which does not by any means indicate inferiority, as the machines are built on the same lines as the other tools manufactured by this well-known concern, and are of the same high character.

Every detail of construction of the band sawing machine embodies the highest grade of workmanship, rendering it remarkably smooth running and handy. For plano and organ factories, pattern work and woodworkers in general it cannot be surpassed.

The frame is cast in one piece, with cored center, and broad, firm base. The wheels are 28 inches in diameter, 1½ inch face, covered with pure rubber bands, ground true after fitting to the wheels and given a running balance; they are supported upon ground steel spindles of large diameter running in long bronze self-lubricating bearings of the reservoir system. The tension device maintains a uniform tension to the saw blade, so that either hard or soft-woods can be sawn without fear of the blade breaking or running off the wheels. The table, of iron in one piece, is 24 by 28 inches and can

be readily tilted to any angle for conical or bevel sawing. The tight and loose pulleys are 10 inches in diameter, with 4-inch face, having a speed of 700 revolutions per minute. Each machine is furnished with one ¾-inch band saw

28" PATENT BAND SAWING MACHINE, MANUFACTURED BY DEFIANCE MACHINE WORKS, DEFIANCE, O.

blade, brazing tongs and vise, etc. The machine will take material up to 12 inches thick and under, and the saw blade used is 14 feet 10 inches long. It requires but one horsepower to drive the machine, and it occupies only 34 by 46 inches of floor space.

The company will willingly send further particulars upon application.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

CHICAGO

Two West Virginia lumbermen were welcome callers at the Record office June 24—James C. West of the Midland Lumber Company, Parkersburg, and C. H. Holden, representing the Pacific & Curtin Lumber Company of Parkersburg, who is in charge of the company's Parkersburg office.

Frank F. Fish, the popular secretary of the National Hardwood Lumber Association, was thought to be convalescing very nicely last week and expected to be at his office on Monday; however, reaction set in and he is again laid up, so that it will probably be another week before he is able to get down town.

"Billy" Matlin, the popular hardware salesman who has had charge of the hardwood affairs of the Chicago Car Lumber Company for the past six months, returns to his former employment with the W. M. Ritter Lumber Company, of Columbus, on July 1 and will have charge of the Chicago territory.

G. J. Landeck, the well-known Milwaukee lumberman and chief host of the delegates to the National Hardwood Lumber Association, was a Chicago visitor June 22.

O. O. Agler of Upham & Agler, the newly

established firm, is a member of the association, and will be ready to discuss this policy. The sketch, by Chase Emerson, is a remarkably clever and well-executed conception. As is well known, the Underwriters comprise a company conducted by lumbermen for lumbermen and is confined exclusively to fire risks on lumber and woodworking plants.

R. M. Carrier of Sardis, Miss., head of the extensive hardwood interests of the Carrier Lumber & Manufacturing Company, was a caller at the Record office last week. Mr. Carrier attended the Minneapolis meeting June 17 and 18 as a representative of the Hardwood Manufacturers Association of the United States.

C. D. Boynton, the "lumberman-wit" of St. Louis, who has contributed many a bit of amusing reading to the Record's columns, was a caller on June 20.

John W. Long, editor of the New York Lumber Trade Journal, was a pleasant caller at the Record office June 15.

A number of gypsum manufacturers who attended the meeting of the National Lumber Manufacturers' Association at Minneapolis, June 17 and 18, spent the following Sunday in Chicago, en route to their homes. Among them were E. G. Westmacott of the Dea & Allen Lumber Company, Des Allemands, La.; L. H. Price of the Ramos Cypress Company, Ramos, La.; A. T. Gerrans of the St. Louis Cypress Company, Houma, La.; J. A. Bruce of the Owl Bayou Lumber Company, Strader, La.; George E. Watson and wife of New Orleans. Mr. Watson is secretary of the Southern Cypress Manufacturers Association.

A new concern at Margaretville, N. Y., has been organized to manufacture lath, lumber, shingles, etc., with a capital of \$10,000. William H. Smith of Margaretville is head of the company.

The Poplar Lumber Company has been formed at Edmeston, N. Y., by Jas. K. Bramer, of Apulia Station, and others; it is capitalized at \$25,000 and will manufacture lumber.

On June 19 fire in the yards of the Pendleton & Gibly Lumber Company of Oconto, Wis., caused a loss of nearly \$750,000. The fire was one of the worst in the north for years. Caused by a high wind, the flames spread through the yard and only one small corner escaped damage.

BOSTON

William Knabe & Co., of Baltimore, Md., Chickering & Sons, Boston, and the Foster-Armstrong Company, Rochester, N. Y., manufacturers of pianos, have consolidated their business under the name of the American Piano Company. The capital stock is \$12,000,000, half preferred. The officers of the new company are Ernest J. Knabe, Jr., president; George C. Foster, William Knabe, Charles H. Eddy and William E. Armstrong, vice-presidents, and George Eaton, treasurer. It is reported that management of the three old companies will remain the same as they were and that the various plants will continue in operation. The operating head of each plant will no doubt be one of its present officers.

C. A. Beech, representing the Appleby Lumber Company, Jamestown, N. Y., was in Boston recently.

Edgar Burgess, manager of the New York branch of the Maley, Thompson & Moffet Company, mahogany, hardwoods and veneers, visited the Boston market early in the month.

Fred D. Stimpson of the Brawley & Smith Company, hardwood dealers, Philadelphia, has been in this market.

A. I. Manes, representing the Scotch Lumber Company, Fulton, Ala., manufacturer of rift flooring, was in Boston recently.

At the time of writing the appointment of a new surveyor general for Massachusetts is still in doubt. Charles H. Crane received an appointment from Acting Governor Draper, but the governor's council has held it up at the request of several members of the trade. A

committee made up of Herbert W. Blanchard, W. F. Brown, Morris A. Hall, Howard C. Morse and Walter E. Chamberlain have been asking the many firms for their choice. The candidates in the field are Charles H. Crane, Herbert W. Bowler, George R. Dunn and Frank E. Budge. All the candidates are favorable to National Hardwood Lumber Association's inspection rules.

John M. Woods of J. M. Woods & Co., East Cambridge, Mass., has returned from an extended western trip.

W. M. Weston of the W. M. Weston Company, hardwood dealers, who has been in the West, has returned home.

L. H. Randall of Randall & Orcutt, hardwood wholesalers, has returned from a very successful business trip through the South and West.

Gardner I. Jones of the Jones Hardwood Company, Boston, has returned from a western trip. R. E. Cleves & Co. is the style of the newest wholesale lumber firm in Boston. Mr. Cleves has been identified with the C. W. Leatherbee Lumber Company for several years. George H. Leatherbee is treasurer of this company and was also associated with the Leatherbee company, being a brother of Charles W. Leatherbee.

A new lumber storage company has been organized in Boston known as the South Bay Storage Company. This company has taken the lumber sheds formerly used by the C. W. Leatherbee Lumber Company.

James R. Hall of the Hall Lumber Company, Boston, has opened his summer home at North Pembroke, Mass.

The Stiles Lumber Company has been organized at New Haven, Conn., with a capital stock of \$10,000. The company will manufacture lumber in Virginia. Charles F. Treadway is president; William H. Stiles, vice-president; C. E. F. Sanford, treasurer, and Henry E. Sanford, secretary. Mr. Stiles is from Johnson City, Tenn., and the other incorporators are of the firm of Sanford & Treadway, wholesale dealers, New Haven, Conn.

NEW YORK

Three failures in the lumber trade in the metropolitan district were reported during the fortnight. The first was Soble Bros., hardwood manufacturers, 1 Madison avenue, formerly of Philadelphia, who have asked their creditors for an extension of time and have submitted a proposition for the formation of a new corporation to be known as the Soble Bros. Lumber Company, with a capital of \$150,000, to continue the business, the creditors to accept stock therein in payment of their respective claims. The liabilities amount to \$102,000. It is understood that quite a number of the creditors have accepted the proposition and further announcement will be made later.

John P. McEwan, wholesaler of 140 West Forty-second street, Manhattan, personally, and the Clayton Manufacturing Company of the same address, with plants at Princeton and Clayton, N. C., controlled by him and of which he is secretary and treasurer, were petitioned into bankruptcy June 9. The petition against the Clayton Manufacturing Company was by two creditors, the Coppock-Warner Lumber Company, \$5,000, and Hyman Supply Company, \$160. The liabilities are \$25,000 and assets \$10,000. Judge Holt appointed Irving L. Ernst, receiver in both cases, bond \$10,000, and authorized him to continue the business for twenty days.

Closely related to the above failures was that of the A. D. Lampion Lumber Company, retailers of Brooklyn, who have likewise been petitioned into bankruptcy. I. L. Ernst, of 179 Broadway, Manhattan, has been appointed receiver with bond of \$10,000. The liabilities are estimated at \$40,000 and assets \$25,000.

There was a meeting of the creditors of the firm of G. L. Schuyler & Co., bankrupts, held at the referee's office, 50 Church street, and after

a consideration of matters in that connection the meeting was adjourned until June 30, when the business will be finally wound up and a final dividend paid. The company has paid 20 per cent so far and it is believed that the final dividend will be very small.

The local office of the Fosburgh Lumber Company of Norfolk, Va., has been removed from 18 Broadway to the Flinton building, where J. S. Fletcher, the new manager, has leased commodious quarters.

Frederick Weyerhaeuser, the wealthy timber land owner of St. Paul, Minn., has been elected a director of the Carnegie Trust Company of Manhattan.

C. E. Kennedy, the well known and popular manager of the local office of the Shepard & Morse Lumber Company, 18 Broadway, for many years past, severs his connection therewith on July 1 to engage in business on his own account, handling a full line of general lumber. Mr. Kennedy has a host of friends in the local district as well as among northern mills, and a thorough knowledge of the lumber business in all its branches, and starts out under most favorable auspices.

A general meeting of the Building Material Men's Club of Newark, N. J., was held in Newark on June 9, preceded by a dinner. The president and vice president of last year were re-elected and W. F. Hopping of the Bockover Brothers Company, Newark, was elected secretary and treasurer to succeed Mr. W. E. Clark.

Among the distinguished visitors during the fortnight was Edward Hines of the Edward Hines Lumber Company, Chicago, who passed through the city accompanied by Mrs. Hines after a rest at Atlantic City following his recent operation.

W. M. Ritter, the prominent hardwood manufacturer and head of the W. M. Ritter Lumber Company, Columbus, O., spent several days here last week visiting with Local Manager E. E. Eaton. In commenting upon the business situation Mr. Ritter, as one of the largest hardwood producers of the country, was most optimistic. The many mills which his company operate while not at present running full time are producing in line with his belief in a fair future trade.

Rolf Stevens, late with William Whitmer & Son, has just joined W. A. Eaton in the latter's new wholesale business at 1 Madison avenue, and will assist Mr. Eaton in the selling end.

M. B. Farrin, M. B. Farrin Lumber Company, Cincinnati, has been in town for several days renewing acquaintances in the trade and for the purpose of taking back with him via the canal and Lake Erie his fine new steam cruising yacht just completed, which he will use in connection with his usual summer stay at his residence on Lake Erie.

Robert R. Sizer, head of R. R. Sizer & Co., 13 William street, is on a business and pleasure trip to the Pacific coast.

The East Jersey Lumber Company has been organized in this city by H. D. Leslie of the Burley Dry Dock Company of Staten Island and O. W. Ramsey of Perth Amboy, N. Y. They will open offices here and conduct a general wholesale lumber business.

A. P. Irish of the Fuller & Rice Lumber & Manufacturing Company, Grand Rapids, Mich., was here recently on business.

E. V. Babcock of E. V. Babcock & Co., Pittsburgh, spent several days in town visiting Manager H. J. Gott of the local office of his firm, 43 Wall street. He reports conditions as better than last month and states that inquiries indicate a slow but steady improvement in business. The Livermore Lumber Company is the name of a new corporation just organized here with a capital of \$100,000 by Jesse L. Livermore, 35 New street, and William F. S. Hart, 6 Beekman street, New York.

Gloeckner & Schundler is the name of a new firm which will open a yard at the foot of Twentieth and Twenty-first streets, Brooklyn. The

firm is composed of L. G. Gloeckner, a partner in the firm of Grupe & Gloeckner, Spanish cedar importers of Brooklyn, and H. O. Schundler, who was formerly associated with E. M. Kenna, wholesale dealer of 66 Broadway, in a selling capacity.

PHILADELPHIA

Though the Lumbermen's Exchange rooms are comparatively deserted at this the vacation season, small groups of the stay-at-homes or of those who will indulge in an outing later on may be found at the noon hour in animated conversation as to issues political and commercial. Great interest was taken this year in the annual baseball game between the nines selected from the Lumbermen and Builders' Exchanges, which was held at the Athletic ball park on June 16 and which resulted in a victory for the Builders' Exchange of 14 to 2. It would be a difficult task for a layman to give a graphic description of the wonderful curves of the twirlers and the slugging of the batsmen in this game. A. J. Kilroy, the umpire, could discourse more eloquently on the subject. Suffice it to say, the attendance was large and the proceeds of course in proportion. To George A. Howes of the Lumbermen's Exchange and Benjamin K. Nusham of the Builders' Exchange, who successfully managed the affair, be the credit, for the very considerable sum which will be handed over to the Modified Milk Society, the Red Bank Sanitarium and the Children's Country Week, for whose benefit these games are annually played. Two helpers on this occasion who volunteered a little voluntary philanthropy by taking it upon themselves to sell the score cards were Edith and Janie Howes, daughters of the jovial chairman of the office and entertainment committee of the Lumbermen's Exchange, George A. Howes. The winning little saleswomen collected \$8.75, which was a most flattering testimonial to their thoughtfulness for these worthy charities.

The Righter-Parry Lumber Company states that on the whole it is getting a fair volume of business. The company recently engaged Charles M. Hamlin, formerly buyer in Kentucky and Tennessee, for the Philadelphia Veneer & Lumber Company of this city as salesman to cover New York state and the New England territory. Charles K. Parry is at Seaside Park, N. J., for the summer.

The Pennsylvania Lumbermen's Mutual Fire Insurance Company is anything but idle these times. This concern, from present indications, will beat all past records in the total amount of business written up. It is careful in placing risks and has been fortunate in the small amount of fire losses.

Horace G. Hazard & Co. report business slowly improving and they are most hopeful as to outlook. This firm recently secured Pier No. 46 and its covered shed, known as the old sugar-house wharf, which they will utilize as a storage wharf.

Miller & Miller are confident that the near future will show great improvement in business. They are indefatigable hustlers and so manage to get orders, but they are not inclined to rush sales at some of the prevailing quotations.

C. E. Lloyd, Jr., of the Boice Lumber Company, Inc., does not trouble over conditions. He keeps away unobtrusively and a modicum of business is entered on the books right along. He feels confident that everything will be in good shape before long.

The Owen M. Bruner Company is complacent over business affairs and reports that though trading is spotty it is keeping up a fair total. Owen M. Bruner is making an extended trip through the lumber districts of Michigan.

H. H. Mians & Co., Inc., report business somewhat brighter and the outlook promising. H. H. Mians is on a selling trip through eastern Pennsylvania.

Frank T. Kumbarger is pleased over a fair

prospect. He reports inquiries coming in and anticipating an early revival of business.

W. H. Fritz & Co. state that they have no reason to complain over the average of trading considering general conditions.

R. B. Wheeler & Co. report that though there has been little change of late in the hardwood situation there is a much better feeling as to outlook. R. B. Wheeler is spending a few weeks at Atlantic City, N. J.

The Kirby & Hawkins Company is receiving its share of what business there is, consequently is not worrying. The company reports business running in spurts, but believes that good times are on the way.

Charles G. Blake, manager of E. V. Babcock & Co., reports buying still carried on on a hand-to-mouth basis, but that things are looking more cheerful for the future. He is confident that though the improvement may be gradual it will be sure.

Eli B. Hallowell & Co. report that inquiries are coming in more lively and that they are successful in booking an order here and there. They are optimists always and prophesy that good times are close by. Ralph Sanders of this firm is making his summer home as heretofore at Bay Head, N. J.

A. Hankey & Co. Inc., extensive makers of machine knives, testify to the improvement in trading, as they have recently made some good sales. Joseph R. Rogers, secretary of the company and Vicegerent Shark of the eastern district of Pennsylvania Hoo-Hoo, will leave for the works at Rochdale, Mass., soon for a short stay. The trip will afford a much needed rest.

Among the recent visitors to the local trade were: F. T. Sullivan of T. Sullivan & Co., Buffalo, N. Y.; G. M. Hutton of Hutton & Bourbonais, Hickory, N. C.; George F. Willis, Diamond Iron Works, Milwaukee, Wis., and P. P. Griffin of Lock Haven, Pa.

Samuel Williams of Thomas Williams, Jr., & Co. has been seriously ill for some time, but his many friends are hopeful that he may recover finally.

The sawmill of Edward Hensworth, known as the Germantown Woodworking Company, was destroyed by fire on June 12; loss is estimated at \$80,000.

BALTIMORE

The only delegate from Baltimore to attend the annual meeting of the National Hardwood Lumber Association in Milwaukee was John L. Alcock of John L. Alcock & Co., who went in his individual as well as official capacity as chairman of the hardwood inspection committee and member of the special committee appointed by the exchange on the hardwood inspection rules. He returned greatly pleased with the action taken at the meeting and the conciliatory spirit shown by the National association. The latter, he says, granted practically all the eastern associations demanded. He says that the rules were gone over carefully, section by section being taken up and considered, and that the conclusions reached must be satisfactory to all concerned. He will recommend that the action of the National Hardwood Association be indorsed by the exchange. The latter has never been antagonistic to the National association, its chief concern being that there should be uniformity in the inspection rules all over the country. It matters little, hardwood men say, whether the standard adopted is high or low, as long as the trade can rely upon its maintenance. For this reason the exchange has sought to cooperate with the national body instead of antagonizing it. The view held here was that existing differences could be adjusted, and consequently, though the exchange had indorsed the stand taken by the Cincinnati Lumbermen's Club, demanding that the inspection rules of 1905 be restored, this attitude was not insisted upon to the point of revolt.

The transportation committee of the National

Lumber Exporters' Association has been notified to meet in Baltimore June 24, when, it is thought, the amended steamship agreement will be ready for submission. The association and the committee have been at work on this agreement for the past two years, and recently the negotiations advanced to such a point as to make an early assent by the secretaries of the various steamship lines to all the main points contended for seem a probability. An effort has lately been made by the N. E. A., through its secretary, E. M. Terry, to have the Interstate Commerce Commission make a ruling, relieving the exporters of lumber of certain storage charges when it can be shown that neither the shipper nor the steamship company concerned are responsible for the delay resulting in an excess of storage beyond the thirty days' free time allowed. A test case came up in Philadelphia recently, a shipper being called on to pay storage charges for the excess of time when the steamer expected to take the shipment suffered a breakdown of machinery at sea and did not reach port in time. The exporter was in no sense to blame and felt that he should not be required to pay the storage charges. The commission, to which the case was submitted by Secretary Terry, however, ruled that it had no power to authorize the railroad to make a change in the published tariff. The only way to get relief would be to make provision for such exigencies in the published tariff, and this would be exceedingly difficult. As similar cases are always coming up at different ports, the ruling is of the greatest importance to the hardwood export trade.

The J. Rivers Loom & Lumber Company of Pennsylvania and West Virginia has purchased for \$2,000,000 the timber and coal interests in Webster, Nicholas and Greenbrier counties, West Virginia, which the Baltimore & Ohio Railroad Company felt obliged to dispose of under the Hepburn law. It is estimated that about 200,000 acres are involved in the deal. The timber is to be cut at the Camden-on-Gauley and Ridge-way plants of the Rivers company. These mills have a capacity of 350,000 feet per day.

Another deal reported from Wheeling is the organization by C. M. Hood and George M. Scheets of the Hood-Hayward Lumber Company, which has taken over the Rudd-Hayward Lumber Company. The latter owns and operates not less than fifteen small mills and manufactures white oak and car lumber. The company has also secured an option on 5,000,000 feet of white oak and poplar timber in West Virginia, and in addition has nearly 4,000,000 feet of lumber on hand.

David T. Carter, who retired a short time ago from the hardwood firm of Carter, Hughes & Co., has engaged in the wholesale hardwood business with offices in the Calvert building, this city. Mr. Carter is well known in the trade and was for years located in Baltimore, going to Virginia to superintend the operation of the mills there about one year ago.

The R. E. Wood Lumber Company has in operation at a fair capacity its sawmill at Eagle Creek, Swain county, N. C., where the company owns a large tract of timber land. Much delay was experienced in getting the material on the spot and a railroad connection, the country being virgin soil.

PITTSBURG

The Colonial Lumber Company is inclined to look upon things with a rather more cheerful eye, although trade is far from what it should be at this season. President W. E. Fownall of this company has made two quite successful trips in Ohio lately and bagged some nice orders. He will start out again this week and means to come back with good business.

Manager Wickersham of the Buckeye Lumber Company reports that trade throughout the East is picking up noticeably and that for good hardwood the demand is steadily increasing. The

Buckeye is fortunate in having secured about 2,000,000 feet of fine oak timber to be cut under contract, and is selling good oak on a very low freight rate from Pittsburg.

The H. B. Curll Lumber Company finds that poplar is much the best seller on its list. Its estimated stock of poplar at Glen Ray, W. Va., on the C. & O. R. R., is 150,000,000 feet. The company expects to cut 20,000,000 feet a year and will start up its plant this week. Both its Pittsburg and Philadelphia offices are busy, and Mr. Curll looks for better prices for poplar in the fall.

The Mead & Spear Company notes a better feeling all round in the hardwood market. J. J. Mead, president of this company, has made several trips this summer to Kentucky and West Virginia and reports the operations there going at a good pace. The Parsons-Cross Lumber Company, which started in business in Pittsburg some two years ago, has been succeeded by the Myers Parsons Lumber Company, which keeps the old office of the former concern on the fifth floor of the Farmers' Bank building. The new name in the concern is that of Max Myers, a member of the firm of Nicola-Stone & Myers of Cleveland, O. He was also a member of the Parsons-Cross Lumber Company. A. J. Fisher, who was also connected with the Cleveland firm, will have the office management in Pittsburg.

The Interior Lumber Company notes a slightly better feeling in general lumber circles, but finds that trade is still very slow. President J. R. Edgett of this company is spending most of his time in southern Ohio, where he has been doing a fair business this summer.

Harry T. Lincoln, the popular office manager of Bemis & Fosburgh, surprised all his friends ten days ago by his marriage to May Pearl McCormick of Conestoga, Pa. The surprise was all the more intense because Miss McCormick was a stenographer in the office and the courtship was carried on so quietly that not a member of the office force had any suspicion of the happy consummation. The couple will live in Bellevue, Pa., one of the nicest suburbs of Pittsburg.

William R. Cornelius has been taking some one section of the hardwood this month, but finds fair orders for hardwood still plenty, but finds fair orders for poplar selling lumber to the factory trade. That is, that many of the factories are taking stock for their semi-annual inventory and are not disposed to buy any lumber until after July 1.

The Webster-Kealey Lumber Company is booking some nice orders for trolley stock this month. One of them was for 400,000 feet of guard rails. Another was for quite a large pile of hemlock. The company is pointed away at its operations in Indiana, Kentucky and Butler county, Pennsylvania, and is not at all afraid of the outlook for fall trade.

Wholesalers in general agree that shipments are larger than one month ago. From West Virginia mills much more lumber has been sold, and in certain stocks there has been quite an improvement since June 1. Wholesalers also agree on another point, namely, that prices on lumber are bound to go up early in the fall if not before Sept. 1. One good reason which they give for this opinion is that several railroads have announced the determination of raising freight rates on lumber July 1. With prices at their present level this leaves the wholesaler but one alternative—that of raising quotations. With the general increase in business activity it is believed that by fall the market will stand higher prices on several lines of good lumber.

The Fort Pitt Lumber Company held a meeting at its office at 1214 Clark building, June 1, and raised its capital stock from \$50,000 to \$50,000. The company has a good hardwood mill on the B. & O. and M. & K. R. R. in West Virginia, and it getting out about 2,000,000 feet a day. President H. L. Austin reports that the company has been quite a hit in business since the hardwood market in the past few days.

Manager W. A. Clay of the Clay Schoppe Lum-

ber Company has returned from southern Pennsylvania, where the company now has seven mills in operation. These mills are cutting oak largely and the company finds a good place for it in Philadelphia and Baltimore and is selling considerable to the export trade.

Mr. Clay says that the No. 1 stocks of white, red and rock oak are in much better demand than they were two weeks ago and that the prospects are good for a gradual stiffening in prices this summer.

O. A. Sibley of the Pennsylvania Lumber Company is down in Alabama this week looking over the watermelon crop and the operations of his company there. The company also has a big mill at Sheffield, Pa., where it is manufacturing a large amount of hardwood.

R. W. Moorhead of the J. C. Moorhead Lumber Company has been taking a few days off in Potter county, Pennsylvania, where he has large property interests. The Moorhead Company is cutting some stock to order at its West Virginia plant, but is not rushing matters at present.

The Goodwin Lumber Company, which located in the Farmers' Bank building a few months ago, is getting well grounded in the Pittsburgh trade under the direction of S. Mills, Jr., its sales manager. Mr. Mills has two salesmen on the road and recently made a successful trip to Ohio.

BUFFALO

A. Miller is still in evidence as a Buffalo lumberman in New York, where he has seemed to find a new market or an extension of the old one, and he is of course warranted in sticking to anything in that line.

O. E. Yeager claims distinction on account of making sales of birch lately as well as other things and does not complain of poor trade, though it is not what it used to be.

I. N. Stewart & Bro. are in the walnut trade along with their cherry specialty and are selling it some, though it is not very active, the common going slower than the rest. It is about 10% higher than cherry.

The mills of the Hugh McLean interest are always going, and it appears that they have faith in spruce as well as oak, for they are piling one up in the St. Lawrence Valley and the other in the Southwest.

The Buffalo Hardwood Lumber Company has now received the last of its shipment of about 110 cars of mostly oak from the Southwest by river to Cincinnati and now is prepared to meet any demand in that direction.

Oak is one of the things that Scatcherd & Son are always in quest of, as their trade seems to absorb that sort of lumber much as a sponge does water, while at the same time other hardwoods are not neglected.

The stock of Sullivan & Co. will come in by lake more than ever before now, as the plan is to stop off Pacific coast shipments at Duluth and load on vessels. There will also soon be ash and elm coming down from Michigan.

G. Elias & Bro. have had in three lake cargoes and will bring down some more later on, so that the yard is well stocked. The door mill is always busy, and boxes are picking up some, though they have been quiet a long time.

A. W. Kreinheder held over from the lumber convention to the political one, going to St. Paul in the meantime to visit his brother. The yard of the Standard Hardwood Lumber Company is unloading oak from the South.

Everybody looks on F. W. Vetter as one of the steady ones in the hardwood trade, with an assortment of lumber that meets the demand and a trade that keeps the yard busy.

President F. A. Beyer of the Pascola Lumber Company stayed a second week to keep tab on the Chicago convention and came home well satisfied with the choice made. Business is good at the Missouri mills of the company.

The hardwood dealers appear to be satisfied

with the work of the Milwaukee convention and say that the eastern seaboard is not likely to make any more trouble, as they obtained about all they asked for without hitting the West to any extent. It was not an easy thing to do, but it had to be done if the body was to go on. Burtis was well remembered with Mr. Yeager as vice-president and Mr. Beyer on the board.

The Hardwood Exchange will probably hold one more meeting and suspend for the summer. It is a very active body, but does not pretend to do very much business. The general Lumber Exchange will hold a July meeting.

SAGINAW VALLEY

Those who ought to know say that there is more hardwood lumber moving at present than at any time since last summer. This looks good and, moreover, it has the merit of being true. There is more call for cars and more lumber is being shipped by firms engaged in the business. Mr. Bigelow of the Kneeland-Bigelow Company says his concerns shipped 2,884,000 feet of lumber in May, and the June shipments thus far are ahead of last year. Their stock is all distributed by rail.

John Watkins, who operates a small mill at Battle Creek, saws more or less lumber for home people and has just contracted to saw 1,500,000 feet of hardwood lumber for the Advance Thresher Company. He manufactured 900,000 feet for the same company last year.

The Richardson Lumber Company lost 1,500,000 feet of logs near Tower by fire on June 20, involving a loss of \$15,000. A large amount of timber has been destroyed the last four days in the northern part of the lower peninsula by forest fires. The damage done will approximate \$100,000, mostly in Cheboygan and Presque Isle counties.

The maple flooring business has manifested indications of sluggishness the last two weeks to a greater extent than at any previous time this season. This of course does not affect firms having contracts, and it is regarded as only temporary. This is the dull season usually in trade, and yet it is safe to state that the volume of trade now is not over thirty per cent below what it was a year ago. It is believed the output of the mills in the valley this season will approximate that of last year. At the yards there is a fair inquiry for lumber and dealers feel much encouraged. Quite a number of million feet are being sawed at various points in the woods by portable mills. Quotations remain unchanged.

A motor machinery company at Bay City has devised an equipment for sawing down trees with a saw driven by a gasoline engine. It not only saws the trees off close to the ground, but saws them into logs after they have been cut down.

The Cook, Miller & Curtis hardwood mill at Grand Marais is running at any previous time. The Kneeland-Bigelow and the Kneeland, Duell & Bigelow companies' mills will be operated right through the season.

A. C. White, who has been styled the "Basswood King" in this section, is operating his plant with a full force.

GRAND RAPIDS

N. J. G. Van Keulen of the Van Keulen & Wilkinson Lumber Company left this week on a short business trip up the lakes and to Chicago.

About a dozen of the largest furniture buyers in the country were in the market June 22, two days before the opening of the furniture sales. Indications point to a large attendance of buyers and to good results from the standpoint of orders placed.

Some of the local furniture manufacturers have been recently placing orders for lumber in an encouraging way. Prospects for fall business are looking brighter.

Reports from upper Michigan state that millions of feet of timber and in some cases mills and small villages have been destroyed by recent forest fires. The novelty works of the Tubbs Manufacturing Company, Tower, were burned, also a mill and a half feet of logs belonging to the Richardson Lumber Company. The little village of Kentucky, southeast of Boyne City, was wiped out and several sidkways of logs and much standing timber damaged. Much property in Cheboygan county was destroyed. Fire has also done great damage in Gannett's lumber camps, near Fouch, in Leelanau county, and in other sections.

John Watkins, who operates a sawmill at Battle Creek, has cut this year \$52,000 feet of lumber for the Advance Thresher Company of that city. He has contracted to furnish the company with 1,450,000 feet of hardwood for the coming year.

W. S. Pullen, formerly of Allegan, is building a mill at Hillsdale for sawing apple wood. After being cut the wood is steamed for about thirty-six hours, when it is corded and allowed to season for about a year. For this timber Mr. Pullen pays at the rate of \$10 per cord, or 3 cents foot for the scaled. He also contracts for standing orchards.

W. W. Mitchell and F. S. Cobbs, Cadillac lumbermen, passed through this city last week in their motor cars, accompanied by friends. They are on their way to Boston, via Detroit, Buffalo and Albany, and will spend the summer touring in the East.

The Bennett Handle Company, capital \$30,000, has been incorporated and will manufacture handles and other products at East Jordan.

CLEVELAND

Considerable interest is centered in the lake shipping situation. Cleveland gets considerable quantities of western hardwoods by water, while practically all the stock imported from Canada comes by that route. This year to date there is not 25 per cent of the movement of lumber that there was a year ago. The condition is steadily improving, however, and by the beginning of next month will more nearly reach normal than for any period this season. With strikes threatened by many of the cargo handlers, the lumber carriers expect to come through unscathed, agreements existing between both sides which will ward off trouble.

Lumber dealers in the flats, and there are a score of them, are seeking substantial improvement to the roads and bridges by means of which they reach the various freight depots as well as for the local deliveries. Among these the lumbermen want a new swing or lift bridge over the river at Scranton Road. The present bridge is an antiquated affair which can run by hand. Many times lumber loads are lined up for several hundred feet waiting to cross after a boat has passed on. The lumber dealers held a conference with the city authorities, who promise a new bridge and other improvements of a substantial character in the near future.

J. L. Lyttle of the Lyttle Lumber Company of Pittsburg was a local visitor during the past week. He reports business as steadily improving in all lines.

The Martin-Bariss Company of this city has received a line shipment of African mahogany veneer logs and is already cutting a number for the market. They are splendidly graded.

The Cleveland Builders' Exchange, of which most of the Cleveland lumbermen are members, will hold its annual outing on July 13, going to the Front House, on Lake Ontario, midway between Hamilton and Toronto. The party will number fifty or sixty and will visit Niagara Falls en route. The return will be made on Friday, July 17. A number of lumbermen are planning to take in the trip.

Fire did considerable damage to the plant of

the Lake Erie Lumber Company on the morning of June 7. It spread to adjoining buildings, the total loss exceeding \$100,000. The yard is in the center of a thickly settled factory district and many plants were in danger for a time. Fifteen houses belonging to the lumber company were burned to death in the flames.

E. J. Harden of the firm of Waggy & Harden, hardware dealers of Sutton, W. Va., called upon the local trade during the week. He says the hardwood business is showing much more strength than a month ago.

Cleveland lumbermen during the past two weeks have sympathized deeply with F. W. Gilchrist, prominent hardwood manufacturer of Alpena, Mich., who with his three sons and a daughter have been at the bedside of Mrs. Gilchrist, who was operated upon for cancer. Mrs. Gilchrist has been in a critical condition, but her recovery is now hoped for. F. R. Gilchrist of Laurel, Miss., E. R. Gilchrist of Alpena and W. A. of Cairo, Ill., together with a daughter, have accompanied the wideman with the father at the bedside of the sick woman.

W. G. Ward of the Ward Lumber Company of Lynchburg, Va., was a visitor to Cleveland during the week.

Samuel E. Putnam of Putnam & Savage, hardware dealers with offices in the Williamson building, reports trade for the past two weeks as being the most satisfactory experienced this season. Mr. Putnam says that the volume of inquiries for hardwoods has become much greater, while the deliveries are more satisfactory also.

Two desks and a big chair factory, all of which use considerable quantities of hardwoods, are again in full operation in Cleveland and it is expected that they will consume considerable stock within the next six months.

Officers of the Chamber of Industry have issued an "Employment day" for June 11, incidentally lumbermen and other interested in building are pointing out that in addition to giving the unemployed work on July 1 that as many persons as possible proceed with building operations, which will help all along the line.

COLUMBUS

M. A. Hayward returned this week from a trip through the North. He attended the National Hardwood Lumber Association convention at Milwaukee and says that it was a large and enthusiastic meeting and that optimistic views were expressed regarding the future of the lumber business. He seems to think that the few changes that are taking place in the lumber business are for the better and that general improvement can be noticed from week to week. Mr. Hayward does not look for any rapid gains, but says that the tendency is now in the right direction and that after the presidential nominations have been disposed of conditions will soon assume better form and after the first of the year trade will become normal in all departments.

Work was suspended last week on the new government building at Third and State streets, awaiting plans for the addition of ten feet to the foundation, and according to the announcement about \$100,000 will be added to the original cost of the building. Considerable of the lumber for the new building has already been delivered and the addition will enable local dealers to sell many additional cars. A fall amount of building permits has been taken out during the past week and the low price of material has induced many to plan the erection of new structures.

Some of the larger lumber companies here say that inquiry is now much better than it has been since the first of the year and that large lots now have the call instead of odds and ends, orders for which are often difficult to fill. They say that while inquiry shows improvement, there has been but little increase in new orders received. Some of the larger houses are more optimistic regarding the future than the smaller

ones, but all seem to believe that in due time conditions will become adjusted.

INDIANAPOLIS

Maurice Trimble, for twenty-eight years superintendent of the Bosworth Lumber Company, Vincennes, died at his home in that city recently.

The National Veneer & Lumber Company, recently merged with the Walnut Lumber Company, is building some new sheds and making other improvements.

The Conroy & Birely Table Company, Shelbyville, has changed its name to the Davis-Birely Table Company.

William F. Johnson of the Capitol Lumber Company has returned from Minneapolis, where he attended the convention of the National Lumber Manufacturers' Association.

Several Anderson business men have organized the Anderson Co-operative Company with \$10,000 capital, and are preparing to build and equip a plant at one.

J. M. Fritchard and W. W. Knight of the Long-Knight Lumber Company, this city, attended the convention of the National Hardwood Lumber Association at Milwaukee.

Charles W. Miller, Goshen, secretary of the Lesh, Prouty & Abbott Company, East Chicago, has been nominated for congress from the Thirtieth Indiana district to succeed the late A. L. Brick. He is a lumberman and formerly general.

After a short illness Charles Hamilton, engaged in the lumber business at Martinsville for more than thirty years, died at his home in that city a few days ago. He was formerly in business at Memphis, Tenn.

Alexander A. Isgrigg, formerly engaged in the retail business in this city but more recently a traveling representative for the Henry Lumber Company, Michigan City, died in that city a few days ago while attending the Republican national convention. He was 55 years old.

It is rumored that the Westcott Carriage Company contemplates moving its large plant from Richmond to Anderson, where the Citizens' Factory Committee has offered a free site and substantial bonus. The plant is one of the largest in Richmond.

Incendiaries attempted to burn the yards and plant of the Greer-Wilkinson Lumber Company at Fort Branch on the night of June 18. There was only a slight loss. A man with his wife have been arrested on a charge of arson.

David B. Schofield, who started the old Schofield mills on the banks of Fall creek, near this city, in 1850, died in this city last week at the age of 89. The sawmill was operated fifty years.

MILWAUKEE

The report of the Committee on Forestry, given by Chairman M. M. Wall at the recent Milwaukee convention of the National Hardwood Lumber Association, has been attracting attention all over the country. To prevent the serious shortage of hardwood timber the report recommended five steps that should be taken; that lands should be set aside to be devoted to forest growth; that legislation should be passed protecting the timber owner against depletions and forest fires; that the several states take up the question of re-plantation; that Congress prohibit the exportation of logs and that the federal government make a census of the stumpage of the United States.

E. H. Mertes of Spokane, Wash., a visitor at the recent hardwood convention in Milwaukee, in an interview spoke of the unlimited supply of timber in Alaskan territory and believed that this fact offsets the hardwood shortages in the Appalachian ranges and in the Mississippi districts. Mr. Mertes said that the finest pine in the land covered thousands of square miles in Alaska.

S. H. Rondeau, former cashier of the State Bank at Clintonville, Wis., has been chosen as manager of the Roberts Lumber Company at Embarras, Wis.

A. A. Shuler, one of the Milwaukee managers of the Noble-Corwin Lumber Company, recently returned to Milwaukee after an extensive trip through northern Wisconsin and Michigan.

D. A. Dardis of the Dardis Lumber Company of Burlington, Wis., was a recent Milwaukee visitor.

E. H. Trump of the Thomas & Proetz Lumber Company of St. Louis recently called upon the Milwaukee hardwood lumber trade.

A. H. Bohn of the Waldstein Lumber Company of St. Louis was a late Milwaukee visitor. The Pendleton-Gilley Lumber Company of Oconto, Wis., suffered a loss of \$65,000 by fire on June 19. The cedar yards, containing 500,000 poles, were totally destroyed.

The liabilities of the Koch & Loeber Company of Milwaukee, extensive manufacturers of willow and woodenware, recently declared bankrupt, are far in excess of the first estimate and now are given as \$225,874. This is the largest claim filed in the Milwaukee bankruptcy court for some time. More than 200 creditors have filed claims against the company and a meeting of these will soon be held.

The Filer & Stowell Company of Milwaukee, well known manufacturers of sawmill machinery and appliances, are experiencing an excellent demand in their line. The company has recently shipped a \$25,000 sawmill outfit to Honolulu, Hawaiian islands, and has extensive contracts for the supplying of mills to companies in Nevada and Texas.

S. C. Major of the S. C. Major Lumber Company of Memphis, Tenn., wholesaler of hardwoods, was a recent Milwaukee visitor.

Wisconsin hardwood men are awaiting the opening of the Wisconsin & Northern railway branch between Shawano and Crandon, Wis., when one of the richest hardwood tracts in northern Wisconsin will be accessible. It is believed that the distance of some forty miles will soon be lined with hardwood plants.

R. H. Hodges, Milwaukee wholesale hardwood dealer, is on a business trip through northern Wisconsin.

The Jung Woodenware Company, recently organized and now located at La Crosse, is ready for operation with bright business prospects. The company will start with twenty employes and if the trade will warrant this force will soon be increased 75 per cent.

The Sawyer-Goodman Company of Marinette is busy with summer logging and has established two camps at Champion, Mich., where it is expected that 5,000,000 feet of logs will be cut during the summer.

The Schroeder Lumber Company of Ashland, Wis., has sent crews to the north shores of Lake Superior, where timber is being cut which will later be shipped down to Wisconsin pulpwood.

The Iron County Lumber & Timber Company, to be located at Hurley, Wis., has been incorporated with a capital stock of \$10,000 by T. M. Thomas, J. W. Carow and F. I. Hughes.

The Mueser Lumber Company, an Iowa corporation with a capital of \$97,200 and Wisconsin interests of \$24,430, has filed articles to operate in Wisconsin.

BRISTOL

F. K. Bradshaw of Johnson City, who recently purchased a 10,000-acre tract of timber in Union county, Tennessee, expects to soon build mills and begin the development of the property on a large scale.

An evidence of the feeling of confidence among the lumbermen of this section is shown by the many improvements, extensions, etc., that have been made and the heavy buying of machinery. Among the machinery men in this

section this week are: Benjamin H. Cox, Jr., J. A. Fay & Egan Company, Cincinnati; W. J. Cotteral, Ohio Knife Company, Cincinnati, and Gaylord H. Miles of Wysong & Miles Company, Greensboro, N. C. While in Bristol Mr. Miles was the guest of his brother-in-law, J. A. Stone, of Stone-Hunting Lumber Company.

T. J. Galloway of Johnson City, largely interested in the Wood Lumber Company, which became financially embarrassed nearly two years ago, has filed a voluntary petition in bankruptcy and the first meeting of creditors will be held before Referee in Bankruptcy H. H. Shelton of Bristol this month. Mr. Galloway's assets are in the neighborhood of \$25,000, while the extent of his liabilities is not known.

W. H. Stiles, who recently resigned as lumber and timber agent of the Carolina, Critchfield & Ohio, has returned to eastern Virginia and will enter the wholesale lumber business at once on his own account. Mr. Stiles is well known to the trade all over the country, having been for several years traveling representative of Sanford & Treadway of Connecticut, largely interested in this section.

A tract of timber land in Unicoi county, Tennessee, forty miles from Bristol, affected by the failure of the Wilberg & Hanna Company, Cincinnati, and in which other concerns were interested, will shortly be sold under process from the court.

The Doss Manufacturing Company, just organized at Pochontas, Va., with a capital stock of \$10,000, is preparing to enter business at once, and will do a general wholesale lumber and manufacturing business.

"The business outlook is much better," said J. A. Wilkinson, a prominent Bristol manufacturer. "The demand is improving and the volume of business is much more satisfactory, though things are by no means what might be expected."

O. H. Vial, largely interested in timber lands of east Tennessee and a well-known wholesale lumberman of Mountain City, Tenn., was here this week and reports the lumber business in that section in fair shape.

The Marlon & Key Valley railroad, one of the best known lumber railroads in southwest Virginia, and extending from Marlon, Va., where the big band mills of the United States Spruce Company and other concerns are located, has been sold. Only meager details of the transaction have been received here, though it is said that persons largely interested in the timber lands of Grayson county, including Baltimore lumbermen, are interested in the deal. The road is about thirty miles in length.

J. H. Bryan of the Bryan Lumber Company has returned from a trip in the East and reports little change there in the lumber markets.

F. W. Hughes of Price & Heald, Baltimore, and C. H. Smith, Jr., of R. A. & J. J. Williams, Philadelphia, are buying lumber in eastern Tennessee and western Carolina, and early all the country mills in that section are running. The roads are rapidly improving and hauling to the railroads has begun.

CINCINNATI

Local lumbermen who attended the convention at Milwaukee, June 11 and 12, have returned much perplexed at the action on the inspection question. They with others made an effort to have the 1905 rules again installed. However, they were pleased with all other action taken. A number of the local dealers did not return immediately, but joined the Business Men's and Builders Club at Chicago and helped choose Ohio's son, William H. Telfer, for the nomination for President. The local crowd are well pleased with his being placed at the head of the Republican ticket and some of them are of the opinion that his nomination will help trade to a great extent.

R. L. Gilbert of the J. W. Darling Lumber Company has returned from a successful busi-

ness trip to Chicago. During his stay in the Windy City he took a run over to Milwaukee and represented his firm at the convention. He stayed in Chicago long enough to hear the outcome of the convention.

L. D. Halstead of Richey, Halstead & Quick of the Traction building has purchased a summer home in Michigan and between trips will visit the cottage. His wife and children are there for the summer. Mr. Halstead will not return to the local offices until October.

H. J. Garrett of the Brodhead-Garrett Company of Clay City, Ky., was in town last week visiting the lumber trade in an effort to sell lumber.

Floyd Day of the Swann-Day Lumber Company of Clay City, Ky., was here recently. He made a thorough canvass of the city for trade and, from reports, was fairly successful.

Charles Duhmeier of Duhmeier Brothers has the sympathy of his many friends in the trade owing to the illness of his little girl. The latest news states she is getting along very nicely and will soon be herself again.

George Littleford of the Littleford Lumber Company states that he found things rather quiet during the early part of June, but the latter part of the month presented a more brisk inquiry for lumber. The situation will show some improvement each week, that is, until the usual summer dullness sets in.

W. K. Blinn of the William H. Perry Lumber Company, who has been on a vacation for the past two months, is expected to return the latter part of this month.

W. E. Johns of the William H. Perry Lumber Company has returned from a business trip to Chicago. He also took a run over to Milwaukee to see what was going on at the convention. W. D. Wolfe of the same concern is still at the yards of the company superintending the shipment of a great deal of lumber from there. The yards are located at Nashville.

President Thomas P. Egan of the J. A. Fay & Egan Company, one of the largest manufacturers in wood-working machinery in the country, states that by the first of July he intends to put on additional forces of men and that the company will soon be doing business on the same old basis. The concern employs about 1,600 men and is called the "City Shop."

Benjamin Bowman, a salesman for a Chicago lumber concern, was arrested here last week for passing worthless checks. The amounts, although small, were passed on a number of concerns here. As his folks are wealthy, his financial distress is expected to be straightened out.

Bankruptcy Referee Greve approved the sale made by Stuns P. Eschel of the sawmill of the United States Timber Company, located at West Irvine, Ky., about ten days ago. The property was appraised at \$9,000 and brought \$7,500. The office fixtures and two carloads of lumber were also sold last week for \$475, which is slightly above the appraised value.

A suit for \$2,761 delinquent franchise tax was filed in the United States court against the New Deatur Bugby Company. The company is now in the hands of a receiver appointed by the court. All but one-third of the amount claimed is accumulation of \$10 a day fine.

The Sayers & Scoville Company, with a capital stock of \$150,000, was incorporated last week by W. A. Sayers, Flaval H. Scoville, Virginia and Bessie Scoville, Francis M. Sayers and A. E. Eisenhart. W. A. Sayers is president of the concern; Flaval Scoville, vice-president and treasurer; and A. E. Eisenhart, secretary.

W. B. Burt, president of the J. B. Stone Lumber Company, with offices in the Union Trust building, left the early part of the week for a business trip south. During his stay in the South he will visit the mill of the company.

G. N. Burt of the Burt & Brabb Lumber Company of Ford, Ky., was a caller among the lumber element during the last fortnight. It is

said that he met with considerable success in disposing of his concern's holdings.

Chester F. Korn of the Farrin-Korn Lumber Company, states that his concern is enjoying a fair amount of business, but that it is not what it might be. He left the early part of the week for Mississippi, where he will visit the mill of the concern.

Dwight Hinckley of the Hinckley Lumber Company has purchased a saddle and driving horse and has also been elected a member of the local Riding Club. Business with his concern is very good, as the erection of buildings here is heavy, and they are dealers in building material.

Everybody in Cincinnati is rejoicing over the nomination of Taft. His reception when he arrived last Saturday was very hilarious.

Thomas J. Moffett of the Maley, Thompson & Moffett Lumber Company has just returned from the convention at Chicago and was much pleased over the nomination of William H. Taft. He stated that during the past ten days his company has been doing a very good business and that he looks for an improvement each week.

"The month of June so far with us has been just as good as last year," says B. F. Dulweger of John Dulweger & Co., "and from present indications an improvement should be noted each week."

L. W. Radina of L. W. Radina & Co. has just returned from a few days' pleasure trip up the state. He said that business with them has been about the same, but is of the opinion that Taft's nomination will strengthen trade to a considerable extent.

G. Furger of the W. H. Dawkins Lumber Company of Ashland, Ky., was a visitor in the Queen City during the latter part of the month.

D. H. Mough of the Ohio River Lumber Company of Ironton, O., called on a number of the local lumber dealers during the week.

W. L. Briggs of the Briggs & Wilson Lumber Company of Boston, Mass., was a caller among the lumber trade here during the past fortnight.

William Duhmeier of Duhmeier Brothers says that things with them generally remain about the same, but is of the opinion that the month of July will reveal an improvement.

W. M. Weston of the W. M. Weston Company of Boston was a recent visitor here.

O. L. Wade of Indianapolis called on a number of the local lumber dealers here during the past fortnight trying to get some trade for his concern.

H. R. Shreve, who has a beautiful little cottage on the Miami river, spent a few days here trying to get some of the local lumber dealers to erect a cottage on the river near his, so as to have some company and incidentally a little playing with the pasteboards after the sun has set and the night is growing long.

At a meeting of the creditors of the Wilberg & Hanna Company, bankrupt lumber merchants of this city, held last week in the office of Bankruptcy Referee Greve, it was stated that the firm has offered the creditors 50 cents on the dollar on time and 40 cents on a cash basis. This meeting adjourned until July 9 to consider the proposition.

A disastrous fire occurred in the plant of the Mason Lumber Company at Mason, O., last week and resulted in a loss of about \$50,000. The plant was controlled by the Lockland Lumber Company of Lockland, a short distance from Cincinnati.

The annual outing of the Cincinnati Lumbermen's Club, which consisted of a banquet on the club house porch of Chester Park, was held Tuesday evening, June 23. The affair was a success in every respect and the short addresses delivered by retiring President Thomas J. Moffett and the new president, R. F. Dulweger, were received with much applause. After the banquet the crowd went to the opera to hear "Robin Hood." The next meeting of the club will be held at the Business Men's Club, June 27, when several important questions will be

brought up, among them a definite place to hold the weekly meetings.

EVANSVILLE

Nathan Thayer, the well-known member of the firm of Thompson, Thayer & McCowen, sailed June 20 from New York for Ireland, from which place he will go to England and thence on a tour of the continent, returning late in October. Mr. Thayer's trip will be primarily for pleasure; however, he will call on all his friends in the trade across the water.

Bedna Young and Frank Cutsinger of Young & Cutsinger were at their Jasper plant this week looking after affairs there. The plant at that place has been closed down for some time while repairs were being made. The mill started up Monday of this week with a nice stock of logs on hand. H. J. Schaefer, the promising young manager for Maley, Young & Cutsinger at that place, says business has been fairly good with them the past month and he expects this month to be still better.

Thompson, Thayer & McCowen are erecting a building at their plant at Columbia street and the Evansville & Terre Haute railroad, in which they are going to install a planing mill with rip saws, cutoff saws and everything that goes with a well-equipped plant. The planing mill will be run by a large electric dynamo which will be installed in the building. The firm will thus be in position to handle all kinds of mixed orders where a part or all of the lumber is required to be dressed. They will also be able to handle the retail trade to better advantage.

C. W. Talge of the Evansville Veneer Works is on a trip in the northeast. The trip will be quite an extensive one; he has now been gone about two weeks.

The Hokenstein-Hartzmetz Furniture Company, whose factory burned recently, has leased the factory building at Second and Division streets, formerly occupied by the Crescent Shoe Company. The firm expects to get the factory in operation in about a month with the same capacity as before, turning out the same style of goods, mostly music cabinets. It was thought for a time after the fire that the firm would locate in another city, as inducements were offered to do so, but they decided differently.

Joseph Bertrand and Miss Stella Meeks were united in marriage here June 17 by Dr. Wiggenton of the Chestnut Presbyterian Church. Mr. Bertrand is a promising young man and is connected with the Henry Maley Lumber Company of this city. Miss Meeks is a beautiful and talented young woman. The young couple were the recipients of many congratulations from a wide circle of friends.

ST. LOUIS

A recent pleasant event was the outing of the Lumber Dealers' Association on June 13. Twenty-five retail lumber dealers left the lumber yard of Stephen J. Gavin at 9 o'clock in the morning in automobiles furnished by William L. Boeckeler of the Boeckeler Lumber Company, Harry Swartz of the Eau Claire-St. Louis Lumber Company, Stephen J. Gavin, G. A. Gruner of Philip Gruner & Bro. Lumber Company, James Prendergast of the Prendergast Lumber Company and John A. Reheis of the Wilson-Reheis-Boifes Lumber Company, went out to the St. James Hunting and Fishing Club, about eighteen miles out, and spent the day there. The usual merry-making was indulged in.

The F. C. Moore Lumber Company reports considerable business early this month, although Mr. Moore says it is not as much as there was last year.

E. W. Blumer, sales manager of the Lothman Cypress Company, says they are doing well but the cypress business is not what it should be. Five of their mills are operating.

Theodore Plummer, president of the Plummer Lumber Company, is not at all satisfied with the way business is going. Prices, however, are better and that is one of the redeeming features. As they have a nice stock of dry hardwood on hand and can afford to wait for better prices, they are not disposing of any of their stock unless they get the prices they ask.

George E. Hibbard, vice-president of the Steele & Hibbard Lumber Company, says he notices a betterment in trade, although it is only slight.

A nice run of business is reported by E. H. Luehrmann, vice-president of the Charles F. Luehrmann Hardwood Lumber Company. Thus far their sales this month are much better than they were last year, and they are getting better all the time.

The St. Louis Furniture Board of Trade is going to have a special week August 3 to 8 for the retail furniture dealers who come to this market for their goods. There will be a day on the river, with dinner and two nights at the country standers. The week promises to be both pleasant and profitable.

According to the reports made by the St. Louis hardwood dealers who went to Milwaukee to attend the National Hardwood Lumber Association, they had a great time, even if they did not get the convention for next year.

C. E. Thomas of the Thomas & Proetz Lumber Company says business is quite satisfactory, although they did not do as much as they wanted to do.

The Mangold Stave & Coopage Company has increased its capital stock from \$50,000 to \$100,000.

Leland P. Arthur of the Arthur Hardwood Flooring Company of Memphis, Tenn., was a visitor to St. Louis recently.

According to statistics compiled by the Missouri Bureau of Labor and Statistics, Carter count standers at the head of the companies of Missouri in lumber shipments. In hardwood lumber it exported \$8,533,000. It also shipped out 4,500 feet of walnut logs, 146,000 railroad ties, 5,500 fence and mine posts and 400 carloads of coopage.

W. A. Bonsack, president of the Bonsack Lumber Company, reports business more gratifying in spite of the comparative dullness in the hardwood lumber trade.

The plant of the Jacob Loesch Coopage Company suffered \$10,000 damage by fire recently.

C. M. Jennings, the chairman of the Entertainment Committee of the Lumbermen's Club of St. Louis, had the club out at Delmar Garden Tuesday night for a summer outing. The ladies participated. There was a beefsteak dinner at 6:30 at the cafe and after that the whole party went to hear "When Johnny Comes Marching Home" in the auditorium. About 100 were present. It was the last meeting of the club until September, so something a little out of the ordinary was given.

NASHVILLE

The continued and oppressive hot weather is driving Nashville's lumbermen out of the city, and if this spell keeps up there will be little doing in the way of local business or local lumber news. John E. Ransom has gone to Ridgely, Tenn., with his family for the rest of the summer. He has a summer cottage there, and as it is only about twenty miles from Nashville, he can go back and forth to business each day. Walter Keith, vice-president of the Nashville Tie & Cedar Company, has also taken his family to Ridgely for the summer. Millard Fillmore Green of the Davidson-Benedict Company has gone to Chattanooga for the hot months with his family. W. J. Cude of the W. J. Cude Land & Lumber Company recently moved out to his elegant summer home on the Hazleroad. He bought the old Cheatham homestead not long since for \$25,000, and has refitted the entire place elegantly. John W. Love of Love, Boyd &

Co. has been unable to get away as yet to Markland, Nova Scotia, owing to the illness of Hamilton Love, Jr., the five-months' old child of Hamilton Love, a member of this firm. The child has had typhoid fever and is to quite a little fever has typhoid fever and is to quite a serious condition. Unusual concern is felt over his condition just now on account of the extreme heat.

John Baumgartner of Nashville has secured patent rights on an invention which he claims will make a hit with the many dwellers in apartments these days. It is a combination piece of furniture, which may be aavenport, a chest or a table. It can be used as a piece of furniture for a hall, dining or sewing room or office. It is said the design is light, complete and durable and easily changeable from one form to another.

A special from Lebanon, Tenn., announces a good sized deal in cedar timber, in which the Eagle Pencil Company paid \$10,000 at public auction for the cedar on fifty-four acres of land belonging to Jim and Dick Hooker. This is said to be the largest deal of cedar timber of heart wood at one time in this or any other part of the great cedar belt, and, in fact, this was the largest and best piece of cedar timber left in Wilson county. Several firms bid and the sale was a spirited one.

A dispatch from Birmingham, Ala., announces the destruction of the big sawmill plant at Hollis, Ala., belonging to the Kaul Lumber Company. Over 6,000,000 feet of lumber were destroyed, in addition to the sawmill, planing mill, engine house and all the tramways. The depot and commissary were saved, however. The loss is estimated at \$500,000.

An involuntary petition in bankruptcy has been filed in the federal court at Nashville against the well-known firm of W. E. Earhman & Co. of Murfreesboro, Tenn.

Lebanon, Tenn., secures another industry in the removal to that town from Mobile of the Mobile branch of the Gulf Red Cedar Company. This concern manufactures for export, supplies cedar slats, out of which cedar pencils are made. The Gulf Red Cedar Company is a branch of the Richmond Cedar Company of Richmond, Va., capitalized at \$300,000. It has branch plants at Mobile, Greenville, Miss., and Paint Rock, Ark. The Lebanon plant will work about 100 men.

MEMPHIS

Lumber shippers of this city are jubilant over the victory they won over the railroads in the two cases which have just been decided by the Interstate Commerce Commission at Washington. The first is styled the J. W. Thompson Lumber Company et al. vs. the Illinois Central and Yazoo & Mississippi Valley roads and involves the rate on hardwood lumber shipments from Memphis to New Orleans. The second is styled George D. Burgess et al. vs. the Transcontinental Freight Association and involves the rates on hardwood lumber from points south of the Ohio and east of the Mississippi to Pacific coast territory. In the first named the commission has ordered the defendant railroad companies to restore the old rate of 10 cents per hundred pounds, which was granted to 12 cents February 2, 1903, on the ground that the advance in rates was not only unreasonable but also unjustifiable. The lower rate became effective in a very short time. In the last named case the defendant association is ordered to restore the old rate of 75 cents per hundred pounds and to refund the present one of 85 cents per hundred pounds between the territory named and Pacific coast points. The commission has also ordered the defendant to return to shippers the amount of excess freight paid, but the period for the refunding by such return is only that intervening between the present time and the date of the filing of the complaint with the commission, something like a year ago.

Nearly all the leading hardwood lumber firms in this market were joint complainants with the J. W. Thompson Lumber Company in the case against the Illinois Central and Yazoo & Mississippi Valley roads, bearing their share of the expense and taking the matter before the commission.

It is not expected that the reduction in rates on hardwood shipments between Memphis and New Orleans will have any material bearing on export lumber business out of this city. The reduction in rates will enable exporters in making firm offers to shade their prices to the extent of the reduction in rates, but the foreign market is now so glutted with consigned stock that it is doubtful if the lower rates will attract any attention from foreign buyers. They are able, from all reports received here, to buy lumber abroad at such advantageous figures as to make prices on this side look extremely high. It is probable that the reduction of 10 cents per hundred pounds on lumber shipments to the Pacific coast will stimulate the demand from that quarter. Business in the foreign market in this section as an advance became effective, the freight rate being well high prohibitive.

But much more important than the stimulus to business for the immediate present is the effect the decision is likely to have upon the railroads themselves. The railroads have shown a disposition during the past few years to advance rates in the face of all opposition, over all protests and without adequate justification. They had comparatively easy sailing until shippers learned to carry their complaints before the Interstate Commerce Commission and until that tribunal was given larger powers over matters affecting rates.

At the last meeting of the session the Lumbermen's Club, acting upon the suggestion of Hon. W. A. Percy, passed a motion to the effect that the River and Rail Committee be empowered to assume the aggressiveness in all matters pertaining to changes in rates on the part of the railroads. Mr. Percy stated that it was his opinion that if the roads realized they would encounter serious legal obstacles every time they threatened an advance in rates they would be very slow about making changes. As a matter of fact it is highly probable that the commission may be given an opportunity of passing upon certain phases of the readjustment of rates out of Memphis to compensate for the withdrawal of reconsigning privileges. This is the statement made authoritatively by Mr. Foster, who has the matter in hand as chairman of the special committee to which reference has been made. Mr. Percy made the statement before the club that the withdrawal of reconsigning privileges was equivalent to a straight advance of about 2 cents per hundred pounds on lumber shipments out of Memphis, and it is therefore not surprising that lumber shippers are holding out for something more than a concession of 1 cent.

Lumber manufacturers in this section are beginning to curtail production. They concluded some time ago that it would be necessary to reduce their output, but many of them had large quantities of timber that had to be cut up in order to be saved and could not follow this decision sooner. Among those closing down during the past few days of preparation to take such action at an early date are: J. D. Barnell, Inc., two mills at Memphis and Leland, Miss.; Three State Lumber Company, Burdette, Ark.; and North Mississippi; Moore & McFerren, operating two mills outside of Memphis and cutting cottonwood almost exclusively; L. H. Gage Lumber Company, which has closed down its big mill at Earl, Ark., for the first time in several years; Hale & Keiser and the E. Sosa Lumber Company. The mill of Hale & Keiser at Osceola was closed down until a short time ago, when it resumed down to special sizes to fill in certain lines of stock. This work has been about completed. There are other plants in this territory which

have already closed down or will do so shortly, but a complete list of them is not obtainable at this writing.

The gentlemen who went to Charleston, Miss., as guests of the Lamb-Fish Lumber Company a short time ago report as being very much pleased with what they saw. The big mill is one of the most complete of its kind in the country and the yards are the best seen anywhere in the South. Facilities have been arranged for handling business with all possible dispatch and the company is receiving the congratulations of its patrons and friends upon the magnificent plant. The sawmill, machine shop and bending works have already been completed and are now in operation and work has begun on the box factory, planing mill and veneer plant. Work on these will be rushed as rapidly as possible. The capacity of the plant as operated at present is about 125,000 feet a day, mostly oak.

The Memphis delegation has returned from Milwaukee, where they attended the annual meeting of the National Hardwood Lumber Association. They were very much pleased with the convention and its general results. They state that they enjoyed every minute of the time they were in Milwaukee and express themselves as highly appreciative of the hospitality shown them. The delegation were also much pleased with the election of George D. Burgess, of Russe & Burgess, as treasurer of the association for the coming year. His selection is upon a recognition of the fact that Memphis, because of its wonderfully strong following in the association, is entitled to consideration.

The movement for consolidating the Memphis Industrial League and the Business Men's Club is under consideration again and it is probable that something definite will be done in the next few days. The directors of the two organizations have held several conferences and the Business Men's Club has declared its intention of taking over the Industrial League if 2500 new members can be secured for the former. It is believed that this will provide sufficient funds for carrying on the work of the league. If this plan is followed the Industrial League will become a department of the Business Men's Club. Commissioner J. F. Peters, who has been in charge of the work of the league since its formation, has handed in his resignation. The work of the organization is regarded as too important to be allowed to drop. If arrangements cannot be perfected with the Business Men's Club other plans will be attempted.

Shippers are very much alarmed over the threatened advance in rates on the part of southern and southwestern roads which, according to current reports, is to become effective not later than September 1. The statement is made that something definite will be known regarding what the roads propose to do within the next ten days. The American organization throughout the South will fight any advance the roads may attempt to make. The Lumbermen's Club of Memphis has committed itself positively to this policy: The Little Rock Board of Trade has expressed its intention of resisting the advance. The Lumbermen's Club has asked other organizations to participate with it in such a protest and, if the roads insist upon attempting to install a higher schedule it is certain they will get a fight such as lumber shippers of Memphis have recently proved themselves capable of giving.

Export conditions are still unsatisfactory. One of the leading exporters of this market today states that he does not expect any early improvement in conditions abroad. He says that there is so much consigned stock that it is almost out of the question to secure satisfactory prices for lumber shipped abroad. He does not believe, however, that the consigned stock itself is a more depressing factor than the general depression in trade conditions. Another exporter is authority for the statement that there will probably be some good to come from

the heavy consignments of lumber abroad. He believes this will take the shape of a stoppage of advances against consigned lumber on the part of foreign brokerage companies. These, in a number of instances, according to his information, will lose some of the money they have advanced, for the reason that there is not enough proceeds derived from the sale of this lumber at auction to pay for the freight and to reimburse them for the amount they have advanced. W. H. Russe some time ago advanced the idea that the way to break up the consignment evil was for the brokers to stop making advances. If they incur losses a few times as the result of advances they will be cured and thus, through their own misfortune, brought to their senses.

Building operations in this city are on a liberal scale. Weather conditions have been very favorable and this has helped the movement. The prospects are that the showing for June this year in Memphis will compare most favorably with the corresponding period last season.

Box factories in Memphis are having a rather quiet time. They usually expect to do only a moderate business at this season of the year, but the demand is smaller now than is customary. There are some orders which were taken on contracts a long while ago which are being filled, but the manufacturers of boxes are doing considerably less than the average for June.

Leland P. Arthur of the Arthur Hardwood Lumbering Company has returned from a recent trip to Kansas City and other western points.

George D. Burgess of Russe & Burgess, who was elected treasurer of the National Hardwood Lumber Association at its recent convention, is in the East. He will not be at home for about a week.

Frank B. Robertson of the Robertson-Foschue Lumber Company and E. E. Goodlander of the Goodlander-Robertson Lumber Company, who went West a short time ago on a business trip, have returned. They came back with the delegation from Memphis to the annual convention of the National Hardwood Lumber Association.

NEW ORLEANS

Roderick S. Huddleston, secretary of the Otis Manufacturing Company and manager of that Company's Chicago branch, was a recent visitor here for many years was connected with the Otis mill in this city. Mr. Huddleston says his firm is doing a good business and expects to do well this year, despite adverse conditions which have affected the lumber business generally.

L. M. Richardson, another Chicago lumber operator, was a recent visitor to New Orleans. "The market is fair now," said Mr. Richardson in discussing the situation. "It is gradually getting back to a paying basis, and I think the fall business will be quite brisk. The foreign market is in fair shape, with no extraordinary features. Some might regard it as poor, but that depends a good deal upon one's connections, and I have found it even better than I expected." Mr. Richardson also discussed the matter of federal statutes for conserving the forests. People who know what was best for their timber lands, he said, according to federal statutes to guide them, William Chalfant, Jr., a prominent capitalist, of Westchester, Pa., as the representative of a big eastern syndicate has bought the big tract of Ayozeles parish lands involved in the suit of the Fidelity Trust Company vs. the Ayozeles Land & Timber Company. The lands are situated chiefly on the south side of Red river and north of the Atchafalaya, approximately 70,000 acres lying in one body. It is expected the tract will yield about 900,000,000 feet of all kinds of timber. Mr. Chalfant and his associates paid \$250,000 for the property.

Announcement is made that Cook, Douglas & Co.'s mill at Grand Canal, La., has resumed opera-

tious after having suspended for several weeks.

J. H. Hinton, a well-known Mississippi and Louisiana lumber exporter, has organized a new exporting company, to be known as the Lumber-Exporting Company. It is domiciled at Lumberton, Miss. J. H. Hinton, J. W. Hinton and others are the incorporators.

Lumber exporters of the Atchafalaya river district in this State are much concerned in the efforts being made to interest the United States government in the creation of a twenty-foot channel from Morgan City to the Gulf. Private interests have already dredged a fourteen-foot channel, and a considerable number is being shipped through there now. With the twenty-foot channel millions of feet will be shipped out of Louisiana that way, and the lumbermen are earnestly supporting the move in favor of the deeper channel. The work will cost less than \$500,000, it is stated, and the new waterway will be of incalculable benefit to commerce.

Ex-Governor Blanchard's work in behalf of a forestry commission in the State of Louisiana is beginning to attract wide attention in this State, and keen interest is being manifested in the developments. Mr. Blanchard proposes to have the legislature create a forestry commission to cooperate with the federal government in the matter of conserving the timber lands of Louisiana, and his work in behalf of this commission is of great concern to the timber holders of the State. The present legislature will dispose of the proposition one way or the other.

Another matter before the present session of the general assembly that is attracting considerable attention is the much-talked-of Hackley, Hume and Joyce case in Tangipahoa parish, which has been exploited recently. This is the case in which a big syndicate paid approximately \$287,000 for a big tract of land in Tangipahoa parish. This land was originally entered, forty-one years ago, as tidal flood land, and the consideration paid the State was 25 cents per acre. Recently the attorney-general of the State, acting on the instructions of the governor, filed suit to recover the land, alleging that it was fraudulently entered and that it was not tidal flood land. A compromise was offered by the company, and it agreed to pay the State for the tract more than the State could get if it confiscated the land and resold. Ex-Governor Blanchard agreed to this compromise and it is awaiting ratification by the general assembly. If it is accepted the State will get about \$3 per acre for the property, whereas if it is confiscated and sold it will get only \$1.50. The action of the legislature is consequently awaited with much concern.

ASHLAND

William Eckman of the R. G. Gage Lumber Company is on a business trip up the Big Sandy looking after the lumber and timber interests of the company. This company reports receipt of some very desirable orders for oak ties and sound and square edged bill caks within the last few days. They are also receiving several cars of lumber in their yards here from their mill operations up the Sandy.

Edward Barber of Millersburg, Ingham & Company, Cincinnati, is loading three cars of export oak from the Licking River Lumber Company at their mill at Farmers, Ky., and also two cars at Ashland this week.

T. S. McClure, one of the most prominent timbermen of Louisiana, Ky., filed bankruptcy papers June 9 with the clerk of the United States court at Catlettsburg, with assets of \$93,591.78 and liabilities of \$85,922. From the latter amount there stand being deducted \$7,103.83, which is not his direct liability, leaving the actual amount \$28,750.01. Mr. McClure, it is understood, was forced to this step by the action of millmen of this city, with whom he had a contract to take his timber as he could deliver it. They refused to renew notes which he would have paid with timber already rafted and in the river, and as

he was unable to turn the logs into money there was nothing left for him to do but to liquidate the business through the courts. Mr. McClure is the owner of the T. S. McClure Timber Company, a \$15,000 corporation, which owns a fine lot of timber in Martin county adjacent to the tracts operated by Mr. McClure during the past few years.

Mr. Searcy of Whisler & Searcy, Ironton, O., was a business caller in the city this week. Mr. Searcy advises that they are continuing to operate their mill full time at Ironton and are receiving more orders than sixty days ago. Mr. Searcy is of the opinion that business will continue to improve.

Increased activity is noticed on the N. & W. They have commenced work on their belt line at Cincinnati and are resuming work on their bridge near Ironton and the new underground crossing at Groveport Pike, Columbus. It is encouraging to know that the railroads are resuming work along their lines. It is also noted in looking over the reports of the American Railway Association that there is a great decrease in the number of idle cars over that of thirty days ago. There was a decrease of over twenty-three thousand idle freight cars during the latter half of May as against the number shown in the first part of the month. These indications certainly point to the restoration of business and should be encouraging to the public in general.

One of the largest contracts for railroad ties ever handled in this section will be awarded within a few days by Col. T. J. Ewing of Catlettsburg, Ky., who has been commissioned by eastern parties to purchase 3,000,000 railroad ties for the European market. Col. Ewing has a bid from one individual to furnish the entire number, and bids from a number of others to furnish part of them. He is of the opinion that the contract will be awarded to the one who is bidding on the whole job, and if it is it will be the largest contract ever undertaken by a single firm or individual at one time in this section.

R. G. Page, secretary of the Licking River Lumber Company, has returned from a trip through the North, and advises receipt of some orders and states that business in general is somewhat improved. He also states that the large manufacturers are buying very sparingly at this time and are placing orders only for stock that they need immediately.

The Yellow Poplar Lumber Company of Coal Grove, O., continues to operate its large hand mill and planning mills full time and probably has enough logs to run for several months. The company is increasing its yard capacity and putting on sticks a large per cent of the cut.

The Ashland Lumber Company of this city has its mill closed down at present for repairs and cleaning the boilers. This company is sawing a large amount of timber for the Herrmann Lumber Company and the R. G. Page Lumber Company of this city, in addition to its own stock. It has enough logs on hand to run for some time.

The W. H. Dawkins Lumber Company is operating its large mill at Ironton, O., and putting on sticks a very fine lot of poplar lumber. The company reports receipt of some very desirable orders during the month of May and an increase over the month of April.

MINNEAPOLIS

The Interstate Commerce Commission decision in the case of hardwood rates to the west coasters does not particularly interest local wholesalers. They think it will increase trade in the West, but that the old rate was never low enough to bring about the proper volume of hardwood shipment to far western points. They do not understand why a 75-cent rate is reasonable for westbound business in hardwood, which will load many more pounds to the car, while 55 cents is declared the highest reasonable rate for the same distance eastbound. Apparently,

under the decision Minneapollis will not get anything better than a 75-cent rate.

Several Twin City lumbermen attended the National Hardwood Lumber Association meeting at Milwaukee, and returned much pleased with the doings, especially with the election of President O. O. Agler. In the delegation from here were D. F. Clark of Osborne & Clark, president of the Northwestern Hardwood Lumbermen's Association; W. H. Hill of the Minneapolis Lumber Company and the Ruby Lumber Company; H. M. Halsted of Halsted & Boornay; F. M. Bartelme and A. H. Bernard of Minneapolis, and F. A. Nolan of St. Paul.

Offices have been opened at 900 Lumber Exchange in this city by a new wholesale firm, the Levine Lumber & Timber Company, which consists of Henry Levine, for some years buyer and outside representative of the S. H. Davis Lumber Company of this city, and his brother, Gus Levine. This concern announces that it will specialize on hardwoods, and will also handle western coast lumber and northern pine, besides dealing in timber lunds.

W. N. Hallan, who has been manager of the Sioux City branch of the City Sash & Door Company of Minneapolis, has sold his interest in the company to A. N. Wheeler, the well-known salesman who has represented that company for two years past. Mr. Wheeler will go to Sioux City to manage the plant there, which carries a \$60,000 stock of doors and mill work, in a fine two-story and basement warehouse building 110 by 224 feet. Mr. Wheeler is well acquainted with the retail trade tributary to his new location.

CADILLAC

R. E. McLean, manager of the I. Stephenson Company, of Wells, Mich., and Mr. Stephenson, were recent visitors here, looking over the Cummer-Diggins Company's steam loader and chemical plant. Mr. McLean reports a number of forest fires along the line of the G. R. & I. and other roads over which he came.

Reports show forest fires along the northern division of the Detroit & Mackinac railway. The Richardson Lumber Company lost 1,200,000 feet of logs at Posen. The water tank, pump house and hand car house of the Detroit & Mackinac railway at Tower were also burned.

Mr. and Mrs. F. J. Cobbs, Mr. and Mrs. W. W. Mitchell, Miss Marie Mitchell and Miss Yost are making an automobile trip through northern New York and New England.

Chas. T. Mitchell left this week for a two weeks' trip to New York City and the east.

The family of Secretary J. C. Knox of the Michigan Hardwood Manufacturers' Association arrived here this week and are now settled at 206 E. Harris street.

Hardwood manufacturers here report a number of good orders and say that indications for trade are a good deal brighter than for some time back.

Charles Murphy of Seymour, Ind., is visiting his brother, Joseph Murphy of Murphy & Diggins.

Quite a number of Cadillac lumbermen and their families are planning camping out on Lake Mitchell this summer.

CHARLOTTE

D. O. Ceell, secretary of the High Point Hub & Handle Company of High Point, N. C., whose plant was destroyed by fire recently, states that as soon as the insurance is adjusted he hopes the plant will be rebuilt. If this is done the factory will be built on a much larger scale than before. The Oettlinger Buggy Company of Greensboro, N. C., is planning to put in a lot of additional machinery to meet the demand of increased trade. The extra machinery will be for the manufacture of bodies of vehicles principally.

The secretary of state has chartered the new

Savannah Flume Company of Waynesville, N. C., with a capital stock of \$150,000. Objects are to build flume lines for transporting timber to railroad stations in the vicinity of Waynesville. J. O. Bowman, Alden Howell and V. F. Brown are the incorporators.

The Harter Lumber Company of Ulmers, S. C., has been chartered to erect and operate planning mills and do a general lumber business; capital, \$2,750. A. J. Harter and others are the incorporators.

The Southern Buggy Company of High Point, N. C., which does a large business, is planning to enlarge by securing another story of the building in which it is housed, to be used as a store-room.

A schooner with a cargo of 450,000 feet of lumber for Philadelphia, consigned by the Hammer Lumber Company of Wilmington, N. C., and for Hoboken with 1,491 cross ties, consigned by the Empire Tie Company, cleared the Wilmington, N. C., port recently. Reports from the ports of this section indicate that a decided increase has been shown in shipments of lumber during the past few months.

The Wilmington Sash, Door & Lumber Company of Wilmington, N. C., has commenced operation, charter having been received. The capital of the company is \$20,000 and the incorporators are H. A. DeCover and others of Wilmington. This company takes over the business formerly conducted by A. M. Price at Wilmington, but it will carry on the business on a much larger scale.

F. N. Tate, president of the North Carolina Case Workers' Association, embracing practically all the furniture factories in North and South Carolina, Virginia and Tennessee, and Dr. G. W. Bradshaw, also an official in the association, both of High Point, N. C., are very much elated over the results of the conference in Chicago recently with the Western Classification Committee, relative to the moving of furniture from this section to western states. As a result of the conference of these officials there will be no change in rates, etc., on carload lots of furniture for the present, which is welcome news to furniture men in this state.

NORFOLK

With the local hardwood exporters and dealers conditions are, as is usually the case at this time of the year, dull, and because of the demoralized condition of the European markets business is exceptionally slack. It is stated by the bigger men of the trade here that while the congestion of consignment stocks on the wharves at Liverpool and London is now being relieved, still this is being done at such a slow rate that it will be a matter of weeks to come before any relief can be expected insofar as affects shipping from this territory.

During the month of May there were some heavy shipments of hardwood stocks to the old country, the cargo of the British steamer "Allegheny" having an especially large and valuable assortment of hardwood logs and lumber. In discussing the situation with Frank W. Blake, an exporter of walnut, poplar, oak, ash, hickory, gum, maple, red cedar, holly and other similar woods, Mr. Blake stated that with his business was exceedingly quiet; that he looked for no noteworthy improvement in the immediate future, but was hoping for a change for the better in the fall, when, he thinks, prices should also improve.

It is learned that a new hardwood manufacturing operation has been established within the past few weeks on the line of the Tidewater railroad near Roanoke, Va., which operation is working on full time, apparently considering such a course a safe one, reasoning that it will be able to dispose of the stock later at good figures. This Tidewater road is opening up for development some fine hardwood forests, which will mean much for Norfolk's future.

The Norfolk & Cairo Railroad Company announces through its president that operations on the roadbed, etc., will be commenced about July 15. It is expected that Roanoke contractors, who are figuring on furnishing the entire quantity of lumber needed for the construction work, will be given a large portion of the work, and possibly all. This road will connect two of the largest lumber centers in the country, Norfolk, Va., and Cairo, Ill., and when built will render accessible about one hundred miles of virgin timber along its route. New York capitalists are largely interested, although some of its bonds have been floated in Europe.

TOLEDO

The plant of the Marietta, Chair Company, Marietta, Ohio, will close down June 27 to admit of extensive repairs and the installation of a new boiler and engine.

The steamer George Burnham arrived in the city recently from Marksville, Canada, with its second consignment of railroad ties. There were 13,056 ties, which were consigned to several large lumber companies of the city.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

CHICAGO

The local hardwood trade is fair, with a slightly increased demand. Prices have not appreciably recovered, as there are still odd lots of small mill stock being offered at very low prices. However, when it comes to marketing woods of quality, of high-class manufacture, there is only a small quantity moving, and what is sold is being marketed at close to list. Local jobbers are optimistic over the future of the Chicago business and believe that there is a good fall trade in sight.

BOSTON

The market for hardwood lumber has not shown a marked improvement during the past two weeks, although a few dealers are beginning to report a larger inquiry. Consumers have small stocks, so that when trading does start they will have to come in as large buyers. Manufactures of interior finish are not very busy and few have been willing to anticipate their wants of lumber. Furniture manufacturers are doing a little more than they have been, and reports from the large piano people indicate better times ahead. The call for veneers is moderate. Large dealers report good business for a day or two and then the demand falls flat for three or four days. While this is true, business is better to the aggregate than a few weeks ago. Now that the convention is over, dealers believe confidence will be restored.

The best manufacturers of quartered oak are less disposed to accept low bids than they were a few weeks ago. Palo oak is plentiful and with the exception of a few instances it is difficult to get bids from buyers for more than small lots. Brown ash is well held under a limited demand. The call for elm is not large. Mahogany is in moderate call.

NEW YORK

The general hardwood situation at New York does not show any material change from that as last noted. Business is still more or less of the hand-to-mouth order, but prices are still holding on with reasonable firmness. This is especially true of the better grades. There has been a lot of some readjustment in values on certain items, but, on the other hand, such stocks

The Fremont Lumber Company, of Fremont, Ohio, with liabilities representing four times its assets, was thrown into bankruptcy by its creditors recently. Liabilities amounting to \$111,474.34 are listed in the schedules filed in the United States district court. Assets are given as \$35,224.19. Liabilities represent for the most part open accounts and bank loans.

At a time when it could least afford such loss the East Side Lumber Company of Toledo was visited by a disastrous fire June 21. Lightning caused the blaze, which destroyed the entire planing mill with its valuable machinery and a large quantity of lumber which was stored there. The loss will be about \$15,000, while the loss was insured for but \$11,000. As the company was recently placed under the supervision of a receiver at the instigation of creditors and was straining every nerve to get its affairs straightened out satisfactorily, the loss comes at a time when it will be keenly felt.

The Turnbull Wagon Works, one of the largest concerns of the state, will hold its annual stockholders' meeting for the purpose of electing directors at the office of the Security Savings Bank & Trust Company, Toledo, July 6.

As ash and poplar have shown a slight advance, which evens up matters on a basis which can be said to reflect very fair stability to prices. Of course, there is still the bargain as well as the forced liquidation element among manufacturers and wholesalers, but when it comes to a question of good, well-manufactured stocks of hardwoods in the better grades there are few concessions made and little effort to force the market. The retail yards are not buying anything they can get along without, while manufacturing trade is selling very close to the wind, which means low stocks in the local market. This fact, coupled with not overplentiful supplies at manufacturing points, creates a condition which with but a slight improvement in consumption will mean a sharp and constant rise in prices. In connection with the business that is offering, ash, poplar, basswood and quartered oak seem to be in best call, with the balance of the list somewhat slow.

PHILADELPHIA

The hardwood lumber situation, like other lines of industry, still lacks the impetus necessary to a continuous improved trading, but a spirit of optimism seems to have taken possession of the people generally, and great things are hoped for when the presidential question shall have been settled. Buying continues on the hand-to-mouth basis, and many consumers and yardmen, in hopes of still lower figures, allow their stocks to become so reduced as to render buying finally compulsory; but it is confidently believed by the conservative element that at most any time these buyers will be caught napping, and that there will be a scramble, perhaps too late, for the needed stock. It is given out that in several instances men have bought large blocks of both hard and soft woods as an investment, which they will hold for higher prices, which are sure to come at the first revival of buying. It is announced that in the West the railroads are commencing to buy, but such is apparently not the case in this territory, although there still remain the railroad methods testify that the companies here invariably are close-mouthed and never disclose in advance the moves they intend to make; consequently authorities say they would not be surprised to receive inquiries from this source at most any moment, as it is believed that as soon as the crops commence to move the railroad

companies will resume activity in their repair and construction work.

With the exception of the better grades of poplar, basswood, sound wormy chestnut and quartered oak, which are firm as to price, the quotations in hardwoods are variable, in spite of the fact that stocks at both shipping and consuming points are far below normal. The furniture factories of eastern Pennsylvania are running fairly well, but buying very cautiously; flooring makers keep up a respectable activity, as do also such and door mills, although the volume of business is below normal figures; veneer and cigar-box manufacturers report but little improvement, but they are getting as to the outlook. The packing-box makers state that buying is spasmodic and that the practice of price-cutting, which is lamented by thinking men, is still going on.

BALTIMORE

The hardwood lumber trade of this section is much the same as it has been. The demand still lags much to be desired, and, though inquiries are more numerous, the range of prices is easy. A better feeling prevails among dealers and manufacturers, however, and there is every indication that the next few months will bring a marked improvement. Manufacturers have curtailed production to such an extent that stocks on hand are of very moderate proportions, and any pronounced increase in the requirements would create something of a scarcity, with attendant advances in quotations.

The foreign situation continues to be very unsatisfactory, the extensive stocks held abroad preventing recovery and the restricted demand retarding the distribution to such an extent that no decided improvement is looked for in the near future. To ship stocks under existing conditions is to court trouble, which cannot always be avoided if the exporter holds a contract, for the foreign buyer will by various expedients seek to reduce the amount the shipper is to receive, until the sum is about equal to the current market quotations, which makes it unprofitable to do business. Thus, while the mills here have been holding down, stocks on hand are about as large as ever, the withdrawals being correspondingly restricted, and the suspension of exports serving to keep large quantities of lumber here that would under normal conditions have gone abroad. The outlook, however, is better than it was. Not a few of the big consumers are resuming operations and show more interest in lumber than they have for months. While no rush is expected, the clearing of the political situation, it is thought, will have a favorable effect.

PITTSBURG

On the whole things are looking somewhat better in the Pittsburgh district. There are more bills working and more signs of activity in general. The hopeful feeling prevailing and building operations seem to have taken on a new lease of life. In the city the report of building operations in May was more encouraging than was expected and a considerable number of projects are being started this month. So far, however, the yards are running very sparingly and not a few of them have gone into the practice of loaning lumber; that is, one yard will order a car of lumber and then divide it up with two of its competitors. The yardmen seem determined to hold their purchases down to the minimum and although their stocks are very small in many lines they are not accumulating any lumber.

From the trade outside the city come more encouraging reports. The demand from factories is quite fair and with the large amount of bridge work and trolley line construction going on there is a pretty good market for hardwoods. In the East salesmen report that conditions are much

improved and some good hardwood orders have been taken during the past week. Finishing lumber for building projects is about the slowest seller on the list, as comparatively few structures are in the state to need such lumber at present. The country mills in many places are running to nearly full capacity and are piling up stocks in the absence of good orders.

Prices on hardwoods have not changed. Quartered oak is very scarce and commands a good price. The best grades of poplar and chestnut are also good sellers. Locally, there is very little demand for the medium grades of oak, chestnut or even poplar and prices on these are fully as weak as they were June 1. There seems to be little probability of higher quotations this summer on most hardwoods for the general uncertainty that prevails in business circles is keeping down the market demand for all kinds of hardwood stock.

BUFFALO

The hardwood trade is keeping up its former average, and at the summer has turned warmer earlier than it usually does and promises one of the old-fashioned hot seasons, there should not be any looking for increase just now. There is quite a movement, and though it goes for little, so long as more is demanded it is very far from being a bad season. While the entire trade is tranquil and there is no reason for expecting less demand before there is more, the dealers will not complain very much.

Still it is hard to forget how much business was in progress a year ago, and it is wondered when the old swing is to come back again. Some say there is too much politics in the air now for much business improvement and that there will not be much up or down of any sort of lumber for the summer. Oak seems to be holding its own. Somebody reports that quartered oak is now about the only wood that is bringing old prices, but some woods were getting too high and needed a stay.

It will no doubt be fall before any improvement in any prices will take place. There are some reports of sales of ash, and basswood is wanted more than before. Elm is hard to keep in stock, and it is remarked that if it was put into low-grade furniture as much as formerly it would soon be used. The dealers who are bringing gum this way are offering it in that line, but it is plain that our woodworking factories do not know as much about handling it as they will later.

It seems that chestnut and birch are as quiet as ever, but maple is profiting by the fact that it did not go very high and can now be expected to hold its own right along. Flooring mills find southern pine so low that maple has to sell at very moderate figures also.

CLEVELAND

Considerable improvement has been noted in the hardwood situation during the past fortnight. The lumber outlook has shown more activity than for any similar period this year. One reason for the numerous inquiries of the past week or two is thought to be the fact that most of the industries which use hardwood have gotten down to their limit and have simply been compelled to restock. While the volume per order is under that of a year ago, these inquiries indicate renewed confidence in the situation.

Poplar is in the lead as regards demand. There is a steady call for this wood and prices are a trifle firmer, while the movement is quite active. Quartered oak is showing up. There is not a great deal of stock on hand at present, and if the demand grows active it will boost the business in what there is.

Among the other woods there is not a great deal of activity. Ash and becky are both off. The wagon trade has been hit hard by the

industrial slump and has scarcely recovered. Chestnut is also moving rather slowly, though it has a good future.

Considerable competition has developed among the hardwood interests in this section to dispose of stock, preparatory to taking the usual summer inventory next month. Price cutting is still in vogue, but with any considerable volume of orders it is believed that it will cease.

COLUMBUS

Although the lumber business in Columbus is generally regarded as quiet, yet there seems to be a slight gain from week to week. Light stocks are one of the best factors in the situation and that fact leads dealers to believe that the trend of values from this on will be upward. The big dealers are not inclined to sell much around the present level and seem to prefer to keep their lumber in the tree instead of selling at the market value now in force. Manufacturers are producing to only meet immediate requirements and show no inclination to increase their stocks. Retail dealers, however, are doing a better business and some of them say that more building is now being done than there has been in several months. Some of them have been compelled to sell lumber at low prices in order to close contracts, but they seem to be getting more business and regard the outlook as much improved.

Some of the big men in the business contend that the present low prices are due to the disposition on the part of some of the smaller dealers to realize in order to keep their business moving. Columbus dealers are optimistic regarding the future of the market for hardwoods and confidently predict much better prices in the near future. The oaks are firmer, but prices are no higher than they were a week ago, while poplar shows no tendency to go lower. First and second gum is quoted the same as a week ago and the third cottonwood is about the same as it has been for several weeks. There is but little quartered oak in the market and values show considerable firmness. About the market for other hardwoods there is nothing new to be said, and but little change is expected to take place during the summer months.

INDIANAPOLIS

There has been a slight decline in the local hardwood market within the last two weeks. It is believed to be only temporary, however, as conditions are already improving.

Hardwoods are well maintained, with prospects that they will go higher. This is in sharp contrast to yellow pine, which has fallen off 25 per cent in prices and is very unsteady.

The decline in the demand for hardwoods is believed to be due to a sudden falling off in building operations. Contracts let early in the year have been completed and new contracts have not come in as quickly as expected.

MILWAUKEE

The improved condition of the Milwaukee hardwood trade is still being maintained and the market has become stronger during the past week. Buyers take only small orders, but dealers say that stocks are low and that before long increased buying must prevail. Milwaukee buildings that are being erected this season are new at the finishing stage and the outlook for hardwood dealers is bright.

Stocks are low in the yards of the dealers and several have received orders the past week. Little quartered oak is to be found on the market, and what there is is high as to price. Basswood has materially improved since poplar is holding its own. Demand for maple and maple flooring is strong and the market has advanced somewhat, although the advance

has not been as great as was anticipated at the opening of the building season. Cypress conditions show very little change and there are few sales of much consequence being made in this wood. Birch has been active for this market and the price is holding its own.

BRISTOL

Lumbermen in this section are pretty generally inclined to the belief that conditions are improving, though there is not as much substantial evidence of betterment as they had anticipated. It is generally admitted that the outlook is much brighter than it has been and the predictions are that the late summer and fall will see better prices, together with more active demand for all kinds of stock.

Prices are holding up fairly well and values are not seriously disturbed by the dullness of the market. Exporters say that the domestic market is in better shape than foreign, though they expect to see conditions abroad grow better within a few months.

"The trouble is," said a well-known local exporter, "that some of the exporters consigned too much stock to their customers during the early months of the year and the supply was in excess of the demand. I think, however, that conditions abroad will soon right themselves, as the importers are beginning to find out that they are not going to get lumber at slaughter prices, as they had been led to expect, but that American prices are firm."

The majority of the mills in this section are running, and the volume of business being transacted is fair and shows an improvement over a month ago, according to reports of the local railroad traffic officials. The per cent of idle freight cars is now very small, while the majority of the industries are in operation, though some of them are working on reduced time. Wages are reduced, generally speaking, about 15 per cent.

CINCINNATI

The month of June in the hardwood market has been satisfactory in several respects. In the first place, the actual amount of business transacted exceeds that of the month previous, and some dealers are of the opinion that the month of June of this year will be as good as last year, if not slightly better. So far the shipments of lumber from here have been much larger than those of the month previous. The demand seems general for all hardwoods, but such grades as poplar and oak are leading items on the list. Quarters oak and even plain white are in better demand now than for some time, and from reports received a much more urgent inquiry is probable within a short time. The Sunshine League, launched some time ago, is making great progress, and by the first of July it is the intention to start up as many business places as possible. This will also lend a much better tone to the market. Walnut, chestnut mahogany, spruce, cottonwood and some other items have all showed improvement in demand, and there is evidence of a better inquiry at hand. Box manufacturers are purchasing a great deal of the lower grades, and their business is reported as being quite brisk.

EVANSVILLE

The hardwood market has been holding up well during the past fortnight. Prices remain about the same and inquiries for stock are coming in quite freely and a few good orders are being placed. However, manufacturers are not anxious to place large orders for quartered oak at present market prices to be held very long before shipment, as all are of the opinion that stock will bring higher prices in the near future, and as the largest portion of the product of this

market is quartered oak, they are not getting as many orders as they would were they willing to accept present prices of stock to be delivered later on.

The same depression is being noticed in foreign markets by local exporters that is reported from other producing centers. Although inquiries are being received from abroad and an order is placed now and then, there seems to be little real demand, and there is a tendency on the part of foreign dealers to make cuts and in some cases refuse to accept cars, which makes it necessary for the shipper to dock his stock until his agent can get another customer for the car, and this means the shipper is compelled to stand the expense of moving the lumber, staking, measuring, dock rent, fire insurance and numerous other charges, and then his lumber is sold at a figure much below his invoice price. With these conditions existing, the experienced exporters do not care to take the chance, and as a result the export trade is exceedingly dull.

The demand for poplar is increasing, especially in the thin stock; however, thick poplar is very dull. The building trade is looking up and woods that are used for this purpose are in better demand. Quartered oak is still in good demand both in common and fast grades. Plain oak remains slow. Quartered white oak is in excellent demand with the flooring trade, and the general tone of the market denotes that the picking up of the building trade is helping business along.

ST. LOUIS

Although the usual summer dullness prevails in the hardwood market, there is a better feeling. There is a notably good demand for some items on the hardwood list. Quartered red and white oak are in particularly good request. Plain oak is also called for considerably and the poplar demand is getting better. This last item is quite scarce in some grades. The two hardwoods that are the dullest on the market are gum and cottonwood, although there is little call for hickory. The minor woods are quiet. In the producing territory the situation is strong, except as to gum and cottonwood. New timber is not being cut, but operations are confined to getting out logs cut last summer and fall. The heavy rains have prevented new timber from being cut. For this reason the mills are only running in a small way, and in fact some of them are not being operated at all. Dry stocks in the upper grades are small. Little dry is on hand at the majority of the mills except at the small mills some distance from the railroads, and they have not been able to ship it. The cypress conditions in St. Louis have not changed. Business is quiet and comparatively few orders are coming in.

NASHVILLE

Although conditions in the lumber market have been steadily improving, still things are nowhere near normal, nowhere near what they were this time last year, and lumbermen are becoming resigned to the belief that old times will not return until next fall. It is getting hot now, very hot in and around Nashville, and what is known as "summer dullness" has set in. About the only redeeming feature to be found in the local situation is the fact that quite a lot of summer building is going on. This has made the market for quartered oak quite active—in fact, quartered oak is about the only wood that is in any sort of demand at this time. Plain oak continues to drag and there is little doing in ash, hickory and chestnut. Stocks at mill points are not large and the results are not piling up any stocks, no matter how cheap they may be obtained. Large consumers, however, have not stopped buying stuff, but are laying it

away for future use. It looks as though the small consumer and the retailer, in view of the fact that they are doing a hand-to-mouth business, will have to pay more for their stuff in the fall, when they will perhaps need it badly.

Cumberland river is getting low and clear now and the logging season is well nigh over until next winter—in fact, the sudden hot spell, which has been on for several days, has caused the river to fall quite rapidly, and in some instances crossings which had been started down stream in rafts were caught, tied up and wait for a tide. Quite a lot of activity is noted among the local hardwood flooring manufacturers, and this has made the market for quartered oak more brisk than would otherwise be the case.

MEMPHIS

The demand for hardwood lumber is still rather light, but is gradually increasing. The main complaint now with both manufacturers and wholesalers is the low prices offered. Some holders are evidently trying to dispose of their lumber regardless of price, and this is not only creating an undesirable competition but it is forcing prices to a level which the trade here are unwilling to accept. The prevailing view is that values will be better later and the majority of Memphis manufacturers and wholesalers prefer to hold their present stocks, as they do not believe they can be replaced at as cheap figures as are represented in current prices.

The demand continues good for high grade plain and quarter sawed oak. The lower grades, however, are in only moderate request—in fact, a feature of the entire situation is the comparatively better demand for high-grade lumber than for the lower. Ash is full of sale and prices are unsatisfactory. The movement in gum is rather quiet and prices are low. Cypress is moving in only a moderate way. The demand for poplar is fairly good and prices are comparatively well maintained. Cottonwood is rather poor at the moment. The demand for it is not large in any grade and offerings are pretty full, with the result that prices have been reduced materially on the part of manufacturers in some sections. Memphis manufacturers, however, as a rule are holding out for pretty good values. Low-grade gum has been moving very slowly recently. One of the big harvester companies, however, has recently taken a very big quantity of firsts and seconds sap gum, but the price is considered a very low one. Some of this was sold by Memphis manufacturers at the convention in Milwaukee. Export conditions are unsatisfactory and the volume of business moving in that direction is very small.

NEW ORLEANS

Conditions in the New Orleans market have not changed materially within the last fortnight. A review of the market shows the export situation to be in anything but satisfactory shape. Some of the mills are doing a little export business, while a few of the hardwood plants are supplying a fair demand from the interior. As a rule, however, business is quiet and there are no indications of early improvement. Recent concessions made on cypress to the New Orleans factories have attracted attention. Under date of June 15 a local cypress company issued a concession list making cuts practically all down the line and reducing the list price anywhere from \$1 to \$1 per thousand. There is still a fair European demand for staves, and the movement in these is more active than in any other export timber.

ASHLAND

The hardwood market here, as regards prices, orders and shipments made, is about as it has

been for the past sixty days. The larger manufacturers expect a greater demand and better prices in another sixty days and are making no special effort to make sales. It is now believed that the timber supply from sources on which the mills here depend will for the season be practically nothing, and the lumber saved the present season will supply shipments to be made only this year but in 1909 also. With this curtailment, anything like normal conditions will cause an unusual scramble for lumber, especially poplar and oak.

Now in addition to the above prevailing conditions in eastern Kentucky and western West Virginia, we are confronted by a circumstance which in the last three years has grown into an enormous factor in the production of lumber. This is the small portable mill which sprang up so plentifully within the past few years of lumber scarcity and helped the situation by cutting on small tracts of timber inaccessible to large plants and unheeded by the large manufacturers who were looking for heavy investments.

The price of lumber for several years past has enabled timbermen to get a supply from some remote and rough places where the cost of operation would have been prohibitive were it not for the unusual high prices lumber brought. The investigation shows that practically none of these plants are now running. It is estimated that only about five or ten per cent of these plants located in eastern Kentucky have saved anything since the first of last December, at which time the season was nearly closed and the cut pretty well cleaned up and shipped, which was indeed fortunate for the purchaser.

As to the amount of lumber supplied by these portables an estimate can hardly be made too high, as there are some of them which saw from half a million to one and a half million feet annually. These mills standing idle, together with the general curtailment of production in the large plants, surely means that the lumber demand is supplied largely from the old stock on the yards.

SAN FRANCISCO

Local conditions, which generally speak for the whole Pacific coast, show a gradual improvement, or, as we may better say, a continuation of the excellent state in which they have been for some time. In hardwoods dealers have no cause to complain, especially when compared with other lines of building material. The supplies are very good and business quite brisk.

Oak continues to receive the larger share of the interest of all concerned, but in many places it is being replaced by the Pacific coast woods, principally juniper, which continues to find friends wherever it goes. In oak quarter-sawn white is naturally the one which receives most attention, and lumber that is a little off color or narrow is frequently rejected by the consumers.

Mahogany likewise continues in very good demand, and on account of the scarcity of West coast wood, which is being very extensively specified on account of its beauty, the dealers have had to go east for part of their needs and quite a movement is coming this way. Several new stores occupying entire buildings are being fitted out in this wood, the owners apparently stopping at nothing to make their places as handsome as the very best in other cities.

In flooring maple receives by far the most attention, although a little red and white oak are being used. In maple the 2½-inch width seems

to be the most popular, but the trade in general insists on the lengths being 4 feet and up and a very small percentage of short lengths.

Money is getting more plentiful every day, for building purposes particularly.

MINNEAPOLIS

Conditions in the factory trade of the Northwest are improving steadily, though rather slowly. The flooring men are having the best of the business at this time. A large share of the houses this year are of inexpensive design and material, calling for comparatively little hardwood, but in most cases they have hardwood floors on the lower story at least, and as the volume of building in this city is not far from being last year, this is making a good trade in flooring, birch being a decided favorite. There is less parquet flooring sold than formerly. The factories are beginning now to stock up somewhat, having run their stocks low, and find that prices are relatively much stiffer on hardwood than on other lumber. The furniture factories are cleaning up their stock and have been running out of some items of hardwood, so some of them have been in the market lately for small lots to round out their stock. They are still keeping it low, however, and the best demand from these people is not expected to materialize for another month or two. The sash and door trade is rather quiet, so comparatively little hardwood is being taken. Basswood continues to be firm, and quartered oak is generally reported scarce and strong. Cull hardwood for box purposes is quiet at present, but with a summer revival of box trade should pick up to a marked degree. The country trade is somewhat better, as a number of the smaller shops and factories are coming into the market for material again, wagon stock being a leader, as usual; but flooring is also selling well to retail yards in small towns.

CHARLOTTE

The hardwood situation in the Carolinas continues to show signs of improvement. During the past two weeks lumbermen have been much busier than they were some months ago; orders now coming in more freely and operations being conducted on a larger scale. Market prices also have strengthened, and on the whole there is a decided tone of optimism in regard to the present situation and the outlook for the future. It is the confident belief that fall will witness a return of normal conditions. A number of new concerns have been chartered during the past fortnight and several plants that closed earlier in the year because of the unfavorable conditions have found it profitable to resume either partial or full operation. The same improvement is evidenced in other lines of industry in the Carolinas, and undoubtedly the prospects for a regular business during the fall and winter are brighter than at any time this year.

TOLEDO

Hardwood stocks in this city are below normal, and there is little disposition to replenish them. In some lines there is plenty of stock on hand; in other lines there would be a decided shortage if the demand was where it ordinarily is. Dealers are buying a little more liberally, however, and all are firm in the belief that the bottom notch in prices has been reached and that the next change will be in the nature of an advance. This perhaps accounts for the placing of heavier orders recently. There has been no large business done, but some increased activity is noted. Oak and poplar have been central figures in the market recently. A consignment of oak timber, comprising about 150,000 feet, cleared from this port recently for Kings-

ton, where it will be re-loaded and shipped to Liverpool. There is still no heavy call from the building trades for hardwoods, although the factories continue to consume their usual quota. Agricultural implement plants are especially busy. It is said they are behind on their orders for machinery, due to the heavy demand occasioned by the big crop. Vehicle works are also active, all of which has furnished a nice market for hickory, ash and oak. Box plants are also busy and are taking cargoes of mixed hardwoods.

LOUISVILLE

Hardwood matters in Louisville seem to be looking up, for it is noted that whereas for several months the past users of both heavy dimension oak and oak lumber have been only making inquiries which usually amounted to nothing, within the past few weeks a fair proportion of inquiries has ripened into orders. It is noted that more business is being done in heavy dimension oak than in the lumber grades.

In Louisville prices have been well sustained throughout the period of financial depression. Of course comparatively little shipping has been done, but it is predicted by the more optimistic manufacturers that business will be good again by September 1.

As to heavy dimension oak, one big local company declares that it has booked enough orders in that commodity to "hold them" for some time. The trade in oak lumber has not been so brisk.

Mahogany veneer is in active demand, and the manufacturers are busy booking orders and filling same. One manufacturer said that he had thought for a while it was because it was a specialty that the city is in the midst of, but after a long run of weeks it had begun to look as if things are doing again and business all around will pick up.

LIVERPOOL

Trade still continues in a most depressed state and no improvement can now be expected for some weeks to come, as with the advent of the present month the demand is in the midst of the summer holidays, which have an upsetting influence. Prices of all hardwoods have come down to a low level and it is extremely difficult to find a single item which it is possible for brokers to sell at remunerative prices. Shipments on consignment still come tumbling in and many cargoes have been sold at very low prices.

Hickory is still being shipped in extremely inferior qualities, with the result that prices are no gain being made in the trade position, though there is little doubt that the prevailing depression has invaded this market also. There is, however, a good quiet demand for the best quality wood and this and only this should be shipped. Poplar, oak and walnut are all being sold at low prices in all grades and sizes and as lower prices are likely to come shippers should try to realize as promptly as possible. Ash planks and second-growth logs are practically unsalable and should on no account be shipped, but the larger first growth logs are in fair demand. The last mahogany sale was a very poor affair and much wood had to be withdrawn for want of a bid. The wood was not of exceptional character, but there is little doubt that this market is showing the general depression which exists.

Woodworking Machinery

For all kind of Shops Working in Hardwoods

*Sheet No. 3-A

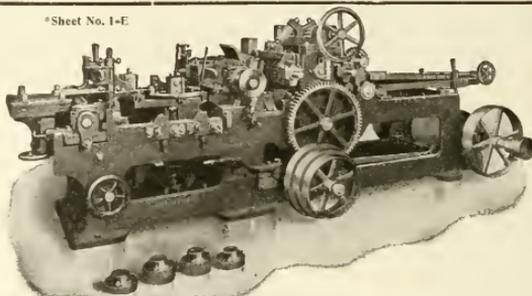

Our No. 156 Cabinet Planer

(Capacity 24 in. to 42 in. wide and 7 in. thick.)

Is noted for the smoothness of its work--it equals a hand plane--no marks from the knives are left on the surface of the board as with other machines. Our Patent Sectional Clamp Bearings have enabled us to accomplish this.

*Sheet No. 1-E

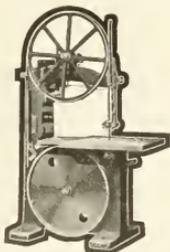

No. 133 Inside Molder

(Capacity 12 in. to 15 in. wide and 6 in. thick.)

This machine is designed for the manufacture of fine interior moldings, flooring, ceiling, and all work of this class found in hardwood shops, planing mills, furniture factories, car shops, etc. It is equally useful as a planer and matcher.

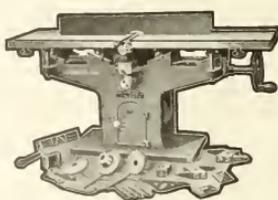

*Sheet No. 4-M

Our No. 50 Band Scroll Saw

Will run at twice the speed of any other band saw made. It will run a thinner gauge blade without danger of breaking. That means larger output and finer quality. Solid lower wheel. Patent knife-edge strain.

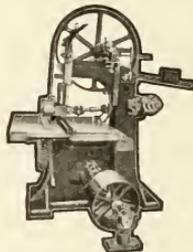

*Sheet No. 1-G

[No. 62 Universal Woodworker

So great is the variety of work that can be done on this machine that it is entitled to the name "Universal." It will plane straight or tapering, out of wind, joint, rabbit, gain chamfer, bore, etc. Almost anything can be done on it. Its capacity is limited only by the skill of the operator.

*Sheet No. 8-N

No. 202 Band, Rip and Edging Saw

CAUSE--An automatically moving chain in the table.

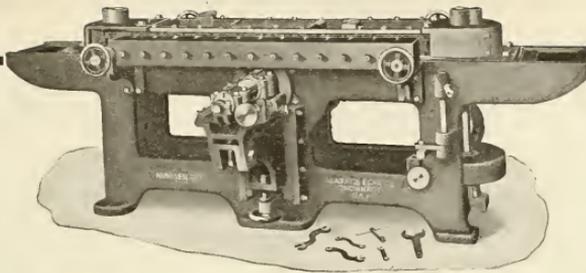

EFFECT--Edges a board with as fine precision as a circular edging saw.

* For large illustration and complete description of any of the above write for sheet number.

The World's Standard for Woodworking Machinery

A Continuous Feed Glue Jointer that is Superior to All

AFTER LONG AND COSTLY EXPERIMENT, WE HAVE PRODUCED A MACHINE THAT HAS PROVEN A WONDER, BECAUSE OF ITS EXCELLENT WORK, EASE AND QUICKNESS OF ADJUSTMENT, RAPID FEED AND LARGE CAPACITY.

IT HAS MANY EXCLUSIVE FEATURES THAT PLACE IT FAR IN ADVANCE OF ANY OTHER CONTINUOUS FEED GLUE JOINTER ON THE MARKET.

Important Features:

FRAME is cast in one piece—absolutely rigid.

The entire mechanism is completely enclosed.

ALL BEARINGS ARE OILED FROM THE OUTSIDE WITHOUT STOPPING THE MACHINE.

Feed consists of a traveling chain which oils itself automatically.

Feeding power is transmitted by large bronze worm wheel and steel worm running in oil, with **BALL BEARINGS AT END THRUST**, absolutely noiseless.

Notice the two hand wheels on each end of the machine. They adjust the housing to various thicknesses of stock. On this housing you will notice nuts the full length. These nuts hold in place as many steel rollers which give pressure to the stock being worked. The rollers are each mounted on independent housings and backed up by tempered steel springs holding the stock firmly in place.

A Gib is provided, running **FULL** length of the chain—not part way only—insuring perfect alignment.

CUTTER HEADS are located in the center of the machine lengthwise, one on either side. They are mounted in heavy housings, having vertical, horizontal and angular adjustments.

FEEDING CHAIN IS COMPOSED OF DETACHABLE LINKS.

We are Prepared to Ship You One of these Machines Immediately.

The World's Standard for Woodworking Machinery

AMERICAN 48-INCH CLEMENT BAND RESAW

The Finest Machine Built

Note what one user says:—

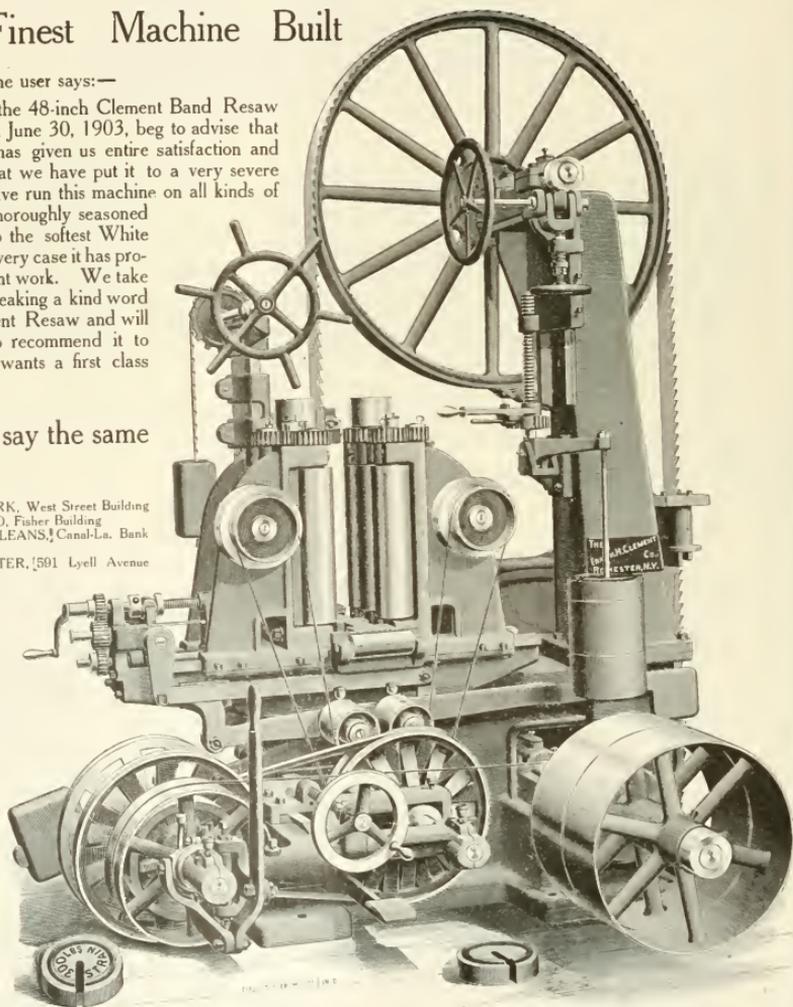

Referring to the 48-inch Clement Band Resaw shipped us on June 30, 1903, beg to advise that this machine has given us entire satisfaction and we believe that we have put it to a very severe test. We have run this machine on all kinds of wood from thoroughly seasoned Oak down to the softest White Pine, and in every case it has produced excellent work. We take pleasure in speaking a kind word for the Clement Resaw and will be pleased to recommend it to anyone who wants a first class machine.

They all say the same

It's Easy ATKINS SILVER STEEL SAWS

Segment ground—thinnest at center of back. Of even gauge along the tooth edge, but gradually tapering to the center of the back. They run free and easy. Atkins Segment Ground Cross-cut Saws will

Cut 25% More Timber

than any other, because they have plenty of clearance and require but little set, which makes them run fast and easy. By using Atkins inexpensive Saw Tools, Atkins Cross-cut Saws may be easily adjusted so as to do the most work.

Made of SILVER STEEL, they hold their edge. The most economical Saw and undoubtedly the best for you to buy. In use generally where the finest saws are appreciated.

Most jobbers carry our Saws in stock for immediate delivery or they may be ordered through us at Indianapolis or any of our branches. We have interesting booklets on this subject which we should be pleased to send you.

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine, and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

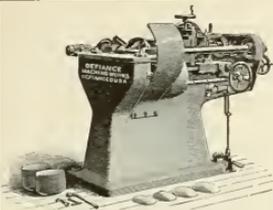

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock 17½ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

SMITH of
SMITHVILLE

No. 133-A. SEVEN INCH, FOUR SIDE HARDWOOD MOULDER

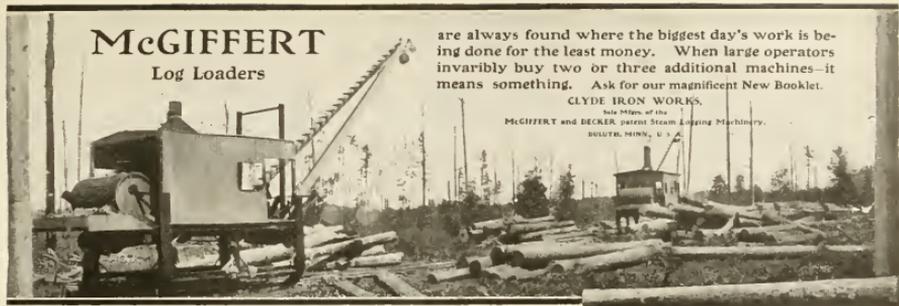

HARDWOOD manufacturers are constantly demanding machine tools of a more sturdy character. Many attempts have been made by machine builders to meet this need, resulting in added complications, with very slight improvements. We have, however, developed a moulding stick of the 7-inch type that is both sturdy and simple, a machine that contains all of the elements of a very heavy large size moulder, yet it is only a seven-inch machine. Write us today for a special circular
